

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

THE FOREIGN REVIEWS.

THE establishment of an English Foreign Review marked, as it seems to us, the commencement of a new era in our literature. The expediency of such a publication does not depend upon the solution of the question, whether periodicals are or are not the best media for transmitting thoughts from one part of the world to another. They have been long the media through which all our home trade has been carried on; and as the laws of this trade regulate our notions of trade generally, our foreign commerce could scarcely be considered as placed on a safe and permanent footing till the same principle was adopted in our intercourse with our neighbours as in that with each other. And, in fact, it was obvious that we did not study a French, a German, or an Italian book, with feelings at all similar to those which we experienced on taking up an English one. We regarded the literature of other countries as a subject of far-off contemplation, and scarcely realized the idea of its being the expression of the thoughts of existing men, or that anything was required in the study of it besides a tolerable acquaintance with the words of the language. These false notions we expect to see entirely eradicated by the works of which we are speaking; and the mere establishment of them has done so much to introduce a more living communion between England and other countries, that we regret the press of England has not exerted itself more vigorously to promote their circulation. We include ourselves in this censure, and we propose to do something in the present article towards atoning for our past negligence.

The 'Foreign Quarterly Review' deserves the first place in our notice, because the idea of this class of works originated with its founders. It seems to us the best edited periodical in this country; and we should think no review, monthly, quarterly, or weekly, can cost so much labour to its conductor. In all journals, the task of making a good selection of subjects, is hard and onerous, and one that perhaps, in the majority of cases, is ill enough discharged. But all the temptations into which the editor of an ordinary journal is liable to fall,—such as the temptation of allowing a clever contributor to work some unprofitable mine of thought merely because he has conceived a liking for the labour,—the temptation of being swayed by the turn of his own mind to string together many articles in which there is a great sameness of style—the temptation of fancying that because the public taste is not to be consulted about the sentiments expressed in an article, therefore it should not be consulted about the topics it treats of,—all these must be trebled in the case of the editor of a Foreign Review. The tracks of study into which the men from whom he must obtain his contributions have wandered, have been often so much determined by accident or the knowledge needful for some special occasion—the remedy of converse with other men against becoming wedded to one particular set of writers in our own language is so utterly unavailing here—and the plausible sophism that as the English care little for the literature of other countries at all it does not much signify to what corner of that literature their attention is drawn, is so ready at hand to stifle any concern about pleasing the public, that one would certainly have anticipated and pardoned many and glaring faults in the management of such a work. In the case

of the 'Foreign Quarterly Review,' however, no pardon is needed.

The mixture of subjects is admirable. Not only is there no preference shown for one country above another,—no French, Italian, German, or Spanish ascendancy visible anywhere—but what is much more difficult, the books selected from each of these languages are those, which are best calculated to illustrate the spirit of the different nations from which they have issued. This end seems never to be lost sight of, and it is very skilfully combined with the other, less considered by a philosophical reader, but highly important with a view to the pleasure of the 'general,' giving of the work an English and a present interest. Our readers will not be able to form a judgment of the extent to which these remarks are true, except by consulting the work, and even then they must have some experience in periodicals fully to perceive their force, for it is generally the case that those merits in the compiler of a journal, which make the most difference in the reader's enjoyment of it, are so worked into the tissue of the composition as entirely to escape his observation. The contributors to 'The Foreign Quarterly,' appear to be, in general, men of strong and mature minds, who have outlived the first love-feelings which a new literature inspires in persons just entering upon the study of it, but who have gained in exchange a power and a habit of surveying its productions with as much sobriety of feeling as any volume in their own language. They have come into such close acquaintance with the treasures of other countries, that all the enchantment which distance lends to the view has vanished. Leipzig is no more in the estimation of one of these critics than London: the name of Morini has no prepossession for him which does not belong in a much greater degree to that of Murray—

'A primrose on the Danube's brim,
A yellow primrose is to him,
And it is nothing more.

It may be thought that there are some disadvantages in this calm, unenthusiastic spirit. A little exaggeration, some would be inclined to say, of the merits and value of the treasures to be dug out of these neglected mines, could do no harm among a people the most of whose inclinations are generally the other way; while the least excess of coldness might operate as a cruel discouragement to those who are setting out upon a long and painful mission into the unknown regions, in hopes of bringing back riches which will repay them for their toil and enterprise. In the main, however, we are inclined to think the principle of the Foreign Quarterly Reviewer is a right principle, and therefore one which must do good. It is calculated immediately to remove a great many apprehensions which respectable and ignorant people are apt to entertain with respect to the tendency of Foreign Reviews as being likely to create a Foreign taste,—it sets students upon inquiring whether it was the novelty of the strange costume or the beauty of the strange forms which have hitherto delighted them,—and if it stop one or two adventurous youths from embarking for El Dorado, it is surely good for themselves that they should not start on a fool's errand—and good for society, that they should not come back with woe-begone faces, complaining that all is barren only because they did not meet in every forest and glen with fairer nymphs than our own Unas, and Amorets, and Rosalinds.

Among the numerous admirable articles that have appeared in this Review, which has been steadily improving since its commencement, our special favourite is the Life of Wieland, in the third Number. In spite of some opinions which, perhaps, from our want of experience to understand their truth, seem to us somewhat inconsistent with the general spirit of the writer, we should feel little hesitation in saying that there never has appeared in any Review a more striking and beautiful article. If the highest metaphysics are those which are concerned not in the comparison or consolidation of systems, but which assist the study and minister to the growth of the individual, this admirable biography possesses all the value of a metaphysical treatise; and if the best novels are not those which illustrate the shifting varieties of manners, but the essential varieties of character, it has all the attraction of an excellent novel. And in this age of slovenly writing, it is no slight addition to these praises to add that the composition of this paper combines those good qualities which one looks for, and scarcely expects to find, in long and elaborate works.

Next to this paper, we should be inclined to rank the article at the beginning of the second Number, and the one (apparently by the same hand) on the French Philosophers of the Nineteenth Century in the first. The latter article especially, though it does not profess to give a complete view of the system of M. Cousin and his disciples, and though it would probably be denounced, and even ridiculed, by those gentlemen, because it does not put their cause in the light in which it looks to most advantage, exhibits, it seems to us, in a masterly manner, those points of controversy with which it is most important that Englishmen should be acquainted. The writer cheerfully acknowledges the vast superiority of the new school in point of logical consistency, and (so far as the acknowledgment of the existence of feelings implies the possession of them) in feeling likewise, to the miserable one-sided sensationists of the last age; but he appears to think, and we wish every searcher after truth in England thought with him, that though it may be very necessary that a nation which has been perverted through the use of reason, should pass through a process of restoration by the means of reason simply, we who have some life, however little that may be, and however at times crushed under the pressure of the cases that contain it, preserved for us in the religious instructions of our infancy, in our institutions, and in the traditions of our fathers, should be very wrong to exchange that life for a philosophy from which, after all, the worst system that ever prevailed in France only differs as the dry bones that lay scattered on the valley of Hinnom differed from the complete skeleton into which, at the bidding of the prophet, they were amalgamated. But we are wandering from our purpose, which was merely to give an account of the Foreign Reviews. From the instance which we have mentioned, however, our readers may see how little ground there is for suspecting that these reviewers will make an insidious use of their talents and knowledge, for the purpose of weakening our English sympathies, or of importing foreign vintds that are unsuitable to our climate and constitution.

The 'Foreign Review' is a very powerful competitor to the work we have been describing, but its articles are written in a style so very different, and the field is so immensely extensive, that we

have no doubt of each being able to gain and to maintain a footing for itself. 'The Foreign Review' has greater vivacity than its contemporary; its articles are written with less care, and, to general readers, are more amusing; they are probably in most cases, the workmanship of younger, more active, and more ardent artificers. Speaking thus, we allude to the majority, for every here and there it is evident that very grave and ancient persons are willing to lend a hand. Mr. Southey is no chicken, as we all know; and even if the subject did not convict him, there are tolerable traces in the style of one article, 'On the Expulsion of the Moriscos' from Spain, that the number which has just issued from the press owes him 56 pages worth of obligation. The most lively, persevering, and able writer in this Review, is the translator of Wilhelm Meister, if we are not mistaken in attributing to that gentleman two articles, on Goëthe, one on the life of Heyne; and one in the last Number, 'On German Playwrights.' The most obvious peculiarity in these articles, is their quaint and lively style, a style which, though it sometimes degenerates into what an intolerant critic might call affectation, seems on the whole, a very appropriate expression of the enthusiastic spirit of the writer, and possesses the power which more regular styles often do not possess, of communicating that spirit to the reader. But there are much greater merits than this doubtful one in Mr. Carlyle's articles. Putting his opinions out of the question (and though the colouring of these may be foreign, they are painted, as far as we can judge, upon a ground of good old English feeling), his articles contain unquestionably the most lively, and the most accurate picture of different phases of the German mind that has ever been presented to our countrymen. The article on Wieland, which we mentioned as doing such infinite credit to the 'Foreign Quarterly,' is interesting chiefly as the sketch of an individual mind; and the light that it throws upon the national character is not so much a direct as a reflected light. On the other hand, the main purpose of Mr. Carlyle's article is to elucidate the peculiarities of German feeling and life; and the men to whom he introduces us are brought forward chiefly because they embody, better than any thing can, these peculiarities. This idea is a happy one—especially happy with regard to Germany—a country which both we and its own inhabitants are too apt to regard as a region of systems and not of human beings. On the whole, the 'Foreign Review' is, like its rival, a decidedly improving work. The article on Russian Literature, in the fourth number, (in spite of some inaccuracies, in the original as well as the translated parts, which we think could scarcely have proceeded from the able writer of it,) was valuable, and in a great degree novel; and the present number contains a very interesting communication respecting Turkey, from the pen of a person who seems well acquainted with the subject. This number we think is the best that has yet appeared of the 'Foreign Review.'

We had intended to conclude with some reflections on the particular advantages which ought to result from the existence of both those works, but as our article has already run to a considerable length, we will content ourselves with mentioning one, and it appears to us the most important, good which they are likely to work out for us, and which has never been sufficiently dwelt upon, even by the founders of these valuable periodicals. We think they will assist in making us more strictly, more genuinely, more completely national. This is no paradox, nor are we using the word national in a different sense from the ordinary one. We mean, that as we advance in a knowledge of foreign literature, we shall become more wedded to our own truly national literature; we mean, that we shall be more averse from imitation; we mean, that we shall be more earnest to cultivate a certain idiosyncrasy in all our thoughts, habits, and feelings. And how will this

lesson be taught? It will be taught, so far as experience can teach any thing, by our discovering in the history of foreign literatures that they have risen into greatness or waned into insignificance, just in proportion as they have nourished or have repressed their individuality; and it will be impressed upon us far more potently and feelingly by the study of those literatures themselves, which, stirring up the activity of our minds, and urging us to create something, but presenting to us forms borrowed so entirely from circumstances with which we are unacquainted, that we cannot have the slightest right to them as models, will compel us, after a few ineffectual essays at copying, to draw the materials with which we work from the world around us, from our own words, and lakes, and firesides, and the glorious events of our history.

In the 18th century, every one cried out that French literature must be the most glorious literature in Europe, because every nation in Europe had taken it in preference to its own. The plays of Corneille and Voltaire, screamed the Blairs and the La Harpes, are acted in every town from the Tagus to the Volga—what other proof do you want of their power and their universality? We want no other proof of their being the most beggarly productions of the human mind that ever aspired to the name of poetry. If there had been any power and originality in these works, they must either have evoked originality in the minds to which they were addressed, or have become distasteful to those minds, because there was no congeniality of feeling between them. There is no instance on record—and it is impossible, from the first principles of the human mind, that there should be an instance—of a work of genius continuing to be admired by an individual or a nation, in whom none of the powers which produced it are consciously alive. It was because French poetry was so powerless, so ungenerative, that it continued to be relished by people who could fashion nothing for themselves. There was a sympathy of deadness between the mind and the literature. The two corpses claved to each other, till the embrace was broken, as in the case of Germany, by the dead public mind acquiring life, and throwing off the incubus that encumbered it; as in the case of Spain, by their both putrifying together. The French, of all the literatures in Europe, we apprehend, is the only one that could maintain long an ascendancy in any country, because it is the only one which, meeting with a nation capable of enjoying it, would not have been the means of summoning forth that hidden native strength which would endure no foreign domination. The feelings of Frenchmen at the present moment, with regard to our literature and the German, seem, but only seem, to be an exception to this truth. Shakspeare and Goëthe, it is true, are beginning to be admired, after a fashion, in that country; and it is true that no national poetry has yet appeared there which the impulse of that admiration can have created. But this is only a temporary state of mind, which will speedily pass away: after a short struggle, they will either vomit up the new food, and return to the diet of their fathers; or, it will be really digested, and, losing all its primary qualities, will mix with their life's blood, and become a part of their system.

Away then with the notion that we shall be Italianized by studying Ariosto,—Hispanised by delighting in Calderon,—Germanised by loving Schiller. No!—the Spanish scholar, because he has become enamoured of the Castilian or the Morisco costume, for its picturesque adaptation to the people who wear it—will be just the man most superstitiously to clothe his English children in plain broad cloth and stout hose—the greatest enthusiast for Johannisberg amid the scenery of the Rhine, will cling most devoutly to Port on the banks of the Thames—the admirer of blue skies, as harmonising so well with the musical indolence of an Italian's mind, will be just he who would hold out most stoutly for our alternations

of sunshine and fog. As we become more acquainted with great foreigners, we shall become more impregnated with their spirit; and the strongest feeling in the spirit of each of them was a wish to form the loose elements of thought and feeling which lay scattered over the countries which he adorned into a firm, concentrated national mind.

THE ELLIS CORRESPONDENCE.

The Ellis Correspondence. Letters written during the years 1686, 1687, 1688, and addressed to John Ellis, Esq., Secretary to the Commissioners of his Majesty's Revenue in Ireland: comprising many particulars of the Revolution, and Anecdotes Illustrative of the History and Manners of those Times. Edited, from the Originals, with Notes and a Preface, by the Hon. George Agar Ellis. 2 Vols. Colburn, London, 1829.

THE most worthless portion of English history, that portion which presents us with scarcely any characters that are not despicable, with scarcely any events that are not spots on the national escutcheon, is the very portion of which we possess the most accurate and perfect knowledge. The Memoirs of the Count de Grammont, as the most perfect private court history in any language, from the pen of one who could say *quorum pars magna fui*,—the diary of Evelyn as a view of men and things from one who was just near enough to form a tolerably right judgment of them, without being much corrupted by the contact,—the diary of Pepys, a private still of gossip, absolutely undiluted by the least mixture of thought or feeling: these works present us with a more perfect picture than probably any nation possesses of any period of its history. But the interest of the greater part of them ceases with the death of the merry monarch. His brother, though so very considerably engaged in the gallantries of Charles's court, seems, after he became religious, to have contented himself with one mistress; and there was not much leisure in that reign for any diversions except executions. The loss too of the great star of chivalry, of him,

'With whom alone 'twas natural to please,'

had thrown a damp upon the court at the close of the preceding reign; and its liveliness was not likely to be restored by his rebellion and death. In short, those who cannot be satisfied to exchange the smile of Jermy for the frown of Jeffries, and to consider one revolution some compensation for the loss of five hundred *faux pas*, may as well close the volume of history at the accession of the last Stuart, and, therefore, need not take up 'The Ellis Correspondence.'

This work is a collection of letters, written generally by unknown correspondents, to a collateral ancestor of the editor, Mr. Agar Ellis, who was Secretary to the Commission for the Public Revenue in Ireland, in the reign of James II., and became Under Secretary of State after the Revolution. The remarks we have just made will account for the letters containing little besides dry news, the age of lively private scandal being at an end, even if there had been a Count Anthony Hamilton to describe it. The writers of these letters, too, (some of whom Mr. Ellis conjectures to have been persons hired for the purpose of reporting,) seem to observe considerable caution in expressing their opinions about the measures of which they speak.

Whether this arose from the correspondents being aware of each other's sentiments, and not thinking it necessary to refer frequently to them, or from their having shrewd suspicions that excessive loyalty to an imprudent court was unwise, certain it is, that much of the interest which might have belonged to such letters is lost by this abstinence, and they add but little either to our stock of facts, or to our concern about those with which we were acquainted previously. We will endeavour to make a few extracts which may be interesting to our readers.

The following is more lively in its style than most letters in the collection:

' London, March 27th, 1686.

' Yours are of so old a date and filed up, that I cannot tell when I last heard from you. I hope my quarrel may most justly be laid upon the ill weather, for all blows rank storms here these sixteen last days; yet his Majesty to-day (God bless him) underwent the fatigue of a long fox-chase. I saw him and his followers return, as like drowned rats as ever appendices to royalty did. I can send you little certainty of matters, but that the Navy Commission is filled up according to Peppys's good liking. I went on purpose this afternoon to your monkish brother, and spent some hours with him; that sort of interest is strong, and a sort of necessity for using it. The chief of my aim was to urge him to attack Peppys, in order to make you a Commissioner on this side the water in the Navy; he has promised me to go speedily to him, with whom he has a fair acquaintance, and the high channel your brother's credit runs in makes not the worse for you. We often believe men have greater credit with Princes than really they have, which undoubtedly capacitates them to do us greater services with equals; as in this case I hope to your satisfaction you will find. Neither are you by any means to find fault with the way taken to attain this, for St. Paul refused not to go in the ship, though dedicated to Heathen Gods. He harped at something of your backwardness to lay down some money for Sam. Pray let me intreat you, if your convenience will in anywise admit of it, consult with Will, and do it; there is the indelible obligation and affection of a brother on the one hand to urge you, and the insuring one that is both forward and able to do you offices of value on the other.

' The matter now grows somewhat barefaced which way the Catholic cause is to be advanced, for the Palatine's envoy has taken a house in the city, and is making conveniences for a mass chapel, that looks like something else than a place of prayer for his private family; whereupon the Lord Mayor, by some damned Protestant instigation, goes and forbids farther workings, locks up the place and takes the keys; but last night, his Majesty (not being to be so used) sent for Lord Mayor, and bade him return the man his goods, and ask pardon of the public minister. It may reasonably be expected that in a little time a great many so characterized may follow the example *ad propagandum fidem*. It looks with an odd face, and provoking to the mob, and ours have as weak a pretence to prudence upon such occasions as any *mobile* in the world. Stroude is dead, or dying. Lord Pembroke will succeed in one or both the commands, as I guess. Sir Edward Hales made Governor of Barbadoes. Merideth, a sort of Privy Councillor to Lord Sunderland, has put Clarke in dead Fr. Benson's room. Duchess of Northumberland's affair, I believe, is accommodating in the mouth of the river; a wise undertaking always ends thereafter.—Vol. i., pp. 81—86.

The importance attached to such an event as that mentioned in the next extract is characteristic of these times:

' On Sunday at Stamford's Chapel came in a heedless pretence, where being laughing and staring, an officer of it bade him go out, since he appeared not by his behaviour to be of that religion. He said he would not go out, and if they said much to him, he would break their crosses and juggling-boxes down; whereupon a constable seemed to form; a constable was charged with him, and the Militia officer on the guard called, but between them the fellow in fault slipped away; yet not so far but he watched the outcoming of either the priest, or an appendix of the Chapel, and beat and dragged him through the kennel. The Lord Mayor was yesterday called before the Council upon it, and told, if he kept not the peace better, the King would send some of his regiments to do it, and in the mean time, that the negligent Militia officer be taken and secured to answer the law.—Vol. i. pp. 111—112.

The following letter goes greater length than almost any in the expression of opinion, and our readers will observe the caution at the close:

' London, July 27th, 1686.

' We have many packets due here; none since Friday was sevennight. My Lord Ormond stays here in expectation; my poor Lord's concern is the chief cause of it. I was at Windsor last week, and was once in the mind to have carried the reference of the Carriages to the Attorney-General, but was kept back, and resolve to let it sleep till after Michaelmas. Your great Lord Tyrconnell we expect here next month to turn his park, for we are assured he only thinks it enough on one side yet. High doings at court and camp: the officers all ready to look out for purchases; but they must keep in the high-ways for them, inclosures being

too high for them. His Majesty, as a piece of gallantry, made all his 4000 horse march at two in the morning into Staines Meadow, and attend the Queen from thence to the Heath, where she honoured Lord Arran with dining with him. But his Sacred designs a farther graciousness in a few days, viz. to go and let all his good friends of Bristol, Taunton, and the towns about see him, and judge how decent an attendance 4000 men at arms are. The Chancellor of Scotland stays here to take Lord Middleton down with him President of the Council of that kingdom; poor Middleton hangs back, thinking of Cleveland's judgment, and of Cain's doom. The chief reason is to admit Lord Montague into his room, who is come in with the Jesuits, and will be Secretary. We little value the Austrian fashion, and keep close to the French. All our old bugs are routing out to rig up a fleet against spring; 5000 men at work in the yards: the Hollanders see the storm and dread it, for we are much beforehand with them. When matters are ripe, the Treasury will run into commission, and Powis preside. The Monk and Jesuits pull hard, the first by the King's sleeve, the other by the Queen. I think they will shuffle out Pere Mausuete from Confessor to the King, and Peters the Jesuit get in, who is also made President of Whitehall new Chapel. Your brother and Marsh and Mausuete make a sort of triumvirate of it at present. Have a care how you let any of this be seen. The gazette will tell you foreign matter.

' Lord Carlingford will go General of our Holland forces, to better model them, and not let them stay long there.—Vol. i. pp. 152—155.

These absurd verses are quoted in one of the letters, and are specimens of the trash with which Dryden was assailed by his Whig opponents:

' On the Author of "The Hind and Panther."

' Predestination how can he deny
Whose nimble Hind is "fated not to die?"
Yet how can she who this receives from fate
Of her own strength receive immortal state?
But in that faith it is not strange to see
Choice transubstantiated to decree;
Our Poet's choice is mere necessity. . . .
His vocal wants admonish him to range,
And 'twere great pity he should starve and change.
His praise of Nol obtain'd no lasting boon,
Because his hated memory stunk so soon.
Now sure he cannot fail of a supply
From a rich mother? fated ne'er to die.
But how can he receive it from the Cows,
Who likens their beloved Nuns to owls?
Nor can the Sovereign hand reward his tongue,
Who counts it his prerogative to wrong.

The lawyers' maxims he's allow'd to blame,
' Whose old possession stands till th' elder quits his claim,"

Which since the elder is not pleased to quit,
That this should yield unto its fate 'tis fit,
Like the crazed ruins of his monumental wit,
Whose darkness in the abyss of light is set,
Though glory blazes round, 'tis darkness yet.

' On the same.

' To put religion into doggel rhyme,
May well become the *Trent-lets* of our time;
For being naked found in holy writ,
They fly for refuge to her fig-leaved wit.'

Vol. i. pp. 318—319.

The trial of the Bishops is described in the following newspaper style:

London, June 30th, 1688.

' Yesterday the seven Bishops came to their trial, which held from morning till seven at night. We gave you an account of the jury in our last. The first twelve stood, only Sir John Berry was not there: they did not bring in their verdict last night, and it is said they had not agreed upon it this day at four in the morning.

' The Counsel, in handling the matter for the Bishops, divided the substance of the information into two parts, whereof the same consisted; the first was, that they had maliciously, seditiously, and slanderously made, contrived, and published, a false and seditious libel against the King, which tended to diminish his regal authority and prerogative: the second part of the plea for the Bishops was as to the special matter of their petition, which showed there was no malice or sedition in it.

As to the first point, much time was spent in proving the hands of the Bishops: that of the Archbishop was proved and well known by several; but that of

the other Bishops was not otherwise made out than by the belief and supposition of the witnesses, though their own servants were subpoenaed against their masters, so that the Court was of opinion there was not sufficient proof of their hand-writing.

As to the Archbishop, it was objected, that he could not be within the indictment, for that it was laid in Middlesex, and his grace had not been out of Surrey in seven or eight months. To this it was answered, that his signing and writing of the petition, and sending of it over to be delivered in Middlesex, was a sufficient publishing of it there. But the Court was divided in this point.

Then the King's Counsel alleged, that the Bishops had owned their hand-writing in the Council, and had also confessed the delivery of the petition. It was replied on the Bishops' side, that they had owned their hands, but after that the Lord Chancellor had required them to do it; and that they had done it, trusting to his Majesty's goodness that no advantage would be made of their confession against themselves. But they denied they had owned the delivery of the petition, much less that they had published it; and there being no other evidence of it than that they had been with the Lord Sunderland, and had offered his Lordship a sight of a petition, which he had refused, nor did he see them deliver it to the King, the Court said it was only a presumption, and no proof.

' As to the matter of the petition, whether a libel upon the Government or no, the Attorney and Solicitor-General maintained it was; for that it boldly meddled with the acts of the Government, declaring his Majesty's toleration to be illegal, and thereby tending to diminish the King's authority and prerogative royal.

' To this the Bishops' Counsel replied, that they had done but what was the right of every subject, to petition the King, and that in matter of conscience, and upon the account of religion, which they were by their oaths and by the laws of the land to take care of; and quoted several laws and statutes to that purpose. They urged also, that they did not declare the King's Declaration of indulgence to be illegal, but said only that the Parliaments of 62, 72, and 89, had declared so; whereupon the Journals of Lords and Commons were read.

' The Court was also divided in this point. The Chief Justice and Judge Allibone said that it was a libel, but Judges Powell and Holloway were of a contrary opinion.

' The Attorney and Solicitor were only for the King, and kept their ground against Pemberton, Sawyer, Finch, Pollexfen, Treby, and Sommers, who were for the Bishops.

' This morning, between ten and eleven, the Jury brought in their verdict, the Bishops attending in Court, Not Guilty in part or whole: which causes great joy.—Vol. ii., pp. 7—11.

We will take one letter out of a number, which describe the alternations of hope and fear respecting the Orange invasion:

' London, Oct. 23d, 1688.

' Our Irish tall fellows came into Holborne, where they quarter, on Saturday; on Sunday a squabble with the neighbourhood, but not much hurt, though the world talk of murder, ravishment, &c. There seems to be little use for them at last; for our last accounts from Holland say a mighty sickness among men and horses, and the Prince of Orange very melancholy. They were much shattered, to be sure, and concealed their harm what they could. We begin to vapour here apace, and strive for troops. I wish myself quit of some burthensome horses; for I look upon the terror over, but what they will have by our fleet and fire-ships, if the wind would shrink but to a moderate gale. Yesterday, before the preceding tidings came, was held a high Council here. There were summoned the Lords Spiritual and Temporal here or hereabouts, the Judges, (whereof Sir Thomas Stringer, to-day a new one, in the place of Allibone, dead,) Lord Mayor of London, Aldermen, and Sheriffs, and the eminent lawyers; where the King, in short, told them, that he did not doubt but they were all satisfied the design of Holland was to invade him; that he was firmly resolved to oppose them in person; and because he knew not how Providence might dispose of him, he had called them there, he hoped, to convince them of the barbarity of the report that had painted him so unnatural that he would debar his own daughters from the right of succeeding him, to give his kingdoms to a suppositious son; therefore, he offered the proof to be scanned before them of the legality of his son the Prince's birth, which was the Queen Dowager's oath, Lady Roscommon, Lady Bellasis, Arran, and Sur-

Sunderland, and many others, that swore very plainly and positively in the matter; and his Majesty at last declared, upon his honour, that he had often laid his hand upon the Queen's belly, and felt the child stir. This will be registered in Chancery after the same manner the late King's declaration was of the Duke of Monmouth's illegitimacy. We are low in the pocket at Court, and so am I that lie now in the neighbourhood of it: therefore, hereafter direct your's to me at Mr. Michael East's, in Ax-yard, King-street, Westminster: Sarsefield said he had not answered my note at Dublin, but would do it here, which I faintly hope. If you can do any good with Mr. Eustace, send me a bill.

'I have been scandalised and used like a dog by Lords Dartmouth and Preston: they casting out in their cups that I was a spy employed by the priests to give intelligence and drive that interest. God knows how far I have been from such designs, or injuring any body for the freedom of their private discourse; yet is this whispered about to my great trouble; and upon taxing Lord Preston, he denies all with imprecations; and Mr. Musgrave pretends to answer for my Lord Dartmouth, that he never either said or thought such a thing. I could well enough sit down with this dirt thrown at me, knowing that it will rub off when it is dry; but that the thought, I fear, sticks with my Lord D. of Ormonde. You have known some of my nearest thoughts: if you think I deserve your good word, say something to him in your next.'—Vol. ii. pp. 255—259.

MEMOIRS OF JOSEPHINE.

Memoires sur l'Imperatrice Josephine, ses Contemporains, la Cour de Navarre et de la Malmaison. Vol. II. Colburn. London, 1828.

We believe the work before us has excited much greater attention in this country than in France. Indeed, however novel among ourselves might be the anecdotes it contains, we imagine they were by no means so among our neighbours, and probably there are few of the writer's contemporaries, frequenting good society in Paris, but who might have furnished us with memoirs of equal interest and importance. It is not our wish to represent the volumes as devoid of information, far less do we design to impugn the credit that is due to them. The authoress seems to write with care, to believe what she has written and to report of Josephine much which she had herself seen; but to see and to observe are very different things. Our principal astonishment is, that any one who possessed such opportunities of contemplating the illustrious woman to whom these memoirs owe their chief attraction, should have found so little to record, about which the world will ever care to be instructed. Many traits are indeed described of her, all tending to justify the respect and veneration which society will ever cherish for her gentle and amiable character, but any one who refers to these pages with a hope of obtaining minute details of her private life, or fresh expositions of her sentiments, feelings, and opinions, will certainly be disappointed.

The book is entitled 'Memoirs of Josephine,' but Josephine occupies a scanty portion of its chapters; in her absence, however, it must be confessed other characters figure on the scene who are not altogether unworthy of attention. Let us take one of the most interesting, the Princess Pauline. Pauline Buonaparte as it is well known, was at first married to General Le Clerc, and on his death to the Prince Borghese, one of the richest noblemen of Italy:

'Madame Leclerc, was, without doubt, the most lovely person I have ever beheld. Jealousy and envy, so ready to observe defects in that which is admired, never succeeded in finding the slightest imperfection in that exquisite countenance, to which were united the utmost elegance and perfection of form, and the most fascinating grace. To censure her exterior was absolutely impossible; it was requisite either to be silent or to add ones own eulogies to those which that surpassing beauty every where excited. Happily for those women who repine at the success of others, they found opportunity enough of revenging themselves on the mind, the character, and the conduct of Madame Leclerc.'—p. 19.

The authoress having then noticed her extreme ignorance in every thing not immediately relating to dress, adds—

'At a later period, when she was known as the Princess Borghese, flattery, carried to the most abject adulation, may have found the means of proving that a sister of the great Napoleon was necessarily a woman perfect in every particular; but at the time of which I speak, the world went no further than to praise with enthusiasm her admirable face. It was right—all that could be said on that point was below reality. Without desiring to enter here into details of her private life, one must yet acknowledge the dissoluteness of her manners.'—p. 20.

The princess's indiscretions survived her personal attractions. They who beheld her a few years previous to her death, when a certain Russian nobleman engrossed her attention, looked in vain for that exquisite beauty of form and feature which had once not merely excited the admiration of the Salon, but which the tasteful genius of Canova so much delighted to portray. Our next extract is of a different character.

'M. Rabusson, the brother-in-law of Horace Vernet, evinced before Napoleon a presence of mind which gained him two steps, and prepared for him the promotion which he has since obtained. He was a sous-lieutenant in some regiment. The Emperor at a review let fall his hat, which M. Rabusson pressed forward to pick up. "Thank you, Captain," said the Emperor, without paying attention to the rank of him whom he was addressing. "In what regiment, Sir?" "Ah! true, in my guard," replied Napoleon, smiling at his own mistake, and the coolness of the spokesman. He asked his name, and learned that he was a brave man, whom various acts of merit had rendered worthy of the cross of the legion of honour. Afterwards, he kept his eye upon him, gave him some perilous opportunities of distinguishing himself, from which he came out with honour, and granted him various successive rewards.'—p. 137.

The following anecdote of one of the old noblesse of France, may perhaps surprise those of our own countrymen who have not been in the habit of considering a declaration of bankruptcy an honourable means of obtaining distinction. The father of our authoress one day surprised the Duke de Lauraguies in an agony of grief, and exclaiming that he was a ruined, a dishonoured man.

"But how, M. le Duc! what has befallen you—a frightful, horrible thing—have you lost a large sum at play?—Pooh, I am used to that,—much worse,—a fearful misfortune I tell you. You alarm me; I know not what to think, for the sorrows of the heart seldom trouble you,—and—oh! if it were only the death of a mistress!—but, alas! it is much worse than that. Twenty years ago, I did all I could to effect my own ruin; eighteen months since I became bankrupt, very honourably, very reasonably, and all Paris talked about it. Well, but see now; has not this rascal Guéméné thought proper to fail for fourteen millions! I am completely shovelled aside; I shall pass along unnoticed now; I shall now be talked of no more than a citizen of the Rue Saint Denis—you must acknowledge that I am most unfortunate."—pp. 156, 157.

The fifteenth chapter of this volume contains an animated and lively account of the alarms that must have agitated the inhabitants of Paris at the advance of the the allies on that city in 1814.

'Previous to the entrance of the allied armies into Paris, the whole disposable force of every description was called forth for its defence. To free themselves from the trouble of mounting guard, the most distinguished performers of the capital enrolled themselves in the principal military bands, of which Mehul, Cherubini, Berton, and Paër, were leaders; Nicolo, clarionet; Boyeldieu, *chapeau Minois*; Nadermann, big drum; Talon, fife, &c. All these distinguished characters, beating and blowing in amusing emulation, created a fearful discord; and, in listening to these harsh sounds, it would have been difficult to believe that the different parts were entrusted to men of celebrity in the musical art.'—Note, p. 172.

After the capitulation of Paris, Josephine, uncertain of the result which events might have upon her own fortunes, fled from Malmaison, and took up her abode for a short period at Navarre. Her only amusement seems to have been wandering in

the grounds of the palace by herself, or with a single companion.

'The conversation that at any time ensued, turned naturally upon the political state of France, or the situation of Napoleon, of whom she took a pleasure in relating anecdotes, with which she only was acquainted; but at the end of the walk she would appear overpowered with the weight of accumulated grief, and constantly finished with these words, accompanied with a sigh—"Ah! if he had only listened to me."—p. 190.

Glory and distinction are but rarely the portion of women; to them, whatever may be their mental endowments, society holds out few inducements to desert the great circle of domestic life. The transcendent abilities of some individuals of the sex have indeed caused them to be excepted, but they are few in number; the generality of those who have attracted the attention of mankind have owed that distinction rather to some fortuitous circumstances of life or death, than to their talents or their virtues. And happy has been the woman who, chosen by fortune to rank and station above her fellows, has shown herself equally pre-eminent by the excellence of her understanding and the benevolence of her heart. Of this class was Josephine, she rose from a private place in society to the most exalted, and she was respected and beloved while among her equals, and when Empress she united all around her in one common bond of delighted and grateful affection.

It was in returning from an entertainment given by her daughter Hortense to the sovereigns, that Josephine experienced the first attack of that disorder which terminated in her death. For a long time she resisted the progress of the diseases. Her thoughts and her wishes were with Napoleon in Elbe; and, could she have joined him, it is possible that her life might have been prolonged to a later date. "Never," said she, remarking on the situation of the Emperor in Elbe, "never have I deplored so greatly a divorce which has always been to me the source of affliction." On the 10th of May, the Emperor Alexander dined at Malmaison, but Josephine was obliged to retire early, in hopes that rest would bring renovated health on the morrow; but the morrow and the following days found her so much worse that, on the 24th, when Alexander and the King of Prussia were to breakfast with her, the physicians forbade her appearing; this order, however, she refused to obey, till weakness compelled her to leave her place to be supplied by Hortense. From this moment her malady took a serious turn; on the 25th, the Emperor of Russia proposed to send his own physician, but this she declined. Indeed, any aid at this time seems to have been vain; all that was possible was done by her own medical attendants. Her sickness gradually increased. On the 28th, she received the sacrament, and at that time could scarcely articulate, but her countenance had lost nothing of its accustomed calm and kindness. Alexander paid his last visit on this day at Malmaison, and at sight of him Josephine seemed to revive. The Prince Eugene on his knees near the bed, with his sister Hortense, received his mother's benediction. "At least," said Josephine, with an expiring voice, "I die regretted; I have always desired the happiness of France; I have done all that was in my power to contribute thereto, and I can say to you with truth, to all you who are present at my last moments, that the first wife of Napoleon has never occasioned any tears to be shed." Such were the last words Josephine pronounced, and the next day, 29th May, 1814, at half-past eleven in the morning, all her sorrows terminated.'—p. 241.

At the conclusion of the volume there are a few letters which will be perused with considerable interest, rather on account of the distinguished characters to whom they relate than the matter which they contain. In concluding our remarks, we must say one thing respecting the style which the authoress has adopted; she has not indeed fallen into the sin of fine writing which is generally so fatal to authors of journals, memoirs, and travels. But her book is entirely devoid of that naïveté and simplicity which constitute the legitimate grace of narration. Still we can recommend the work on many accounts to our readers, and we feel assured that those who have found amusement in the former volume, will be much more gratified with the present.

MALCOLM'S POEMS.

Scenes of War; and other Poems. By John Malcolm. 24mo. pp. 191. 7s. Oliver and Boyd, Edinburgh, 1828.

SCOTCH philosophers—lecturers at the Royal Society—authors of prize-essays at the University—and writers in 'The Athenæum,'—in one word all those persons, who are expected to furnish handfuls of reasons for every phenomenon which occurs in the world, that their hearers, readers, or sleepers may not complain of not having been allowed a choice, would be hardly driven to account for the circumstance, that soldier-poets should be as rare now as they were common in many periods of English and classical history. What can have divorced two pursuits, between which there is certainly no repugnancy,—between which, at one time, there seemed to exist something almost like sympathy? Is it because the age of chivalry is over? Alas! in the Persian and Samian war it had not begun. Is it gunpowder, then, the never-failing resource of hard-run speculators? That would be plausible, if one could only exterminate Surrey, and Sidney, and Essex, and Raleigh, and Cervantes out of history. Well, may it not be the disuse of heralds in declarations of war, which took place about the peace of Westphalia? Yes; that must be the reason,—the disuse of heralds is evidently the differing point between Æschylus and the Duke of Wellington.

These premises being settled, we are somewhat surprised that, without that ancient custom having been resumed, a gentleman should come forward to proclaim himself one of a class which ought, upon principle, to be extinct. Yet such a person is before us. Mr. John Malcolm asserts that he is a soldier; and to convince us of the fact, he has chosen, for the subject of the poems at the head of our article, the scenes with which, in his military capacity, he has been conversant. What are we to do? Shall we give up our theory? Perish the thought! Or shall we deny that Mr. Malcolm is a good soldier? That were impossible, for he has scars. Shall we then deny that he is a poet? That, indeed, is a tempting proposal to a critic, and we must consider of it.

We have considered, and we have generously decided in the negative. We will not deny that Mr. Malcolm is a poet—for we hope and trust he is one; and, did we not see one or two symptoms in his verse that are rather alarming, we should say very decidedly that he is one. The symptoms we allude to are a little too much carelessness (or else trouble, for opposite causes often produce similar effects) in the use of diction; a dangerous habit of running into the muses' shop, and buying a ready-made phrase, rather than stop to be measured for one, and too little caution even in the choice of these prepared articles, about their size and fitness. These things do, as we have said, somewhat frighten us, (being cowards not merely by instinct, but from reviewing experience) and make us hesitate in uttering the words that were just rising to our lips, that this gentleman is *doctus utriusque lingue*—one who can express his meaning, and make impressions either with his sabre or pen; and who, as he has not feared Mah-ratta soldiers, must not fear English critics.

In spite of this fault, however, we do trust Mr. Malcolm has the root of the matter in him; he is evidently an amiable, right-hearted man, and such a man has, no doubt, a stock of thoughts which he will be able to pour forth into true poetry, if he will only forget that he is writing for any purpose but to express his thoughts, and will just take the plainest, most straightforward, soldier-like language, for the clothing of them.

The following passage, from a poem called 'Retrospective Musings,' is a fair specimen of Mr. Malcolm's writing; and, if our readers should think, upon perusing it, that we have not done full justice to him in our remarks, we shall be half in-

to regard certain faults with a too jealous eye, because they are those which have most kept out of view the real essence of poetry, and have substituted the worst counterfeits for it; but, in individual cases, we are willing to allow that these faults ought to meet with great tolerance; for that very frequency which has made them so mischievous, has likewise made it exceedingly difficult to avoid them.

'Tis eve, but on the mountain-head
No farewell sunny smile is shed;
The woodland choristers are gone,
The hermit-robin sighs alone;
The waning beauty of the earth
To musings sadly sweet gives birth;
Recalling from the past again
Of thoughts a pale and pensive train,
And scenes that sun them in the rays
Reflected from departed days;
And in the mellowed radiance wear
A sainted aspect, sadly fair,
O'er which the tints of time have shed
The mournful beauty of the dead:
And there, while Memory wanders o'er
The regions of a lonely shore,
A moaning of the distant main
Is blending with my dreamy strain:
In dying sounds of softened tone,—
From music to its echo grown,
From far away come back on me
The torrent's mountain melody;
And faint and low the murmurs mild
Of streams that warble to the wild.

'For there, beneath the evening-star,
From home, and haunt, and man afar,
Oft have my wandering footsteps sought
The scenes that wakened solemn thought;
But ever dearest seemed to me
Companionship of the lone sea,
Where, o'er the foam around them flung,
The world's grey fragments frowning hung,
Dim-shadowed in a misty shroud,
Or hooded in the stooping cloud;
Where Ocean, with a quire of waves,
His anthem thundered through the caves,
And rolled through Nature's vaulted piles
Like organ's down cathedral aisles.

'There, when the wintry storm was o'er,
I loved to linger on the shore,
And gaze upon the floating wreck
On Ocean's breast, a darkening speck,
And muse on its pale crew, who found
No rest in earthly burial-ground;
But sunk, perchance, 'mid tempest's roar,
A thousand miles from every shore;
Or on some night of fate and fear
Went down when their sweet homes were near;
And while around each native hearth
Pealed songs of joys and sounds of mirth,
Perchance arose from sea to sky
Their shriek of mortal agony.—
'Tis thus the rolling world doth run,
One half in shade and one in sun;
Thus some rejoice while others weep,
And some must wake while others sleep.

'And oft upon the silent hill,
While evening brooded bright and still,
And shed a dying beauty o'er
The beetling cliff and ruin hoar,
I watched the snowy sails at rest
Far off upon the billow's breast,
And thought how blest the crews they bore
To many a sweet and summer shore,
And longed for that expected time
When I should seek a brighter clime,
And scenes that Fancy painted there
Of dying saints as visions fair.—
Delusive were the happy dreams
As those of childhood, when it deems
That earth is circled by the eye,
And wedded to the azure sky.

'When eve, of day and darkness born,
Paled like the spectre of the morn,
And from the hearth the blazing pile
Shed round the pictured wall its smile,
Whose silent dwellers there would seem
More life-like in the sportive beam,—
How sweetly then the cares of day
From weary bosoms past away,
While music's witching accents run.

Those strains that prompt the bosom's sigh,
Those magic airs that cannot die,
Eternal as the rocks that stand
The bulwarks of our native land,
Immortal as the feelings given
Unto the human heart by Heaven!

'Oft, when on high the harvest-moon
Rode clear and cloudless in her noon,
We wandered onward with delight
Beneath the cool and silent night,
When not a frowning shade was there
To dim the soft and azure air,
But all was lustre pure and mild,
A pale light o'er a pathless wild;
When Silence slumbered on the hill,
And lakes below lay bright and still,
As at Creation's dawning morn
They slept ere yet the winds were born;
Reflecting mountain, rock, and tree,
Fair as the good man's memory
Gives back, ere life's last sun is set,
Its scenes unclouded by regret.'—pp. 59—65.

CONSPIRACY OF BABEUF.

Conspiration pour l'Egalité dite de Babeuf, suivie du procès auquel elle donna lieu, et des Pièces Justificatives, &c. &c. Par Ph. Buonarroti. Deux Tomes in 8vo. Bruxelles. A la Librairie Romantique. 1828.

[Concluded from page 938.]

THE political dogmas of that levelling sect, whose formation and proceedings we have sketched in a former Number, were identical with the most violent of those to which a moment's triumph had been given by the short and terrible reign of popular frenzy; and, indeed, are pretty much the same with those which are, at all times, most favourite with a certain class of morbid mock moralists, and with the coarser, if not more criminal disciples, who receive and 'better' their instructions. The civic order, which was finally resolved by Gracchus Babeuf and his patriot band of brothers, had received its finishing touches (in theory) in the mysterious *atelier* of a secret committee, which met at the house of Amar, Rue Cléry, 'to prepare an insurrection against the tyranny, of which the iron hand pressed hourly with more weight upon the neck of the French people.' In this 'political lyceum,' after laying bare the causes of the evils which afflict nations, they arrived at a clear insight into the principles of that social order which offered the strongest remedies and securities.

'Never,' it was observed, 'had the mass of the people attained to that degree of instruction and independence needful for the exercise of the public rights essential to its liberty, its safety, and its well-being. The wisest nations of antiquity had slaves who put them incessantly in peril; and, with the exception of the Peruvians, the inhabitants of Paraguay, and other imperfectly known tribes, never had civil society been able to discharge from its breast that imposthume of the commonwealth, that herd of men made miserable by the idea of advantages of which they are deprived, and of which they believe that others are in possession. Every where the multitude is bound beneath the rod of a despot, or of privileged classes. And, if we take a less extended range, we view the French nation enslaved, by the machinations of victorious egotism, to the possessors of inherited or acquired riches.

'The cause of these disorders was discovered in the inequality of fortunes and conditions, and was traced to its true origin in the institution of private property, by aid of which the most adroit or fortunate have despoiled, and still despoil, the helpless multitude, which, compelled to long and painful toils, ill fed, ill clothed, and ill lodged; deprived of the enjoyments which it sees multiplied for the few, and undermined in physical and moral strength by misery, by ignorance, by envy, and despair,—sees nothing but hostile elements in society, and loses even the possibility of having a country.

'The history of the French revolution came to corroborate the reflections of the committee. It saw the class formerly rich, and that which had become so, assiduously engaged in securing their own pre-eminence; it saw ambitious pretensions ever marching in line with hatred of labour, and desire of riches; it saw the attachment of the people to their political

aristocrats consisted in impoverishing, dividing, disgusting, terrifying, and keeping down the labouring class, of which they represent the remonstrances as the most active cause of national disunion and decline.

'Consequent on these observations was the conclusion, that the ever-fruited origia of servitude in nations is social inequality, which, so long as it exists, must render almost illusory the exercise of their rights to a crowd of men which our civilization has sunk below the level of human nature.

'That to destroy this inequality was the task for a virtuous legislator, was the principle which resulted from the views of the committee,—and how to accomplish this, became the subject of renewed deliberations.'

Communistes des biens et des travaux was decided to be the true scope and ultimate perfection of society, 'the only public order capable of crushing oppression in every form, by rendering impossible the ravages of ambition, and of avarice, and by securing to every citizen the greatest possible portion of happiness.' It was decided in the committee, that no useful application of the laws of liberty and equality was possible, without a radical reform in the division of property.

'In developing these ideas, much was said of the philosophers, and, above all, of the revolutionary leaders by whom their justice had already been recognised. Of this number were Robespierre, and his companions in martyrdom, who, in the eyes of those whose doctrine has been just explained, had clearly aimed at the equal distribution of rights and burthens. At the name of Robespierre, Amar, who, on the 9th Thermidor, had been one of his most violent persecutors, acknowledged his error, expressed his penitence, and only endeavoured to excuse himself by alleging the ignorance under which he had laboured with regard to the beneficent views of him whom he had aided to calumniate and to sacrifice.'

Hitherto, says M. Buonarrotti, we had confined ourselves to rallying and re-animating the most active elements of revolution. It was now time to agitate the people of Paris.

'Endeavouring to conciliate the publicity indispensable to our sittings with the regulations of police, and above all with the *menagemens* inculcated by prudence, we at length became convinced that our political doctrine being a rigorous deduction from the laws of nature, it was equally rational as easy to present it as the code of the Divinity, that is to say, as the object of natural religion.'

'In fact, the practice of a worship, which represents the Supreme Being as the Creator, as the Legislator, and the protector of equality, afforded the incalculable advantage of pleasing all who only hold Christianity for the sake of its morals,—all who reject Atheism while abhorring superstition. Besides, it was founded on the opinion of sages whom humanity reveres, and reasonings impossible to be refuted; it might become, in the hands of reformers, a powerful lever for the erection of democratical institutions; it was the only legal method of addressing large assemblies of people.

'It was therefore resolved to appear in the public temples, under the title of deists, preaching exclusively the moral system of nature.

'And in order to accustom the multitude to replace by new observances the ritual of the Catholic church, an object which the government itself was endeavouring to accomplish, by introducing *fêtes decaidaires*, it was resolved to celebrate these festivals publicly, and to ask of the Directory a large church for the purpose.'

The Directory, whose articles of faith, however liberal, were not exactly comprehensive enough to include the new church militant of Tribune Babeuf, returned a civil answer, that they themselves, anticipating the devotional propensities of the gentlemen of the Pantheon, were engaged at that moment in preparing the celebration of the decadary festival. The Pantheonists, thus placed in the position of dissenters from the national establishment, resolved to 'hire a temple,' and get up, without loss of time, a catechism and ritual of their system of nature. But by this time the Directory, not unnaturally jealous of this schismatical secession from their own church in

personal invectives launched against their own body by the non-conforming club-men, as well as seriously alarmed by their increasing numbers and boldness, closed the Pantheon, as we narrated in a former number. The suppression of this, to speak plainly, somewhat heathenish synod, was entrusted to an officer, fated at no distant period to effect the re-establishment of a more regular hierarchy; and the club-law of the great Gracchus Babeuf rose in the scale against the sabre-law of General Buonaparte.

Thus baffled in their devout imagination of new fashioning religion on political principles, the ex-members of the Pantheon now determined to supersede the existing government by a secret Directory. This laudable design, however, not being of a nature to transgress with impunity the 'secrecy' of its title, was carried on by secret channels of communication with the populace of Paris, with the troops of the government (whom to seduce from their employers was one principal object,) and with the Republicans of Lyons, a small number, one would think, after the horrible extemities which their city had undergone beneath the Jacobin ascendancy. The *Tribun du Peuple*, the *Eclaircur*, and the *Journal des Hommes Libres*, were the avowed and published organs of the party. In addition to these, a quantity of flying sheets, placards, and pamphlets, were diffused throughout the country with incredible industry; counting the brood of anarchy before it was hatched, the 'secret' directors agreed that the populace of Paris, on whose habits of revolt they reckoned confidently, should nominate the provisional authority to which the government of the nation was to be trusted on the success of the intended insurrection. The new Government was to consist of a national assembly, composed of one democrat for each department of France; and the new revolution being completed, the secret directory was still to keep its seat, and to watch over the conduct of the national representative, as the Committee of Public Safety had done before it. The preparations were completed, the conspirators assembled, the day of insurrection fixed, and a member of the revolutionary committee had, under its dictation, written the first line of a proclamation to the French people—'*Le peuple a vaincu, la tyrannie n'est plus, vous êtes libres*'—when his own freedom was unfortunately violated by the arrest of that tyranny which he was thus unceremoniously denouncing as having ceased to exist. The whole documents and proofs of the conspiracy were discovered at the house of Babeuf, who addressed from his prison an epistle to the Directory, in which he offered them terms with all the coolness of a demagogue at the head of an unsubdued and powerful party. Impelled by an equally invincible fanaticism, his partisans, in the night of the 23d Fructidor, (August,) marched at midnight, about 600 or 700 in number, to the camp of Grenelle, where they expected to be abetted in their projects on the rest of the troops by a battalion of the department of Gard, which, unfortunately for them, had been displaced from its station. Alarm was given,—the dragoons, half-naked, charged the insurgents, and military commissions finished afterwards the work which their sabres had not time to complete. As for Babeuf and his accomplices, after a summary trial, which they signalized by the boldness of their defence, and by singing the *Marseilloise* in chorus at the close of each sitting, the two principal plotters (Babeuf and Darthe) received the sentence of death, which they vainly attempted to anticipate by suicide; and seven others, amongst whom was the author of these volumes, were transported to Cayenne.

Want of space forbids us to translate for our readers the farewell letter of the Tribune to his wife and sons, Emilius, Camillus, and Caius, beginning '*Bon soir, mes amis: Je suis prêt à m'envelopper dans la nuit éternelle.*'

LIFE AND ADVENTURES OF SELKIRK.

The Life and Adventures of Alexander Selkirk; containing the real Incidents upon which the Romance of Robinson Crusoe is founded. By John Howell. 12mo, pp. 196. Oliver and Boyd. Edinburgh, 1829.

MR. HOWELL, besides being a Scotchman, is also evidently a very meritorious man. He read Robinson Crusoe when he was a boy, and herein he differed not from many of his contemporaries; but the reading produced one effect upon ordinary men, and another upon Mr. Howell. He did not dream as we, or any body else might have done, about the scenery of Juan Fernandez, Friday, and so forth; nor did he conceive the intension of visiting Juan Fernandez, and procuring a footman with a cognomen derived from one of the days of the weeks; nor did he seclude himself from his family, and endeavour, so far as might be in a Scotch parish, where there is much butter-milk, and many things else that make glad the heart of man, to realize the discomforts of his hero's situation. His thoughts were of higher matters: he was resolved to find, not the paltry island which had been merely the theatre upon which Robinson had acted, and which might as well have been any other place not in the Pacific, but the very man himself, the identical Crusoe. For this purpose, early one morning, in the year 1823, Mr. Howell journeyed forth in search of the parish of Largo, in which Robinson Crusoe, there better known by the name of Selkirk, first saw the light. Great were the rejoicings of Mr. Howell when he discovered his name entered at full length in the parish books; but there were yet happier days in reserve for him than this; the cups and the chest in which Alexander Selkirk had kept his tea were revealed to him, probably by some miraculous interposition; and not long after, an aged person connected with this world, we believe, though that point is left in some mystery, who knew some stories—not very good ones, but that signified but little—of the wanderer. Two years passed over the head of Mr. Howell, and the end of them still found him an unquiet man, for as yet the character of Robinson had obtained but little elucidation from his labours. But now was coming the crowning joy of his existence. Mr. Howell, while walking to and fro in search of facts, met with a great-grand-nephew of the adventurer. This apparition, we confess, would have overpowered us; we could not have approached such a being for the world; the departed Robinson is almost a too insupportably living creature for us, but an actual bodily great-grand-nephew of his would have completely upset us. Mr. Howell, however, is a very bold man. He not only came near the man, but literally (we almost tremble while we repeat his words) made his acquaintance, and found him, strange to say, a very pious, humble sort of man. From him Mr. Howell learnt much; but his insatiable love of truth, as he rightly calls it, caused him to hunger for more. After reading files of all the English periodicals, looking through most of the newspapers published in the last century, diving into MSS., reading through folios, he at last succeeded in collecting the facts that he deemed necessary for a life of Selkirk, and thus, having first committed this very entertaining little volume into the hands of the printers, he reposed from his labours. Alexander was a sadly unruly boy. His first feats are thus described:

'When the accounts reached Scotland of the Revolution, and of the expulsion of the Stuarts, the complying clergy, who were in general much disliked by their parishioners, were in many places turned out of their churches with tumult and reproaches. In no part of Scotland was more zeal shown at this time for the non-complying ministers than at Largo. On the first Sabbath-day, the people assembled in the churchyard, with such arms as they could muster, to resist the clergyman's entry into the church to do the duties of his office. Alexander's eldest brother, John, was ringleader, and Alexander himself, though only thirteen years of age, flourished his bludgeon by his side. But no attempt was made to resist the mob, and their

pastor, after dividing among the poor what money was in the poor's-box, quietly retired from his parish, having few supporters when forsaken by the government.

Until the year 1695, Alexander continued at home working with his father; but he was still very unsettled, and gave to his parents much cause of uneasiness by his wayward humours and irregular conduct, which at length brought him under church censure. Being now eighteen years of age, and spurning the control of his father, he went to sea, rather than be rebuked in church for his improper behaviour. For a period of six years he remained abroad; but in what situation, or in what particular part of the world, there are no documents to prove. That he was with the Buccaneers in the South Seas I am much inclined to believe for the two following reasons:—1st, His boisterous conduct to his younger brother, Andrew, who was weak in his intellects, for only laughing at his drinking salt water by mistake, and his attempt to seize a pistol (probably brought home with him from sea,) shows a recklessness of consequences which he could only have acquired among that body. 2dly, His appointment to be sailing-master of the Cinque Ports galley, a situation of trust, requiring a previous knowledge of the seas to be navigated, when a fit person can be obtained. At this period there is no probability that they were scarce; and Dampier himself, an able seaman, knew well how to choose his officers, and never would have given his consent to the nomination of a master not fully qualified,—pp. 22—28.

The voyage in the Cinque Ports galley, Captain Dampier, of which he was master, is given at great length. The cause of his landing at Juan Fernandez is thus stated:

‘From this period, until the end of August, the Cinque Ports kept cruising along the shores of Mexico, or among the islands, without any success, the St. George having gone to the coast of Peru. During this period a violent quarrel arose between “Honest Selkirk,” as Harris call our hero, and Captain Stradling. So high did the dispute arise, that Selkirk resolved to leave the vessel, whatever might be the consequence. At length want of provisions, and the crazy state of the ship, compelled Stradling to sail for the island of Juan Fernandez, to refit. He was in hopes of recovering the stores and men which they had left there at the commencement of their cruise in these seas; in which, as has been already remarked, he was disappointed, as the two French whalers had taken away every thing, and he only recovered two of his men, who had been successful in concealing themselves. Their account of the manner in which they had spent their time, fixed the resolution that Selkirk had formed some time before, to leave the ship and remain upon the island.

‘From the beginning to the end of September the vessel remained undergoing repairs. The disagreement, instead of being made up, became greater every day, and strengthened the resolution which Selkirk had made to leave the vessel. Just before getting under weigh, he was landed with all his effects, and he leaped on shore with a faint sensation of freedom and joy. He shook hands with his comrades, and bade them adieu in a hearty manner, while Stradling sat in the boat urging their return to the ship, which order they instantly obeyed; but no sooner did the sound of their oars, as they left the beach, fall on his ears, than the horrors of being left alone, cut off from all human society, perhaps for ever, rushed upon his mind. His heart sunk within him, and all his resolution failed. He rushed into the water, and implored them to return and take him on board with them. To all his entreaties Stradling turned a deaf ear, and even mocked his despair; denouncing the choice he had made of remaining upon the island as rank mutiny, and describing his present situation as the most proper state for such a fellow, where his example would not affect others,—pp. 62—64.

His feelings on the island we will not give after Mr. Howell, because, as the name does not make much difference in this matter, we take it that Defoe's account of them may be altogether as true. His rescue we give:

‘Alexander saw the boat leave the Duke and pull for the beach. He ran down joyfully to meet his countrymen, and to hear once more the human voice. He took in his hand a piece of linen tied upon a small pole as a flag, which he waved as they drew near to attract their attention. At length he heard them call to him, inquiring for a good place to land, which he pointed out, and, flying as swift as deer towards it, arrived first, where he stood ready to receive them as they stepped on shore. He embraced them by turns; but

his joy was too great for utterance, while their astonishment at his uncouth appearance struck them dumb. He had at this time his last shirt upon his back; his feet and legs were bare, his thighs and body covered with the skins of wild animals. His beard which had not been shaved for four years and four months, was of a great length, while a rough goat's-skin cap covered his head. He appeared to them as wild as the original owners of the skins which he wore. At length they began to converse, and he invited them to his hut; but its access was so very difficult and intricate, that only Captain Fry accompanied him over the rocks which led to it. When Alexander had entertained them in the best manner he could, they returned to the boat, our hero hearing a quantity of his roasted goats'-flesh for the refreshment of the crew. During their repast he gave them an account of his adventures and stay upon the island, at which they were much surprised. Captains Dover and Fry invited him to come on board; but he declined their invitation, until they satisfied him that Dampier had no command in this expedition; after which he gave a reluctant consent.—pp. 91—93.

We omit his next set of adventures, which, however, are well worthy of record, and are well recorded, to join him on his return to Scotland:

‘For a few days Selkirk was happy in the company of his parents and friends; but, from long habits, he soon felt averse to mixing in society, and was most happy when alone. For days his relations never saw his face from the dawn until late in the evening, when he returned to bed. It was his custom to go out in the morning, carrying with him provisions for the day; then would he wander and meditate alone through the secluded and solitary valley of Keil's Den. The romantic beauties of the place, and, above all, the stillness that reigned there, reminded him of his beloved island, which he never thought of but with regret for having left it. When evening forced him to return to the haunts of men, he appeared to do so with reluctance; for he immediately retired to his room up stairs, where his chest at present stands, and in the exact place, it is probable, where it then stood. Here was he accustomed to amuse himself with two cats that belonged to his brother, which he taught, in imitation of a part of his occupations on his solitary island, to dance and perform many little feats. They were extremely fond of him, and used to watch his return. He often said to his friends, no doubt thinking of himself in his youth, “That, were children as docile and obedient, parents would all be happy in them.” But poor Selkirk himself was now far from being happy, for his relations often found him in tears.

‘Attached to his father's house was a piece of ground, occupied as a garden, which rose in a considerable acclivity backwards. Here, on the top of the eminence, soon after his arrival at Largo, Alexander constructed a sort of cave, commanding an extensive and delightful view of the Forth and its shores. In fits of musing meditation, he was wont to sit here in bad weather, and even at other times, and to bewail his ever having left his island. This recluse and unnatural propensity, as it appeared to them, was cause of great grief to his parents, who often remonstrated with him, and endeavoured to raise his spirits. But their efforts were made in vain; nay, he sometimes broke out before them in a passion of grief, and exclaimed, “O, my beloved island! I wish I had never left thee! I never was before the man I was on thee! I have not been such since I left thee! and, I fear, never can be again!”

‘Dr. Lamond, who resided in Largo, and died there a very old man, used often to point out to John Selcraig, the teacher, the spot where the cave was formed, as he remembered, when a child, to have seen the solitary Alexander seated under its roof.

‘Having plenty of money, he purchased a boat for himself, and often, when the weather would permit, he made little excursions, but always alone; and day after day he spent in fishing, either in the beautiful bay of Largo, or at Kingsraig Point, where he would loiter till evening among its romantic cliffs, catching lobsters, his favourite amusement, as they reminded him of the crawfish of Juan Fernandez. The rock to which he moored his boat is still shown. It is at a small distance from Lower Largo, to the eastward of the Temple-house.

‘It was thus he lived during his short stay at home, evidently far from being happy or contented. The visions he had formed of domestic life could not be realized, and he remained among his friends only because he knew not what better to do with himself. He found that he was not fitted for society; his enjoyments were

all solitary; his pleasures were derived wholly from himself; he felt oppressed by the kind attentions of strangers. At length chance threw an object in his way, that awakened in his mind a new train of thoughts and feelings, and roused him from his lethargy. In his wanderings up the burn-side of Keil's Den to the ruins of Balcruivie Castle and its romantic neighbourhood, he often met a young girl seated alone, tending a single cow, the property of her parents. Her lonely occupation and innocent looks made a deep impression upon him. He watched her for hours unseen, as she amused herself with the wild flowers she gathered, or chanted her rural lays. At each meeting the impression became stronger, and he felt more interested in the young recluse. At length he addressed himself to her, and they joined in conversation: he had no aversion to commune with her for hours together, and began to imagine that he could live and be happy with a companion such as she. His fishing expeditions were now neglected. Even his cave became not so sweet a retreat. His mind led him to Keil's Den and the amiable Sophia. He never mentioned this adventure and attachment to his friends; for he felt ashamed, after his discourses to them, and the profession he had made of dislike to human society, to acknowledge that he was upon the point of marrying, and thereby plunging into the midst of worldly cares. But he was determined to marry Sophia, though as firmly resolved not to remain at home to be the subject of their jests. This resolution being formed, he soon persuaded the object of his choice to elope with him, and bid adieu to the romantic glen. Between lovers, matters are soon arranged, and, accordingly, without the knowledge of their parents, they both set off for London. Alexander left his chest and all his clothes behind; nor did he ever claim them again; and his friends knew nothing and heard nothing of him for many years after; still they kept his effects untouched in hopes of his return. Both his father and mother were dead, when, in the end of the year 1724, or beginning of 1725, twelve years after his elopement with Sophia Bruce, a gay widow, by name Frances Candis or Candia, came to Largo to claim the property left to him by his father,—the house at the Cragie Well. She produced documents to prove her right; from which it appeared that Sophia Bruce lived but a very few years after her marriage, and must have died some time between the years 1717 and 1720. This is farther established by the will and power of attorney, preserved in the Scots Magazine, vol. xlvii., page 672, which is dated in 1717.—pp. 128—135.

Our readers will perceive from these extracts that the work is not the less amusing because much pains have been bestowed upon it.

LETTER TO SIR ALEXANDER MALET, BART.

A Letter to Sir Alexander Malet, Bart., in reference to his Pamphlet, touching the late Expulsions from Winchester School; with a Word, in passing, to the Editor of 'The Literary Gazette.' By an Old Etonian. pp. 26. Wilson. London. 1829.

We wish we had any authority for saying, that the writer of this pamphlet had impudently and falsely assumed the designation of an ‘Etonian.’ It would be perfectly consistent with the whole spirit of his pamphlet that he should have done so; yet it has so often been our misfortune to meet with young men combining, in a remarkable degree, the brains of idiots and the hearts of coxcombs, who, we were positively assured, did issue from that ancient foundation, that we should be afraid to impeach the veracity of any new person similarly endowed, who should put forth the like pretensions.

Fortunately the true Etonians, gentlemen alike in feeling and in exterior, are also very numerous; and to those we must trust the defence of their venerable institution from the disgrace which such a person as this would entail upon it, if he could be believed, for a moment, to be a fair representative of its feelings. In his attempt to answer the excellent pamphlet of Sir Alexander Malet, this very foolish and very ill-meaning person maintains that fagging is to be preserved, because it is not expedient to part with our public schools, and to substitute modern schemes of education for the schemes that were contrived by our forefathers,

We should not have conceived it possible for idiotcy to reach such a sublime point as this. That a human brain should be found capable of confounding the notions of the scheme of education laid down by a set of men wise, at least, in their day, with the monstrous invention which the evil passions of boys have grafted upon it, certainly never entered into our imagination. We are obliged to the author for proving that a lower depth of imbecillity than we had ever sounded may exist in every creature—but we must at the same time exhort the members of his school, lest other monsters as extraordinary should arise up and call themselves Etonians, to prove, by their zealous support of the reform which Sir Alexander Malet has had the honour of recommending, that in their opinions it is necessary to the permanence of the institutions established by our forefathers, that they should be purged of the abuses which have been introduced into them by their descendants.

CATALOGUE RAISONNE OF RECENT PUBLICATIONS.

Hermes Britannicus. A Dissertation on the Celtic Deity Teutates, the Mercurius of Caesar, in further Proof and Corroboration of the Origin and Designation of the Great Temple at Abury, in Wiltshire. By the Rev. W. L. Howles, M.A. J. B. Nichols and Son. London, 1828.

This learned treatise, by a learned man and a poet, is well worthy the attention of our readers. We have not now time to go into an antiquarian discussion, but we shall probably return to the subject which involves much that is curious in historical mythology.

Present State of Van Diemen's Land; comprising an Account of its Agricultural Capabilities, with Observations on the Present State of Farming, &c. &c. pursued in that Colony: and other Important Matters connected with Emigration. By Henry Widowsen. S. Robinson. London, 1828.

This work must be exceedingly useful to Emigrants. Its contents do not possess enough of general interest to warrant us in making extracts; but we heartily recommend any person who has an inclination of visiting the settlement, to study them carefully.

Dews of Castalie: Poems, composed on various Subjects and Occasions. By J. Johns. R. Hunter. London, 1828.

THESE Poems are evidently the production of an ardent mind. The writer, we think, has had a strong desire of fame before his eyes while writing them; and this stimulus has sometimes supplied the place of that stimulus, which is furnished by a 'mind o'er-labouring with the weight of thoughts.' If Mr. Johns will resolutely banish all consideration of the honour which is to come from his poetry, and will just consider the poetry itself, we have no doubt the fame which he is now likely to lose by seeking it too earnestly, will reward his labours. The 'Dews of Castalie,' however, display considerable talent.

The Companion to the Almanac; or Year-book of General Information, for 1829. Knight. London, 1829.

WE noticed some weeks ago 'The British Almanac,' published under the direction of the 'Society for the Diffusion of Useful Knowledge.' That diligent body has now compiled another work as a companion to the preceding, which contains more matter, and is likely, we think, to obtain even a wider circulation.

The Origin of Life, the Cause of Diseases, and the Source of our Feelings and Senses Explained and Demonstrated. By James Morrison, the Hygeist. 8vo., pp. 16. Sherwood and Co. London, 1828.

THIS beats cock-fighting. A man undertaking in the space of sixteen pages to explain the origin of life—the reason of diseases—and the causes of our feelings and senses. Of course, the learned author begins with demolishing the hypothesis of a soul, which such weak persons as Bacon and Leibnitz were fain to entertain. This is done in two lines; and the rest of the book is employed in establishing the author's own system, which, after all, is not much more

monstrous than that of other materialists; for if man once gives up the certainty that he has a soul, if he once admits that he can be argued out of his consciousness, he involves himself in a sea of contradictions, in which the wisest are as much lost as the most contemptible, and Hume and D'Alembert become degraded to the level of Mr. Morrison the Hygeist.

NEW MUSIC.

No. IV. of Select Subjects from Haydn's Creation and Seasons, newly adapted as Divertimentos for the Piano-forte. By J. B. Cramer, and inscribed to Miss Hall of Totteridge, Herts. Cramer and Co. Price 4s.

It was with much pleasure we noticed the three previous parts of this estimable work in the former numbers of 'The Athenæum'; and we also derive an increased satisfaction in recommending this the fourth part. It is wholly arranged from Haydn's delightful Seasons, and the indefatigable Cramer has very judiciously chosen an interesting variety of movements. It commences with two pages of the overture in G minor, expressing the passage from winter to spring; this is relieved by the soothing allegretto in G 6-8ths, 'Come, gentle Spring,' (varied and embellished in Cramer's best manner,) and the third movement in C, 'With joy the impatient Husbandman,' is well contrasted with the pastoral finale, 'From out the fold the Shepherd.'

The whole is highly tasteful, elegant, and pleasing, without difficulty.

'Lassie, let us stray together.' A Ballad, sung by Mr. Sinclair; the Music composed and dedicated to Miss Syle. By B. Horne. Horne and Son, 2s.

A very pleasing and flowing melody in the Scottish style, well suited to Sinclair's voice and manner, and being within the compass of nine notes only, the highest being F on the fifth line, quite applicable to the voices of amateurs in general. The author is a clever and intelligent professor, occasionally residing at Liverpool and Manchester, and his compositions are published by himself at both places.

Brilliant Rondo for the Piano-forte; composed and dedicated to Mrs. J. C. Wilkinson. By W. Wilkinson. Op. 2. Ewer and Johanning, 4s.

Thirteen pages of one uniform and monotonous movement, in the noisy, military, common-place key of D, unrelieved by the smallest contrast or variety. About one-third of the quantity, preceded by a slow movement, would have made an acceptable publication, for the general arrangement is not devoid of imagination, and the modulations are tolerably grammatical and ingenious, excepting an occasional flat 7th being not resolved, or made to ascend.

Zuleika's Rose; written by Lord Byron, and composed expressly for Miss Paton. By John Barnett. Mayhew and Co. 2s.

This is by far the best specimen we have yet seen of Barnett's writing: it abounds with excellent modulation, appropriate expression, and good taste, in every particular. It presents a grand scene of three movements, and although overflowing with chromatic changes, yet the vocal part is by no means difficult of execution; it may be 'caviare to the multitude,' but it must be admired by the connoisseur and well-informed professor.

The favourite Airs in Pacini's Opera, 'L'Ultimo Giorno di Pompei,' arranged for two Performers on the Piano-forte. By A. Diabelli. Book 1. Boosey and Co. 5s.

Three pieces, extending to twenty-three pages, form this first book, and present a well-arranged variety of clever music. The opera is not very well known in this country, (not having yet been performed here,) but to those who are acquainted with it, we may notice that the pieces chosen are as follow: 1st. 'Viva Salustio,' prelude ed introduzione, andante in C, 3-4th time, modulating into two other movements in A, and concluding with an allegro in C. 2d. 'Di porporine rose vazzose,' a very pleasing chorus in A minor, and afterwards major. And 3d. 'Marcia D'entrata di Salustio,' a clever march in F, à la Rossini. The whole is well adapted for the performers, (which we have with pleasure proved in the trial,) and is not only the newest piece published but one of the best. It is unusually well engraved and brought out; and we hope to notice the second book very soon.

Mozart's Operas, arranged with embellishments for the Flute. By Charles Senst. No. I. Cocks and Co. 3s.

Twelve of the most estimable beauties from Mozart's inimitable 'Le Nozze di Figaro,' form the first book of this very desirable work, comprising the essence of the whole opera. The embellishments are not so intrusive or overwhelming as to obscure or deteriorate the simplicity of the original, but are conceived in the best taste, and offered in the most perfect manner.

SONNET.

AN awful statue, by a veil half hid,
At Sais stands: one came to whom was known
All lore committed to Etruscan stone;
And all sweet voices that dull time has hid
To silence now, by antique pyramid,
Skirting the desert, heard; and all the deep
May in its dimly-lighted chamber keep,
Where genii groan beneath the seal-bound lid:
He came, and raised that yet unlightened veil
With hands not pure, but never did unfold
What he had seen: the shadow, madness, fell
On his few days, before he went to dwell
With night's eternal people, and his tale
Has thus remain'd, and will remain, untold.

SONNET.

ACROSS the main my spirit was beguiled:
Amid the blackness of a cypress wood,
By the slow windings of a sable flood,
An ancient mound, o'ergrown with flowers, was piled:
Upon it stood a Schem and a child,
Sole heirs of that so fiercely-squandered blood,
Whose sires, the hunters of the western wild,
Beneath them lay in the dim solitude.
Last of his nation, long the chieftain gazed
Upon his silent boy with steadfast eye;
Then, with untrembling arm, the hatchet raised,
And sternly whisper'd " 'Tis the hour to die!"
He hid his son in that ancestral tomb,
And sought from Christian swords a warrior's doom.

BRANDANE.

Cheap Pleasures.—How little is requisite to supply the necessities of nature! and in a view to pleasure what comparison between the unbought satisfaction of conversation, society, study, even health and the common beauties of nature, but, above all, the peaceful reflection on ones own conduct: what comparison I say, between those and the feverish empty amusements of luxury and expense? These natural pleasures, indeed, are really without price, both because they are below all price in their attainment, and above it in their enjoyment.—Hume, on qualities agreeable to ourselves and others.

A book is the most singular production in the world: printed by people who do not understand it, sold by people who do not understand it; bound and read by people who do not understand it, and I had almost said, written by one who does not understand it.

The finest satire is unquestionably that which carries the least venom and the most conviction, so that it even moves the smiles of those it assails. Such was the character of Lord Chesterfield's speeches in the upper house. Dr. Maty, says of him that, 'he reasoned best when he appeared most witty; and while he gained the affections of his hearers, he turned the laugh on his opponents, often compelling them to join in it.'

Dugald Stewart.—The Plymouth subscription for the monument to the late Dugald Stewart already amounts to 1,584l.

Rocheffoucault's maxims, 'dans l'adversité de nos meilleurs amis nous trouvons toujours quelque chose, qui ne nous déplait pas,' certainly sounds strangely, but whoever denies its truth, understand neither it nor himself.

NOTES ON LISBON.

No. IV.

EXECUTIONS.

CAPITAL punishments are very rare in Portugal, perhaps not once in two years. The usual mode is hanging, in which case the criminal is turned off a ladder, as was formerly the practice in England; but here, the moment the unhappy wretch is launched into eternity, the hangman jumps off the ladder after him, and, by throwing himself upon his shoulders, breaks his neck, and terminates his struggles in an instant.

But for very heinous offences they have a more imposing execution, well adapted to impress the mind with awe, though not more painful to the suffering party than the other. The following is an account of an execution of this kind which I witnessed:

Two men had been found guilty of forging the paper currency of the country to a very considerable amount, and to make a proper example of them, an old law, which had lain dormant for nearly a century, was put in force; this law submitted them to be burnt alive. But as even the Portuguese, (as well as ourselves,) are too refined now to relish roasting our fellow creatures, as an epicure does a lobster, they were first allowed to be strangled.

These wretched men were, on the day of execution, brought from the prison accompanied by several priests, and attendants, bearing the banner of some saint, preceding the criminals, and marched very slowly to the *Caes do Socrê*.* They wore only a long loose white dress, which reached from the shoulders to the ground: it hung very full, and was confined round the middle by a white sash. They were bareheaded and barefooted: indeed, they had no article of dress on but the white robe.

In the centre of the square a stage was erected, the flooring of which was of thick oak; but the planks were left about an inch asunder, to admit the ascending flames when the fuel, which was placed beneath, should be lighted. The stage itself was about six feet from the ground; in the middle of it was a post about eight feet high, and in front of that, and connected with it, was a seat for one person.

When the men arrived at the place of execution, a priest addressed them for some time, after which one of them ascended the platform, and was placed on the seat with his back against the post. The executioner then bound him, by a rope passed round his middle, to the stake; another rope confined his thighs to the seat, and his feet were also firmly tied down to the flooring; his hands were tied before him, secured at the wrists, and a cord behind him bound his elbows close to his sides. Thus secured, he could not by any exertion or convulsion move a limb.

A priest then mounted the platform, and stood for a long time talking to the poor wretch, who seemed occasionally to answer to questions put to him. The priest then came forward to the front of the stage, and addressed the multitude, in a sermon, for about a quarter of an hour, or twenty minutes. His figure was commanding, his face handsome, and uncommonly expressive, his action graceful, and his voice clear though deep. The subject of his discourse was suited to the sad occasion, and he sometimes turned towards and addressed the criminal. When this discourse was ended, he once more approached the culprit, and receiving the cup and wafer from an attendant, administered the sacrament to him. He then prayed over him, kissed him on the forehead, and sprinkled him with holy water.

The priest now quitted the scaffold, and the executioner proceeded to his office; he pulled the hood of the white dress the criminal wore over his

head, so as to entirely conceal his face, and then passed a circular rope over his head, bringing one part of it round the front of his neck, and passing the other part (or bite) of it through a hole in the post behind, and then through the loop of that he passed a short stick, by turning which round he gradually tightened the rope round the man's neck, and then, instantly, with all his might, and with the utmost velocity, twisted the cord, by means of the stick, till it not only strangled the man, but actually broke his neck, as was perceived by his head suddenly falling forward on his breast with a jerk; indeed I thought I *heard* the neck break. In this situation he was left for twenty minutes, after which he was unbound from the post and seat, and laid on his back on the stage by the side of the post.

The other criminal, who had stood a miserable, trembling spectator of his associate's execution, was then supported up to the same place, for by this time terror had rendered him too feeble to walk without assistance; and the horror he had endured for the last hour, in being obliged to witness such a scene, and in which he was soon to bear a principal part, must have been a punishment far greater than the death itself.

The same ceremony and execution again took place; and after this man was also laid on the stage the executioner left it, and the fire was applied to the fuel beneath. The flames soon rose through the openings of the floor, which had been left for that purpose, and seized the linen robes that covered the bodies, which in about half an hour, were entirely consumed.

Their ashes were then collected and thrown into the river, according to the sentence.

One curious circumstance attended the burning of these men. They were placed on the platform side by side; and after the rope, which confined their arms behind was burnt, the contraction of the muscles of the arms by fire, caused them gradually to rise in a perpendicular direction from the stage, extending towards heaven; and the cords, which confined the wrists together, not being burnt through, the hands remained clasped, as in the act of supplication. The arms continued in this posture till the whole of the bodies were consumed, when they fell into the flames. The effect of this circumstance was uncommonly awful; even after death, they seemed to implore mercy from their God, while one atom of their persons existed.

Upon the whole, I could not but consider the method of *thus* strangling a criminal, infinitely superior to our indecent mode of hanging. Here the whole person was concealed by a white full drapery; and so secured that not a motion or convulsion could be perceived through the whole time of their suffering; whereas with us, every struggle of agonised expiring nature is exposed to view, with savage and indecent inhumanity.

Never can I forget an execution I was once forced to witness. Three men were hung together (for rebellion in Grenada, West Indies, in 1796-7,) on a gallows, and that being very narrow they were necessarily hung rather close together; the consequence was, that in the spasmodic struggles of death, by jerking up their knees, and turning round and round, as suspended by the rope, they were for five minutes alternately kicking each other on the breech: an effect that, in spite of the solemnity of the scene, was indecently ludicrous.

PUBLIC PREACHERS.

I have often lamented the monotonous tone and action of the generality of our clergymen in the pulpit; the latter is most times wholly wanting, except in giving the unfortunate pulpit cushion a few clumsy thumps, which generally produce more dust than they *awaken* attention; or should the reverend gentleman be the owner of a very white hand, it may tempt him to display that and his cambric handkerchief together.

How much, on the contrary, have I been sur-

prised and pleased, upon hearing and seeing the clergy in Lisbon address their congregations. Sermons are not considered in Portugal as *church fixtures*, but are only given upon particular occasions, such as some remarkable saint's day,—some public rejoicing, or grieving, &c.; and the report that a sermon is to be preached on such a day, in such a church, is sure to attract as full an attendance as ever Garrick or Siddons could command in even their happiest efforts. Nor do I wonder at it. The discourse, which I believe is *actually* studied and weighed prior to delivery, is always conveyed to the hearers by *speech*, not read from an ill-written manuscript, and therefore has this advantage, that it leaves the body and every limb at liberty. Whereas, I have in England felt a kind of painful fidget, when I have seen the preacher in evident fear of *not reading it right*, or, as sometimes happened, of turning over two leaves at once, which would produce a kind of cross-reading, calculated to call forth any thing but serious attention in the auditors; or, should he be near-sighted, and not quite master of his subject, you might imagine he was smelling as well as looking at it. Here, on the contrary, the orator being made fully acquainted with what he intends to say, having his head, body, and limbs free from restraint, besides being possessed of a full clear voice,* it is no ways astonishing that they should at once instruct, delight, and claim our unqualified approbation.

Though by no means a proficient in the Portuguese language, yet their delivery is so distinct, their emphasis so just, and their action so accordant with their subject, a person may always understand the substance, and much of the detail of their discourses, which, as with us, last about twenty minutes.

STREETS AND HOUSES.

The streets in Lisbon are, to a stranger, the greatest obstacle to his pleasure, comfort, or exercise. Like Rome, Lisbon may be said to stand on its seven hills, or rather on its seventy; for, with the exception of the three beautiful streets leading from the *Praça do Commercio* to the *Rocio*, and those crossing them at right angles, the whole city is one continued jumble of up and down, nearly every street being in itself a hill, and many of them are so steep that it would be extremely dangerous to ride down them with any other animal than a mule, being quite as much so, as the hill of roly-poly-celebrity in Greenwich Park. They are all paved in the same manner as the carriage-way in the streets of London, nor is there any part appropriated to the accommodation of foot-passengers. It appears as if, in paving them, the labourers had chosen the sharpest point of the stone to place upwards, and such is really the case. The want of flagged foot-pavement, and the sharp roughness of these, at first annoyed me; and I felt very much inclined, every time I walked out, to quarrel with what I thought the perverseness and laziness of the people, for they have inexhaustible quarries of stone all round Lisbon; but a little consideration convinced me that they were right, and, that I, like all those who form hasty conclusions from first appearances, was wrong. The fact is, the streets are in general so very steep, that it would be, if not impossible, at any rate extremely dangerous, to walk on a smooth surface; while, on the contrary, by being thus rough-paved, every stone becomes a step, or hold for the foot, both in ascending and descending. That they have been thus paved from an idea of security is evident from the three streets above-mentioned, and all those lesser ones which cross them at right angles, (on a level about half a mile square,) being paved the same as our best streets,

* I have been informed by themselves, that those who are brought up in the respective convents as public preachers, are always, besides other qualifications, chosen from among those who possess, naturally, a clear, strong, and harmonious voice. Nor are the advantages of manly beauty disregarded.

* A small square so called, near the river, and open towards it. *Caes* signifies a Quay.

with broad flat stones. The channels for carrying off the rain, &c., run along the centre of every street.

But there is one abominable nuisance which can never meet with justification in any shape, particularly when it is considered that perhaps no city in the world possesses a finer supply of water, by means of which, notwithstanding the steepness of the streets, there are few parts in which sewers and drains might not be made,* (though now the overflows and waste water of all the fountains is supposed to run unprofitably down the streets.) But that not being the case, every species of dirt is thrown from the windows of the houses into the streets, where what is not devoured by the city dogs is left to putrify. This olio of filth is only partially taken away about once in seven weeks, in their dirt-carts, or in hampers on mules, and the stench caused by disturbing it for removal is insupportable. In the lesser streets, lanes, and alleys, it is never removed, except when the violence of the winter rains carries it into the Tagus.

There is, however, a law, though it is very little attended to, which strictly forbids the throwing of any thing from the windows before the hour of ten at night, and then the person who throws it ought to give warning by first calling out three times *Agua vai* (water is coming); a transgression of this regulation incurs the penalty of a fine, which, if not paid, is changed into imprisonment. Nevertheless you are in danger of, at least, dirty water every hour in the day; though, should this happen, the occupier of the house, (or floor,) from whence the annoyance was thrown, is obliged, on application, to pay you the full price of the article which may be thus wetted and spoiled, whether hat, coat, or any other part of your dress. Should he refuse, the party injured has only to fetch a police-soldier, who, on a further refusal, lugs him off to prison till he complies; and, at all events, is himself entitled to four dollars for being called in to settle the dispute. The only difficulty is to ascertain from which window the offence was committed; for most of the houses being many stories high, and every story inhabited by a different family, you must be very sure that you fix on the right floor, before you make your demand or complaint; and, in general, the offending person withdraws from the window so quick, that it is almost impossible to detect him.

The surest way of avoiding a salute of the kind, which at night is doubly unpleasant, is, in passing through a wide street, to walk in the middle of it, and in narrow streets to keep as close as possible under the houses, at the same time being on the watch whenever you see a dirt heap; for as one window on each floor is ever used to throw their filth from, (generally a passage window,) it consequently always falls in the same place, and there accumulates. The window set apart for this purpose may always be known by the filthy wall of the house under it.

* Though there are numerous wells, and might be as many more, I never could learn that there was a single pump in all Lisbon.

† I should imagine that this prevalence of offensive smells may have originally been the cause that produced the disgusting custom of spitting I have mentioned. I certainly think, that very strong effluvia may be tasted as well as smelt, and then spitting instinctively follows. Thomson had the same idea relative to sweets, 'Or taste the smell of dairy.'—*Spring*—THOMSON.

‡ I had an opportunity of knowing that the same penalty is incurred if a person's dog injures you. I saw the flap of a gentleman's coat torn off, as he was walking very quietly along, by a dog which had laid hold of it slyly. The gentleman followed the dog into his master's house, who, on finding what he done, paid the gentleman twenty-four dollars for a new coat. The dog belonged to a rich lawyer, on whom I was billeted at the time.

SKETCH OF COUNT A. DE LA BORDE'S TRAVELS IN THE LEVANT.

ADDRESSED TO THE PARISIAN ACADEMY OF INSCRIPTIONS AND BELLES LETTRES.

You have asked me, gentlemen, to afford you a narrative of my journey; a request, which induces me to regret that I have not availed myself of the opportunities afforded me for rendering it less unworthy of your attention, or at least more deserving of your indulgence; I shall, therefore, proceed to acquaint you with its object, and trust to that circumstance as pleading my excuse.

Having devoted myself particularly to my son's education, and being extremely desirous that he should one day claim a place in your esteem, I thought I could not do better than subject him to a new, more extended, and more laborious system of education,—a system, indeed, which appears to me to be requisite at the present time of day, if we would have our childrens' education keep pace with the ideas and attainments of the age.

To develop this system to you in all its bearings would lead me into a discussion far too prolix for the present occasion; I shall merely remark that it consists, as respects its first portion, in combining with classical studies, and several modern languages, exploratory travels through the most celebrated regions of antiquity, or, in other words, the periphrasis of the Mediterranean. It will be evident to you, that although such a design as this does not exclude discoveries, it does not contemplate them as a principal object.

With a view of rendering this undertaking more attractive and less costly, I was desirous of associating several juvenile companions with my son, that they might, at the same time, take a part with him in the species of studies in which he was engaged; and I had the good fortune to meet with some young men, whose qualifications were entirely such as I wished for. One of them was Mr. Becker, the son of the worthy general of that name, and himself an officer of the *Etat-major*, a youth full of zeal and talent; a second was Mr. Hall, an Englishman of rank; and the third was the Duc de Richelieu, who was obliged to leave us much sooner than we could have wished, for the purpose of discharging a debt of gratitude.

After devoting a considerable space of time to studies in Italy, and making a short stay in the Ionian islands, we set foot on the classic soil of Greece, where a galaxy of interesting scenes awaited our inquiries. The political state of the country, however, compelled us to invert the order of our labours, and to commence them from another quarter of the Ottoman territories. The first of our researches, therefore, which can pretend to any thing like a character of importance, dated from Smyrna, where we arrived on the fifteenth of July.

You are well aware, gentlemen, that Asia Minor is not altogether so familiar to us as it might be; and yet, what other region is there which excels it in recollections and memorials of the deepest interest? Former travellers have confined their visits chiefly to its coast, and have not penetrated further inland than twenty or thirty leagues. We have essayed to complete their labours by exploring its interior, and thence rejoining them at the stations, at which their steps were arrested. Our first voyage was from Smyrna to Constantinople, taking Sardis on our way. This, which was the most interesting town on our route, lies upon a height, which commands the plain of Hermo: the ruins of its walls extend from either bank of the Pattolo, an insignificant rivulet, which, even in Strabo's time, had ceased to roll its golden particles along its current. Two Ionic columns, supporting a large cornice, constitute the sole remains of the temple of Cybele. Nothing can equal the elegance of their capitals, the volutes of which are ornamented with small palms; they do not rise more than a yard from the ground, though

their diameter enables us to estimate their elevation at fifty feet. On the declivity of the hill on the opposite side are seen a theatre and stadium. There is not one solitary human being to be found in this once celebrated place. The tents of the indigent Uraks, a nomadic race, here and there enliven the banks of the Pattolo; nor are any other monuments to be discovered from the summit of the rock of Cræsus, excepting the tombs of the Lydian kings. These consist of a species of huge mounds of earth, (tumuli,) about seventy in number; and amongst them may be recognised the tomb of Alijattes, the father of Cræsus, which Herodotus records to have been the most extensive monument he had beheld, with the exception of the pyramids; in truth, it bears a close resemblance to an actual hill. As the historian adds, that this tomb was raised at the expense of the frail ones of Sardis, it is reasonable to infer from its size, that the morals of that capital were not of the most rigid order.

On quitting Sardis, and traversing the Hermo, you reach the plain of Ircania, and enter the chain of mountains known by the name of Youssouf-Dugh, which extends from the Olympus to the Ida, and divides the waters of the sea of Marmora from those of the Archipelago. Along the whole of this route we met with fountains from time to time: they are the fruit of private beneficence, and their founders' names are graven upon them, most commonly accompanied by a short verse from the Koran. Amongst other inscriptions of this kind, we were much struck by the subsequent distich:—'The most perfect of men is he who is most useful to his fellow-creatures.'

I shall not speak to you of Constantinople, gentlemen; it offers nothing which is more familiar to the world than the beauty of its site, and the paltry splendour of its public edifices. During our sojourn in that city, we were the witnesses of three events, which fully display its peculiar characteristics; these were the plague,—a fire,—and a revolution. After abiding for seven weeks under the roof of Guilleminot, who loaded us with attentions, we thought it was high time to start upon our expedition to Cairo, through the interior of Asia. The success of this journey depended upon the manner in which we set about it; and, for this purpose, it was necessary that we should deviate from the plan usually adopted by preceding travellers, to which Seetzen and Colonel Boutin had fallen victims. We, therefore, determined upon supplying ourselves at Constantinople with horses and fire-arms; at tired ourselves in the Moslem costume; took with us a firman, drawn in the most expressive terms, through the intervention of the French embassy; and, independently of an official Tater and an interpreter, added several experienced servants to our convoy. By these means our troop consisted of twelve horsemen, each of whom was armed with a double-barrelled gun; so that our weight of metal was superior to what could be brought against us in any of the places where we were under the necessity of making our halts. Thanks to the judicious application of an occasional handful of paras, (a small Turkish coin,) we conciliated the good-will of all classes so effectually, that in those parts where, if unattended, we should scarcely have been permitted to take down a single memorandum, we were allowed peaceably to sojourn whilst we made drawings and took admeasurements of monuments, and neither roused suspicion on the part of the inhabitants, nor received molestation from their enmity. The low price of provisions in the Levant renders this mode of travelling by no means expensive.

Such was the plan we pursued in traversing the interior of Asia Minor, Syria, and Palestine. As it is impossible for me to afford you a complete account of our labours, or the observations arising out of them, I must content myself with adverting to the leading discoveries or researches which we achieved.

When we had taken our departure from Nicomedia and Nicæa, which offer many noble ruins to the inquiring eye, we took an easterly course towards the banks of the Sangar, and had scarcely reached the vicinity of lake Sobariju, the ancient Sofone, when we fell in with a Roman monument of noble dimensions; this was a bridge of six arches, preceded by a triumphal arch, and terminated by a similar structure in the form of a vault, resting against a hill, and opening on both sides for the thoroughfare of a Roman road. At a distance of ten leagues, south-west of Cutahia, the most elevated point of this part of Asia, we reached a Roman town, which has never been visited by any former traveller; nor is it adverted to by any of the ancient Itineraries. Its principal structures consist of a large theatre, a stadium, several porticoes in a good state of preservation, though of diminutive elevation, and an Ionic temple of the most elegant style of architecture, the columns of which are fluted, and composed of a single slab of marble, thirty feet in height; they sustain a frieze, decorated profusely and with the most exquisite taste. From the fragments of an inscription belonging to the façade, we gathered that this temple was restored during the reign of Adrian and was dedicated to Apollo. The Turks call this place Chapter; it is watered by a stream, which is crossed by a Roman bridge of five arches, in as perfect a state at this hour as the Roman vault to which it leads.

From Chapter we journeyed to the Phrygians ruins, described by Colonel Leake, and had the good luck to discover a second ruin of the same description in the same valley: nay, six leagues beyond this, we found a third, having an inscription in similar characters. But our greatest anxieties were directed, and two months of our time necessarily devoted, to exploring the region comprised between Affiom-Karahissar, Denislü, and Isporta: our object was to determine the sources and course of the Meander, the Lico, and the Marsia, and the sites of a variety of ancient towns, seated on their banks; especially those of Hierapolis and Aphrodisia. The former, which was constantly celebrated for its mineral waters, still retains the mephitic cavern, mentioned by Strabo, in which birds fall lifeless to the ground; the ruins of the temple of Apollo, and a long list of magnificent tombs. From the centre of Aphrodisia, the present Guera, rises the temple of Venus, which is of the Ionic order, and of which a considerable portion is still existing. On its left are the Theatre and Stadium: and from side to side extends an Ionic portico of the most consummate elegance. Aphrodisia is indisputably the city of Venus; a sort of Cupids support the garlands which decorate the frieze of the portico; and a chase, which is led by Loves, in pursuit of all kinds of animals, adorns the internal frieze of the temple, many fragments of which still exist in a good state of preservation: a hundred Greek inscriptions, scattered among the ruins, serve to enhance the intense interest which the sight of such a spot cannot fail to inspire.

The road from Guera to Konie, through Isporta, traverses a region of mountains, intersected with spacious lakes. This district may be styled the 'Switzerland of Asia Minor.' Eyerdir resembles the 'Isola bella' of the Lago Maggiore. This great chain of mountains incloses several ancient towns, which had not been previously recognized, and the site of which it became our task to ascertain; amongst them are Salagasso, Antioch of Pisidia, Greenna, and Selga, though none of them were so deservedly entitled to our researches as Konie, the ancient Iconium. This city contains curious vestiges of all its various stages, and particularly the Arabic remains of the Seljuk Sultans, which are no ways inferior to the Moorish edifices of Spain, whether for the elegance of their structure, or the excellence of their architectural design.

(To be continued.)

A PROPOSAL FOR THE CONSIDERATION OF MR. PEEL.

THE invention of the present circulating medium has generally been regarded as the foundation of that extended system of commerce which has contributed so largely to the happiness of mankind. Whether it was expedient, in barbarous times, to use such a method of facilitating exchanges, we cannot pretend to decide; but that it is not the best adapted to the present times, may be made obvious to the meanest capacity. The matured commercial energies of the nineteenth century need not lean on the props which assisted the infancy of traffic.

To vulgar minds, and such are those of all practical and all theoretical men, the divisibility and portability of the precious metals have always appeared the qualities which particularly adapted them for a medium of exchange. These we have long considered as precisely the causes of some of the greatest evils of our social intercourse; evils which we can see no mode of obviating, except that of boldly renouncing the dangerous use of metals, returning to the wise customs of our antediluvian forefathers, and effecting all exchanges by the natural process of barter, or, at any rate, permitting no other than the ancient circulating medium, horned cattle.

Pounds, we are ready to admit, would not be such bad things, if it were not for their detestable division into shillings and pence. There would be few objections to the revival of the ancient talent; but, as long as we have our present scale of small monies, so long must the great practical evil of existence, the demand for ready money and prompt payment, harass that unfortunate class of men, the payers. The payment of small bills is the greatest annoyance of man in a civilized state. For large bills he makes up his mind; these he generally incurs with some deliberation, and the prospect of being called on to pay them is always present to his mind, and induces him to shape his expenses accordingly; and, at any rate, he is generally allowed to take time to discharge them. But a small bill is an active poison; no long day is allowed by it to its victim, and their number makes up for their diminutive size. Their name is a legion; they come in quick and awful succession, like the train of phantoms that haunt the opium-eater. They do not, once and calmly, drain the life-blood from you with the deadly avidity of a vampire, but haunt your waking and sleeping hours with the pertinacious sting of the mosquito, and render life a constant and burdensome succession of petty but maddening annoyances.

And then, who is there on whom they produce that impression which the payment of money ought always to make on those who possess it in but a limited supply? Alas! it is in these small dribbles that our money imperceptibly glides from our hands. We forget that great law of nature, that the sum of the parts makes up the whole: we heed not the evanescence of our 10*l.* and 8*l.* notes in the shape of small change,—we convert the solidity of sovereigns into the fluidity of shillings,—the peace-table is not before our eyes. Who is there that keepeth watch and ward over single pounds?—who counteth the outgoings of shillings and sixpences?—who cherisheth the penny and its moiety as the seeds of greater coins? Few, indeed, there be, who are endowed with such wisdom, and few who do not repent over the emptiness of a gradually eviscerated* purse.

Both these great evils—the evil of constant demand and constant payments, and the consequent

* This singularly beautiful and expressive word is adopted from Blackstone's Commentaries. But we hope that the application of it to the reduced form of empty purses will be considered as a less jarring stroke than the Learned Judge's ferocious injunction to tear out the bowels of truth.

evil of the imperceptible diminution of our funds, would be prevented by the substitution of the pecoral for the pecuniary medium. You could never be bored into the payment of a small bill, because you never would have any coin sufficiently small to pay it with. Suppose a tradesman came to ask you to pay him six and eight-pence; your answer would be, 'I have got a fine ox down in Devonshire, but it won't be fat for a couple of months.' 'I make it a rule,' he would answer, 'never to book these small accounts.' 'Very well,' would be your reply. 'In that case, you have probably got change for a ram which you'll find down at Smithfield.' Here you have made him a legal tender. Is it likely that he can give you change in wethers or lambs? He mutters out that he has'n't the change about him; it will do another time—he rids you of his odious presence, and you are fearless of any recurrence of his importunities. The other evil would of course vanish with the first. No man would fling away sheep and calves, as he does half-crowns and shillings: and the most thoughtless could hardly spend a herd of oxen without thinking of it.

It may be suggested, that it would be inconvenient to tradesmen to be kept so long out of their money. The experience of all London shows that the wish for payment so prevalent among that class, is a mere vulgar prejudice; and that a shop-keeper is just as well off when he is unpaid as when he is paid. And at any rate, the interests of a class comparatively so small as that of sellers, can never be put in competition with the welfare of the many, that is the purchasers.

But the use of cattle, or other heavy goods, as money, would produce even greater benefits by reason of their not being portable. No man could be expected every time he walked out, to drive a herd of live stock before him through the streets. A tradesman thinks it now no impertinence to ask you to put your hand into your pocket, and pull out a few shillings, to pay for any article you have bought. But even if he should have the hardness to make such a request after the substitution of flocks and herds for gold and silver, the purchaser would, of course, answer, 'my good fellow, do you think I carry horses and cows in my breeches pockets, or bales of cotton in my purse. Send your man with the things, and I'll give you a draft on my grazier for an edge-bone of beef at the next Taunton fair.' What could he do but obey? Every other customer would make him much the same answer.

There would then be no need for a Mendicity Society, because beggars would get nothing for their begging. The wretches who bore us at the crossings of the streets, would be heard with contempt by the penniless proprietor of cattle. Guards and coachmen would learn the futility of demands which could not be gratified. Donations to servants would not exhaust the finances of the visitor of country friends. And the unblushing importunity of the lower orders would fail of extorting the ponderous bulk of a Christmas box, or a 'summut to drink.'

The security of property would be greatly increased by every increase in the size of the medium of exchange. Horse-stealing and sheep-stealing abound much in this country; but they are at any rate crimes much more difficult of commission than the picking a pocket. The country gentleman, who had received a dividend in Lancashire cattle, might safely commit his horned balance to a driver, and return to the White-Horse-Cellar without fear or the necessity of keeping his hands in his breeches pockets.

The banker and the philanthropist will observe with delight that this change in the monetary system would put a simultaneous end to the crime, and the sanguinary punishment of the forgery of bank notes. Bank notes there would be none, and who could forge sheep, or pass off forged bullocks?

The confidence in banks would be greatly

augmented; for the dealings of the banker would be transacted in the markets; and you might estimate his liability to meet a run by the size of his stalls, and the droves which entered them.

Again, the public would be guarded against the fraudulence of moneyed men. Could Mr. Austin have been suspected even of embezzling 30,000*l.* worth of four-footed beasts? Could the nation have been sufferers by the defalcation of many myriads of heifers or ewes in the Navy Office? Could Mr. Rowland Stephenson have suddenly decamped with the value of 160,000*l.* in live stock? Could he have safely embarked such a booty for America, or could he have lain hidden, as some suppose, in the heart of the city, without danger of being betrayed by the howling and bleating of his animated Exchequer bills?

There would be no false coining, and no melting of money to send it into foreign parts. We should rarely hear the plaint that money was going out of the country. Nor should we have to pay foreigners in useful commodities for the wasteful return of an unproductive medium of exchange. Our money would be raised in our own country. Usury would be impossible, because the natural periods of gestation would point out the only possible rate of interest which could be asked or given.

We could mention many other advantages of the alteration in our monetary system, which we have recommended in the foregoing remarks. But, for the candid, enough has been said; and any additional arguments would have but little additional effect on those whose prejudices they would not dispel. Above all, we expect little candour from the miserable gang of cold-blooded theorists who are called political economists; obstinately wedded to a *system*, on *no one point* of which (as Mr. Brougham has asserted) do *any two* of them agree, they will meet an original proposition with the disdain of insolent inaptitude for truth. And yet we might trust a little to the strong mind of Mr. Malthus, to whom the boldest conclusions are but as geese and turkeys; and we cannot help hoping that he will lend a favourable ear to the suggestion of a medium of exchange, which bears so close an affinity to his own cherished 'measure of value.'

Dark as are the waters on which we fling forth our truth to be hid for a while from the view of man, we know that it will float on their bosom into a brighter channel, whose distant gleam now cheers our eye. The day will be, (ay, and that a right early day,) in which there shall be a great change in the currency of this our native land. Men, that is Englishmen, shall not barter all that is dearest to them for idle and inanimate dross. There shall be a natural expression of a natural and unselfish commerce. The bustling haunts of traffic shall reflect some of the cheerful features of rural innocence and quiet. The pale and cunning visage of the stock-jobber shall give place to the ruddy cheek and manly morality of the shepherd. Rustic sights and rustic sounds shall make glad our hearts with the memory of by-gone days. And the stranger who shall visit the congregations of merchants, and the thronged halls in which the wealth of the world is bartered, shall find the Arcadia of ancient days in the Exchange of London, and recognize the visionary features of pastoral bliss in the monetary system of the 19th century.

FOREIGN NOTICES.

The Nuraghes of Sardinia.—There are six hundred of these ancient memorials extant in the island of Sardinia. Those which are in a perfect state, are generally about fifty feet high, ninety feet in diameter at their base, and their summit terminates in an inverted cone. They are constructed of various kinds of stone, such as are

found on the island, and their usual site is the top of some hill, standing in a plain; in a few instances, they are surrounded by a wall ten feet in height. The origin of these remarkable and long unnoticed monuments is indisputably to be traced to that portion of Grecian history which refers to the Heraclides and the Pelasgic colonies, and various authorities may be adduced from the ancient writers, particularly Diodorus of Sicily, Pausanias, and Aristotle, in proof of that origin. M. Petit-Radel, who has treated this subject with great judgment, notices the perfect coincidence of the events recorded by those writers with the whole history of the Pelasgic migrations. He shows, for instance, that some of these memorials were built by Dædalus, who planted colonies during the age of Iphicles, Iolas, Minos the Second, Œdipus, and Atreus; and, to prove the existence of the Arcadian colony of Aristæus, which Pausanias places in the earliest ages of Sardinian story, he brings into juxtaposition the records of that hero with those of Cadmus, whose daughter he married, and Nanas, the Thessalian, the founder of the Pelasgic colonies in Italy, of whom there are still extant considerable remains on the coast lying opposite to Sardinia.

Sardinia.—There have been some singular variations in the population of this island during the last fifty years: though it is now on the increase, the following statement shows that it has greatly declined during that interval. The numbers of its inhabitants were, in

1775,	426,375
1802,	387,830
1816,	351,867
1824,	412,357

From this statement, which is drawn from official documents, the amount of its population, as given by recent statistical writers, at 460,000 to 470,000 souls, is an evident exaggeration.

The natives of Sardinia are mostly of middling stature, though characterised by the symmetry of their shape, and their great muscular powers. They are peculiarly remarkable for an uncommon activity of mind, and possess great natural taste for science and poetry. Though a spirit of revenge impels them, on some occasions, to destroy its object, the harmony which pervades their domestic economy would shed lustre on the most lovely periods of the patriarchal state. The feudal system still obtains throughout the island, gorging the few at the expense of the many, and presenting a wall of adamant against the advancement of its welfare and civilization.

The direct taxes amount to 916,647 Piedmontese lire, (28,193*l.*) and the indirect, to 1,725,901, (71,910*l.*) The revenue of the clergy yields an annual sum of 960,000, (40,000*l.*) of which 264,000 fall to the share of the bishopricks, though on this last sum, it should be remembered, the government is entitled to charge as many pensions as are equivalent to one-third of the amount. Independently of the Universities and other establishments for education, the present sovereign has established normal schools in all the villages; they receive pupils at the age of eight years, from which age the learner passes through a three years' course of regular studies. When Viceroy of the island in 1804, he also founded a 'Society of Agriculture and Husbandry,' as well as the 'Monte di Soccorso,' an association exclusively designed for the support and encouragement of agriculture. The incubus of feudalism and superstition, however, must be removed before the industry of the Sardinian can raise his country from its present low estate. Of this, its unhappy condition, no further proof can be needed than that the whole island contains not one paper-mill—and only one solitary manufactory of cotton goods. Every article of leather, hardware, woollens, and linens, save coarse household cloths, is drawn, with some paltry exceptions, from foreign countries. The oil trade is the only

branch which shows any symptoms of increase.—*A. de la Marmora.*

Indigent Population of France.—Out of a population of thirty-two millions, as many as five millions are in a state of positive indigence, either professed, or incipient beggars! The country is plundered by 130,000 individual depredators; and of these, from 15 to 20,000 are apprehended and punished. The expense of providing for the public safety, costs the state an annual sum of 160,000*l.*, and the value of property stolen or damaged, cannot fall short of 80,000*l.* a year. There are more than 150,000 persons under confinement in prison, or vegetating in hospitals, &c.; and above 60,000 children of mendicant or indigent parents cast forth daily upon the world without any asylum beyond tap-rooms, forests, and dens of smugglers. In short, France contains more than 3,000,000 human beings who do not know from one month to another whether they are to live or starve. To complete this harrowing picture, it is lamentable to see the back ground filled up by 11,464 criminals annually discharged from the galleys, and 7,896 prisoners released from confinement.—*M. Laforest.*

Tea Trade in Russia.—Tea is one of the most important objects of Russian commerce, and contributes far beyond any other article to the prosperity of the fair held at Nijni-Novgorod, which receives its supplies upon the breaking up of the ice in the Siberian rivers. These supplies are forwarded on sledges from Kiakta, on the Chinese frontier, to Tomsk in Siberia, where they are sometimes detained six weeks or two months, awaiting the season for their shipment. Descending the Oby and ascending the Irtysh, they are again put on shore, and conveyed, a distance of twelve versts by land, to Perme, whence they are sent by water to Nijni-Novgorod. Their first departure from Kiakta takes place in the beginning of February, and those of 1827 reached Nijni-Novgorod on the 25th of July. They occupied eight-decked vessels, (*raachives*), each carrying from 200,000 to 250,000 pounds' weight; the eight cargoes being worth above 600,000*l.* The cost of carriage is nearly ten per centum, and the article is sold at twelve months, with one half per cent. discount. It is packed up carefully in lead, covered with skins, so as to preserve it from contracting any obnoxious savour from substances with which the package may come into contact. The tea imported by land-carriage into Russia is greatly superior to that imported by sea into England; as, in the latter instance, it cannot be so effectually secured as not to imbibe saline exhalations during the voyage.

The first essays made by the Siberians and Bashkirs to lead their caravans across Chinese Tartary to Pekin, occurred about the year 1653. They bartered their skins and furs for gold, silver, precious stones, stuffs, and tea; but their coarse deportment subsequently induced the Chinese government to prohibit their entrance into its territories, and they were obliged, in consequence, to restrict themselves to a petty traffic on the frontiers. The commercial treaty entered into between Russia and China in 1689 received a more extended form in 1712, when Peter the Great sent Laurent Lange as his envoy into China. Ever since that period, this branch of Russian trade has assumed gradually a more settled and substantial form.

The better descriptions of tea are known by the names of the original growers or manufacturers; and there are above two hundred different kinds, each familiar to the dealers by its parental designation, and prized accordingly. The wealthiest of these dealers are the merchants of Moscow, who conduct their barter with the Chinese through the medium of their own agents at Kiakta, and have recently attempted to defraud their customers by increasing the weight of the lead in which the tea is packed.—*Bulletin du Nord.*

KING'S COLLEGE.

We have been favoured with a copy of the plan for conducting King's College, which have been prepared by the Provisional Committee, and will be submitted to the body of subscribers; but as they have already appeared in the pages of a contemporary, we will only extract two or three of the most interesting articles, upon which we intend to make some remarks in an early number of 'The Athenæum.'

GOVERNOR.—All fundamental regulations concerning the course of studies, and the internal discipline of the College, which the Council may frame from time to time, as well as the appointment and removal of all the officers of the College, will be subject to the approval of the Governors.

TUTORS.—Tutors will be appointed by the Principal, with the approbation of the Council. One or more of the Tutors, under the direction of the Principal, will reside in each house, or in each portion of the College allotted for the reception of Students; they will be responsible to the Principal for preserving good order and discipline, and will be removable by him, with the approbation of the Council.

STUDENTS OF THE HIGHER DEPARTMENT.—The resident Students will be subject to such regulations as the Principal may from time to time announce. They will all be required to attend the service of the Church of England in the College Chapel on Sundays.

PUBLIC EXAMINATIONS.—At these Examinations, the Students' knowledge of the evidences of natural and revealed religion, and of the doctrines and duties of Christianity, as taught by the United Church of England and Ireland, will be carefully inquired into. Every Student will be expected to exhibit a certain degree of proficiency in these subjects.

LOWER DEPARTMENT.—The system here carried on will embrace a Course of Religious Instruction suited to the age of the Pupils, Classics, Arithmetic, Elementary Mathematics, the Modern Languages, &c.

THE DRAMA.

Covent-Garden.

Is not 'The Beaux Stratagem' a good comedy? and was it not well acted at Covent Garden last Saturday? On the first of these questions we trust there is no one who requires to be illuminated,—as to the second, we need scarce do more than mention the name of Kemble, Keeley, Power, Bartley, and Miss Chester; but we can say in addition, and in good faith and sincerity, we have not partaken of a richer treat the whole season. The manners of this comedy, and almost all the characters, are certainly of a past date, but the humour of the incidents and dialogue were as fresh, easy, and forcible, as they could have been in the days when it was a picture of living existence. It is true (and perhaps to be lamented also) that the landlords of public inns are quite another guess sort of rogues now to what they were in the days of old Boniface. As to the road, what gentleman could undertake to live decently by it now when the stage-coaches come so thick and so quick, that one has no time to cut a traveller's throat with the proper degree of cunning and attention to his feelings, before bang goes the blunderbuss of the Royal Mail at your head. Alack-a-day! as the saying is, Captain is no longer 'a travelling name,' except to tourists on the Continent. Pistol and sword have been exchanged for false-key and center-piece, and the whole profession (Oh! shade of Gibbet!) incorporated with the organised police of the metropolis. *Tempora mutantur!* We have ourselves visited at a late period, and with no ordinary interest, the fair and famous city of Litchfield; yea, we have drank deeply of the copas-cup of its ancient, loyal, and free corporation; other objects of interest, such as the vestigia of Johnson, Garrick, Darwin, Seward, and last, not least, the fine monument of Chantrey, were all cared for easily, and in comparatively small space, after the conclusion of morning service; the remainder of our time we devoted sedulously to the recognition of the scene of 'The Beaux Stratagem.' Alas! the place was no more like its old picture than the new Palace to Greenwich Hospital. To be sure, the landlord of our hotel had a good red ale-drinking sort of face,—but his Anno Domini was any thing but 'confoundedly strong'; and when we rang the bell, with love's catechism hanging at our tongue's end, instead of Cherry, came in an old lean withered figure of a waiter; we dismissed the spectre, which had driven out our fair vision, with an internal ejaculation of—'Hence! avaunt! thy bones

are marrowless, thy blood is cold,' and bade him bring us for our consolation a glass of cherry brandy.

We observed, too, with regret, that all traces even of the French officers are beginning, after two generations, to disappear from the countenances of the inhabitants; the sharpness of the Gallic contour is becoming rounded again into the fullness and solidity of English flesh and bone;—changes, no doubt, attributable in some measure to the quartering of two or three of our own regiments there within the last twenty years.

The Dorindas and Mrs. Sullens had flaunting bonnets and proud eyes, but we could see no symptoms of 'corn, wine, and oil' upon their countenances. The Archers and Aimwells were sufficiently exquisite; but, strange to say, they wore black coats, and seemed to have nothing to practise on but targets. We made great and persevering inquiries respecting the scite of Lady Bountiful's mansion, but could only ascertain that it was no where in the vicinity of the close. We felt a great longing, on entering the church, to 'bow to the Dean, (especially as the verger had got his 'half-crown,') but could not catch the eye of the 'commanding officer,' who scarcely seemed to expect the honour we intended him; out of church, however, we are informed the custom is still much in vogue, so much, that when whist is played in the Close, that dignitary always has the privilege of choosing trumps at his own table.

To return to Covent-Garden. This picture of the past is more interesting to us than any picture of the present; it might not be so were our artists equal to the old ones. We have already expressed our unqualified approbation of the acting; still we must in justice say, that Charles Kemble, though eminently successful, can never be the Archer that Elliston was; he is perfectly and naturally the gentleman, but still there is a restraint, a want of real ease, about his acting, which is supplied by his clever and entertaining manner of assuming it; Power is a better substitute for the Jack Johnstone of the old cast in 1814; we think him one of the richest humorists on the stage. Still more irresistible was Keeley, the successor of Bannister, in Scrub. Whenever this actor adds to his author, and he often does so, it is sure to be an improvement: an effect which could not take place, if he did not feel perfectly the humour he depicts. Take, for instance, the following: 'Arch. How many are there of them? (thieves).—Scrub. Sir, eleven-and-forty.—Oh! kill him, kill him, Sir. I never saw a man killed in my life.' Such of our readers as have seen Keeley, may imagine the effect of these last words better than we can describe it; the house did not recover from them for many seconds. Miss Forde is in person the very representation of Cherry, and she played the part perfectly, and with some humour. She is indeed a promising actress, which, added to her more than respectable qualifications as a singer, gives her a chance, we think, of some day becoming a favourite. But Miss Chester—what a gorgeous woman! just arrived at the limits which separate, *emboupoint*, and what gross people call fatness, she is at this time grander than we have ever seen her. What shall we call her? a seventy-four in full sail? or, as Burns better expresses it,

'A glorious galley, stem and stern,

Well rigg'd for Venus' barker.'

Then how well she acted, we thought. It was principally through the assistance of her bye-play and Charles Kemble's, the scene of Aimwell's fit in the arm chair, presented the best group we ever saw upon the stage. We cannot conclude without a word respecting the omission of certain passages upon certain accounts. It is not our foible to be strait-laced; on the contrary, we would have love's catechism retained exactly as it was written; we consider it neither immoral or indecent at all; but whilst this was curtailed, there were passages allowed to remain which must shut the doors of the Theatre against all modest women; a little disguised, indeed, it is true, but still more than half naked; and when the gross laugh of the gross majority of the audience tears away the veil altogether with an insulting and triumphant peal, we insist upon it, that Mr. Fawcett has no right to accuse our impure imaginations (to say nothing of the ladies) of not abiding by their own chaste interpretations of the sense.

Illustration of a passage in Thucydides.—Athenian Cicade.—The common tradition among the ancients was, that cicades were, *and sponte*, produced from the earth; and as the Athenians believed themselves to have had a similar origin, they, for that reason, wore little golden images of cicades in their hair.—*Redi. Opuscula*, 10.

POPULAR LITERATURE.

'Ut in vita, sic in studiis, pulcherrimum et humanissimum existimo, severitatem comitatemque miscere, ne illa in tristitiam, hæc in petulantiam, procedat.'—*Philo Epistola*.

I.

'Collecting toys
As children gathering pebbles on the shore.'
Milton's Paradise Regained.

1.—PORTICAL.

Sir Walter Scott and Dr. Gall, the Phrenologist.—It has been aptly remarked, that the advocates of the phrenological system carefully publish every fact which supports their theories, but none which oppose them. Whether the following anecdotes merely prove an error in judgment of the celebrated founder of the system, or the heads examined to be examples of perverse configuration, we shall leave others to decide.

When Dr. Gall was in this country, he went, in company with Dr. H., to visit the studio of our eminent sculptor Chantrey. Mr. Chantrey being engaged, they amused themselves in viewing the various efforts of his skill. Dr. Gall was requested to say, from the organs exhibited in a certain bust, what was the predominant propensity or faculty of the individual. He pronounced that the original must be a great poet. His attention was directed to a second bust. He declared the latter to be that of a great mathematician. The first was the bust of Troughton, the eminent mathematician; and the second, that of Sir Walter Scott.

Talent, the phrenologist asserts, is proportional to the development of the cerebral mass. Mr. Chantrey exhibited to Dr. Gall drawings of numerous heads. The cranioscopist selected one, whose ample cerebral development gave (as he decided) a sure index of vast talent,—it was a fac-simile of the head of the Earl of Pomfret.

Plagiarism.

Vain—till your heart is warmed—the task to steal
The fire from other bosoms; you must feel
The cord that wakes—in hundred hearts—a tone
Must first be tuned and vibrate in your own.

Goethe.

The Primrose.

Though storms may break the primrose on its stalk,
Though frosts may blight the freshness of its bloom,
Yet Spring's awakening breath will woo the earth
To feed, with kindest dews, its favourite flower,
That blooms in mossy banks and darksome glens,
Lighting the green sward with its sunny smile.

Shelley.

A Poet's Feelings.—The feelings of a genuine poet are all strong—*Quicquid amet, valde amat.*—*Coleridge.*

2.—SENTIMENTAL.

Vice and Virtue.—We have much labour and hold in the obtaining virtue; when we have fought well all day, we loose it at night; vice dogs vs, and neuer assails but upon advantage; shee comes creeping, and by degrees gets into our bosomes; we cannot shut her out, for our gates will not bee bar'd: our senses keep open houses; they are busie faculties, that love not idleness, though they lead to idleness; bee blinde, and the power of the eyes will runne into the touch, and then make that itch for both: take away four and leaue the fifth, and that fifth will trouble vs as ill as all; take away all—we are senselesse: so, having senses, we are subject to vice; having none, without feeling. The reason of vertue's difficulty, is her inuisibleness: it must bee touched, or tasted, or heard, that they make much of; and so much vertue is common: we call her by her name, and tell her of her excellency: but to translate her out of wordes into deedes and actions is few mens' case, and no marvaile, for the persuasion of vertue being in a language that man understands not, without the senses' interpretation, by their interpretation is corrupted.—*Sir William Cornwallis's Essays*, 29, edit. 1631.

Love.

Love's of a strangely open, simple kind,
And thinks none sees it, 'cause itself is blind.

Cowley.

Freedom.

Ah! Freedom is a noble thing,
Freedom makes man to have likyng;
Freedom all solace to man gives;
He lives at ease that freely lives.

Barbour, I., l. 183.

3.—DRAMATICAL.

Welsh Dramatics.—The style of the religious dramas, (if we can call them so,) may be conceived from the

following speech, arising out of the refusal of Noah's wife to enter into the Ark :

' *Shem*.—Father, I shall fetch her in, I trow,
Withouten anie faille.
Mother, my father after thee sendes,
And biddes thee into yonder ship wendes.
Look up and see the winds,
For we bene ready to sayle.'

The Deluge, an old Play, 41.

4.—ORATORICAL.

Father Gregory.—If we may give full credit to our old monkish writers, the effects of pulpit oratory in their days far surpassed any thing witnessed in our degenerate times. We cannot boast, as they could, of a preacher 'tipifying a congregation with the honied rain of his eloquence.'—'Doctor Sanctissimus ille Gregorius, qui melleo prædicationis imbre totam rigavit et inebriavit ecclesiam.'—*John of Salisbury, ap. X. Script.*

5.—RHETORICAL.

The Simple and the Florid Style.—The first writer of eminence who departed from the model of the Greek simplicity was Sallust. His style wants all that flowing ease and smoothness of diction so conspicuous in Xenophon; instead of which he has assumed a manner of his own, borrowed, it would appear, from the declamation of the schools of rhetoric. Sallust was followed by Tacitus and Seneca; the first of whom always aims at that pointed brilliancy which the ancient Greeks never attempted, but which has frequently among the moderns been considered the acmé of perfection. Tacitus also indulged in the florid, pictured style of writing which belongs to poetry; and in this false taste he has been followed by the French and their imitators in Germany and England.—*Lord Monboddo, Origin and Progress of Language, vol. iii.*

Oriental Metaphor.—He feared not the number of tents where death, the mother of vultures, had fixed her mansion.—*Zohair, Transl. by Sir Wm. Jones.*

6.—CHIVALRIC.

Contempt of Death.—We are told of the ancients that they looked upon death as a jest, *Mortem pro joco habent*—vide *Athenæus, Deipn.* iv. and *Bartholinus, p. 5.* But in this they were rivalled by the Scandinavians :

'Magna viri virtus quæ risu calluit uno
Supremam celare necem, summum quæ dolorem
Corporis ac mentis læto componere vultu.'

Sævo Grammaticus, p. 36.

'With joy, with triumph, he resigned his breath,
And smiled away the agonies of death.'

7.—ROMANTIC.

Heath-beds.—Buchanan and Smollett give very romantic descriptions of the luxury of a heath-bed, such as are used in the Highlands of Scotland; and toil may, without doubt, make any bed comfortable, but I can say, from experience, that a heath-bed is far from being a pleasant couch.—*Cordiner's Picturesque Antiq. p. 114.*

8.—PICTURESQUE.

Alpine Scenery.—It is difficult to paint to the imagination objects which have nothing in common with what is seen in other parts of the world; it is difficult to make pass into the mind of the reader that impression of admiration, mingled with terror, which is inspired by those immense masses of ice, surrounded and surmounted by pyramidal rocks still more immense; the contrast of the dazzling white of the snow with the obscure colours of the rocks moistened by the waters drained from the melting snows; the transparency of the air; the splendour of the light of the sun, which imparts to every object an indescribable vivacity and distinctness; and the profound and overawing [majestuous] silence which reigns in those vast solitudes—a silence which is only interrupted from time to time by the noise of some large mass of granite or of emerald ice dashing down the mountainous precipices. When a fine day occurs among the Alps, the air is so calm, pure, and light, that it is scarcely possible to imagine storms could be there so terrific. But the wind being confined between converging rocks, acquires an amazing velocity which the strongest man cannot resist; and being generally accompanied with snow, if you stop—you die of cold; if you proceed—you fall over a precipice in the obscurity of the storm, or your breath is stopt by reflected currents of wind.—*Saussure's Voyages dans les Alpes, p. 631.*

PICTURE OF MORNING.

When pale Aurora, with face lamentable,
Her russet mantle border'd all with sable,
Lapped* about the heavenly circumstance†

With Sol depaint, as Paradise delectable,
And blissful boughs with bloomed variance.

The daisy and the marigold unlapl'd,‡
Whilks § all the night lay with their leaves lapped,
Them to reserve|| fra rheums pungitive.
The umbrate trees that Titan about wapp'd **
Were portrayed, and on the earth y-shaped
By golden beames vivificative.

The grasshoppers among the vergers gnapped ††
And bees wrought material for their hive.

Gawain Douglas, Palice of Hcu. V.

9.—MUSICAL.

Extraordinary Feat of Mrs. Salmon.—Great vocal ability usually indicates great constitutional strength, and this is further proved from the resistance of catarrhal disorders by professional singers. Amateurs are always 'taking colds,' professors very rarely, indeed, though so much exposed to night air in their clothing. Mrs. Salmon, for example, in December, sang at Manchester on Wednesday; at Leeds on Thursday; at Sheffield on Friday; and at Hall (seventy miles distant) on Saturday. This, however, is not equal to her famous week, in which she appeared on Monday in London; on Tuesday at Oxford; on Wednesday in London; on Thursday at Oxford; on Friday in London; and on Saturday at Bath.

Minstrel Music.

He sang sæ sweet, it might dispel
All rage but fell despair.—*Ballad of Gûl Morice.*

Early Opera in London.—The absurd manner of conducting the Opera in London, during the reigns of Charles and James, will appear from the mixture of Italian and English. Mrs. Tofts, a mere Englishwoman, in the part of Camilla, courted by Nicolini, an Italian, without understanding a syllable each other said; Mrs. Tofts chaunting her recitative in English, in answer to his Italian: and, on the other hand, Valentini courting amorously, in the same language, a Dutch woman, who could neither speak English nor Italian.

10.—CRITICAL.

Bray a Fool in a Mortar.—The passage in Proverbs, rendered, 'Though thou shouldst bray a fool in a mortar,' &c., is quite misunderstood, and should be translated, 'Though thou chastise [or punish] a fool in the grinding-house, [or mill,] among the workers at the grist;' for the Hebrew word *Chetseah* signifies to beat, to bruise by corporal punishment; while *Baah*, rendered with 'a pestle,' is rather the plural of *Baal*, addicted to, (*Prov.* i. 17, and xxii. 24,) viz. addicted to grinding corn, or employed in grinding. *Riput*, again, means ground corn, (*2 Sam.* xvii. 19.) Grist corn, ground, or ready for grinding. *Be*, rendered 'in,' should be translated 'at' the mortar, or in the prison, or bridewell, where offenders were compelled to grind corn, with stripes.—*Vide Terence, Andria, iii. 4, and i. 2; and Judges, xvi. 21.*

Carthaginian and Irish.—Colonel Vallancey maintains, that the fragments of the Punic language preserved in Plautus, are pure Irish. The line,

'Handone silli hanum bene silli in mustine,'

he renders, 'When Venus grants a favour, it is generally attended by some misfortune.'—*Collect. Hibern.*

11.—MYTHOLOGICAL.

Origin of the Demi-Gods of Antiquity.—It is too hasty a conclusion to affirm, with Warburton, that all the deities of the ancient mythology were once men and women; for, though Jupiter, Bacchus, Ceres, &c., were once inhabitants of the world, it does not follow, that the grand *Αυτογένητα* originated in the errors of Polytheism, as the god-ship of the Sun, Moon, and *Ουρανός* would, notwithstanding, remain inviolable and untouched.—*Bott's Answer to Warburton, 23.*

Fairy Rings.

Illic Lemurum populus sub nocte choreas,
Plausurit exiguas, viridesque attriverit herbas.

Mons. Catherine, p. 9.

12.—SEPULCHRAL.

Hottentot Buriallings in 1686.—The Hottentot custom of burying the dead is the following:—They come with knives, and shave the body, arms, and legs of the deceased, through the thick skin; then they dig a great hole, and set him in it upon his breech, clapping stones round about him to keep him upright; after, comes a company of their women about him, making a horrid noise; then they cover the mouth of the hole, and leave him in a sitting posture.—*Cowley's Voyage, apud Harris, i. 82.*

* Folded. † The term 'Circumstance' for the visible armament, is almost as fine as the Spanish *Expendidura*. ‡ Unfolded. § Which, in plural. || Preserve. ** Played or Flitted. †† Crinked, or chirruped.

13.—SUPERSTITIOUS.

Demons vanish at Cock-crowing.—This is by no means a recent superstition, as appears from the following verses, by a poet of the fourth century :

'Furunt vagantes Demones,
Lætas tenebris natum,
Gallo canente exterritas,
Spartan timere et cadere.'—*Prudentius.*

Sacredness of Islands.—The Irish of old seem to have held islands in superstitious veneration. In the river Shannon, the romantic island of Inniscailte contains the remains of seven churches, and a round tower; and, in another of its islands, an anchorite tower, 120 feet high, where, also, the ruins of eleven churches are still visible.—*Owenson's Patriot Sketches, i. 48.*

The Orientals, in the same manner, hold the islands of Elephanta, Salsette, Ceylon, &c., holy.

14.—ONEIROLOGICAL.

Pleasures of Dreaming.—If we dreamed the same thing every night, it might perhaps affect us no less than objects seen by day. If an artisan dreamed every night that he was a king, I think he would be as happy as a king who should dream every night he was an artisan. Because our dreams are ever varying from themselves, they strike us more faintly.—*Pascal, Pensées.*

15.—ASTROLOGICAL.

Medical Astrology.—Maginus, in the preface to his *Mathematical Physic*, says that a physician has no use for astrology:—"Unam artem ac quasi temerariam in sectantur, ac gloriam sibi ab ejus imperitiâ aucupari." On the other hand, Ariænnus, the celebrated Arabian Physician, goes so far as to account physicians ignorant of astrology little better than homicides—"Homicidas medicos Astrologiz ignaros."—*Kurt. Sprengel, Hist. Med.*

16.—ALCHEMICAL.

The Cup of Immortality.—The Chinese, it would appear, have not been behind the Europeans in the pursuit of the phantoms of alchemy, and Voo-tee, one of the most celebrated princes of the Han dynasty, was persuaded that the cup of immortality had been discovered. The Emperor finally procured this precious draught, and appointed a time on which he was to quaff it in presence of his courtiers. It was accordingly presented to him, when one of his grandees started forward, seized it, and drank it off. The Emperor ordered the audacious grandee to instant execution; but the latter coolly told him that if the cup was good for any thing, death would have no power over him. Voo-tee pardoned him, but continued to believe in the efficacy of the cup.—*De Guignes, Voy. à Peking.*

17.—MAGICAL.

Marine Incantations.—Incantamenta sic pollut ut naves in medio cursu retineant, sic ut nulla vi ventorum amoveri possint. Quod malum solo virginitum excremento, foris navium ac transtris illitis, curatur; a quo, ut incalis accipi, spiritus illi natura abhorrent.—*Hispan. Illustrat. ii. 1320 edit. Frank. 1603.*

18.—LUDICROUS.

Royal Dinner for the Devil.—His Majesty professed, that were he to invite the Devil to dinner, he should have these three dishes; 1. a pig [whether young or old—roast, boiled, or braised, is not in the bill;] 2. A poll of ling and mustard; 3. A pipe of tobacco for digestion.—*Apothegms of St. James, p. 4, edit. Lond. 1608.*

Divinity of Agnes.—The Stoics prove the divinity of the heavenly bodies from their regular motions; but, says Cotta, if things regular in their motion be on that account divine, then we must predicate divinity of tertian and quartaun agnes.—*Vide Cic. de Nat. Deor. iii. 205.*

II.

'That knowledge is not to be reckoned useless which, though useless in itself, sharpens genius and sets the mind in order.'—*Lord Bacon.*

1.—POLITICAL.

Theological Politics of Mahomet.—In Mahometan countries, the vulgar are prohibited from reading those books which are accounted sacred; and this proves that Mahometanism is not fitted for the poor,—for all mankind. The prohibition, besides, is not a corruption, but an express precept of the Koran.—*Vide Erpenius and La Roque, Voy. à Palestine.*

Influence of Ballads.—More solid things do not show the complexion of the times so well as ballads and libels.—*Selden.*

Of the truth of this, the songs of Beranger furnish a remarkable instance.

2.—HISTORICAL.

Picts in Ireland.—It is evident, from many authori-

lies, that there were Picts settled in Ireland at a very early period. We may refer, for instance, to Adomnánus, vita St. Columb.; Probus, vita St. Patricii; Annals of Ulster; Tighernac, &c. The title, indeed, of one of the chapters of O'Flaherty's Ogygia is 'Pictorum in Hiberniam migratio.'—*Vide also Wood, in Trans. R. J. A. xii.*

Impaling among the Ancients.—The barbarous punishment of impaling, so common at present in the East, seems to have had place among the ancient Romans: 'Cogita hoc loco carcerem, et cruce, et eculos, et uncum, et adactum per medium hominem qui per os emergat, stipitem.'—*Seneca Epist. 14.* 'Alii capite conversos in terram suspendere: alii per obscena stipitem egerunt: alii brachia patibulo explicuerunt.'—*Seneca, de Consol. xx.*

Irish Cannibalism.—In order to render a young girl named Eithne Vathaek sooner marriageable, for the purpose of fulfilling a prediction, she was fed with the flesh of young children to quicken her growth. In consequence of this mode of dieting, she was capable of marriage some years before the usual age.—*Keating, p. 261.*

4.—BIOGRAPHICAL.

Cruden.—The learned Cruden, author of the Concordance to the Bible, professed his determination not to marry, because, by obeying the precept, 'increase and multiply,' he believed that he would make himself a party to the propagation of sin. Acting upon this principle, he eventually paid his addresses to an old maid, who rejected him.

Newton and Stillingfleet.—Whiston, the author of the Theory of the Earth, informs us that he lost the favour of Sir Isaac Newton by presuming to contradict him; and adds, that he would not have ventured to publish any thing against his chronology during his life, as, from the irritability of his temper, it might possibly have killed him. Stillingfleet was no less affected by having his opinions controverted, if we are to believe his chaplain, Dr. Bentley, who tells us that he believed Locke's confutation of his metaphysics concerning the Trinity hastened his end.

5.—TOPOGRAPHICAL.

Locality of Troy.—Many regions formerly abundant in wood, by being now strip of it, are become much less abundant in springs. From this cause it is that Choiseul and others have in vain searched for the river Scamander, in the locality of Troy. The forests of Mount Ida have for ages been in ruins, and the sources of the Scamander have thereby been dried up.—*Abbe Roster.*

6.—BIBLIOGRAPHICAL.

Cole's Manuscripts.—The Rev. William Cole, the friend of Walpole, left behind him in MS. more than fifty vols. folio in his own writing, from 1745 to 1777. The title of this voluminous work is 'Athenæ Cantabrigienses,' and is intended as a sort of companion to Anthony-a-Wood's Athenæ.

7.—GRAMMATICAL.

Prepositional Cases.—When by conquest or intercourse one nation intermingles with another, very important alterations are made upon their common language. Take, for example, a Lombard who was attempting to speak Latin, and who, having occasion for the dative case of *Roma*, should not readily recollect it,—he would naturally say, *de Roma*, or *ad Roma*, and accordingly *di Roma* and *al Roma* are at present used in Italy. It is in such particulars that the modern Greek differs from the ancient.—*Smith, Form. of Lang.*

8.—METAPHYSICAL.

Beauty.—There is a first model of beauty and agreeableness, which consists in a certain relation between our own nature and the thing with which we are affected. Whatever is formed on this model interests and delights us; whatever differs from it is always displeasing.—*Pascal, Pensées.*

9.—LOGICAL.

Sir Philip Sidney and the Austrian Equerry.—When Sir Philip Sidney was at Vienna, the Emperor had an Equerry who spoke so eloquently of horses as made Sir Philip say, 'If I had not been a piece of a logician before I came to him, I think he would have persuaded me to have wished myself a horse.'

Christian Argument.—St. Louis earnestly counselled his intimate friend, the Sire de Joinville, never, upon any account, to argue with an infidel. 'The only way,' said his saintly Majesty, 'that a Christian can do in such cases, is to thrust his sword into his belly as far as it will go.'—*Mémoires de Joinville.*

NOTICE TO CORRESPONDENTS.

The article on Michael Sturtz, though excellent in some respects, is not exactly suited to our work. We shall be glad to hear again from our Correspondent.

The articles on Pantomimes and the New Year's day in America, lie at our office for the writers.

LIST OF BOOKS PUBLISHED DURING THE WEEK.

M'Gregor's Sketches of British America, 8vo., 7s.
Ditto, Ditto, 12mo., 5s.
Maugham's Geography, 3d Edition, 12mo., 7s. 6d.
Lawrence's Last Autumn, and other Poems, 12mo., 6s.
Wardrop on Aneurism, royal 8vo., 10s. 6d.
Rev. J. Mann's Lectures on Ecclesiastical History and Non-conformity, 1 vol. 8vo., 10s. 6d.
Channing's Works, 8vo., 10s. 6d.
Bloomfield's Prometheus, 8vo., 5th Edition, 8s.
Whateley's Logic, 8vo., third edition, 12s.
Christianity, Protestantism, and Popery, compared and contrasted, 8vo., 7s. 6d.
Economy of Human Life, French, by Mrs. Davidson, royal 18mo., 2s. 6d.
What is Luxury? post 8vo., 8s. 6d.
Madan's Translation of Juvenal and Persius, 2 vols. 8vo., new edition, 14s.
Gomersall's Tables of Discount, 17. 5s.
Stewart's Farwell Discourses, 8vo., 5s.
Rev. J. Wolfe's Journal, vol. 3, 8vo., 8s.
Belgic Pastorals, and other Poems, by J. Glaspe, Esq., 7s.
Memoirs of the Affairs of Europe from the Peace of Utrecht, by Lord J. Russell, vol. 2, 4to., 2l. 10s.
Venn's Duty of Man, new edition, 8vo., 8s.
M'Gregor's Stories from the History of Ireland, 18mo., 3s. 6d.
Edmund O'Hara, by the Author of 'Elmes Castle,' 18mo., 3s. 6d.
Chambers's Rebellion in Scotland in 1745, 2 vols., 12mo., 10s. 6d.
Ditto, ditto, in 1638, 2 vols. 8vo., 10s. 6d.
Marsh's Companion to the Altar, second edition, 18mo., 1s. 6d.
Fincher's Interposition of Divine Providence, 12mo., 6s.
Jewsbury's Letters to the Young, 12mo., second edition, 6s.
The Millennium, Twelve Stories, by Mrs. Sherwood, 18mo., 2s.
Cobbins's Child's Commentator on the Scriptures, vol. 1, 2s. 6d.
The Silent Preacher, by Mr. Richard Hooker, with an Address by H. Budd, M.A., 5s.
Franklin's Journeys to the Polar Seas, 4 pocket vols., 30s.
Malcolm's History of Persia, new edition, brought down to the present time, 3 vols. 8vo., 30s.
The First Number of a Series of Coloured Plates, by H. Alken, to be called, Comparative Monthly Sports, 5s.
Pascal's Thoughts on Religion, &c., with a Memoir, by the Rev. G. Craig, 12mo., 6s.
Poems and Translations, by Bishop Heber, new edition, 8vo.
Woman's Love, a Drama, 2s. 6d.
Lodge's Portraits, new edition, 7s. 6d.
Cambrian Quarterly Magazine, No. 1, 3s.
The New Scots Magazine, No. 1, 1s.,—to be continued Monthly.
The First Number of a New Edition of Burns's Works, with Engravings on Steel, by Shury, from Original Paintings by W. Kidd.

Sate Offices in England and Egypt.—The Pasha of Egypt has at present four of his state Officers improving themselves in this country, viz., his Salactar or Sword Bearer, answering, of course, to our First Lord of the Treasury; his Murdar or Seal Bearer, Lord High Chancellor; his Dividar or Inkstand Bearer, Clerk of the Court; and his Tumassi Agassi or (literally) Master of the Washerwomen, doubtful, probably, First Lord of the Admiralty; which is the more likely, from the circumstance of his being the one sent by Government to learn naval tactics on board the Shannon. There is, besides, an Armenian studying liberal arts and polite language at Portsmouth, but we believe he does not hold any state office.

Liberty.—Is it not better that liberty should rise spontaneously from a soil prepared for its reception, and in which its seeds have gradually been maturing in the progress of society, than violently to plant it on stony and thorny ground, where no congenial qualities give strength to its roots, and beauty to its blossoms, where it does not throw wide its perennial shadow under which the people may find happiness and refuge, but spring up, like the gourd of Jonah, in the night of popular tumult and unnatural and extravagant innovation, to perish in the morning beneath the heat of reckless passion, or the consuming fire of foreign interference?—*Russell's Tour in Germany, Article Pervia.*

Extract of a Letter dated Chamouni, July 22, 1816, from Percy B. Shelley to Thos. Procter, Esq.

On a Painted Woman.

(From the French of Brebeuf.)

To youths, who hurry thus away,
How silly your desire is
At such an early hour to pay
Your compliments to Iris.
Stop, prithee, stop, ye hasty beaux,
No longer urge, this race on;
Though Iris has put on her clothes,
She has not put her face on.

R. A. D.

WEEKLY METEOROLOGICAL JOURNAL.

Temperature registered at 9 A.M. and 5 P.M.	Jan.	Therm. A.M. P.M.	Barom. at Noon.	Winds.	Weather.	Prevailing Cloud.
Mon. 29	40	36	30. 17	NW-SW	Foggy.	Cirrostratus

Wed. 31	43	43	29. 95	S. W.	Rain.	Ditto.
Thurs. 1	37	42	29. 70	S. W.	Mst. AM.	Cum. str.
Frid. 2	37	34	29. 67	N to NW	Clear.	Cirrostratus
Sat. 3	36	39	29. 72	W. to N.	Fair Cl.	Cirrocum.
Sun. 4	41	38	29. 32	N. W.	Rain AM.	Cirrostratus

Nights fair. Slight frost on the nights of Thursday and Friday. Mornings fair, excepting that of Sunday.

Highest temperature at noon, 46°. Length of day on Sunday, 7 h. 54 min. Increased, 10 min. Sun's hor. motion on Sunday, 2' 32" plus. Logarithmic num. of distance, 9.99268.

Just published, Part the Second, containing six Plates, of **THE SELECT GALLERY of ETCHINGS**, after Chef-d'œuvres of the Old Masters, finished so as best to represent the Manner of the Original Paintings, and beautifully executed by the most eminent Artists.

Contents.—1. Hostellerie, after Wouvermans.—2. La Brochette, Weennix.—3. The Mendicants, Le Nala.—4. The Dentist, G. Douw.—5. The Storm, Berghem.—6. De Heere Groot, or the Gentleman's River at Amsterdam, De Hooze.

* * * The number of the impressions of the above Work is strictly limited to fifty copies of each description, and the Copper-plates totally destroyed.

Price of each Part—Prints, 1l. 11s. 6d.; Proofs, 2l. 2s.; Proofs, large paper, 2l. 12s. 6d.; Proofs, India Paper, 3l. 3s. London: Moon, Boys, and Graves, Printers, to the King, 6, Pall-mall; and sold by F. G. Moon, Threadneedle-street.

Of whom may be had, Part I. containing—The Pig Market, Ostade; A Woman paring Turnips, Mass; Deer and Water Fowl, Ridinger; the Music Lesson, Terburg; The Toilet, Egion Vander Neer.

Next week, will be published, with large Additional Matter, and several New Embellishments, a Second Edition of

PORTUGAL ILLUSTRATED; by the Rev. W. M. KINSEY, B. D. Fellow of Trinity College, Oxford, and Chaplain to the Right Hon. Lord Auckland. Embellished with a Map, Plates of Coins, Vignettes, and various Engravings of Costume, Landscape Scenery, &c.

The Author has been encouraged by the rapid sale of the first edition of his Work to undertake the publication of a second, which, he trusts, will come recommended to the favourable consideration of the public, not only from the sedulous revision which it has undergone, but also from embodying additional specimens of the national music of Portugal, and the following new illustrations, executed by the first Artists in the most finished style:—1. Belem Castle, on the Tagus; 2. The Aqueduct and City of Lisbon; 3. The Moorish Palace at Cintra; 4. The Cork Convent, near Colares; 5. The Fortifications of Alhambra on the Tagus, which formed the extreme right of the lines of Torres Vedras; 6 and 7. Portraits of Camoens and of Ignês de Castro; besides several Vignettes by Messrs. Brooks and Harvey.—The additional matter, which extends to 100 pages, will comprise a brief Historical Review of the State of Literature, Arts, and Sciences in Portugal, from the earliest period to the present time.

The price of the New Edition will be Two Pounds, in boards. A few copies will have proof impressions of the plates, on India paper, price 2l. 8s.; for which intending purchasers will please to forward their names.

Published for the Author, by Treutzel and Wurtz, Treutzel, Jun. and Richter, Foreign Booksellers to the King, 36, Soho Square.

BOOKS, ENGRAVINGS, &c.

On the 10th of January, will be published in 4to, stamped for circulation by post, price 1s.,

A SUPPLEMENT TO BENT'S MONTHLY LITERARY ADVERTISER AND REGISTER OF ENGRAVINGS, Works on the Fine Arts, &c. Containing an Alphabetical List of the New Books published in London from January to December, 1818, inclusive, with their sizes and prices; also a List of the Principal Engravings published in London during the same period, together with the Names of the Painters and Engravers, and the style, size, and publication price of each print.

London: Published for the Executor of the late W. Bent, by Simpkin and Marshall, Stationers' Hall-court, and may be had (postage free) of every Bookseller and Newsmen in the kingdom.

COOPER v. WAKLEY. JOHN ST. JOHN LONG, &c. &c. IMPARTIAL PRACTICAL REMARKS on the SURGICAL POINTS of the TRIAL of COOPER v. WAKLEY, and on the Law Surgery of Sir James Scarlett; further Exposure of the Practice and Guinea Trade of John St. John Long, the pretended Curer of Consumption; on the Curative Effects of the Chirayita Herb in cases of Indigestion arising from Disorder of the Liver, Visceral Obstructions, &c. by Dr. Blundell and Sully; on Treatment of Jaundice, Dropsies, Intestinal Obstructions by Dr. Kinglake; on the Lymphatic Inflammation, by Dr. Epps; Cure of Blindness from Opacity, of Rheumatism, Ulcers, Scaly Diseases of the Skin, Tumour of the Female Breast, Worms, old Strictures, Corpulency, by Messrs. Wood, Stafford, Lloyd, &c.; Directions for making the Anodyne Cement for tender Carious Teeth, and for Mercurial Ointments and Blue Pills; Exposure of the Trade and High Charges of Drugs at Apothecaries' Hall; Cautions respecting Leeches; Superiority of Acetous Extracts; Moxom's concentrated Compound Decoction of Sarsaparilla; Effects of Croton Oil; late Proceedings of the College Lawyer v. Dr. Harrison; New Regulations of the Court of Examiners; with other Medical and Philosophical Intelligence,—appear in the First Number of the Gazette of Health for the present year, being the 157th.—Price 1s.

Sold by Simpkin and Co., Stationers' Court; at 17s. Pico-dilly; and by all Booksellers in the United Kingdom.

In a few days will be published by EDWARD BULL, New Public Subscription Library, 26, Holles-street, Cavendish-square, London, The

ADVENTURES OF A KING'S PAGE.

3 vols. 12mo. 12s. 6d.
If you would know whether virtues or vices keep a man farthest from a court, go to court and learn.—*Winter's Tale*.
2. FRANCIS, THE FIRST KING OF FRANCE, MEMOIRS OF HIS LIFE AND TIMES, with a fine Portrait from Titian. In 3 vols. (printed uniform with the 8vo. edit. of Roscoe's Leo X.) price 28s.

3. CONVERSATIONS ON INTELLECTUAL PHILOSOPHY, or a Familiar Explanation of the Phenomena of the Human Mind. 2 vols. 12mo.

4. THE MANUAL FOR INVALIDS. By a PHYSICIAN. One small volume.

5. THE ROMANCE OF HISTORY. By HENRY NEEDLE. New edit. 3 vols. 12. 11s. 6d.

THE TRIALS OF LIFE.

By the Author of 'De Lisle, or the Sensitive Man.' The tragical vein of the first story is pursued through scenes and adventures with a skill which would not have disgraced Mrs. Ratcliffe herself.—*Athenæum*.

The second story reminds us of the best performances of Mrs. Oplie—its truth is alone comparable to the superior productions of Miss Austin.—*Examiner*.

'They are both full of thought, and in the highest degree pathetic. They are those romances of real life of which Lord Byron says, most truly, we see and hear more than we shall ever read.'—*Times*.

Printed for Edward Bull, New Public Subscription Library, 26, Holles-street, Cavendish-square.

THE FOREIGN REVIEW, No. V.

* No. VI. will be published in March.

ADCOCK'S COMMERCIAL POCKET

BOOK, for Merchants, Brokers, Wharfingers, and others. Dedicated, by permission, to Alexander Baring, Esq., M.P.

By HENRY ADCOCK, Civil Engineer. This improved Pocket Book contains an analysis of Commercial Science, and, owing to the application of a peculiar property of numbers, as much matter as is usually comprised in from five to six thousand octavo pages, or ten thick octavo volumes.

Besides the usual quantity of ruled paper for cash accounts and memoranda, and the most important of the information comprised in the former Annuals, it will contain the Weights and Measures of every Commercial Province, City, Sea-port, Town, and Country; their value relatively to each other; the relative value of the Old and Imperial, and of the English and Scottish, Weights and Measures; Multiplication and Division obtained by Inspection; Tables of Interest at 4, 4½, and 5 per cent., from 1 to 365 days; Tables of the Value of Annuities and Leases, and of the Calculations of European Exchanges.

To show the value of this extraordinary property of numbers, it may be necessary to state, that most of the articles, enumerated above, are in a tabular form; that this Pocket Book will be no larger than the former Annuals; and that the interest of any sum of money at 4, 4½, and 5 per cent., although occupying but ten pages each in this improved Pocket Book, can be obtained with the same facility as that of 4 and 5 per cent. from the more expensive works, which are charged 11. 11s. 6d. Price 10s.

ADCOCK'S SPORTSMAN'S POCKET BOOK.

This improved Pocket Book, besides 104 ruled pages for cash Accounts and Memoranda, and the most important of the information comprised in the former Annuals, contains the Sports and Pastimes of the British People; exhibiting, in distinct Treatises, and in as concise a manner as possible, the most valuable of the matter connected with Hunting, Coursing, Hawking, Racing, Shooting, Cricket, and Angling. Price 5s.

ADCOCK'S GENERAL POCKET BOOK.

This improved Pocket Book, besides 104 ruled pages for cash Accounts and Memoranda, contains British Weights and Measures; the relative value of the principal British and Foreign, of Old and Imperial, and of the English and Scottish, Weights and Measures; Multiplication and Division obtained by Inspection, and Tables of Interest at 5 per cent., from 1 to 365 days.

Owing to the application of the peculiar property of numbers, this Pocket Book contains as much matter as is usually comprised in two thousand octavo pages, or four thick octavo volumes; the Multiplication and Division of any Numbers, and to almost any extent, may be readily obtained; and the Interest of any required Sum, from 1 to 365 days, may be obtained with the same facility as in the more expensive publications, which are charged 11. 11s. 6d. each. Price 5s.

ADCOCK'S ENGINEER'S POCKET BOOK. For Engineers, Manufacturers, Millwrights, and Others. Dedicated, by permission, to Henry Maudslay, Esq.

This improved Pocket Book is far superior to the Engineer's Pocket Book, published last year; the Treatises on Geometry, and Fractional and Decimal Numbers, have been left out entirely; and the Treatise on the Mensuration of Surfaces and Solids has been much simplified and condensed, to make room for more valuable information. It contains, by Tables and Short Rules, and by the application of a peculiar property of numbers, British Weights and Measures; Miscellaneous Information on Artificers' Work; Tables of the Quantity of Bricks necessary to construct any piece of Brickwork, and of the number of Rods of Brick work contained in any quantity of Superficial Feet; Tables of the relative Value of British and Foreign, Old and Imperial, and English and Scottish Weights and Measures; Multiplication and Division, Squares and Cubes, and Square and Cube Roots, obtained by Inspection; the Mensuration of

perity of numbers, British Weights and Measures; Miscellaneous Information on Digging, Well-sinking, Bricklaying, Carpentry, &c.; Tables of the quantity of Bricks necessary to construct any piece of Brick-work, and of the number of rods of Brick-work contained in any quantity of superficial feet; Tables of the relative value of British and Foreign, Old and Imperial, and English and Scottish, Weights and Measures; Multiplication and Division, Squares and Cubes, and Square and Cube Roots, obtained by Inspection; the Mensuration of Surfaces and Solids; Tables of the Areas and Circumferences of Circles, the Areas of Circular Segments and Zones, and of the Lengths of circular and semi-elliptic Arcs; rules to calculate the Mechanical Powers, the Gravitating Property of Bodies, the Centres of Gravity, Gyration, and Percussion, the Vibration of the Pendulum, and the Central Forces.

Next to these follow a Tabular Comparative View of Animal Exertions, Rules for the Construction of Water and Wind-Mills, Tables of the Elastic Force of Steam, and Rules and Approximating Rules to Compute the Powers of Steam Engines; Rules to find the Quantity of Water discharged by Simple Apertures, by Cylindrical, Conical, Compound, and Bent Tubes, by Horizontal, Vertical, Inclined, and Bent Conduit Pipes, and by Weirs and Rectangular Notches; Tables exhibiting the Ratios between the Theoretic and the Real Discharges, the Comparative Discharges by Pipes and Tubes, and the Ratios between the Initial and Final Velocities.

A Section on Pneumatics, showing the Weight of Air at different Altitudes, the Velocity of the Wind, the Expansion of Air by Heat, and the method of Computing Distances by Sound; a Section on Heat, exhibiting the Quantity of Heat produced by the Combustion of different Substances; a Tabular View of the Freezing Points of Liquids, the Melting Points of Solids, the Points at which Liquids and Solids are Volatilized, or converted into Gases, and the Expansion and Contraction of Substances by Heat; a Section on Artificial Light, another on the Teeth of Wheels, another on Mechanism, and another on Friction.

To these are added, a Section on the Strength of Materials; exhibiting, in a Tabular form, the Adhesive Force of Nails, Iron Pins, Screws, and Glue; the Cohesive Force of Metals, Metallic Alloys, Wood, Leather, Chain Cables, Ropes, and Miscellaneous Substances; with Observations on the Strength of Materials when pulled or compressed in the direction of their length, when exposed to a lateral strain, and when twisted.

And, finally, a Section on the Weight of Materials; being a Tabular View of the Weight of Bar, Square, and Bolt Iron, Wrought and Cast Iron Plate, Iron Pipes, Lead Pipes, Sheet Lead, Bricks, Tiles, and Miscellaneous Substances, with the Weight and Dimensions of Coppers and Boilers, the Weight and Bore of Cocks, and Tables of Specific Gravities.

N.B.—This improved Pocket Book has One Hundred and Four Ruled Pages, for Cash Accounts and Memoranda; is embellished with Wood Engravings; has every rule given fully, clearly, and distinctly, and free from Algebraic Formulae, and is no larger than the Pocket Books annually sold. Price 8s.

ADCOCK'S MECHANIC'S POCKET BOOK.

Dedicated, by permission, to Henry Maudslay, Esq.

This improved Pocket Book, besides 104 ruled pages for Cash Accounts and Memoranda, and the most important of the information comprised in the former Annuals, contains, by Tables and Easy Rules, free from Algebraic Formulae, the Calculations of the Lever, the Wheel and Axle, the Pulley, the Inclined Plane, the Wedge and the Screw, the Gravitating Property of Bodies, the Centres of Gravity, Gyration, and Percussion, the Vibrations of the Pendulum, and the Central Forces.

Next to these follow a Tabular Comparative View of Animal Exertion, Rules for the Construction of Water and Wind-Mills, Tables of the Elastic Force of Steam, and Rules and Approximating Rules to compute the Powers of Steam-Engines; Rules to find the Quantity of Water discharged by Simple Apertures, by Cylindrical, Conical, Compound, and Bent Tubes, by Horizontal, Vertical, Inclined, and Bent Conduit Pipes, and by Weirs and Rectangular Notches; Tables exhibiting the Ratios between the Theoretic and the Real Discharges, the Comparative Discharge by Pipes and Tubes, and the Ratios between the Initial and Final Velocities.

A Section on Pneumatics, showing the Weight of Air at different Altitudes, the Velocity of the Wind, the Expansion of Air by Heat, and the Method of Computing Distances by Sound; a Section on Heat, exhibiting the Quantity of Heat produced by the Combustion of different Substances; a Tabular View of the Freezing Points of Liquids, the Melting Points of Solids, the Points at which Liquids and Solids are Volatilized, or converted into Gases, and the Expansion and Contraction of Substances by Heat; a Section on Artificial Light, another on the Teeth of Wheels, another on Mechanism, and another on Friction.

To these are added, a Section on the Strength of Materials; exhibiting, in a Tabular form, the Adhesive Force of Nails, Iron Pins, Screws, and Glue; the Cohesive Force of Metals, Metallic Alloys, Wood, Leather, Chain Cables, Ropes, and Miscellaneous Substances, with Observations on the Strength of Materials when pulled or compressed in the direction of their length, when exposed to a lateral strain, and when twisted.

And, finally, a Section on the Weight of Materials; being a Tabular View of the Weight of Bar, Square, and Bolt Iron, Wrought and Cast Iron Plate, Iron Pipes, Lead Pipes, Sheet Lead, Bricks, Tiles, and Miscellaneous Substances, with the Weight and Dimensions of Coppers and Boilers, the Weight and Bore of Cocks, and Tables of Specific Gravities. Price 8s.

ADCOCK'S ARCHITECT'S POCKET BOOK.

For Architects, Surveyors, Builders, and Others. This improved Pocket Book, besides 104 ruled pages for Cash Accounts and Memoranda, contains, by Tables and Short Rules, and by the application of a peculiar property of numbers, British Weights and Measures; Miscellaneous Information on Artificers' Work; Tables of the Quantity of Bricks necessary to construct any piece of Brickwork, and of the number of Rods of Brick work contained in any quantity of Superficial Feet; Tables of the relative Value of British and Foreign, Old and Imperial, and English and Scottish Weights and Measures; Multiplication and Division, Squares and Cubes, and Square and Cube Roots, obtained by Inspection; the Mensuration of

Surfaces and Solids; Tables of the Areas and Circumferences of Circles, the Areas of Circular Segments and Zones, and of the Length of Circular and Semi-Elliptic Arcs.

Next to these follow Tables of Simple Interest at Five per Cent. from 1 to 365 days, on an improved principle; Tables of Simple and Compound Interest, from the celebrated Work of Mr. Smart; and Tables of Annuities, Leases, and the probable Duration of Human Life.

To these are added, a Section on the Strength of Materials; exhibiting, in a Tabular form, the Adhesive Force of Nails, Iron Pins, Screws, and Glue; the Cohesive Force of Metals, Metallic Alloys, Wood, Leather, Chain Cables, Ropes, and Miscellaneous Substances; with Observations on the Strength of Materials when pulled or compressed in the direction of their length, when exposed to a lateral strain, and when twisted.

Finally, a Section on the Weight of Materials; being a Tabular View of the Weight of Bar, Square, and Bolt Iron, Wrought and Cast Iron Plate, Iron Pipes, Lead Pipes, Sheet Lead, Bricks, Tiles, and Miscellaneous Substances; with the Weight and Dimensions of Coppers and Boilers, the Weight and Bore of Cocks, and Tables of Specific Gravities.—Price 8s.

ADCOCK'S BUILDER'S POCKET BOOK.

For Carpenter, Bricklayers, Builders, and others.—This improved Pocket Book, besides 104 ruled pages for Cash Accounts and Memoranda, contains British Weights and Measures; Miscellaneous Information on Digging, Brick-laying, Well-sinking, &c.; Tables of the Quantity of Bricks necessary to construct any piece of Brick-work, the Number of Rods of Brick-work contained in any quantity of Superficial Feet; and Tables of the relative value of the Old and Imperial, and of the English and Scottish Weights and Measures.

Next to these follow a Section on the Strength of Materials; exhibiting, in a Tabular form, the Adhesive Force of Nails, Iron Pins, Screws, and Glue; the Cohesive Force of Metals, Metallic Alloys, Wood, Leather, Chain Cables, Ropes, and Miscellaneous Substances; with Observations on the Strength of Materials, when pulled or compressed in the direction of their length, when exposed to a lateral strain, and when twisted.

To these will be added, a Section on the Weight of Materials; being a Tabular View of the Weight of Bar, Square, and Bolt Iron, Wrought and Cast Iron Plates, Iron Pipes, Lead Pipes, Sheet Lead, Bricks, Tiles, and Miscellaneous Substances, with the Weight and Dimensions of Coppers and Boilers, the Weight and Bore of Cocks, and Tables of Specific Gravities.

And, finally, 'Laxton's Builder's Prices,' containing upwards of 7,000 Prices, carefully digested and corrected from the present Price of Materials and Labour; the Workman's Prices for Labour only; the best Mode of Measuring; and a great variety of useful and important Tables, with an Abstract of the Building and Paving Acts. Price 6s.

ADCOCK'S GENTLEMAN'S POCKET BOOK.

For the Nobility, Gentry, and others.—This improved Pocket Book, besides 104 ruled pages for Cash Accounts and Memoranda, contains, 1. A General Tabular View of the Planetary System; exhibiting, in a familiar and comprehensive manner, the Dimensions and Revolutions of the Planets; their Volumes, or the Quantity of Matter in each, compared with that of the Earth; their Mean Distances from the Sun; the Mean Distances of the Satellites of Jupiter, Saturn, and Uranus, and the times of their Revolutions; an easy Method of Calculating the Tides, and the supposed or real influence of the Planets on Atmospheric Changes.

2. The Division of the Earth into Four Primary Parts, and the Quantity of Dry Land compared with that of the Rivers and the Ocean; a General Geographical, Geological, Statistical, and Commercial View of Europe, Asia, Africa, and America; their Relative Connexion with each other; the Number of their Inhabitants, and the Division of those Inhabitants into various Religions, Castes, and Tribes; the Heights of their principal Mountains and Edifices; the Lengths, Breadths, and Velocities, of their principal Rivers; and the Areas of their principal Lakes, Forests, and Deserts.

3. A more General and Extended View of Europe: its Division into Empires, Kingdoms, and Principalities, and the Commercial Dependencies of such Empires, Kingdoms, and Principalities, on each other; the Relative Distance of the principal European Cities; and their Governments, Produce, and Political Changes.

4. A Statistical View of the British Empire; the Number of its inhabitants in 1801, 1811, and 1831, being the Periods when the three Censuses were taken; the Annual Proportion of Births, Marriages, and Deaths; the Comparative Healthiness of the several Counties; the Division of the Population into several Religious Denominations; the Division of the United Kingdoms into Counties or Shires, their General Aspects, Mean Temperature, and Average Quantity of Rain; their Mountains, Rivers, Canals, and Public Edifices.

5. A Commercial View of the British Empire, exhibiting the great Extent and Value of the Arts, Mines, and Manufactures; the Value of the Exports and Imports; the Quantity of Shipping employed; the Annual Produce of the Country; the Revenue and National Debt; the Circulating Medium in Gold, Silver, Bank-notes, Acceptances, and Promissory-notes; the Number of Convictions and Executions for Forgery, and Coining; and a General View of the Commercial State of Society.

6. The Sports and Pastimes of the British People; exhibiting, in distinct Treatises, and in as concise a manner as possible, the most valuable of the information connected with Hunting, Coursing, Hawking, Racing, Shooting, Cricket, and Angling.

7. The Construction of the British Government; showing the Births of the present Royal Family of Great Britain; the Names of the Ministers of State, of Members of Parliament, the Judges, Lord Lieutenants, Archbishops and Bishops, British and Foreign Ambassadors, Charges des Affaires and Consuls, and the Lord Mayor and Aldermen of London.—Price 8s.

Orders received by the Author, at the Publication Warehouse, No. 16, Finch-lane, Cornhill; by Messrs. Simpkin and Marshall, Messrs. Baldwin and Cradock; Messrs. Hurst, Chance, and Co.; Messrs. Suttaby, Fox, and Suttaby; and by every respectable Bookseller in the United Kingdoms.

THE UNIVERSITIES OF EUROPE AND AMERICA.

CAMBRIDGE.—No. III.

[As it is important to the completion of our Cambridge sketches that we should offer a view of the social life of the University, we willingly give insertion to the following letter. Our readers will see, without our apprising them of the fact, that the picture is painted *coulour de rose*, and that it is no *like* likeness of the general spirit and pursuits of the University. It will serve, however, as a useful set-off against the descriptions of mere dissipation and vulgarity which are to be found in novels and other popular books that profess to treat of Cambridge; and it will convince those of our readers who have been misled by them, that there does exist, even among the undergraduates, a class not wholly given to hunting, drinking, or mathematics.] E.

To the Editor of the Athenæum.

SIR,—In Nos. 58 and 60 of your work, you have published two papers on the University of Cambridge. These articles are, I dare say, very interesting to the persons for whom they seem to have been intended,—metaphysicians, divines, and schoolmasters, of whom there are, probably, not above a few scores among your readers. They seem to have been written by some ancient, crabbed, and 'book-minded' critic, thinking a great deal about Greek, logic, mathematics, and chapel-services, and not considering at all what topics would be most likely to win the attention of the public in general. The writer appears to consider Cambridge as a collection only of stone-walls and statutes, and says absolutely nothing of the body of students who form all the real life and importance of the University. Filling his mind for thirty or forty years, in some dim cellar or garret, with pedantry, cobwebs, and library dust, he seems completely to have forgotten the human companions of his youth; if, indeed, he be not, as I rather suspect, an ancient college menial, inditer of declamations, and copyist of impositions,—such a one as he to whom I yesterday paid four shillings and sixpence for writing, in a villanous hand, one hundred lines of Virgil's 'Æneid,' b. iv., beginning '*Speluncam Dido, dux et Trojanus, eandem*,' &c. If he be your correspondent, Mr. Editor, employ him not again. He is a dirty fellow, and over-fond of ale.

I, Sir, who am now a junior Soph at Christ's, am persuaded that I can treat of Cambridge matters infinitely more agreeable to the world than those discussed by your hoary and ungentelemanly contributor. I will tell of the members of the University; not its laws; of 'chartered libertines,' not chartered institutions. And in my article, fathers shall read of their sons, tradesmen of their debtors, bishops of their candidates for ordination, attorneys of incipient barristers, old ladies of their heirs, and young ones of their lovers. I will, in the words of a well-known member of my college, 'Let Euclid, rest and Archimedes pause,' and speak of those for whom the whole system criticised by your correspondent is designed, and not of the system itself. Not that I thereby in the least resign my right of contesting the ground assumed by him, and of showing that the present course of study is, at least, sufficiently troublesome.

* The writer is under an error in supposing that there are any young ladies in England foolish enough to interest themselves about those especial and very dull coxcombs, the members of the Universities. But Cambridge men are proverbially more conceited, and with

But as I think, on further consideration, that the mode of composition the least professorial or essay-like, in short, the farthest from that of your contributor, will be the most agreeable, I shall simply furnish you with an account of one day, such as I commonly experience, and such as is usual among the more civilized, judicious, and prominent members of the University. Having attended or avoided chapel, as the case may be, more frequently the latter, an hour is spent in a lecture-room, where the occupation of the more intellectual students is the drawing caricatures or the inditing epigrams. Breakfast follows; and this is an important business, not only as concerns the palate, digestion, and so forth, but as indicating the character of the whole man. There are who addict themselves to assemblages of a dozen or a score hungry and loud-throated guests, who devote an hour and a half to mere eating, and spend the rest of the day in looking out of the window or playing billiards. I seldom breakfast alone, but never with more than five associates, and those of the choicest for wit, accomplishments, and temper, persons who will detect the strength of a syllogism, though it appear in the festal garb of an illustration, and with whom controversy is just exciting enough to promote digestion, without exhausting the energies which are to carry us through the day. Then, for I feel that I am at a University, and scorn to employ the whole morning in boating or lounging, I become a solitary. Greek (Æschylus or Demosthenes) delights me, or I sport with the Arabian maids, the genii of algebra; or I read hour after hour the deep-toned page of Tacitus, and fancy that I am folding round me the white mantle with the purple hem, and calling upon the gods and heroes of old Rome to defend against luxury and despotism the citadel of war, and law, and empire.

If the weather permit, arm-in-arm with one friend, (and no more,) I sally forth into the humid plains of Cambridgeshire. The companion whom I delight to honour,——, but his name is no matter, knows as much of metaphysics and logic as even your friend, who prates of Cambridge, could require. He would puzzle Duns Scotus in five minutes, and bring Aquinas into a contradiction. He anatomises Locke with the boldest and the nicest scalpel. But these are not, in my eyes, his chief merits. He has indeed a subtlety of intellect, which might suffice to break down a universe into discordant atoms; but his plastic imagination and harmonizing affections secure the order and unity of his thoughts; and with a system ten-thousand times larger and stronger and more compact than those of the system-mongers, he is so thoroughly and delightfully an individual, you care so little for his opinions except as developments of himself and his own gentle and mighty heart, that paradoxes which he never utters but with a smile of conscious extravagance, could not possibly irritate the fiercest disputants, even if they were enforced with all the earnestness which accompanies in him every serious expression of belief. Without, as far as I know him, (and I have known him long and intimately,) having ever done an action, uttered a word, or entertained a thought, which was any thing but amiable, generous, and honest, he is the most nervous and shamefaced of human beings; and with greater power of ideas, conceptions, and words, than any young man I have

to his friends than to his mere acquaintances! However, I need not speak in detail of his qualities; mankind and futurity will hear of them. With him, according to the little diurnal plan I am describing, how often, beneath a dull grey sky and along a bare high-road, how often have I pursued, delightedly, a way which in his society scarcely seemed familiar or monotonous! There is a church-yard for instance, some three or four miles from Cambridge, whither we have sometimes walked together, and which, once or twice, has won even me into seriousness. I confess I can seldom see the world, or even a bit of it, without feeling inclined to laugh, but M—— church-yard has nothing to do with the world, any more than the bones beneath its sod with the bustle of the actual human race. The grey and humble church on one side, and a grove of dark-leaved trees on the three others of the little cemetery, exclude every ray of light that does not drop upon it from the sky.

But my moralizations are not so profound as to merit being recorded; rather let me commemorate my return to college, and appearance in the hall at four o'clock. The dinner is, not remarkably good, but is devoured as earnestly as if it were the master-piece of the *Rocher de Concoale*. And now, Sir, comes one of those solemnities which are nearly peculiar to the Universities, namely, a wine-party. This is a collection of acquaintances for the purpose indicated by the name, and, of course, cannot any where be usual, save in situations which require public dinners, and exclude public deserts. But, Mr. Editor, these parties are not merely distinguished from others by the fact, that the fruit and decanters are disposed of in a different apartment from the mutton and turnips, but they are occasions for a display of knowledge, fancy, humour, eloquence, friendliness, and every other estimable and delightful quality, such as the whole universe cannot afford, were it searched from Paris to Paramatta. Let me consider:—I received yesterday, at my rooms, Morton, the pleasant philosopher I have before mentioned; Williams, a blooming cynic, who, when he can be persuaded to talk, is in a splendid frenzy about political abuses; Bolton, the ugliest, most amusing, and most gentlemanly of scoffers; Wallace, with the eye of an eagle and the gentleness of a dove; and lastly, O! that I could bid come forth before your readers Trevor the very prince of imaginative dreaming, who lives in an airy world, and is kind and romantic among his earthly friends as any beneficent genie of fable. Now, suppose this combination of the most admirable dispositions and faculties (I say nothing of myself, except to solicit attention to the proverb *nos citur a sociis*) round a table embroidered with dishes of oranges, lemon-chips, grapes, French plums, olives, &c., and crowned by sparkling bottles of wine, and need I say more? Politics, poetry, society, the world, and the university, all and each debated by the prime spirits out of two thousand young men, and—made the occasion for an unrivalled display of wit and wisdom! Aristophanes, Shelley, Coleridge, Grammont, Pasta, and Ude, all canvassed, lauded, and illustrated with an exquisite and generous acuteness; and due punishment inflicted, by a few passing touches, on Daniel O'Connell, Lord Winchelsea, Jeremy Bentham, and the Vice-Chancellor!*

Such are the amusements, and such the triumphs, dear to the elect among the Cambridge students!

In the evening, I, and the less noisy and vacant of my contemporaries, generally occupy ourselves in private. But when this is not the case, I sometimes betake myself to a large room at an inn, which is the arena for the debates of a large society.

The meetings are held weekly. Suppose this to be Tuesday, the —th day of —, and behold the 'Union' in all its glory. A long, low room, with three or four rows of benches down the sides, and the President's chair at one end, exhibits a muster of perhaps two hundred members. Tables with candles stand in the centre, and the orators are generally congregated near them. After some minutes spent in private business, the President announces, that 'the question for this evening's discussion is,—Ought the claims of the Roman Catholics to have been granted previous to the year 1808? The opener is at liberty to begin. (*Order, order!*) My friend Williams rises, with his eyes upon the ground, and his hands upon the balloting-box. (*Hear, hear, hear!*)—'Mr. President, I should not have proposed this question to the society, had I thought that it was commonly discussed elsewhere on the proper grounds. This question is, in fact, a contest between the people and the aristocratic monopolies, which scarcely even pretend to represent the people;' &c. &c., and so on for half an hour. Then rose Mr. Billingsgate, a soft-voiced young gentleman of large fortune, and a fellow-commoner; yet, though a fool, a favourite with the society. 'I protest, Sir, against the use of such expressions as those which have been expressed by the honourable gentleman. They are decidedly unconstitutional; I say, Sir, they are decidedly unconstitutional. I maintain, Sir, that the House of Commons does fully and fairly represent the people. By the people, I do not mean the rabble, but persons of birth, influence, fashion, and fortune. The glorious constitution, Sir, is composed of three powers, all exactly equal to each other, and yet no two of them superior to the third. I consider that the speech of the honourable gentleman was decidedly unconstitutional, and in favour of the bloody papists, and ought to have been interrupted from the chair.' (*Hear, hear, hear, and loud laughter.*) Then am I seen to rise, or some other moderate, well-informed, and eloquent member, and the assembly is stilled into silent expectation. The discussion is restored to its proper path, the opposing arguments are admirably balanced, and the whole question is settled in one rolling accumulated peroration.

An evening of this kind seldom terminates without a supper party, which, indeed, in ordinary circumstances, is no very rare occurrence at Cambridge, and which is sometimes the dulllest and sometimes the pleasantest kind of entertainment I have ever experienced. Jokes, songs, and milk-punch are the great elements in these festivities. But I confess, with shame, that to me they have far less charm than an evening spent alone. The silent hours, the blazing fire, the crowded book-shelves, the two or three engravings that adorn my antique walls, the feeling of remoteness from the busy paths of human interests, from the spots which the habitual sympathies of previous life made holy,—all are favourable to meditation; and my narrow and humble cell has often become the theatre for a thousand delightful and splendid fancies. I have sat beside the fire for hours with the tea-kettle humming beside me on the 'hob,' and seen pass along the pale grey wall a glittering array of the wise, the powerful, the lovely, culled from every volume of the world's history,—patriarchs and princesses, Grecian generals, and Persian captives; the knights of the middle ages, and the ladies worshipped by the troubadours; and the broad uncertain wavering glare of my hearth has moulded and collected itself against the dark curtain of my window into shapes of beauty, all feminine, yet scarcely

mortal, surrounded by symbols of wondrous enchantment, and in which the dark glories of Asiatic eyes sparkle through vague halos of splendour like those of the northern lights. These, wild as they are, these are the visions which I have enjoyed even at Cambridge. Speak who will of lectures, and statutes, and articles, and proctors, these are enjoyments which systems cannot give, nor institutions take away.

Christ's College, Cambridge.

E. B.

TWELVE YEARS' MILITARY ADVENTURE.

Twelve Years' Military Adventure in Three Quarters of the Globe; or, Memoirs of an Officer who served in the Armies of his Majesty and of the East India Company, between the years 1802 and 1814, in which are contained the Campaigns of the Duke of Wellington in India, and his last in Spain and the South of France. 2 vols. 8vo. Colburn. London, 1829.

Of all that is most interesting to a philosophical inquirer in the circumstances of India and its inhabitants, we know exceedingly little. The structure of its society, in spite of the light that has been thrown upon it by some very recent writers, is still a great mystery; the degree to which elements of national feeling exist among the heterogeneous tribes which make up its inhabitants, and the chance of these elements ever working themselves into a real national existence, few seem able to determine; the question, whether we are co-operating in the amelioration of its condition, and by what means we could co-operate in it, is still litigated, with little hope of an adjustment, between a host of disputants, most of whom appear to possess a very slight knowledge of the premises that must be settled before it can be satisfactorily solved. But though we have scarcely penetrated at all below the surface in these investigations—that surface has been explored with marvellous industry and great success—there is no country in the world of which we have so many vivid and brilliant pictures—none of which the scenery has been more visibly brought before our eyes and our fancy, whose endless varieties of costume and manners have been so minutely and gracefully sketched. We should be almost glad, if it were possible, that the subject might be exhausted, because there would be some additional hope of wise men going resolutely down into those deeper mines from which they hitherto have been seduced by the glittering ore that lay scattered on the upper earth,—but of this there are no hopes; new labourers are daily coming into the field, and we are so pleased with the treasures they exhibit to us, even though, as is generally the case, they are only old gems newly set, that we have not the heart to tell them that we wish they would go their ways and leave the ground to their betters.

'The Twelve Years' Military Adventure,' as was to be expected, does not reveal many peculiarities of India with which we were previously unacquainted, but it mixes up the old descriptions and familiar objects (and these, old as they are, are given with great spirit and freshness) with personal anecdotes, often very entertaining, and which throw an air of originality over the book, that no mere description can possess. The author having, as he informs us, been devoted, as the greatest dunce of his family, to the infernal gods, i. e. a military life, (an assertion which is either highly complimentary to his brethren, or else proves him to have profited greatly by his subsequent advantages, as his mode of writing is that of a clever and well-educated officer,) obtained a cadetship for the artillery in the engineers in the Company's service; and after spending a reasonable time at Woolwich, set out for his destination. Of course, the first part of the volume is common-place. To say any thing original respecting the voyage;—the cuddy-table,—the arrival at Madras,—the Indian woman market, &c., &c., would require genius of a

high order. Neither are the descriptions of the Anglo-Indian camps,—the tanks,—the hill-forts very modern: we, therefore, prefer taking some of the anecdotes, which, though we will not warrant them all to be spick-and-span, are at least new to us.

'An officer, whose stock of table-linen had been completely exhausted during the campaign—whether by wear and tear or accident I cannot say—had a few friends to dinner with him. The dinner being announced to the party, seated in the *al fresco* drawing-room of a camp, the table appeared spread with eatables, but without the usual covering of a cloth. The master, who perhaps gave himself but little trouble about these matters, or who probably relied upon his servant's capacity in the art of borrowing, or, at all events, on his ingenuity in framing an excuse, inquired, with an angry voice, why there was no table-cloth? The answer was "Master not got;" with which reply, after apologising to his guests, he was compelled, for the present, to put up. The next morning he called his servant, and rated him soundly, and perhaps beat him, (for I lament to say that this was too much the practice with European masters in India,) for exposing his poverty to the company; desiring him, another time, if similarly circumstanced, to say that all the table-cloths were gone to the wash. Another day, although the table appeared clothed in the proper manner, the spoons, which had probably found their way to the bazaar, perhaps to provide the very articles of which the feast was composed, were absent, whether with or without leave is immaterial. "Where are all the spoons?" cried the apparently enraged master. "Gone washerman, sar!" was the answer. Roars of laughter succeeded, and a tea-cup did duty for the soup-ladle. The probable consequence of this unlucky exposure of the domestic economy of the host, namely, a sound drubbing to the poor maty-boy, brings to my mind an anecdote, which, being in a story-telling vein, I cannot resist the temptation of introducing. It was related to me, with great humour, by one of the principals in the transaction, whose candour exceeded his fear of shame. He had been in the habit of beating his servants, till one in particular complained that he would have him before Sir Henry Gwillam, then chief justice at Madras, who had done all in his power to suppress the disgraceful practice. Having a considerable balance to settle with his maty-boy on the score of punishment, but fearing the presence of witnesses, the master called him one day into a bungalow at the bottom of his garden, at some distance from his house. "Now," said he, as he shut the door and put the key in his pocket, "you'll complain to Sir Henry Gwillam, will you? There is no body near to bear witness to what you may say, and, with the blessing of God, I'll give it you well."—"Master, sure nobody near?" asked the Indian—"Yes, yes, I've taken good care of that."—"Then I give master one good beating." And forthwith the maty-boy proceeded to put his threat into execution, till the master, being the weaker of the two, was compelled to cry mercy; which being at length granted, and the door opened with at least as much alacrity as it was closed, Maotoo decamped without beat of drum, never to appear again.

'This circumstance reminds me also of a story which was told of Captain Grose of the Madras army, who was killed at the siege of Seringapatam. He was son of Grose the antiquary, whose talents he inherited. He was remarkable for his wit and humour, and his memory is still cherished by all the lovers of fun who knew him. Having had occasion to make some communication to head-quarters, he was received much in the usual manner by one of the understrappers, who told him that no verbal communications could be received, but that what he had to say must be sent through the medium of an official letter. He happened, some days afterwards, to have a party dining with him, and among others were a few members of the staff. In the midst of the dinner a jack-ass came running among the tent-ropes, exerting his vocal organs in a manner by no means pleasing to the company. Grose immediately rose, and thus addressed the intruder:

"I presume, sir, you come from head-quarters. I receive no verbal communications whatever, sir. If you have any thing to say to me, sir, I beg you will commit it to paper."

Shortly after our author's entering it, the army was joined by no less a person than General Wellesley with the Mysore detachment. Our author, who had good means of information, gives a very favourable version of the story about that

officer's conduct at Seringapatam, of which so much more than is necessary has been said already. The notion of the transaction having displayed any cowardice, seems completely refuted by his view of it.

Our author's picture does not want the dark touches which so powerfully diversify the Indian landscape :

'From the time we quitted Poonah all signs of cultivation ceased. The villages were mostly deserted, and such of the inhabitants as remained were exposed to all the horrors of famine. These forlorn wretches, of whom some, perhaps, had refused to emigrate, from an obstinate attachment to the soil of their birth, while others had lingered in hope till they had not strength to move, might be seen hovering round their dismantled dwellings in different degrees of exhaustion, from the first cravings of hunger to the later and more passive dejection of long privation. But still, amidst all this wretchedness, there was nothing of violence in their despair. The victims seemed to await the approach of death with patience and resignation, if not with apathy. Whether this was the natural consequence of their situation, their mental energies having gradually sunk with their corporeal strength, or whether it proceeded from the character of the 'meek Hindoo,' I cannot pretend to decide; but this silent wretchedness gave, if possible, an additional gloom to a scene already truly heart-rending. This patience under suffering, this composure, and even *sans froid*, within the jaws of death, are prominent characteristics of the Hindoo, and ought, indeed, to put to shame those among their conquerors, who, boasting higher attributes of courage and virtue, pretend to look down upon them with contempt. No one meets death with less apparent dread than the Hindoo; and when imbued with a sense of honour, as among the military castes, no one can display more heroism. I have repeatedly seen them refuse quarter, when the European would have courted mercy even in chains. Wherefore, then, are we always victorious in our contests with them? It cannot proceed, in every instance, from superiority in the art of war, for bodies of troops must sometimes clash in such a way that discipline can avail neither party. The truth lies in this, that the courage of the Hindoo is of a passive nature, while that of the European is active; the former being inert, has only its own weight to give it power, the latter has activity to increase its momentum.

'Numberless were the spectacles of woe which we witnessed at this period. One in particular has been so deeply imprinted on my memory, that centuries of life would not efface it. Being detached one day on duty to some distance from the camp, and returning home late, having outstripped my escort, I was unfortunate enough to lose my way. Night overtook me in this unpleasant predicament, when, finding myself near one of those forlorn villages, I rode up to it to inquire my road. The moon had just risen, and showed me a group of famished wretches seated under the walls of the village, surrounded by the mortal remains of those who, happily for them, had already preceded their comrades in the agonies of death, and whose earthly sufferings were closed. As I approached, packs of jackals, preying on the wasted bodies of the latter even before the eyes of the helpless survivors, ran howling away at the sound of my horse's feet—their instinct teaching them that I was a different kind of being from those scarcely living wretches whom they viewed more with greediness than fear—while the vulture, rising reluctantly from his bloody banquet, flapped his broad wings in anger, and joined the wild chorus with discordant cries. The moon's pale light shed a suitably mournful tint over such a scene. Viewed in its silvery beams, the dark bloodless countenances of the melancholy group assumed a hue perfectly unearthly, and which I can only compare to that in which the prince of darkness is painted by the imagination of youth; while their sunken eyes, hollow stomachs, and emaciated frames, spoke the extremity of their wretchedness. I addressed a few words to them; but the only answer I obtained was a sigh, accompanied with a mournful shake of the head, betokening the want of strength even to give utterance to speech.'—Vol. ii. pp. 145—148.

The battle of Assaye is well described. We quote some of the incidents attending its conclusion.

'At this spot I witnessed a scene which I shall not easily forget. I was riding among the bodies of the poor 74th along with Captain (now Sir Colin) Campbell, who had a brother in that regiment, of whose

fate he was ignorant, till he saw his corpse extended on the ground. The shock to his feelings, and the scene that followed, may be better conceived than described. This, I believe, was his only remaining brother of a large family who had all fallen in their country's cause. It has not been the fault of Sir Colin that he has survived to wear his well-earned laurels. He was but a subaltern at the storm of the pettah of Ahmednagur, where his distinguished gallantry attracting the notice of the General, he made him his brigade-major. Sir Colin is now Major-general and K.C.B., while I am but a half-pay Captain. "*Fortune de la guerre!*" as the French say. But he is the last man I would envy. He is a good fellow, and long may he live to be an honour to his profession! As a set-off to this affecting circumstance, I must describe a ludicrous scene which occurred about the same time, and which for a moment caused a ray of hilarity to cheer the gloom of the battle-field. A surgeon, whose bandages had been exhausted by the number of patients, espying one of the enemy's horsemen lying, as he supposed, dead on the ground, with a fine long girdle of cotton cloth round his waist, seized the end of it, and, rolling over the body, began to loose the folds. Just as he had nearly accomplished his purpose, up sprang the dead man, and away ran the doctor, both taking to their heels on opposite tacks, to the infinite amusement of the bystanders. This extraordinary instance of a doctor bringing a man to life, so opposite to the usual practice of the faculty, became the subject of a caricature; while the story, as may be supposed, long clung to this unfortunate son of Galen, who afterwards went by the name of "the resurrection doctor."—Vol. i. pp. 79—81.

The next extract contains an extraordinary instance of coolness and wisdom displayed by the Duke of Wellington:

'The enemy were formed on an extensive plain in front of the village of Argaum; their infantry, to the amount of about 10,000, in the centre, with about forty pieces of cannon in the intervals of the battalions, and their cavalry, which was numerous, on the wings. There was, about half a mile in front of the centre of their position, a village, towards which the right column of infantry, composed of the General's own division, was directed, and in front of which it was intended that the line should be formed. With this view our column was to pass by a road to the left of the village, and, as soon as that was cleared, it was to wheel and take ground to the right. But, scarcely had the leading platoon gained the end of the village, when the enemy opened at once all their guns on it, from the distance of about 1000 yards, and being well directed, most of the shot took effect in the head of the column. The bullock-drivers attached to some field-pieces, which, as usual, moved near the head of the brigade, becoming alarmed at this unexpected salute, and dreading, perhaps, a second Assaye, lost their presence of mind, and of course the management of their cattle, which instantly turned round, and ran headlong into the midst of the platoons just behind them, and threw them into confusion. The troops coming up in the rear of these, not knowing the immediate cause of this confusion, and feeling severely the effect of the enemy's lobbing shot, became alarmed. A panic seized them; and two battalions of sepoys, with the infantry piquets, actually turned tail, and hastened to seek shelter behind the village. The General, who was then close to the spot under a tree giving orders to the brigadiers, perceiving what had happened, immediately stepped out in front, hoping by his presence to restore the confidence of the troops; but, seeing that this did not produce the desired effect, he mounted his horse, and rode up to the retreating battalions; when, instead of losing histemper, upbraiding them, and endeavouring to force them back to the spot from which they had fled, as most people would have done, he quietly ordered the officers to lead their men under cover of the village, and then to rally and get them into order as quickly as possible. This being done, he put the column again in motion, and leading these very same runaways round the other side of the village, formed them on the very spot he originally intended them to occupy, the remainder of the column following, and prolonging the line to the right.'—Vol. i. pp. 196—199.

We have quoted at considerable length from this volume; but at this season, when the publishers are chiefly engaged in discharging their volleys of small shot as a preparation for the commencement of the campaign, an entertaining book is rather a rarity, and we shall therefore return next week to the second volume.

LAWS OF LITERARY PROPERTY.

A Treatise on the Laws of Literary Property, including the Piracy and Transfer of Copyright, with A Historical View and Disquisitions on the Principles and Effects of the Law. By Robert Maughan, Secretary to the Law Institution. 8vo. Longman and Co. London, 1828.

It would be difficult to name a law, either of nature or of man, so little susceptible, in respect to principle, of satisfactory justification to the mind of the inquirer, not fully persuaded that 'whatever is is best,' as that which has obtained throughout the civilised world, in sanctioning and regulating rights to property. If order be the end and aim of legislation, and if this ORDER signify a something more comprehensive and grand than the mere retaining of things in the state into which they have emerged from the chaos of barbarism,—if it imply, by not the least allowable of fictions, the wisest arrangement devisable by human reason for securing to mankind, in general, the fullest and most equal participation, compatible with their mundane condition, in the bounties of the Creator, how many facts daily occur to suggest to the speculative mind, the suspicion that the laws which regulate the distribution and possession of those gifts of Providence, on which the comfort and well-being of men depends, proceed on an erroneous principle! Should the suspicions so excited lead to more profound investigation,—should an attempt be made to probe the sore which spreads its baneful effects throughout the system,—would the examiner be fairly taxed with ignorance or credulity, if he paused for a moment, in the belief that he had found the object of his search, on beholding the idle, the unproductive, and the dissolute enjoying, or rather wasting, the fruits due to the toil and brow-sweat of others,—on perceiving the produce of one soil removed as soon as gathered, to enrich individual dwellers in other lands already overburthened with wealth, while the miserable natives of the country of its growth, and for whose use that country should seem to have been endowed with its fertility, drag on a miserable existence in privation and wretchedness? Would a being, more accustomed to the contemplation of the bounteous dispensations of Providence than to the selfish and grovelling devices of man by which they are perverted, deserve ridicule for his simplicity, if, on perceiving these abuses, he rested for a moment from his inquiries, in the persuasion that he had touched the rankling substance, that he had discovered this manifest counteraction of the designs of nature to be the result, in a great measure, of the system of laws which invests a man with the perpetual possession, the right of disposition, and even of transmission on death, of whatever he once enjoys? We take possession of an ownerless plot of ground; we till it, we scatter it with seed, and while we await the harvest, it is but justice certainly that we should be protected from invasion by others of the fruits of our industry. But the produce once collected, on what principle do we pretend to retain, against other claimants, the possession of the soil itself?

Having used it once to our profit, we assume the right of appropriating it to ourselves for ever,—to hold it against all the world. Such is the principle of occupancy; and on this flimsy foundation is it that the superstructure of human laws regarding the rights of property is avowedly erected. Weak, however, as is the principle, it has become sanctified; successions of ages and of nations have adopted it, or acquiesced in it, and even were a change desirable, it is no longer practicable. Nor are we sure but that it is in appearance rather than in reality that the system is objectionable, or that in any but extraordinary cases, and connected with other circumstances, it operates to an evil end. The all-providing bounty of nature has dealt blessings more variously than to limit them to the possession of acres and mansions, of garnered stores, of jewels and precious stones. Such treasures as these

will be held in their due and moderate estimation, either for his own sake or for that of others, by him who has felt and reflected how closely and completely substantial happiness is contained within the individual nucleus—how limited the range within which its component parts are included—who considers that these are intense in proportion as they are concentrated—that like the wire-drawn metal, the farther they are made to extend, the weaker are they, and more liable to rupture. A hundred caparisoned barbs, the chosen of Arabia, may await their owner's will in the vaulted hippodrome, but unless he would emulate the feats of a Ducrow, he can bestride at once but a single steed; nor even then is the delight in the swiftness of the fleetest courser comparable to the excitement of a mountain walk. The dainty board may present service after service, yet has each individual but a single appetite to satiate; and from authority it is averred, that at the table provided by the most sumptuous of Christian monarchs for the officers of his guard, and towards which, according to the lamentations of Hume, (Joseph, not David,) such extravagant draughts are made on the public purse, the simple slice of sirloin, and the humble *earth-apple*, are preferred to the most elaborate delicacies which the foreign skill and exquisite taste of an Ude can supply: the opulent Islamite may possess his harem, and be surrounded by his Greek and Circassian Sultanas, by the rarest beauties of Europe and Asia, all emulous of his favours, yet even for the successor of 'The Prophet,' will the affection of the soul refuse to divide itself:—a mere night of love is his, cold and freezing in proportion to the number and brilliancy of the stars that shine, a night unconscious of the genial heat of a sole vivifying luminary, extinguishing all other minor lights; and who that has felt the flood of passion flowing in one full, undivided torrent, would consent to have it dribbled over his heart in streamlets? But to take part in the councils of our native land, to stand conspicuous before the world, to raise the voice of comfort and protection to the oppressed and fallen among nations, to encourage and support people and classes of people struggling for their rights and liberties, be the usurpation that of a single despot, or of a mass of their fellow-citizens, to be conscious of an influence over the destinies of the universe—this, it must be owned, is a noble prerogative. It is the prerogative, however, of talent and not of wealth; and acres, and farms, and stock, are impotent to bestow it: and far better is it to crouch in a corner and die unseen, to invoke the aid of the friendly extinguisher to conceal our fluttering, than to shine forth only to expose our folly, to be a mark for ridicule to point the finger at. Let occupancy, then, continue to be the honoured principle of the laws of property; but let us not be charged with interested or levelling motives in speculating on its soundness in a literary, and, we trust, a philosophical journal, however justly we might be denounced for holding the same doctrine in a meeting of wild sons of Erin, or to an assemblage of Muscovite serfs.

It must be allowed, moreover, that there are objects of property to which the principle of occupancy is applied with a greater show of reason than to landed possessions. The laborious miner penetrates into the bowels of the earth, he burrows in the rocky mountain, he foregoes the blessings of light, he toils in positions the most painful and distorted, and, by hard and persevering labour with mattock and chisel, extracts a morsel of precious ore from the veins of the stony mass into which he has wormed himself. The metal so obtained is a fair object of property: it has more the character of the harvest of the cultivator, of the fruits drawn from the soil, than of the soil itself. The value of the labour bestowed in the acquisition is not separable from the intrinsic worth of the substance itself, and he by whose foresight, energy and toil the treasure has

been brought into use, is with justice protected in the enjoyment or disposition of it. Cases of conversion, also, where substances have undergone a peculiar fashion and alteration by the hand of man, are instances in which the principle of occupancy is partially, at least if not perfectly, applicable. Others might be named, but we pass them over in order the sooner to arrive at a case in which the title is higher than occupancy, and inherent in the very nature of the object.

If we acquiesce in the law which gives land for ever to him who first turned the soil with his spade, if we admit the title conferred by mere conversion or acquisition of an article on which another might have executed the same operation, what should be our course in the case in which the object, the title of which is in question, is a man's own pure production from beginning to end—the matter of his own creation, which, but for him, never would, never could, have been? Surely, if there can exist an exclusive right to the possession of any one object, it is that which has proceeded entirely from a man's self, 'the issue of his own brain,' 'his intellectual offspring.' Sure, if in any thing, in this is contained an unqualified and indisputable principle on which to found a right of property wholly indefeasible. Yet such is our legislative consistency that while we confirm, by our usages and our statutes, the title to those objects, the original right to which rests on a questionable principle, we divest those which have inherent in them all the requisite qualities to become the lawful object of exclusive possession of such their properties; we rob them from the legitimate owners, and distribute them to the public. Such is the operation of the laws which now regulate literary property.

The injustice of these laws it is the purpose of this article, to expose. The author feels and writes both as a lawyer and a man of letters, and appeals to the public for a revision and alteration of the statutes and decisions which deprive the literary man of the title to his own works after the short term of eight-and-twenty years, while the enjoyment of other species of property, which are held by claims far more questionable, are secured in perpetuity. He demands the legislative interposition to redress the wrong committed by former laws, on the ground, not only of justice, but of expediency and self-interest, by the broad and pointed argument, that 'the public have an equally strong interest and a positive duty, in promoting the general adoption of just principles,—each man being individually concerned in enforcing and upholding that which is right and just, since the mischief that is done to his neighbour to-day, may be perpetrated on himself to-morrow.' This argument, *ad hominem*, dispenses with the necessity of any further excuse for obtruding a legal subject on our lay readers, and for detaining them for a short time longer with the analysis, from the book of Mr. Maugham, of the ancient and present state of the laws affecting literary property, and an exposure of the manner in which, under the profession and pretext of protection and encouragement, the most just rights by which property can be held, have been invaded and curtailed.

Copyright is one of that class of objects of property, which has grown up with the development of the human faculties, and the progress of civilization. It is one of those new subjects for the exercise of jurisprudence, applied to which the principles of private justice, moral fitness, and public convenience, are held to make common law, without a precedent; in which, in fact, the right existed *ab origine*, however recently the occasion for asserting it may have occurred. Consequently, no early precedent of the suing for a remedy against invasion of copyright is to be found. Nor is this a matter for surprise. In those times in which to read was so scarce an attainment, that the preservation to society of a

man endowed with that rare accomplishment was an object of such paramount importance, that the course of the law, in his case, was diverted; that the very circumstance which aggravated the guilt of the accused,—unless, indeed, according to a modern doctrine, the tendency of learning was to promote the disposition to crime, and therefore, an offence was more venial in an informed than in an ignorant transgressor,—were allowed as a reason for a relaxation of the law in his favour. Accordingly, the instances of the interference of the law with the fruits of intellectual labour, either for their protection or restraint, are not traceable to a period farther back than a century after the invention of printing. The first occasion of this interference, while it recognised the right, made an infraction on the liberty, of authors. This was the charter granted to the Company of Stationers by Philip and Mary, in the year 1556, when, for the purpose of preventing the propagation of the Reformation, and suppressing what those pious sovereigns were pleased to consider seditious and heretical books, a law was made which gave to that society the exclusive right of printing books. This was followed, in subsequent years, by several acts of the Star Chamber, for the regulation of the press, and the prohibition of printing or importing books by other persons than those entitled to the exclusive right.

In 1641, and after the abolition of the Star Chamber, the power of regulating the press by proclamation and decrees was annulled; but Parliament made an ordinance which prohibited printing without the consent of the owner of the copyright, unless the book were first licensed and entered in the register of the Stationers' Company. The Licensing Act of 13 and 14 Charles II., cap. 133, prohibits the printing or importing of any book entered in the register book of the Stationers' Company, without the consent of the owner. This act, continued by subsequent statutes, expired in 1679. It was revived by 1 James II., cap. 7, and continued by 4 William and Mary, cap. 24, and finally expired in 1694.

Up to this period, therefore, and subsequently, the property in copyright was recognised as a common law right; that right itself had been given by no statute, yet the improvement of several of the statutes required that *ownership should be proved*. As property, it was consequently enjoyed; sales of copyright in perpetuity by authors were common; and there were instances in which the property in those copies was made the subject of family settlements for the provision of wives and children.

Such was the state of the law of literary property until the year 1710, the 8th of Anne, when the Act was passed 'For the Encouragement of Learning,' by which it was enacted, that authors and the persons to whom they had disposed of their rights should have the sole right and liberty of printing works for a term of fourteen years, to commence from the first publishing the same, and no longer; and that after the expiration of the first term of fourteen years, the right of printing or disposing of copies should return to the authors, if they were then living, for another term of fourteen years. This has proved a most important statute, since it formed the commencement of an era in the law of literary property; and all the subsequent discussions which the subject has undergone in courts of justice have turned on its construction. From 1710 until 1775, and until the decision by the House of Lords of the case of *Millar v. Taylor*, a suit instituted in 1776, on the subject of the publication of 'Thomson's Seasons,' it was considered that the act of Anne had not affected the common law right. The judgment of the Lords, however, established a different doctrine, and put the question out of all dispute; it closed all doors to a revival except in the form of an application for legislative enactment. Of the proceedings in this interesting case, the author of the work gives the following abstract:

'In the year 1769, the subject was discussed at great

length with respect to 'Thomson's Seasons,' in the celebrated case of *Millar v. Taylor*.

'The counsel for the plaintiff insisted "that there was a real property remaining in authors after publication of their works; and that they only, or those who claim under them, have a right to multiply the copies of such, their literary property, at their pleasure for sale." And they likewise insisted, "that this right is a common law right, which always has existed, and does still exist, independent of, and not taken away by, the statute of Anne."

'On the other side, the counsel for the defendant denied that any such property remained in the author after the publication of his work, and they treated the pretensions of a common law right to it as mere fancy and imagination, void of any ground or foundation.

'They insisted that if an original author publishes his work, he sells it to the public; and the purchaser of every book or copy has a right to make what use of it he pleases, and may multiply each book or copy to what quantity he pleases.

'They also contended that the act of Anne vests the copies of printed books in the authors or purchasers of such copies during the times therein limited, but only during that limited time, and under the terms prescribed by the act.

'There was a difference of opinion in the Court. Lord Mansfield and Judges Aston and Willes were in favour of the plaintiff's copyright, and Judge Yates was alone against it. Judgment was of course given according to the opinion of the majority.

'Some years after this decision the question came before the House of Lords, upon an appeal from a decree of the Court of Chancery, founded on the judgment given in the Court of King's Bench in *Millar v. Taylor*, and it was ordered by the House, on the 9th of February, 1774, that the judges be directed to deliver their opinions upon the following questions:

1. 'Whether at common law, an author of any book or literary composition had the sole right of first printing and publishing the same for sale; and might bring an action against any person who printed, published, and sold the same without his consent?

'Of eleven judges, there were eight to three in favour of the right at common law.

2. 'If the author had such right originally, did the law take it away upon his printing and publishing such book or literary composition; and might any person afterwards reprint and sell for his own benefit such book or literary composition, against the will of the author?

'There were seven to four of the judges who held that the printing and publishing did not deprive the author of the right.

3. 'If such action would have lain at common law, is it taken away by the statute of 8th Anne? And is an author by the said statute precluded from every remedy, except on the foundation of the said statute, and on the terms and conditions prescribed thereby?

'On this question there were only five judges who were of opinion that the action at common law was not taken away by the statute, and there were six of the opposite opinion.

'It was well known that Lord Mansfield adhered to his opinion, and therefore concurred with the eight upon the first question; with the seven upon the second, and with the five upon the third (which in the latter case would have made the votes equal.) But it being very unusual, from reasons of delicacy, for a Peer to support his own judgment upon an appeal to the House of Lords, he did not speak.

'It was finally decided, that an action could not be maintained for pirating a copyright after the expiration of the time mentioned in the statute.'—pp. 30—32.

Immediately after this decision by the House of Lords in its judicial capacity, and in the same year, an act was obtained enabling the two universities in England, the four universities in Scotland, and the several colleges of Eton, Westminster and Winchester, to hold in perpetuity their copyright in books,—a glaring and most partial inconsistency, for which it would be difficult to assign a fair reason, and which, in its operation, is attended by the anomaly, that the copyright of a work which in the author existed only for twenty-eight years, if purchased by either of the bodies mentioned, becomes a right in perpetuity. The act of 41 Geo. III. made on occasion of the union with Ireland, merely en-

acted alterations in the remedies for the infraction of the law, and we may therefore pass over its clauses to the notice of the act of the 54 Geo. III. c. 156, in which the provisions of the former are embodied, and in which the law as at present in operation is contained. This act increases the term of copyright in a work to twenty-eight years certain from the time of publication, and for so long after the expiration of that term as the author shall survive. He is required to enter his book at Stationers'-hall; the neglect so to do subjecting him to a penalty provided by the act, but not affecting his copyright. The penalties for piracy under this act are, liability to an action, to be brought in any court of record, for damages, and to double the costs of suit; the forfeiture of the book so pirated, damasked and made waste; and a penalty of three-pence for every sheet, one moiety to the King, the other to the informer. By a decision of the Court of King's Bench constructive of this statute, an author, on the sale of his copyright, to entitle himself to the reversion of his right, should he survive the term, must make an express stipulation to that effect with his publisher; if he neglect so to do, the sale is considered a general assignment of all his interest.

Such is the substance of the law affecting literary property as it stands at present. By the act of 8th Anne, or by the construction put upon it, authors have been deprived of the right in perpetuity, which there is no doubt they previously possessed over their literary productions. Whether it were the intention of the framers of that act to work this wrong on the objects whom they professed to favour, has been and still is doubted; and, in the work of Mr. Maugham, the point is argued, and the negative proposition is maintained on very strong grounds. We shall not follow him in his reasoning on this head. The question, in a legal point of view, has been effectually set at rest by the decision of the House of Lords already referred to, and by the recognition, by subsequent acts of Parliament, of the validity of that decision. Nothing but a new legislative enactment can now remedy the evil, the injustice of which is obvious. It is powerfully exposed by our author; and we agree with him in anticipating, from the increasing liberality of the times and of Parliament, a more enlarged view of the subject, and a redress of the grievance. Should such a desired object be obtained, Mr. Maugham may certainly have the satisfaction of reflecting on the share he has taken in promoting it.

Our space will not allow us to accompany the learned author in his just and sensible advocacy of the cause of men of letters, on the subject of another crying grievance to which they are subject,—that of the University-tax, of which an alteration is the more called for, as it cuts like a two-edged sword, both ways, especially in its operation on works of value, since it not only takes eleven copies from the author, but deprives him of the sale of eleven; so that he may be said, in fact, to be taxed to the amount of twenty-two copies, although the law expresses but eleven.

The law, with regard to engravings, naturally forms a branch of the subject of Mr. Maugham's work. The several acts of Parliament by which the artists of that class are protected, have assimilated the law of this species of ingenious production to that on the copyright of books, with the exception of the remedies for infraction. A case, however, is now agitating the higher regions of art, which the law has not anticipated. Has the possessor, it is demanded, of a work of art, the right to have it engraved without the consent or emolument of the original artist, whose work it is? If not, can the heirs of Sir Joshua Reynolds (e. g.) supposing no lapse of time or other circumstance stood in the ways require, at the hands of a possessor of a work by that master, the sum which a printseller would be willing to give for the privilege of having it engraved and published? With

these queries for the exercise of the acumen of our legal readers, we take our leave of this subject, not however, without recommending the work of Mr. Maugham as a manual to legislators, literary men, and artists; and expressing our sense of the obligation the two latter classes are under to him for the clear and satisfactory manner in which he has set before them the laws by which their labours are affected, and the zeal and talent with which he has advocated their interests.

RANK AND TALENT.

Rank and Talent; a Novel. By the Author of 'Truckleborough Hall.' 3 Vols. Colburn. London, 1828.

If there be any truth in proverbs, we ought to feel no very friendly dispositions toward the author of 'Rank and Talent,' for he clearly practices a branch—and we are afraid we must acknowledge a superior branch—of our own craft. He is, to all intents and purposes, a reviewer,—but a reviewer not of productions, but of producers—not of books, but of men. To dissect and furnish analyses, brief or copious as may suit his humour, or that of his bookseller, of the beings with whom he converses—to give a catalogue of all the novelties which issue from the press of fashion, whether in the form of some quarto country squire, or some wide-margined duodecimo prig of the city,—to note where these have any pretensions to originality, or where they are only new editions of approved classics; in fine, to give witty and pointed criticisms upon these compositions which shall answer firstly and chiefly the great object of showing off the talent of the critic; and secondarily, the smaller object of giving the reader some notion of the thing criticised,—this is the appropriate business of the class of traders to which our author belongs. Generally speaking, we apprehend that the laws which govern the two divisions of the trade are the same; or, at any rate, we may form a fair guess about those which prevail in one, from those which are admitted to prevail in the other; but then to avow what these laws are, might be construed into a violation of the articles of our apprenticeship, into a shameful promulgation of mysteries, which our brethren have always thought it for the interest of the public not to divulge. Thus much, however, the scrutinizing intellect of the present age has discovered respecting our peculiarities, and thus much, therefore, we may without offence acknowledge,—that a reviewer is utterly incapable of writing the book which he reviews,—that a reviewer is not to be trusted even when his accounts of books are apparently the most fair and reasonable, because he exhibits that in fragments which can only be judged of as a whole,—and lastly, that the reviewers of books are, nevertheless, a clever, hard-working race of men, and ought to be encouraged. To apply these principles: we apprehend our man-reviewer could never compose a man; that is to say, bring before our imaginations a real embodied individual—that his examination of human motives in detail is not to be confided in as a creed of human nature, because it is extremely probable that in the rude process of analysis some of the most delicate (which are often some of the most potential) ingredients have been lost sight of, and because it is quite certain that all analysis must destroy that principle of cohesion between the parts, which, be it what it may, does unquestionably give to each part in combination a different character from that which it possesses when separated; and lastly, that the man-reviewer is, nevertheless—if his functions be not misunderstood, and he be not employed to do work for which he is incompetent—a very useful and meritorious person.

The author of 'Rank and Talent' is evidently a very clever man, and his novel, in our judgment, would be insulted by comparison with almost any of the fashionable novels. Neverthe-

less, we must take leave to assure the author, though he will no doubt laugh at us for saying so, and will rank us among the persons whom he is so fond of telling us, *substitute* an ideal for a real world, (that there are persons who have both an ideal and a real world, never seems to enter into his imagination,) that he is not, except in a very low sense of the word, a man of genius or a philosopher, to both of which characters he appears to pretend. He is a very shrewd and diligent observer, one who, in investigating mankind, trusts to his understanding and not to his fancy, one who does not start with a theory which he has to make out, and which induces him to cut off all the awkward corners and sharp angles in human nature, but who fairly and honestly repeats what he hears, though the speakers may utter ever so many oddities and contradictions. The first quality, as we have said, places him at an immeasurable distance a head of the ordinary fashionable novelists, who trust not at all to their understanding, but simply to a very crude and vulgar fancy, which tells them that each man will talk at all times according to the craft in which he was born, that lawyers are always lawyers, that a clergyman is simply a clergyman, and that one man in the middling class differs in nothing from another except in having the name Brown instead of Green, and in saying lack-a-daisy instead of good gracious. The second quality, of not having a theory to support, sets him equally above the class of novelists among whom Miss Edgeworth is queen. The follies of wise men—the sagacity of foolish men—and the existence of that large class which it is impossible to pronounce either wise or foolish, of which these gentlemen and ladies take no account, are duly recognized in his pages. He has not the monstrous notion of making a consistent character by representing a horrible creature whose mind is eternally in the same category. But here our praises must stop. If he ventures to ascend one step higher on the ladder, and place himself on a level with the men who, along with an understanding to perceive the varieties and inconsistencies of character, have likewise an imagination to conceive the principle which reconciles them, and to present us with a well-compacted creature in whom these qualities, however dissonant in themselves, shall yet be so amalgamated that their dissonance shall not be felt—if he should attempt to reach the elevation upon which such men as these are seated, the odds, we fear, are great that he stumbles and falls to the ground. He is extraordinarily deficient in dramatic power—cannot even support an ordinary conversation for two pages together, a failing of which he seems to be conscious, and for which he makes some rather awkward apologies; so that, though even of those personages whom we have never met with, he describes traits with such clearness and force that we feel they must exhibit these particular characteristics, whether we shall be able to recognize them as real men and women, entirely depends upon the accident of our having encountered them before. That this is not the case with higher works of art, is too obvious to need remarking. We never saw any creature from whom we could derive the least hint, the faintest analogy to assist us in our conception and admiration of Juliet; and yet our minds are never darkened with a shadow of scepticism respecting her reality or her womanhood.

On the contrary, we have had the honour of being introduced to the four Misses Woodstocks, though we cannot this moment recollect where and when; and consequently we are able to pronounce the following sketch capital, which, but for that fortunate event in our history, we should not have dared to do:

'The young ladies were not distinguished for any great share of personal beauty, nor were they remarkable for any deficiency in that respect. They were not romantic, nor were they deficient in sensibility. They could talk well, but did not utter oracles or speak essays. They were not merely acquainted with books, but with what books taught. They were also well

aware that the knowledge which they possessed was in all probability possessed by others; and that many with whom they might converse were far better informed than themselves. They did not set up for literary ladies on the strength of having read Locke's Essay, or being acquainted with a few Italian poets. In fact, they had read to good purpose, and had thought to good purpose too. The worst of the matter was, there were four of them; and they were so nearly alike in moral and mental qualities, and so much together, and in such perfect confidence with each other, that there was not opportunity and distinctness enough for any one of the four to make an impression, and preserve or strengthen it. For if, by chance, any susceptible youth, who might be desirous of choosing a wife for her moral and mental qualities, should be seated next to or opposite to Miss Woodstock, and should by hearing very sensible and unaffected language fall from her lips, or by observing in her smiles or more serious looks an indication of excellent moral feeling, find that his heart was almost captivated; probably on the following morning chance might place him near another sister with whose taste he might be fascinated, and whose most agreeable manners would make him almost regret that he had already lost so much of his heart; and while he might be balancing in his mind on which of the two his affection should rest, a farther acquaintance with the family would still farther unsettle and embarrass his judgment; and he would at length conclude that, as it was impossible to be in love with four, he could not really be in love with any; and the result would be general commendation and respect; and the four young ladies would be left to enjoy their reputation of being the most agreeable, unaffected young women living.'—Vol. i. pp. 161–163.

So, also, it has been our lot to meet Miss Henderson, and as we owe that young lady a grudge on several accounts, we willingly take this opportunity of revenging ourselves. We must premise that Clara is the heroine and a foreigner.

'Clara was young, susceptible, romantic, well informed by means of books, was possessed of good judgment and discernment; she was more familiar with standard writers than most young women, and was not aware that there was any pedantry in talking about them; she had also a taste for science; she had seen and observed but little of the world of humanity, but she had observed more of the world of nature; botany had been one of her studies, so had astronomy, and even geology; she had also a knowledge of the Latin tongue. To say the least of it, she was pleased with her knowledge. Whatever she had acquired had been by means of books, and those books were not numerous; and whatever came to her knowledge through that medium, came with all the authority of an oracle, so that any one who contradicted what her elementary instructions had taught her, or started any different theory from that in which she had nursed her own mind, appeared ignorant of the matter altogether. Coming forth into the world, she was surprised to find that her knowledge was beyond that of many with whom she conversed, and then she placed too high a value on that knowledge. A mind constituted and situated as that of Clara Rivolta, was in great danger of receiving from the vanity and conceit with which would-be knowing ones are gifted, an impulse not favourable to its graceful and proper development.'

'Lady Woodstock and her daughters had been introduced to the female part of his family by Mr. John Martindale, with the view of supplying them with certain intimates, to prevent accidental or disagreeable acquaintance. But it is not easy to manage such matters precisely according to preconceived theory and design, for these very young ladies were the means of introducing Clara to a young lady who tried very hard to make her as great a simpleton as herself. The young lady to whom we refer was Miss Henderson, eldest daughter of Mr. Henderson, the popular preacher above-named.'

Mr. Henderson not knowing what means he might have to provide for his family, very wisely gave them as good an education as was in his power; and at the same time, in order to have that education for them all as cheap as possible, it was his plan that the elder should teach the younger, that she might be thus partly prepared, should need be, to undertake with a great stock of experience the task of instructing others. The young lady took instruction kindly and well. Her progress in every thing was really astonishing. Her music-master, her drawing-master, her French-master, never had such a pupil in the whole course of their experience. Masters say the same of all their pupils who are not paragons of stupidity. But in this instance

there really was somewhat more truth in the commendations than is usually the case. Mr. Henderson was of course highly delighted with his daughter's talents. Mrs. Henderson was lavish in her praise of them, and profuse in her exhibition of them. The young lady was puffed into a mighty conceit of herself, and she very kindly pitied the ignorance and incapacity of the great mass of mankind. The young lady and her father and mother were not aware, that it was to a constitution of mind by no means enviable or desirable, that Miss Henderson was indebted for the great rapidity of her progress and the multitude of her acquirements. There were two causes of that progress: one was a prodigious share of vanity, which would undergo any exertion or painful affliction in order to gratify itself; and the other was a total want of all power of imagination or principle of original and investigating thought, so that there was nothing to interfere with an undivided and close attention to any object of pursuit. The natural result of acquiring knowledge on these principles and from these causes was, that the knowledge was at last and best the mere lumber of memory, and the theme of vain prate and idle boasting; it was not food for the mind, it was not digested. There was scarcely a piece of music which Miss Henderson could not play at sight; but her style of playing was such as to weary rather than to fascinate; and to listen to the young lady's mechanical dexterity on the piano-forte, was called undergoing one of Miss Henderson's sonatas. There was also the same hardness and absence of poetry in her paintings. The outline was very correct, the colouring was accurate, the transcript complete, but there was no life in the living, no animation in the scenery. There was a provoking likeness in the portraits which she sometimes drew of her friends; and so proud was she of her skill in portrait-painting, that few of her acquaintance could keep their countenances safe from the harsh and wooden mockery of her pencil. Deriving a rich gratification to her vanity from her various accomplishments and miscellaneous acquirements, she fancied that her greatest happiness was in the pursuit of knowledge and the pleasures of science. Much did she despise the follies of the fashionable world, and very contemptuously did she regard the ignorant and half-educated part of the community, and that part, in her judgment, consisted of nearly all the world, her own self and one or two particular friends excepted. Into this select number Clara Rivolta was most graciously admitted.

'Miss Henderson, though gifted with a most ample and comfortable conceit of her own superior powers and acquirements, was still not backward but rather liberal and dexterous in administering the delicious dose of flattery to those whom she honoured with her notice and approbation, as being superior to the ordinary mass of mortals. Clara Rivolta received the homage paid to her mind and acquirements as the effusions of a warm heart and generous spirit. It is possible, however, to mistake heat of head for warmth of heart. This was a mistake into which Miss Henderson was perpetually falling, both as it related to herself and to others. Not only was the young lady liberal in her praises of those whom she would condescend to flatter with the honour of her approbation, but she absolutely praised them at her own expense, expressing her high sense of their superiority to herself. But it should be added, that this kind of homage always expected a return with interest, and the language in which she praised her friends was always put forth as a model and specimen of that kind of homage which she should be best pleased to receive from her dear friends.

'To the vanity of intellect Miss Henderson added the vanity of sentiment. She had read something in books about the heart, and about sentiment and feeling, and so on; and she thought that there must be something fine in that concerning which so many fine words had been used. Thereupon, with that conceit she added sentimentality to the rest of her acquirements; and an acquirement in good truth it really was, seeing that it was by no means natural. Not the less fluently could the young lady discourse on that subject, because she knew nothing about it; but, on the other hand, she set herself up as a judge and censor-general on all her acquaintances and the world beside on the subject of sensibility of heart. She had enjoyed many opportunities of falling in love, and those which she had enjoyed she had not overlooked. Many and many a time was her heart lost, but never irrecoverably. Few were the gentlemen who thought it very prudent to venture to pay serious court to a young lady of lofty thoughts and lowly means. A very slight degree of notice was sufficient, however, to set if not her heart in flames, at least her tongue in motion to her confidential friends

concerning sentiment and sensibility, and all that sort of thing.

* Such a companion as this was by no means fit for Clara Rivolta. But Mr. Martindale saw not the real character of the young lady, and Miss Henderson was wise enough to flatter the old gentleman into a conceit that she considered him as one of the few enlightened men of the age; and, as Mr. Martindale himself was one of those oddities who think all the world block-heads but themselves, he was not displeased with that kind of homage which Miss Henderson paid him: and as Mr. Martindale was one of the very few single gentlemen whom Miss Henderson had seen and had not fallen in love with, she was not quite so disagreeable to him as she was to many others. Mr. Martindale, therefore, tolerated the acquaintance with Clara; and as for Signora Rivolta, it appeared that Miss Henderson had sagacity enough to see that she was not to be imposed on or deceived by foolish talk, and therefore she avoided exposing herself to her.

* In person Miss Henderson was by no means disagreeable; she was rather pretty. There was, it is true, a little deficiency in height, and a little redundancy in breadth; but still there was nothing remarkable one way or the other. She dressed in very good taste, and her ordinary manner was good. It is wicked, or at least very thoughtless, in young men to pay unmeaning attentions to any young lady, but especially to such very sentimental ones as Miss Henderson: frequently had she been rendered unhappy by this thoughtlessness. Now, it is very silly for young men to boast of the hearts they win; and, in winning such a heart as we are now speaking of, there is certainly nothing to boast of, for any one was sure to succeed provided there was a vacancy. At the time of which we are writing, the fragrant Henry Augustus Tippetson was the favoured and honoured companion of Miss Henderson's walks; and it is difficult to say which was the prettiest animal of the two, Mr. Tippetson or his little white French dog. They were, at one time, always to be seen together, at a certain hour of the day, in the Green Park. They seemed to have a great fellow-feeling, and both looked as spruce and neat as if they had both been dressed by the same valet. Mr. Tippetson, though something of a coxcomb, and considered to be vain of his person, still was so far diffident of himself as to use the assistance of his little quadruped companion to attract attention to himself. Often has he acknowledged, or rather boasted, that his little dog has been the means of bringing him into conversation with those whom otherwise he should not have had an opportunity of addressing; and oftentimes it had been supposed that it was Henry Augustus Tippetson's private opinion, that his little French dog was considered by the ladies as a very pretty excuse for taking notice of the pretty owner of the same.

* Now it was the natural unsophisticated opinion of Clara Rivolta that Mr. Tippetson was an empty-headed, effeminate coxcomb, not worth notice, and absolutely incorrigible by any other discipline but that of time. But Miss Henderson had discovered, or fancied she had discovered, that Mr. Tippetson was not so great a coxcomb as he appeared to be. She acknowledged, indeed, that he was very attentive to his dress and his person; and very candidly did she make allowance for a little error in that respect, as he was but young, and she had heard it said that it is better to be too attentive in youth than too negligent in age in that respect. As for Mr. Tippetson's liasing, she was very sure that was perfectly natural and unavoidable. The use of perfumery was become absolutely necessary from the frequency of crowded apartments. As to the apparent diversity between the studious and the learned Miss Henderson, and the lounging, indolent, unreading habits of Mr. Tippetson, the difference was rather apparent than real, according to the young lady's own account of the matter: for though Mr. Tippetson was not at present much in the habit of reading, he had been formerly, and his mind was by no means unfurnished; he was a man of great observation, and was constantly making remarks and observations on every thing he saw or heard. So that Miss Henderson was quite sure that when Clara came to be better acquainted with the young gentleman, she must think better of him. Thus it is that foolery is tolerated. Look at a coxcomb at a little distance, and observe his silly airs. The animal is absolutely nauseous, and his whole manner and style villanous and contemptible. But a more intimate acquaintance makes a discovery of some bearable qualities; and familiarity renders the odious less odious; and then it is thought that there are more qualities existing in him than have

been discovered, because more have been discovered than were suspected. So foppery and foolery are tolerated from habit and intimacy."—pp. 101—112.

To complete this young lady's portrait, we must present our readers with a letter in which (to borrow our author's phrase) she makes over to Clara all her right, title, and interest in Mr. Augustus Tippetson, to have and to hold the same unto her and her heirs for ever; the said Miss Henderson having, however, previously to this magnanimous step, provided herself with another admirer in the person of Clara's true love, Mr. Horatio Markham.

"Once more, my ever dear Clara Rivolta, I take my pen to address you, and perhaps it may be for the last time. We are separated by distance of place, and still more so by the cessation of a correspondence which gave me at least infinite pleasure and inestimable benefit. As I can no longer hope to receive your truly intellectual communications, I read over and over again those most delightful and improving letters with which you once condescended to honour me: and indeed it was a condescension in you to stoop to let down your fine mind to correspond with me. I feel I acknowledge your superiority; and not only do acknowledge and feel it, but it is manifest to others too. Tippetson is your slave. Nay, start not, I repeat it, Tippetson is your slave. I am well aware that I possess not powers of mind to retain him. Clara, he is yours. Yes, my ever dear friend, Tippetson is yours. I surrender him entirely, unreservedly, calmly. Do you doubt it, my Clara? Do you distrust me? Oh, no, you cannot. See how steadily and firmly I write. My hand trembles not; my cheeks burn not; no tear blots the paper; nor do I repent what I have said, or wish it unsaid. Tippetson appreciates your merits. You have the power to rule and charm his mind. The world may call him frivolous, but can that be a frivolous or common-place mind that can comprehend and rightly appreciate the superior mind of Clara Rivolta? You, my dear friend, know that Tippetson is not frivolous, that he has powers of mind far above the ordinary average of human intellect. Take him, dear Clara, he is yours for ever. And do not think that in thus surrendering him to you, I renounce your friendship; nay, rather do I seem to have a stronger claim on it and on your gratitude for this surrender. But I may not enlarge. I must not endeavour to renew a correspondence, which you, no doubt, for the best of reasons, have declined. I have written by this day's post to Tippetson to the same purport that I have written to you. May Heaven bless you both with all imaginable happiness! Think nothing, I conjure you, of the pain which this sacrifice has cost me, that is now over and past. It is done. Every other consideration must give way to the sanctity of friendship. Farewell, a long farewell. Ever and unchangeably yours, 'REBECCA HENDERSON.'

Mr. Tippetson, the hero of the preceding extracts, is a very cleverly-managed character. To introduce any novelties into the treatment of an ordinary coxcomb, we should, *à priori*, have pronounced impossible; but our author has succeeded in throwing some new light upon the hackneyed subject. A far more elaborate personage is old Mr. Martindale, who, though belonging to the race of rich old bachelor patrons, has very specific and individual distinctions, which make it impossible that he should be confounded with his tribe. But partial extracts would do great injustice to that personage, as well as to Mr. Horatio Markham, (joint hero of the book with the Honourable Philip Martindale, who is the head partner in the firm,) a high-minded, clever and accomplished young barrister, with a touch of legal and literary coxcombry; and, therefore, we prefer recommending to our readers this book. They will find it very lively and amusing, written in a particularly quaint and dry style, and exhibiting, as we said before, unusual sagacity in the sketches of character. These qualities they must beware of mistaking for greater ones; but they must also beware of undervaluing them, or of preferring to them the tinsel merit of skill in astonishing by incidents. We ought, however, to have mentioned before, that the story in which these gifts are set is sufficiently entertaining and well sustained.

UNIVERSITIES AND PUBLIC SCHOOLS.

Extracts from a Work preparing for publication, under the title of 'Select Notices of Universities and Public Schools.' Pp. 80. London, 1828.

THE pamphlet before us has hitherto, we believe, been circulated only among the members of the Provisional Committee of King's College. It is merely a collection of extracts from a larger work which the author of it has long been preparing, but which he has deferred presenting to the public from a laudable anxiety to make his extensive materials still more useful by carefully arranging and condensing them. Judging from these specimens, we anticipate more advantage to the cause of education from the entire work than from any which has been published for a long season; and if the founders of King's College should be able to effect no other good end than that of calling it forth, we should think their labours had not been in vain.

The pamphlet opens with the University of Edinburgh; the sketch of this institution, though probably only an outline of that which will appear in the forthcoming work, is, nevertheless, more complete than any we have seen elsewhere.

The characteristics of these regulations and of the university for which they were formed, seem to be, weakness and instability in the foundation, and considerable practical wisdom in the details. These symptoms mark all educational institutions in this country, at least, which are of modern origin; and we trust that any universities which may be hereafter introduced, will be as eager to profit by the improved notions which these bodies derived from their age, as they be will to seek their principles and groundwork in the establishments of a more remote generation. This seems to us the true application of experience in education, and in most things else. Some would say, the last age was better than all the foregoing ages; what we must do is to add to the stock of wisdom which we find accumulated in the institutions which it produced something of our own. Others would say no: the principles of these institutions were laid in the early ages; what is required of us is to divest these foundations of all that has been built upon them since, and then to build for ourselves. Whereas, we apprehend, the true philosopher would say, each age has added something and has lost something. Study what idea each age has worked out, and if you find that the groundwork of institutions was but consulted for by our remote forefathers, and the details of their administration by our immediate predecessors, you must endeavour to consolidate both in your new establishment, unless you would have it remain in some important circumstance imperfect.

One of the most useful suggestions for the consideration both of new and old English University authorities, is the following extracts from the Library:—

'Library Regulation.'—The Library will be open for the purpose of giving out books to students every lawful day during the Winter Session, from 11 o'clock, A.M. to 2 o'clock, P.M., except on Saturdays, when it will be shut at one o'clock precisely.

'In applying for books, it is necessary for students to bring with them a written list of such as they wish, and to present to the Librarian their matriculation

** On this point we can give our readers an amusing piece of University History, with which probably they are unacquainted. A few months ago, a Grace passed the Senate of the University of Cambridge, for permitting Bachelors of Arts (under certain restrictions, which fully secured the Masters from any other danger of being forestalled in their demand for new works) to obtain books from the university library. This Grace was thrown out in the *Caput*, in consequence of one individual in that august body interposing his veto. This individual is the professor of civil law in that University, a science which requires more various and discursive reading for the comprehension of it, than perhaps any other in the whole compass of human studies!*

ticket, and the ticket of some one Professor for the actual session.

'Every book taken out must be returned within a fortnight uninjured;—the same book may be taken out again for another fortnight, unless previously asked for by another.

'Attendance is given in the Library, every lawful day, from ten till three o'clock, to enrol the names of the students in the "Album," which is the only legal record of their attendance in the University.'—p. 6.

The next section is on the University of Glasgow. For that institution we certainly feel no partiality; we think it reflects, in a remarkable degree, all the vices of the Scotch mind, and, of course, strengthens and transmits them. The farces, with accounts of which we are every year annoyed in the English newspapers, of the boys electing their own Rector, would be enough alone to disgust us with the system. Yet we think there is admirable good sense in the following observations; and their occurrence in such a place furnishes a striking proof that there is no educational institution, however contemptible in its outlines and its general details, from which some useful hints may not be gleaned:

'Discipline.—Remarks upon it.—The most certain and effectual mode of discipline, or rather the best method of rendering discipline in a great measure needless, is by filling up regularly and properly the time of the student, by interesting him in the objects of his studies and pursuits, and by demanding regularly and daily an account of his labours. In the present state of the University, such of the students as can afford the expense frequently live in the families of the Principal and Professors, where they have, together with the opportunity of prosecuting their studies, the advantages of proper society and private tuition. It is, at the same time, in the power of every Professor to become acquainted with the deportment, application, and abilities of almost every one of his students. And the knowledge of this is likely to be much more effectual in exciting their exertions and producing regular attention to their studies, than the endless penalties which may be contrived for every species of misdemeanour. A complicated and rigorous discipline, extending to innumerable frivolous observances, can hardly fail, in this age, to become contemptible. If students are treated like *children*, it is not to be expected that they will behave like *men*.'—p. 15.

Trinity College, Dublin, is the next University on the list, and it is very briefly disposed of. There is nothing in the plans of this body, as they appear in the list, which merits much observation or imitation, but possibly a more careful study will discover, even in this 'silly sister,' some features that are not uninteresting or inexpressive. Among these we may mention permission of marriage to the senior fellows,—a privilege now, we fear, withdrawn, but which we should like to see admitted into Oxford and Cambridge. Of course, King's College is not interested in this question, for we take it that no enforced celibacy is there contemplated. THE BELFAST ACADEMICAL INSTITUTION, we have heard, is under respectable management, and that considerable attention is paid to the improvement of the student. There seems, however, to be no peculiarity worth mentioning in it, except the Board of Faculty, an institution of very doubtful utility, of which the following account is given:

'Board of Faculty.—Its Functions.—The Professors form a Board of Faculty to superintend the literary concerns of the Collegiate department: and each Professor is, in his turn, President for one year. This Board is empowered to take cognizance of every matter connected with the literary pursuits and moral discipline of that department of the Institution, to regulate the course of studies to be pursued, and to direct the formation of new classes when necessary, with the concurrence of the Joint Boards of managers and visitors; to appoint the hours for the meeting of the several classes, and the time and order of public examinations; and finally to adjudge premiums, sign the testimonials given to students at the close of the collegiate course, in the presence of the managers and visitors, specially summoned for that purpose; and to enforce discipline, by such fines and punishments as they may deem proper.

'The Board meets in the institution once a week during the college session, and as often during vacation as may be necessary.'—p. 18.

Then follows the charter of the lately established King's College in Canada. After which we arrive at the University of Paris. We have been long promised an account of this body from the pen of one of its members, and therefore we shall pass over the numerous details which are furnished in the pamphlet. The ROYAL COLLEGE VENDOME seems expressly made for the manufacture of Frenchmen. It is divided into classes, the studies of which are arranged with all that attention to artificial system, and that disregard of real method which characterize the nation. The following passage is richly natural:

'Instruction, 3d Class.—When once the scholar has reached the third class, the principles of the language are expounded to him, and he is taught to appreciate choice of expression and harmony of style. With this view, general and detailed ideas are conveyed to him of the elements of oratory, and the science of phraseology; indeed, for the purpose of ascertaining that he has comprehended what he has heard, he is required to compose an analysis of the lecture. On holidays he is required to translate a select piece of Latin prose or poetry, and enjoined to transmute, as far as he may be capable, the peculiar beauties of the original into his version. The next morning, his translation is compared with the model assigned; and he is rendered sensible of the resources which his native tongue possesses towards overcoming difficulties, by the perusal of a corresponding translation by some eminent hand.'—p. 46.

We are informed, also, that *religion being the most solid corner-stone of virtue and manners, is taught and practised by a resident spiritual superintendent, approved by the Bench of Bishops!*

We now come to that rich theme, the German Universities, about which Mr. Russell has written a book displaying so much cleverness, ignorance, bigotry, and, what includes all these, Scotticisms. The University of Gottingen occurs first; but with this subject our readers are already acquainted, and many of the details in these extracts are taken from the article upon it which appeared in 'The Athenæum.' We pass on, therefore, to Berlin, of which the details here furnished are very ample. The following passage deserves consideration at least; whether the plan which it unfolds deserves imitation, (as the writer seems to think,) is a more difficult question.

'Specification of the Lectures, 1825-1826.—The Universities of Germany (says a Correspondent) deserve the name more justly than those of any other country; because every branch of learning and science is comprehended in their scheme of tuition. In proof of this assertion, we may observe that, during the winter session of 1825-1826, there were held at Berlin,—

26 Courses of Lectures in Theology.	
25 ————— Jurisprudence.	
50 ————— Medicine.	
12 ————— Philosophy.	
19 ————— Mathematics.	
23 ————— the Physical Sciences.	
10 ————— Political Economy.	
12 ————— History.	
4 ————— the Fine Arts.	[Guages.]
25 ————— Ancient and Modern Lan-	

'There are two circumstances which accompany the distribution of the public lectures of this University, which appear extremely deserving of imitation. In the first place, each series of courses delivered in the various faculties, is headed by an "Encyclopædical and Historical Course of the particular Science." A synopsis of this description is of infinite use, whether as regards the commencement or the close of the student's labours. In the second place, a variety of Professors are frequently engaged in lecturing on the same branches. This competition engenders a spirit of emulation, which is as beneficial to the student, as it is to the science itself.'—p. 53.

The University of Warsaw follows. This history contains nothing very remarkable, but there is something very melancholy in reading such a paragraph as the following, in the statutes of a Polish university:

'University Meetings.—The whole of the Members of the University assemble in solemn convocation, to render homage to the memory of such of their fellow-countrymen as have signally advanced the cause of science of learning, to celebrate the anniversary of its foundation, or to instal a new rector.

'Injunctions to the Professors.—No restriction whatever is laid upon the Professors as to the mode in which they shall develop their theories, excepting that they are enjoined to avoid whatever may be prejudicial to the interests of religion, government, and purity of manners. They are equally enjoined, by every practicable means, to render theory subservient to practice and the wants of the country, and to spare no exertions which may serve to promote science and diffuse useful knowledge.'—pp. 57-58.

Alas! who are their fellow-countrymen! and where is the country for whose wants the professors are to provide?

The Russian Gymnasias, which were fresh organised by the Emperor Alexander, and were connected with the different Universities previously established in the country, form the next subject. We think the following is an interesting peculiarity in these new institutions:

'Illustrative Excursions during the Vacation.—The masters of mathematics, natural history, and technology, join with their best pupils, during the vacations, in making excursions into the adjacent country, as a means of enlivening and illustrating their studies. These excursions afford an opportunity of exercising the student in practical geometry, botany, &c., and give him an insight into such mechanical or technological establishments as may chance to be at hand.'—p. 64.

Passing over the Parisian special school of commerce, we come to the colleges of the United States. In spite of Dr. Dwight's opinion that the system of government in Yale College combines every advantage, we must take leave to remark, that if the following statement be correct, as it no doubt is, the legislature and the mob opinion which it represents must exercise a far more direct control over those bodies than we think is at all consistent with their independence, and their usefulness as bodies destined to control and form the mind of the country:

'Government, Honours, Degrees, Punishments.—The government is in the hands of the President and eighteen Fellows: but "their acts are to be laid before the legislature as often as required, and may be repealed and disallowed by the legislature whenever it shall think proper." The President, with the consent of the Fellows, has power "to give and confer all such honours, degrees, and licenses, as are usually given in colleges or universities, upon such as they shall think worthy thereof." There is also a right of appeal to the corporation in cases of expulsion, dismissal for faults, and rustication for any term longer than nine months. A new trial must first be requested, within thirty days after the sentence, and laid before the faculty. If the former judgment be then confirmed, the parent or guardian of the student must lodge a petition to the corporation with the President, within thirty days after the new trial, and he must lay it before the corporation at their next meeting. Trials, fines, and other public punishments have, however, fallen greatly into disuse. At present, the administration is almost entirely of a parental character. A student, guilty of such inferior offences, as desertion of study, and disorderly or dissolute conduct, after private remonstrances have failed, is solemnly admonished that he is in danger. If needful, he is admonished a second time, and his conduct made known to his parent or guardian, that he may unite his efforts with those of the faculty for the reformation of the youth. And if he still persist in his vicious courses, he is sent home, and cannot be re-admitted without a vote of the faculty. This scheme of government (observes Dr. Dwight, the late President) has been found to unite in it every advantage.'—p. 69.

Here, for the present, we must break off, thanking our author most heartily for the instruction he has afforded, and promising to return to the subject as soon as the publication of his work affords us the opportunity.

LITERATURE OF THE PEASANTRY.

THE GHAIST; AN AULD SCOTS TALE.

We enter our protest against Schlegel's sweeping division of all poetry into classic and romantic; not only because the distinction is seldom apparent, as the one, contrary to all logic, frequently includes the other, but because it seems to exclude one important class of productions, which, for want of a more appropriate epithet, we shall call *POPULAR*. Without going into minute definition, we would rank under this head the songs, ballads, and tales, which form almost the only literature known to our peasantry and mechanics, and exert so extensive an influence over their feelings and opinions, that a shrewd politician remarked, if he had the making of the ballads of a nation, he would give any body who chose the making of the laws.

In this remark, the politician was partly right; but if, like most generalities, it be pushed to extreme cases, it will not apply. We know that the most despotic tyrant must often bend to popular opinion, and that he must always be careful not to offend popular prejudice. Joseph II. could not, with all his power, force the people of Vienna to put quicklime into their coffins; nor could Peter the Great compel the Russians to shave their moustaches. The passing of an edict is a very different matter from obeying and complying with its injunctions. The French Convention could easily pass and publish a decree that the soul is not immortal, and, to impress it the more forcibly on the mind, could order a figure of eternal oblivion to be set up in the burying grounds throughout France. But this absurd and impious edict could not eradicate the national belief, which continued to prevail in spite of the sceptical lawgivers and their foolish decrees.

These are cases in which the influence of popular poetry is, for the most part, paramount to all authority. It takes hold of the memory, and becomes a species of prejudice, which interweaves itself with every thought and every action. It, consequently, leads or confirms the popular opinion, and becomes an article of the national belief. Nor is this influence confined to the mere vulgar. It often extends to the middle, and sometimes to the upper ranks, who, in their more early years, when most susceptible of impression, meet with the popular poems and ballads in the nursery, or in the hands of their dependants.

If it be acknowledged, moreover, that literature, whatever be its species, and however little it may be cultivated, possesses over the mind an almost unlimited sway in polishing its original rudeness, extending its range of activity, and multiplying its sources of enjoyment,—we must conclude, that the shortest excursion which a peasant can make in the fields of poetry and fiction, will give his thoughts and feelings a character altogether different from that of his unlettered neighbours. According to the original bent of his mind, and the species of literature with which he becomes acquainted, he will be changed from a commonplace rustic, to a shrewd, cautious, calculating man,—or to a rapt, visionary swain, who lives alternately amidst delightful, but unreal, dreams, and distressing, but equally unreal, horrors. To the first class belongs Ramsay's 'Gentle Shepherd,' of whom he says,

'Ilk day that he's alane upon the hill
He reads fell books that teach him mickle skill.'

And again,

'Whene'er he drives our sheep to Edinburgh port,
He buys some books of history, sang, or sport;
Nor does he want a routh of them at will,
And carries ay a pouchfu' to the hill.'

Gray has given an admirable description of the second class in his *Elegy*:

'Oft have we seen him, at the peep of dawa,
Brushing with hasty steps the dews away,
To meet the sun upon the upland lawn.

There, at the foot of yonder nodding beech
That wreathes its old fantastic roots so high,
His listless length at noon-tide would he stretch,
And pore upon the brook that babbles by.

Hard by yon wood now smiling as in scorn,
Muttering his wayward fancies he would rove,
Now drooping, woeful, wan, like one forlorn,
Or crazed with care, or crossed in hopeless love.'

These are the extremes, between which will be met with every shade of difference in rudeness and in polish, in practical wisdom and poetical dreaming. It is this which stamps the manners of a peasant, as much as either his natural disposition, or the peculiarities of the district where he lives. It effects a wonderful change even on his language, for though he uses the very same provincial vocabulary as others, yet will his sentences acquire a polish and a correctness of construction, which will strongly contrast with the harsh and vulgar collocations of his neighbours.

Of the truth of these positions we are well assured from personal observation, and we could easily give numerous living examples to prove it; but we must, for the present, decline this, as it would lead us too far from our immediate aim. Since, then, the subject which we propose to examine, appears to be of considerable moment both in a political and a literary view, we shall occasionally devote a few pages to some of the poems which work so powerfully and secretly on the thoughts and feelings of the people.

The specimen which we shall first select, is not, we believe, much known beyond the precincts of the cottage; and there it has of late become a great favourite among the Scottish peasantry. It is evidently intended to ridicule a belief in ghosts, by detailing, in mock-heroic blank-verse, (a novelty, or, as Southey would call it, an experiment in Scottish song,) a parody of a tale which seems to be the basis of more than half the legends relating to the re-appearance of disembodied spirits.

A traveller, who is in the tale named 'auld Gibby,' takes shelter from a storm in a half ruinous castle, to which he was attracted by a glimmering light. The tenant of the ruin could afford him no accommodation, unless he were willing to sleep in a chamber which had been long haunted by a ghost. To this, Gibby, after some demurring, was reluctantly obliged to consent, upon condition of having his dog, Bawty, for his companion, and a blazing fire lighted up on the hearth. After he had retired to his apartment, the ghost, of course, soon appeared in all its terrors, and led Gibby out into the storm to point out to him a concealed treasure; for which good office, a promise was exacted from him of burying the bones of the ghost in consecrated ground, in default of which, his spirit could not rest. Gibby, after this midnight adventure, returned quietly to his bed and slept till morning, hopefully dreaming of his good fortune. But, to his sad disappointment, he found, on awaking, that it had been all a dream; for Bawty, whom he had left tied up, to guard the golden casket, was lying snugly in the chimney-corner, and looked kindly up in his face.

The opening of the piece is quite a picture of an old peasant exposed to the pelting of a pitiless storm:

'Cauld was the night—bleak blew the whistlin' win',
An' frae the red nose fell the drizzlin' drap,
Whilk the numb'd fingers scanty could dight aff,
Sae dozen'd wi' the drift, that thickenin' flew
In poor auld Gibby's face, an' dang him blin'.
Sair, sair he pech'd, an' saught against the storm,
But aft for foghten turn'd tail to the blast,
Lean'd him upon his rung, an' took his breath:
Poor Bawty, whingin', crap to his lee side,
Wi' 'is tail atween his feet, an' shook his lugs.'

Gibby's affection for his dog may almost match with that of Dalgetty for his horse Gustavus, or of Sterne's pilgrim for his ass; for

'Loutin' down, he happ'd him wi' his plaid,
Giff his head, an' cried "Poor fallow, whist;
An' gif I'm spared to reach some biggit wa's,

Ye's win as near the ingle as mysel',
An' share my supper too.—But we maun on—
The night grows mirker, an' nae moon nor starns
We'll see the night.—Sae let us face the blast,
An' "to a stay brae set as stout a heart."
Sae cheer'd he his dumb brute, an' he was cheer'd.'

The prevalence of good-natured feelings of kindness towards the brute creation is one of the best indications of a well-regulated heart, though the sentiment makes but little impression on a peasant when it comes from the pulpit in the form of a studied discourse, compared with the indelible stamp which is left upon his memory by such lines as these. Shakspeare's well-known lines,—

'The poor beetle that we tread upon,
In corporal suffering, feels a pang as great
As when a giant dies,—

have, we doubt not, sunk deep into the hearts of thousands; and a better feeling than what we have quoted could not be expressed in a popular tale. The proverb which inculcates perseverance is also good, though not quite so strong as the verse by Burns,—'He that does the best he can, will whiles do mair,'—which has cheered many a peasant through the most hopeless difficulties.

Gibby's perseverance was crowned with success; for, when he was

'Quite dowf an' dozen'd, through the drift he saw
A light dim-blinkin', an' at last a house:
'Twas an auld biggin, that in per-lous times
(Whan folk rampag'd an' fought for ilka thing)
Had been set there to keep aff sudden skaith;
An', in fierce brulziements, wi' warlike wights
Had stoutly stood; but now 'twas tumblin' down,
O'ercome by Time, (fell loun!) that a' o'ercomes.
The moon, just glimmering through a parted cloud,
Show'd Gibby what o' the auld wa's remain'd;
An' whare the creepin' woodbin' spread its leaves,
Light shakin' wi' ilk blast o' win' that blew.
Blythe, blythe was Gibby, (Bawty, too, was blythe;)
He chappit at the door, an' gif he could,
He wad ha'e whistled too; but, wi' the cauld,
He daver't sae, he could na crook his mou'.'

There is, perhaps, some want of *keeping* here. The poet (for the author we hesitate not to call so) has sometimes forgotten his mock-heroic, and been fairly carried away by a higher spirit. The description of the old castle is indeed excellent, but it is too good, too much sustained and polished, to correspond with what follows. As there is nothing remarkable in the conversation with the landlord, we pass on to the haunted chamber:

'Whan the lang, drawlin', gaunt, an' drowy e'e,
Show'd bed-time come, he was led up the stair,
(Where ne'er a foot for mony a day had gane,)
An' thro' an entry, lang and ruinous,
Whare, at the auld fail'd winnocks, the cauld blast
Gar'd Gibby shiver as he gaed along.
The door, worm-eaten, creakit on its bars,
An' in he steppit, eerie, leukin' roun',
To ilka nook he thought might hand a ghaist.
Aneath, ayont his bed, an' up the lum,
But naething could he see worse than himsel.
A clear peat-ingle bleez'd on the hearth-stane,
Foregainst which Bawty crap, waggin' his tail,
Turn'd him about, an' laid him krusly down,
Thinkin' o' neither bogles nor the storm.

"Gilbert, gude night, soun' sleep, an' a blythe mornin'."

Quo' the gudeman, an' parting, steek'd the door.

Gibby said naething, but look'd wondrous dowf;
Fast as he could, hows'ever, into bed
He gat, among the claise, out o'er the lugs,
An' saun'd himsel', and swat wi' perfect fright.'

The entrance of the Ghaist is given with considerable effect. Some of the touches would not have disgraced the author of 'Tam O'Shanter' himself.

'The auld door
Risp'd on its rusty bars. Poor Gibby glowr'd,
Bawty set up a lang an' fearsome howl,
And cower'd aneath the bed: when, strange to tell,
The fire-flaughts glanced sae clear aroun' the room,
Ye might ha'e gather'd preens: the thun'er rain'd,
An' wi' an elritch skirl, a fell-like sight,
Wi' bluid a' barken'd, gousty stalk'd along,
Steer'd up the ingle, gied a lang ho'w grane,
An' shook its bloody pow! An' thrice it pass'd,

Wi' slaw an' heavy step, by Gibby's bed,
Wha near-han' swarf'd, an' scarce could thole the fright.'

The tale of the Ghaist follows, in which the poet has introduced some brief precepts of popular morality. The spirit thus addresses the terrified Gibby:

'Sax townmond's syne, benighted here like thee,
Fremit, far frae hame—my hame to see nae mair,
Wi' gear wheel laden, a' my ain, dear won,
O'er gear, alack! *The best craft's honesty*;
I wanted to be rich; let knaves tak' tent;
For whan I bless'd myself an' had it snug,
Mark how it ended.—In that vera bed
I laid my weary limbs, whan my base host,
In dead o' night came on me, nae ill dreading,
Rear'd me o' a'; an' that name e'er might ken't,
He, wi' a muckle rung, dang out my harness.
D' ye see that ugly gash?—but be na fley'd,
The sky-bald, by his ain ill conscience chas'd,
Did flee the kintira, an' ne'er kend the gude o't;
'Twill mak' you rich.—Rise up, and come awa',
I'll shaw ye where it's hidden. Now min me,
Under that hearth ye'll fin' my banes; them tak'
An' see sads yirded into haly grun';
Sae sall my wan'rin' spirit be at rest,
An' may'est thou never meet a fate like mine.'

The prospect of riches seems to have operated on our hero very powerfully, in dispelling his fears, as he immediately complied with the Ghaist's command:

'Up Gibby raise—nae daffin' in his head,
An' followed his grim guide—dreary and dreigh,
He passed the muckle yett. The cauld north win',
That blew sae loud about syne, was now fair lawn;
The moon shone clear upo' the new-fa'n snaw,
An' made a baffins day. When they had gane
Thro' twa-three fields, the Ghaist at length stapp'd
short,
An' grained an' waved his hand: 'Lo! here (quo' he)
'Ilk boded lies that ance to me perteen'd':
(Oh! it is little worth whare I ha'e gane,
I gi'e it a' to you. Mark weel the park:
An' now be sure, the yirdin' o' my banes
Dinna mislappin. Oh! remember me"
Nae mair he said, but whidded out o' sight.'

At the conclusion of this scene, poor Gibby was more collected and 'forethoughty' than might have been supposed, from the supernatural intercourse he had been holding.

'Wi' hair on en', an' ilka lith an' lim'
Quakin' wi' fright, Gibby, to fin' a' meith'
Looked a' about, but neither tree nor buss,
Nor stane cou'd fin', thro' a' the snaw spread waste;
At last [he] bethought him o' his knarly keut,
An' stack it i' the yird wi' sicker birze:
"This rung" (quo he) will be a special mark;
But less some wilder wight in wan'rin' by
Should flit it,—Bawty! ye maun watch't till day,
An' I sall row ye in my waukit plaid.'

The catastrophe, if we may call it so, is given with much *naïveté*:

'Clear raise the morn on Gibby's drowsy head,
He grained and rax'd himself, an' thought on Bawty,
Poor fallow! freezin' a' night 'mang the snaw.—
An' whare he'd get a pick-axe an' a spade
To hunk the hidden treasure; ban'd himself
For owre lang sleepin'; started to the floor,
Whare, Bawty, fain to see his master safe,
Leuk'd kin'ly in his face an' wagg'd his tail.
He cou'dna trust his een, but glow'd about,
Rub'd them an' glow'd again, an' clearly saw
The dog, the plaid, the gartans, an' the keut,
He left them when he ga'd to bed.
The goud was gane, sae was the grumly ghost,
An' Gibby's lairdship was for ever lost.'

Of the merits of this popular tale, we need say nothing, as we have been so copious in our extracts that our readers may well judge for themselves. To us it appears that its merit entitles it to be better known; and we take credit to ourselves for bringing forward from the obscurity of the peasant's cottage, this picturesque companion to Burns's 'Tam O'Shanter.'

Who the author was or is, we are wholly ignorant; most of the copies which we have seen, are signed ROBBIN FAGGOT, evidently a *nom de guerre*, though, on the slight evidence of the initials of this name, we have heard it ascribed to Ferguson. This cannot be well ascertained from the style;

for though we may safely pronounce that Burns could not be the author of it on the evidence of the style alone, yet Ferguson had less mannerism and less genius; and of course, his touches are more difficult to trace. The only strong objection against Ferguson, is the dialect, which partakes more of the western idiom than he could have given it. We should, therefore, be more inclined to ascribe it to Wilson, the humorous author of 'Watty and Meg,' but better known for his splendid work, 'The American Ornithology;' though we confess we have but little foundation for the conjecture, besides the dialect and the peculiar cast of the poems which Wilson published before he went to America. After all, it may very probably be the production of some obscure peasant among the crowd of imitators who took to rhyming during the splendid career of Burns.

A.

ORIGIN AND ESTABLISHMENT OF THE POST IN FRANCE.

THE edict by which Louis XI. decreed the establishment of the first stations for the service of the post on the principal high-roads of France, is dated on the 19th of June, 1464, and contains one-and-twenty clauses. A station was directed to be maintained at every fourth mile. The sole object of this first attempt was to secure prompt despatch and relays of stout horses for the messengers who bore official communications from the sovereign in those turbulent times, or conveyed similar communications to him from the higher servants of the state, who were employed in the provinces. The introduction of post-houses, for the regular conveyance of letters, or the convenience or necessities of travellers, was not contemplated at that time of day; nor were the relays expected to consist of more than four or five horses. A similar establishment is said to have been formed in three high-roads, in the time of Charlemagne, though, with this difference, that he made his subjects defray the expense of the regular conveyance of his couriers, orders, and despatches. Taboetius* and Berger† record this fact, and add, 'that he established three viatorias: the first on account of his conquests in Italy; the second on account of his having brought Germany under his yoke; and the third with a view to Spain.' For this purpose, he expended considerable sums in making roads and building bridges, and accomplished public undertakings which were beyond the capacity of most of his successors. A sufficient proof of the justice of this remark exists in one single circumstance,—no pavement was seen in any of the French cities or towns until two hundred and seventy years after his decease. With Charlemagne's reign began and ended the first attempts at forming any regular post-establishments in France; for no vestige of them is to be traced from that period down to the times of Louis XI., unless, indeed, we admit, in counter-evidence, an old charter of Louis the Fat, recording a donation to the church of 'St. Martin de Champs,' in which his signature is accompanied by that of one Baudouin, in the quality of Grand Maître des Postes. It does not, however, by any means follow that any post really existed in France previously to the fifteenth century, besides that set on foot by Charlemagne. On the contrary, it is more than probable that this title of Grand Maître des Postes was a mere title of honour derived from the age of Charlemagne, and equivalent to a similar designation which existed in Saxony a century back, though the holder of it was in no ways connected with the post-office department.

The year in which the decree of 1464 took effect, as well as the parties by whom it was first brought to bear, are quite unknown even in France;

* In *Paradox. Regum*,

† In 'Histoire des gros Chemins'; livre iii. p. 577.

equally so is the name of the officer (styled 'Conseiller Grand Maître des Courcurs de France' by the 2d clause of that decree,) who was intrusted with the duty of founding and superintending the new establishment. All we learn is, that the sovereign intended this task to be committed to a person 'in whose intelligence, capacity, and integrity he could confide,' and that this individual should remain at his elbow. There is some reason for believing that the office was united with that of his 'master of the horse,' which was held by his old favourite Alain Goyon; though it would seem that from the year 1479, the superintendence of the post was vested in the 'comptroller of the equeries of the stable,' whom, in that year, we find to have been one Robert Paon. V. Hörnigk affords us a memorable instance of the perfection to which this branch had been carried, when he informs us that 'Chauveau, herald to King Louis XI., brought letters to his master, at his chateau of Amboise, in less than three days from Milan.'*

The indefatigable vigilance which Louis XI. exercised, both as regarded external as well as domestic occurrences, his secret treaties, the intrigues of his neighbours, particularly of the prince, and subsequent duke, of Burgundy, and his frequent waverings as to the cause it behoved him to espouse, occasioned so much employment for messengers and envoys, that, at his death in 1483, there were no fewer than 234 couriers or equeries (*chevacheurs*), most of them apparently stationed in the various provinces. Charles IX., who found much less need for these personages, reduced their numbers to 120, and, at the same time, raised the superintendents of stations to the rank of regular servants of the crown. This measure was subsequently confirmed by an edict of Louis, dated in February 1509.

The first relays established in France, date from the year 1597; they were afterwards interwoven with the post-office department. In 1608, the title of 'Comptroller-General of the Post' was exchanged for that of 'General of the Posts,' to whom were assigned very extensive powers over every person and matter connected with his office, whilst all appointments, dismissals, or promotions were made dependent on his nod.

It is worthy of notice, that no essential change was made in the machinery of this branch from the time of Louis XI. to that of Louis XIII., a space of nearly one hundred and fifty years. The posts were, at that time, exclusively reserved for the service of the sovereign and the state; nor was any private individual allowed to make use of them; and the edict of 1464 specifically prohibits all post-masters, under pain of death, from supplying horses to any persons who were not furnished with a passport from the King and an order from the Comptroller-General, 'because the establishment was wholly subservient to the purposes of the crown and state.' Hence was derived the expression made use of in the letters of appointment to this service,—'*Maîtres tenans les chevaux courans pour le service du Roi, et Maîtres Courcurs*.' These post-masters were, in case of necessity, bound personally to carry the despatches of the sovereign, the governors, lieutenant-generals of the provinces, and other chief officers of the state; and for this reason they were styled, in the old letters-patent, 'Chevacheurs, or Equeries of the Stable.' This, indeed, was the original title of the King's messengers, for which that of cabinet-messengers, or couriers, was afterwards substituted.

The post was not employed for general purposes before the time of Louis XIII., when private persons began to take advantage of it for the transmission of letters and packets, in consideration of a moderate charge. This custom arose out of a permission, which had been previously given to couriers and estafettes, to convey the correspondence of private individuals when engaged in car-

rying public despatches. D'Almeras, the Postmaster-general, observing the great satisfaction which this permission afforded, established regular post-office couriers, who left Paris for the various provincial capitals on certain days in the week, and returned back from the post-offices in those capitals on subsequent days. This alteration, which proved equally beneficial to the post-office as well as the public, was effected in the year 1629, when Louis XIII. discharged the greater part of the Government messengers; and, in his *ordonnance* of January in that year, directed his governors, generals, and other servants, for the sake of public economy, to abstain from sending their despatches by official couriers, but to transmit them in future through the ordinary channel of the post-office.

We must not omit to make mention of the privileged establishment of couriers connected with the university of Paris; a department which that body had set on foot, at so early a date as the thirteenth century, for its own convenience, and the conveyance of such letters, property, and money as the host of students, who resorted to it from all quarters, might find occasion to transmit, or wish to receive. These couriers or messengers were partly selected from amongst the better classes of the citizens of Paris, with the intent that when the communications with other parts were interrupted by hostilities, or the student did not receive remittances from home in due time, the messengers might assist him with pecuniary advances. This class was called the *grands messagers*, or chief messengers. Their number was limited; and they were not required to leave their homes on any other errands than such as were given them by the masters or scholars of the diocese to which they were attached. The 'lesser' or ordinary messengers, who were despatched into the provinces, from whence they returned to Paris, are often styled 'flying messengers' (*auxii volantes*) in the national records, as betokening the celerity which was expected to attend their motions. These individuals, whose caste was wholly distinct from that of the King's messengers, took charge of the correspondence of persons unconnected with the University; nor did the government interfere with the revenue which it derived from this source. The earliest documents referring to the privilege of such an establishment are a letter from Philip the Handsome, of the 27th of February, 1296, and Louis X. of the 2d July, 1315. The university-post was not united with the royal post-office until Louis XIV. farmed the revenue of both branches to Lazarus Patin, in 1672. It was conditional on this occasion, that a certain amount should be paid by him to the University; but his successor, Colombier, endeavoured by every pretext he could invent or allege to rid himself of its claim. Louis, however, in 1686, gave his decision in its favour; Colombier was forced to discharge the claim during the whole duration of his contract, and at its close the University received permission to farm its establishment at a higher sum, though it was required to contract with the farmer of the royal post. In 1698, the rate of sale had risen to 49,685 francs, (2,070*l.*); and, in 1716, the king augmented it to an annual sum of 60,000 francs, or 2,500*l.*

The University, still discontented with this valuation, submitted a remonstrance in the same year to the Duke of Orleans, who was regent during the minority of Louis XV., complaining of the restrictions which had been put upon them in the exercise of their ancient privileges, and urging him to fix the sum, to be annually paid them by the farmer-general of the post-office revenues, at 150,000 francs (6,200*l.*), unless he would allow them to farm their *messengeries* on their own account. They did not omit to enforce their representations by reminding him that gratuitous instruction was afforded to young persons in all the Colleges of the University. This affair was a source of conflicting feelings on the Re-

gent's part; for though he was sensible that the occasion no longer called for the continuance of such an establishment, and that it was become irreconcilable with the altered and costly character of the public post-office, he was unwilling to curtail the University of its indisputable rights. The Duke having listened with attention to the arguments and proposals of the University, and taken the opinion of the Privy Council and Parliament upon them, on the 14th of April, 1719, Louis XV. promulgated a decision, countersigned by the Duke, and subscribed with the words, 'For such is our pleasure,' by which the messengeries of the University were for ever abolished, and a twenty-eighth part of whatever sum the farming of the post-office revenues might produce, was assigned to it in the shape of a compensation.* This decision was accompanied by the following express stipulations:—'We ordain, that, dating from the 1st of April in the present year, the instruction of youth shall be gratuitously undertaken in all the acting colleges of our said eldest daughter, the aforesaid University; prohibiting the regents of the said college, under any pretence whatever, from requiring any sort or kind of remuneration from their scholars; in defect of which gratuitous instruction, these presents shall be held void and of none effect. It is our will also, that if the said farmer of the posts and messengeries shall make default in paying to the said faculty the one twenty-eighth part of the said general contract, the University shall stand repossessed of all its rights, and be entitled to exercise them in the fullest manner, by virtue of the before-recited decrees of our council and letters patent.'

If I have allowed myself, on this occasion, to enter more into detail than the object of your inquiry would seem to justify, I hope to stand excused on the score of the entire absence of any specific history of the establishment of posts. Nor can I refrain from flattering myself, that the miscellaneous, though partial notices which I have now furnished, will be found acceptable to every friend to topics connected with the progress of human civilization.

HUTTNER,
Postmaster-General, Leipzig-

SPORTING REMINISCENCES.

No. II.—MY FIRST GROUSE.

(Continued from page 968.)

At the time I am treating of, 'shooting flying' as it is technically called, was comparatively little attempted; it was, in fact, considered (notwithstanding the assertions of Scott† and others to the contrary) as a rare and difficult accomplishment, and those who succeeded in it were looked upon with a degree of wonder approaching to awe.

I was therefore not a little surprised when my uncle informed me, on presenting me with the gun which he and the gamekeeper had selected for me, from the armoury of the establishment (consisting, for the most part, of old, rusty, military pieces, which had been secreted during the search for arms after the rebellion in 1745, and had lain by ever since,) that he did not mean to countenance the practice of 'shooting sitting.' Having been used to shoot sea-fowl, which, even when on the water, are generally so tossed about as to afford fair practice, he had himself acquired considerable dexterity in bringing down birds from the wing—so much so at least, that he had incurred the odium of the old sportsmen in the neighbourhood, by whom he was jealously regarded as one who

*'Ore puer puerique habitu sed corde sagaci
Æquabat senium atque astu speraverat annos.'*

* The produce of this branch of the revenue was at that time 130,000*l.*, and the proportion of it accruing to the University amounted, therefore, to 4,640*l.* a year. It was enjoyed by the University until the breaking out of the French Revolution.

† Not he of Waverley, but William Henry Scott, author of a work entitled 'British Field Sports.'

and being of course imbued with a contempt for 'still-mark-sportsmen' proportionate to his skill, he was determined that I should not, as he elegantly expressed it, get into any such 'lubberly' habits.

To the enlarged ideas and enlightened example thus early presented to me, I owe the proud satisfaction of being able to affirm, (what few old fellows of my standing can boast,) that, with the exception of a hare which I chanced to espy squatting, and shot, in a hedge-popping excursion I once went in the neighbourhood of Windsor, (for which act of villany I was, to my great surprise and no less indignation, nearly made to atone the penalties of a common poacher,) I never shot, fired, or aimed at any birds whatsoever, otherwise than on the wing, or any four-footed animal otherwise than running.* I may, and no doubt have, occasionally felt strongly tempted to fire at birds I have seen basking over a hedge, or running under a ridge of potatoes; but I repeat it proudly and unequivocally, I have never yielded, but have kept my integrity up to the present day, 10th January, 1829.

The gun which my uncle brought me was a large-bored single barrel, (large in those days, though it would be considered small now,) and he recommended me to employ myself for some time in handling it, and getting accustomed to its 'trim and bearings.' This I was in no danger of neglecting: it was the first time I had ever had a gun in my hands without being liable to be called in question for the same; indeed, the only gun of any sort I had ever fired was a certain old musket, which was the means of my coming into collision with the laws as aforesaid.

After practising taking aim, and snapping the lock at a chimney, until I had satisfied myself that I was one of the best marksmen in the kingdom, I returned into the house, where I found my uncle and his attendant completing their arrangements for the following morning. On finding that they did not intend setting off till after breakfast, I remonstrated with all the vehemence of a person who knows nothing in the world about the subject of his remonstrances. In vain the gamekeeper assured me that 'we should hae walth o' time;' that, by starting earlier, we should only 'fire the dugs, puir bit beasties,' and render them useless during the afternoon, which was by far the most valuable time of the day. Nothing would convince me that, by beginning three hours earlier, we should not gain three additional hours' shooting; indeed, my own opinion was, as I told the gamekeeper, that we should be on the ground by the earliest light. 'Nae doot, nae doot,' answered he, laughing; and then, turning to my uncle, he added, 'I'm thinking, Sir, ye'll hae to gie him his ain gate for ance; I'se warrant he'll no be crawling sae crouselly by this time the morn's night.' I did not understand the latter part of his speech, nor, as I found it had produced a favourable effect, did I stop to inquire; so, after a little more argument *de part et d'autre*, it was settled that we should meet half way, by breakfasting an hour earlier than had been intended. I was obliged to agree to this arrangement, though not quite to my satisfaction; and, having completed what else I had to do, I betook myself early to rest, that I might sleep off the fatigues of the journey, and be quite fresh for the bloody deeds I meditated for the morrow; but I was in such a state of feverish excitement, that all attempts to compose myself to sleep were for a long time fruitless; and when, at length, I fell into an uneasy slumber, it was only to be wakened with a start at each succeeding chime of the hall-clock, and to be disappointed again and again, on finding that it still wanted many hours till the time of rising.

The agreeable author of 'The Subaltern' describes his feelings on the evening previous (if I

* I mean, of course, no game, as I am still school boy enough to have a particular *penchant* for sparrow, lark, and rat shooting.

mistake not) to the storming of St. Sebastian, by likening them to those of a young sportsman on the eve of the 12th of August. Not having had the honour of being present at that memorable storm, and therefore having only tried one side of the question, I cannot venture to dispute the justice of the comparison; but, with all due deference to Mr. Glegg, I cannot help thinking that the advantage is greatly on the side of the sportsman; inasmuch as, in his case, the firing is all on one side, which, to any man except a professed fire-eater, (which I do not pretend to be, although I can put a bullet into a crown-piece as well as most men,) must, I should conceive, be rather a desideratum than otherwise.

The morn, the eventful morn, at length rose, and with it rose I. Every thing which took place on that day is as fresh in my memory as if it had happened but yesterday. It was one of those grey, misty,* uncertain-looking mornings which are so common in Scotland, and which puzzle the predictions of the ablest weather-prophets. My uncle could, as he said, have confidently predicted a day of continued wet, had he been at sea, but did not pretend to be learned in inland weather-signs. The gamekeeper was in doubt, and I in despair.

My uncle insisted on waiting till we should see how it would turn out, as it would, he said, (partly, I suspect, to provoke me,) be nothing short of madness to go, if it should set in for a day of rain. However, about six o'clock, the clouds having rather cleared off, I prevailed upon him to despatch his breakfast and start; and much was I rejoiced when we, *i. e.* my uncle, myself, the gamekeeper, and the two pointers, were once fairly embarked in a nondescript kind of vehicle he termed his dog-cart, and so secure from any change of plans.

Our way lay, for a short distance, along the high road; after which, we diverged into a wild and romantic glen, surrounded with mountains, on whose summits the mist still continued to roll heavily. The road itself was such as would have appalled the stout heart of any southern Jehu,—rough and stony, with deep ruts, and so narrow as to bring our vehicle frequently on the very verge of the precipitous descent into the stream below, varied occasionally by the deep-worn channels of the mountain-torrents which intersected it in several places, and which we crossed by bridges, narrow as that leading to the Mohammedan paradise, but differing therefrom, inasmuch as we experienced no accession of comforts on the other side, and built, like most Scotch bridges, at a sharp angle from the steep descent that leads to them.

While this continued, I was, I confess, in so unpleasant a state of mind, by reason of my latter end being brought so continually and so obtrusively before my eyes, that I almost forgot for the moment the object of our journey; and it was only when, on turning into a less frequented but smoother track, that led up among the hills, we got rid of our rock-bound purgatory, that I became sufficiently at my ease to express my surprise at the utter recklessness with which my uncle continued his course, whatever difficulties were opposed to us, and the perfect nonchalance with which he and the gamekeeper, who were both sitting on the seat before me, continued their conversation about the probability of the weather holding up, the likelihood of a breeze, the strength of the scent, &c. &c., at times when I should have thought that occasional ejaculations from the 'Prayers to be used at Sea' would have been much more to the purpose. They were much amused at my fears, which were, they said, wholly groundless. As for the road, 'it was capital, better, indeed, than they had known it for years;' and, as for the rate of travel, my uncle 'would never be such a lubber as to take in canvas till he was sure of a squall coming.'

As my remonstrances were of non-effect, I

found it my best way to keep, as Hajji Baba expresses it, 'the tongue of silence within the lips of necessity,' and let them take their own way, which they did for a short time longer; till the road (by courtesy so called) stopped at the shepherd's cottage, where we were to put up our horse. This duty being despatched, we proceeded to business.

The first step to be taken was to ascend a steep hill some two thousand feet high, which directly fronted us, and from the top of which we were to start. Notwithstanding the gamekeeper's entreaties that I would 'tak it easy,' I was so eager to get to work that I began the ascent at a rate which, to a person of any experience in hill climbing, would have made the time of my arrival at the top extremely doubtful; the consequence was, that before I had proceeded above a hundred yards, I was seized with a stitch in the side, which compelled me to lie down, and was a lesson to me to take advice in future.

When we were about half way up, I was startled (being still rather in advance of the others) by the rising of an old cock-grouse about a hundred yards before me, and immediately afterwards the hen, with a covey of six or eight nearly full-grown poults, followed his example. Here was an encouraging prospect. 'Hech, Sirs,' exclaimed the gamekeeper, 'wha ever saw the like o' that? the wild de'il! od, if they're a' like that, we shall gie' but a puir account of the muir-fowl the year.' However, as no exclamation could avail us any thing, we continued our ascent of the hill Difficulty, and, after one or two rests, arrived at the top.

Here a scene of extraordinary splendour awaited us.

[To be continued.]

A PHILOSOPHICAL DISCUSSION.

DEAR MR. EDITOR, — College, Cambridge.

SITTING by my fire last night, at the awful hour of twelve, and amusing myself with endeavouring to discover what a man thinks of when he is thinking of nothing, I was on a sudden startled by a loud knock at my door, and in marched the identical Diable Boiteux of Le Sage. Feeling myself strongly armed against all demons by the operation of a forced chapel attendance during the preceding week, I, of course, entertained no alarm at such a visit, but placed the little gentleman snugly in my easy-chair, and invited him to follow my example in smoking a Havannah cigar. He declined this very civilly, and entered into conversation on the common topics which he supposed me to be interested in, such as the approaching struggle for honours here, the pantomimes, the French Theatre, and, though last not least, the change which it is reported 'The Westminster Review' is about to undergo, a change as great as that from a grub to a butterfly. On my expressing great curiosity about this, the little fellow said, that if I were disposed for a walk, he would show me something worth seeing. I complied, and putting an old cap and gown on the demon, for fear of meeting the proctors, we sallied forth. We had not travelled long before we found ourselves in a house in the vicinity of Queen's-square, Westminster, in a room. Oh, Mr. Editor, how shall I describe that room! It was nothing in the actual, scarce like any thing in the possible, world. It was like the secret apartment in Dionysius's ear at Girgenti, as that might formerly have been; or like the central chamber of the Penitentiary at Milbank, as that ought to have been. It was obviously suited for every present and future purpose: perhaps you can feel what sort of a room it was. Well, Sir, and in this room were three persons: one a youth; another a pale, tall, melancholy-looking man, with a Scotch expression in his face, absorbed in contemplation; another equally Scotch in his appearance, but rather more practical. I soon perceived that the first and third of

these stood in the relation of pupil and preceptor (I ought, perhaps, rather to say disciple and philosopher) to each other. The conversation which ensued between these gentlemen, as far as I can recollect it, I here transmit to you.

Philosopher I.—Well, child, what do the public say to the new scheme? Have you been to Mr. —? What does he say?

Disciple.—The public, Sir, are all agape with expectation. They look for the first 'good thing' of the — as an astronomer does for the expected return of a comet.—Who is to lead the forlorn hope, Sir? Mr. — thinks it would be advisable to buy something from Blackwood or the author of 'Paul Pry' just for a beginning. At any rate, he says you will never be able to satisfy the craving of the public, unless you hold out some additional inducements to your correspondents.

Philosopher I.—Pooh! Mr. — is too much on the extensive. What do you think, B—?

Philosopher II.—Decidedly. Demand will soon create supply. In all branches of operative industry, artificial advantages, in the shape of bounties, are generally found injurious. Capital will naturally flow into those channels in which there—

Philosopher I.—Besides, facetiousness, if too generally and too suddenly introduced, will tend to throw many very useful talents out of cultivation. There's —, who wrote the papers on Special Juries, is quite neglecting his law studies for 'Joe Miller.' In his new course he is not quite so happy. He made three puns the other day, which I was obliged to ask him to explain, and read me an epigram that seemed wonderfully inconclusive.

Philosopher II.—In the early stages of a work of humour, jokes have a tendency to increase in a geometric ratio, readers in an arithmetic; but there is this peculiarity in the law of publications, that, after all the intellects of the writers have been cultivated up to the highest point of perfection, (there being at that moment a maximum of readers,) both readers and jokes fall off with equal rapidity. Both of these circumstances are evils. More wit than consumers is fearful: neither wit nor consumers is tremendous. Perhaps, by a preventive check on the fecundity of intellect in the first instance, we might attain to some means of counterbalancing the positive check in the other. Now, preventive checks resolve themselves into, first, withholding of payment—

[Printer's Devil enters with a MS., as if in haste.]

Printer's Devil.—Sir! Here is Mr. —, of the Temple, has sent an article on Mr. Montgomery's 'Vision of Hell,' as a specimen of the light style.

Philosopher I.—(takes and reads)—Phoo! 'Tis his old article on prison discipline with a few jokes sprinkled in between. The rascal has the impudence to ask twenty guineas for it, and to demand instant payment. We will offer him twenty shillings for the wit alone—eh?

Philosopher II.—I am quite of your opinion. It would be better to secure a supply of the raw material and work it up at home. The strength of the review, I think, lies in manufactures.

Disciple.—It is expected, I hear, Sir, that some theory of poetry will be laid down by us, previously to our passing any censure or praise on living authors. Have you thought at all on the subject?

Philosopher I.—Thought? 'Gad, yes. I have been reading Horace's 'Art of Poetry,' quite agree with him; expediency, the grand principle here as elsewhere. Mark you, he is speaking of play-writers; he says

'Aut prodesset volunt, aut delectare poetæ'—

that is, 'they either aim at increasing the sum of human happiness by the indirect method of superinducing habits of frugality, industry, and mo-

* I speak *Scottic*: what they call 'mist,' we call rain; what they call fog, we call moss; and what they call moss, we call bog.

ral restraint, which, of course, are favourable to the accumulation of capital, and hence to human comfort; or, by the direct method of producing immediate pleasure—taking care, however, that the enjoyment of this pleasure shall not trench upon the enjoyments of others, so as to render person or property insecure.

Disciple.—I was in the Editor of 'The Athenæum's' room the other morning, and while there, happened to cast my eye on a passage in a book that was lying open with a leaf turned down. As well as I can recollect, it ran thus:—"The highest moral purpose aimed at in the highest species of the drama, is the teaching the human heart, through its sympathies and antipathies, the knowledge of itself; in proportion to the possession of which knowledge, every human being is wise, just, sincere, tolerant, and kind."

Philosopher I.—Pooh! Jacob Behmenite!

Philosopher II.—Platonic jargon!

Disciple.—Ay, ay, mystical trash, I am quite aware! I only repeated it to manifest the infinite superiority of your definition.

Philosopher I.—What has been said of the Newtonian system may be said with equal justice of the theory of the — Review. Its simplicity is an evidence of its truth.

Disciple.—So I told S—, and he said, "Cutting a knot to pieces is the simplest way of untying it—a complete evidence that it is the true method."

Philosopher I.—A mere scoffer!—(*Philosopher II. during this time is rummaging the book-shelves.*)—I would undertake in half an hour to convince any man possessing an ounce of sense of the truth of the selfish system, and to give him through that a key to all human actions—all human thoughts.

Philosopher II.—(*Reading to himself.*)—"Why look you now, how unworthy a thing you make of me. You would play upon me: you would seem to know my stops: you would pluck out the heart of my mystery: you would sound me from my lowest note to the top of my compass: and there is much music, excellent music, in this little organ; yet cannot you make it speak. S'blood, do you think I am easier to be played on than a pipe? Call me what instrument you will, though you can fret me, you cannot play upon me." Why, A—, what's this? 'The Book of Fallacies' used to stand here. I was getting it down to find an answer to—

Philosopher I.—"The Book of Fallacies"? O yes! Why you know, as the character of the review is to be more literary, I thought I had better get a Shakspeare and some of the standards to stand on my shelf. But, B—, we want a motto for the new series: Have you got one?

Disciple.—Oh, do you know, Sir, I think, from what you have just said, it necessarily follows that our new review will be a poem, and a first-rate one.

Philosopher I.—A poem? 'Gad, I am glad to hear it. I did not think there was anything very poetical about me, but I do sometimes feel a sort of a — sort of a —

Philosopher II.—Ay? well, I, twenty years ago, wrote an elegy on 'Rent and Wages,' which a young lady thought very funny, and preferred to the 'Paradise Lost.'

Philosopher I.—How do you make the case out, child?

Disciple.—Why, Sir, Horace, as you have just quoted him, says, 'that the aim of a poet is to instruct or please.' Now, the — Review has been instructing mankind in the essence of all human knowledge since its first institution, (if they would but open their eyes to their own interest, which Mr. Mill says they always will; therefore I suppose they have;) and now, Sir, it is preparing to please them, which completes the idea of a poet.

Philosopher II.—Granted so far: but where is the metre? Where are the rhymes?

Disciple.—Oh, Sir, but the mystics themselves confess that there may exist poets 'lacking the accomplishment of verse.'

Philosopher I.—Egad, the — review will demonstrably be a poetical work.

Philosopher II.—Demonstrably! and the maxim which forms the foundation of our æsthetic criticism, seems admirably adapted for a motto:

Aut prodesse volunt aut delectare Poetæ,
Omne tulit punctum, qui miscuit UTILE DULCI.

Philosopher I.—Ay, ay; but we must translate; for, thank God, the readers of the — Review do not generally waste themselves on the unproductive study of the dead languages. Try the mettle of your ancient Pegasus.

Philosopher II.—Behold!

Or to instruct or please his kind,
Inclines the true-born poet's mind;
'Twas thine, O —! the lucky hit,
To mix utility and wit.

At this effusion, Mr. Editor, there was a sudden apparition of the ghost of Helvetius, much pleasure depicted in his countenance: the phantom, after about five minutes, exploded with a loud crack; and when I recovered from the surprise occasioned by such a phenomenon, I found myself on my own sofa, and just caught a glimpse of *Le Diable* retreating through the door. Farewell. I am your's (in hopes you will interpret this vision)

A DREAMER OF DREAMS.

A FIRE IN HOLBORN.

THERE was a brightness along the whole line of the south-eastern horizon. It was not that steady blaze that glorifies the rising or the setting sun, or that sometimes is discerned by the traveller after dark, as the illumination sent up by a thousand lights of some great city before him. It was quivering, restless, and unlimited; it was the hell-flame of a hideous conflagration.

I hurried from the room, whose windows commanded a view of this fiery sign, and, following its direction, reached, at length, the scene of disaster. In a nook of the street, half sheltered by a projecting line of buildings in its front, a mass of fire, now condensed, now broken into spires and curves of separate flame, was shooting towards the sky. The ground-floor seemed already over-spread. Through its windows and openings, at every instant multiplied, the fire came forth, and blazed and triumphed. There were two figures standing but a little way above its present limits, supplicating aid,—but hopelessly. They were saved,—not too soon, for, in another instant, the enemy had gained another bad eminence, lifting its proud head, and roaring with menaces to all above and around it. I saw a boy crawling like a cat upon the summit of the building that was in this jeopardy; he seemed likely to become another *Encladon*; but he saved himself by a leap and a minute.

There was nothing to check or divert the injury. The house was an old one, and full of combustible stores; and, before a single stream of water was brought to play upon it, down fell the roof between its now tottering walls, and buried for ever were the implements and gains of labour; the inanimate things that were dear to many, the objects whence arose a hundred hopes and pleasant thoughts to their ruined masters.

How wonderful a revolution springs up from this falling of a spark! Set aside the whole structure of the whole mind of the immediate sufferers at once levelled and uprooted,—see the commotion of all others, however little involved! Here is a string of neighbours hurrying to and fro, and transporting the goods and moveables of some other tenement that may in time be reached; there are standing one or two of the owners of such goods, doubtful, and in terrible excitement; on the opposite pavement is heaped a wilderness of spectators, gazing, more or less intently, on the one spectacle. Now you hear the rattle of

iron wheels, and the shouts of bystanders announce a fresh fire-engine. Bravely, boys! No stint! No fears! It must yield soon.

At all those windows, however far removed from the site of the accident, not one,—is it an illiberal presumption?—then, *scarcely* one human creature is looking out but with personal calculations of the hazard that may yet fall on him. Below, whatever tribes and varieties are there clustered together, you will hear little of true sympathy for the injured; much of self-congratulation and egotistical wisdom. A poor woman stood, in tears, on some house-steps not far off; a man, her husband, was trying to console her. They had been lodgers in the building that was now in ashes, and their all was buried under them. One, more benevolent than the rest, was addressing her from other motives than those of curiosity. She told the circumstances of her escape, as far as she could collect them from the chaos of her recollections, but the narration was broken by tears, and she seemed almost unconscious of the reality. They had been startled in bed by the watchman, but not supposing the danger to be at their door, had delayed to take warning till the flames themselves assured them of their peril. Neither could exactly recount the entire mode of escape. But her thoughts were all bewildered by the severity of their loss. 'Let us go,' he said to her, 'let us go to your sister's. We can do no good here.'

'It's all the same,' she answered, sobbing loudly; 'we've no home now!'

The words were followed by a movement in the thickly-hedged mass of people, occasioned by the forcible advance of a pie-vender, who bustled through them, right merrily, at the fine opportunity for his speculations. 'Beef-steak pie, veal-pie, kidneys! All hot! all hot!' He jostled against the houseless woman: it was a jubilee to him!

The more serious remarks, if any such fell from the spectators, were not more consolatory. One would exclaim against negligent servants; a second against old houses; a third against combustible property, and so on; all very sagacious, but rather too late to afford remedy.

'Will it reach the broker's house, I wonder?' asked a pert voice, with a mongrel feeling, in which was comprised much fear least the exhibition should be soon terminated.

'Ah! there goes the poor old shop! I'm sorry for it; 'twas a good shop, and kept good liquors; but nothing's sure. I could always almost get a drop there for nothing, and I don't know who'll give me a thimble of gin, now Mr. Smith's had this misfortune.' It was a wretched giggling creature, in dirty rags, whose consciousness of her own loss was scarcely vivid enough to eclipse her enjoyment of the fun and bustle and noise thus created:

'The tender for another's woes,
Th' unfeeling for his own.'

It is not here that disinterested pity can be expected. Then, where else? In those trolloping miserable women, scarce conscious of the blessings of a home, or the curse of its destruction, whose assembling here is a pleasant variation from their long and lonely wanderings in the darkness of night, to whom a crowd must always mean a holiday, and excitement indicate gain? Or in the drunken devil reeling up and down amongst them, and muttering vile jokes upon the terror and misery he contemplates? Or in the rival of him whose cellars and roofs are now commingled,—the publican who sees alone in the disaster an occasion for much immediate gain and future aggrandisement? Or in those lady-bystanders who are angry with the firemen for making the streets so wet? Or in the complement of the crowd, who stare unfeelingly, or with entertainment, or even listen to the brutes about them as they bandy here and there a set of wicked witticisms upon the heat of the tenants and their own cold; and 'how well the Miss Powells, of the

neighbouring straw-bonnet shop, look in their night-caps; and that 'the burning spirit will soon move the Methodist Chapel in the back ground; and that 'Little Turnstile will be the greater of the two before day-break,' &c.?

Reader, wander with me through such a crowd, all wondering at the chasm so soon, so terribly made, by the hand of the destroyer, and judge by what thou seest if misery have a helpmate.

FOREIGN NOTICES.

AUSTRIAN NAVAL AND MILITARY FORCES.—We observe, from the official returns of this branch, that the infantry of the Austrian army consists of twenty battalions of grenadiers, fifty-eight regiments of the line (each of three battalions), seventeen regiments of frontier troops of two battalions each, one rifle regiment of three battalions, and twelve battalions of independent Jägers, and five garrison battalions. Its cavalry comprises eight regiments of cuirassiers of six squadrons each, six regiments of dragoons of similar strength, seven regiments of light-horse of eight squadrons each, and twelve regiments of hussars, and four regiments of Uhlans, of the same strength. The artillery, independently of a numerous corps for garrison service, comprehends five regiments of field-artillery, one corps of bombardiers, and one corps of artificers; which last includes a rocket establishment, brought for the first time into useful action in the campaign against Naples. The corps of engineers is abundantly supplied with officers, and composed, of one battalion each, of pioneers, miners, sappers, and pontooners. Under this head may be placed the battalion of Czaikists. To the preceding catalogue must be added the corps of police, including the regiment of Gens d'Armes in Lombardy, the frontier cordons of Bohemia, Austria, Styria, Moravia, Silesia, and Galicia, and the police-corps of Vienna.

All the regiments of the line, with the exception of those of Hungary and Italy, possess two *landwehr* (militia) battalions, in addition to their regular strength.

The naval department, the head quarters of which is placed at Venice, contains, independently of inferior officers, four captains of frigates, and four captains of sloops; and comprises a battalion of marines, a corps of marine artillery, and engineers and sailors.

The land forces are commanded by ten field-m Marshals; eighteen attached, and nine unattached, generals of cavalry; sixty-seven attached, and thirty unattached, lieutenant-generals; and one hundred and eighteen attached, and ninety-two unattached, major-generals.

CURE OF HYDROPHOBIA.—We consider the following extract from the 3d vol. of 'The Transactions of the Moscow Physico-Medical Society,' as worthy of the attention and inquiries of our medical friends. After observing that the boils which arise beneath the tongue of a patient stricken with hydrophobia, are not symptoms of so important a character as many practitioners assign to them, Mr. Rittmeister, of Paulofsk, thus proceeds:

'Having once ascertained the extraordinary effects of warm blood as a preservative against the usual loathing for water, I have applied these means in thirty different instances, and have not failed in a single one of them. A boy, severely lacerated by the attack of a mad dog, was brought to me, amongst others; for three successive days I administered to him the warm blood of a fowl, diluted with a small quantity of warm wine, and repeated the dose once in each of the three succeeding weeks. When this species of treatment is pursued, the wounds themselves do not stand in need of any particular attention, though, in this case of the boy, I kept them open, by means of the powder of cantharides, for the space of four weeks. The boy's health continued, throughout, perfect and unimpaired.

'It may be necessary to observe, that the blood coagulates when left in a cold vessel. I find it advisable, therefore, to pour a table-spoonful of any

weak wine, or even brandy, into a tea-cup, bring the wine into a tepid state by immersing the cup in hot water, and then let the blood flow from the animal into the wine, stirring the mixture carefully with a hot spoon, until the tea-cup be half full; and then the patient must swallow it instantly. A little water may be taken afterwards for the purpose of rinsing the mouth.'

The medical correspondent who supplies the foregoing extract, endeavours to explain the 'rationale' of the discovery in these terms: 'The canine venom is an animal poison, and capable of being transferred, by inoculation, from one animal substance to another; but it will always conjoin itself most readily with that substance with which it stands in closest consanguinity or relation. The poison of the *rabies canina* has, therefore, a greater predisposition to unite with the blood of a dog, or other animal, than with human blood, because it stands in closer affinity to the bloods of animals than men. This is but another exemplification of the *'similis similibus gaudet.'* In conformity with this theory, the animal poison flies from human matter so soon as it is offered the more attractive means of conjunction with animal blood; and, if it have not had time to inoculate the human substance too deeply, it will at once transfer itself to that with which it possesses a greater degree of affinity.' Our correspondent professes his entire faith in this valuable discovery, if adopted in the incipient state of the disease, and adds his determination to apply it in the first case of hydrophobia which comes under his notice.

NETHERLANDS UNIVERSITIES.—The United Kingdom of the Netherlands contains six of these institutions, the most ancient of which is that of Louvain; and the following is a list of the sums appropriated to their maintenance for the year 1828-1829, by the national exchequer, viz.:

Louvain . . .	Fl. 120,000 or £10,000
Liege . . .	70,000 — 5,830
Ghent . . .	70,000 — 5,830
Leyden . . .	80,000 — 6,660
Utrecht . . .	70,000 — 5,830
Groningen . .	70,000 — 5,830

Fl. 480,000 — £39,980

To each University are attached a library, a botanical garden, a cabinet of natural history, a chemical laboratory, an hospital, an anatomical amphitheatre, and dissecting rooms.

The numbers of the students at the University of Louvain were, in the years

	1826-1827.	1827-1828.
Medicine . . .	77	87
Law . . .	163	179
Philosophy . .	119	97
Philosophical College	193	249
History, &c. . .	68	79
	620	691

The other universities have experienced an increase by no means inferior to that of Louvain, which, as well as the other northern schools, has no faculty for theology. The 'Collegium Philosophicum,' established in 1825, is, in some respects, a substitute, its object being to prepare young men, destined for the Roman Catholic Church, for admission into the Episcopal seminaries. Though violently opposed by the Pope and Catholic hierarchy, its progress has been extremely gratifying.

SAXE-WEIMAR.—This grand-duchy possesses a population of 226,000 souls; of which the town of Eisenach contains 8,200; Ilmenau, 2,400; Jena, 5,200; and Weimar, 9,800. The Protestant clergy are 335 in number, and officiate in 519 churches; and the Catholic in 10 parish-churches, 7 churches of ease, and 6 chapels.

The government of this little state is administered by the Grand Duke, with the assistance of three privy councillors; and it will scarcely be credited, that its Court establishment comprises a grand master of the ceremonies, a lord chamberlain, a master of the horse, a grand marshal, forty

chamberlains, six grooms of the chamber, five pages, six body physicians and surgeons, and five court-apothecaries!

The University of Jena averages about 650 students per annum, and possesses a library of more than 100,000 volumes.

RUSSIA.—Mines of the Ural Mountains.—From the report made by M. D'Engelhardt, Professor of Mineralogy at the University of Dorpat, who has very recently returned from a long exploratory journey in these districts, it appears that the Ural mines have yielded the following produce during the year 1827:

	Pds.	lbs.	sol.
To the Crown,.....	89	29	53 45-96
To individuals,.....	192	10	49

282 0 6 45-96
In all, of pure gold, or 148,375 oz. English; value 579,000*l*.

To the Crown,.....	2	7	25
To individuals,.....	23	23	40½

25 30 65½
In all, of platina, or 13,557 oz. English; value 5,700*l*.

Platina Currency.—The great quantity of platina raised from these mines, has induced the Emperor Nicholas to employ it in coining a currency, which his subjects are at full liberty to circulate or refuse, as they think proper. The coin issued under these circumstances is to be equivalent to three silver roubles, or about nine shillings and sixpence, and will be a little larger than the French one-franc piece, and approximating to the size of an English shilling. As this is but an experiment, the first issue will be but trifling in extent. Individual proprietors of mines are allowed to send their platina to be coined at the government mint, and will, consequently, assist in forwarding an experiment, which, if it should succeed, may hereafter form an important branch of Russian revenue.

There are six royal copper mines in the same district, and one in the Altai mountains, which together produce about 840 tons of copper annually. The produce of the private mines varies from 1850 to 2560 tons a-year for the whole empire. The royalty on this produce is thirteen per cent.

The quantity of iron run from the produce of whole of the mines in Russia, both royal and private, averages annually about 150,000 tons. This metal pays a similar rate of royalty with copper.

GENEVA.—Duration of Human Life.—We have seen some recent calculations of the average duration of human life in this city during the last two hundred years, which appear to afford a gratifying proof, that as science and civilization advance, the term of our mortal career receives a corresponding prolongation. The following is the result of the calculations to which we allude:

Period.	Average duration of Life.
1560-1600	18 years 5 months
1601-1700	23 — 5 —
1701-1760	32 — 8 —
1761-1800	33 — 7 —
1801-1814	38 — 6 —
1815-1826	38 — 10 —

Diamond produced from Carbon.—In the sitting of the Parisian Academy of Sciences, of the 10th of November last, M. Arago submitted a communication from M. Cagnat-Latour, a chemist, in which he affirms that he succeeded in crystallizing portions of carbon, so as to obtain the substance called 'diamonds;' that his process differs from that pursued by M. Gannal; and that a sealed packet, which was deposited with the secretary in 1824, contains the details of his first operations. M. Arago added, that he knew another party who had obtained similar results; and M. Gay-Lussac asserted that M. Gannal had conversed with him on the subject of his essays, at various times, for more than eight years past.

MR. BUCKINGHAM.

MR. BUCKINGHAM is now delivering a course of lectures at Liverpool, which, we observe, from the newspapers published in that town, have attracted, and continue to attract, great attention. With the main object of his visit, which is to excite a feeling in the great commercial towns against the continuance of the East India Company's charter, we have no concern—for Indian and English politics lie equally out of our province. We, therefore, shall merely extract a passage from the Liverpool 'Times,' which gives an account of his lectures upon the literature and manners of the oriental nations.

Mr. Buckingham's first Lecture on the Countries of the East.—Mr. Buckingham delivered his first lecture on the Countries of the East, at the Music-Hall, last evening, to an audience of great number, and of the highest respectability. The range of subjects was so extensive that it is impossible for us to comprise, within any moderate compass, more than a mere enumeration of the heads of the discourse. After an introduction, in which Mr. Buckingham stated the motives which led him to this undertaking, and the object he had to accomplish thereby, in awakening the people of England to a sense of the importance of a free intercourse with India and China, he proceeded to describe the geography of Egypt; its extraordinary position, as consisting merely of one long continued valley, whose fertility depended entirely on its being the alluvial deposit of the Nile; its remarkable antiquities, especially at Alexandria, Memphis, Tentyra, and Thebes, with a description of the Pyramids, the great Sphynx, and the colossal statue of Memnon, still erect in the plain of Thebes; the peculiarities of its climate, in its being exempt from rain in the upper provinces of the country, the Etesian winds, the Simoom of the desert, &c. Mr. Buckingham then gave a detailed account of the animal, vegetable, and mineral productions of Egypt; numbering among the first, the camel, the buffalo, the crocodile, and the hippopotamus; among the second, the date, the pomegranate, rice, sugar, cotton, flax, and indigo; and among the third, the emerald and the porphyry of the ancients. The population of Egypt he described as consisting of Arabs, Turks, Greeks, Armenians, Copts, and Jews; of each of which he gave the leading characteristics; and of their religion, government, and commerce, he also gave the outline-features. The most interesting part of the Lecture, in a general point of view, was, however, the detail of the singular manners and customs of the Egyptians, their betrothals, marriages, polygamy, funerals, feasts, pleasures, music, poetry, language, &c., the contrast of which with our own habits and feelings, added much to the impression it was calculated to make. From Egypt Mr. Buckingham passed on to Arabia, following nearly the same course in the division of his subjects, and including in it descriptions of the Red Sea, of Suez, Jodda, Mocha, Mecca, and Medina, with an account of the Wahabees, the primitive manners of the Desert Tribes in their wandering camps; and much that we may remember with pleasure from its illustrations of scriptural and historical associations. The Lecture abounded in matter of the most interesting nature, exciting equally the astonishment and gratification of the audience. Perhaps the most interesting circumstance of the whole, was the very fact of a traveller so enterprising, intelligent, and celebrated as Mr. Buckingham, describing, in a manner peculiarly frank, animated, and pleasing, the scenes he had passed through, and the events he had witnessed. The audience, amongst whom were many of our first merchants and our best-informed men, besides a considerable number of ladies, were delighted with the lecture, and frequently interrupted Mr. Buckingham with testimonies of applause.—*Liverpool Times of Tuesday.*

FRACTURES CURED WITHOUT LAMENESS.

Observations on the Nature and Treatment of Fractures, &c., showing that they admit of being united, so as to restore the Natural Powers of the Limb, without Deformity or Lameness, &c. &c. &c. By Joseph Amesbury, Consulting Surgeon of the Royal United Association; Surgeon to the South London Dispensary; Lecturer on Surgery, &c. Pp. 305. 8vo. Plates. London, 1818.

SOME of our readers may recollect, that a few years ago, Mr. Wallack, of Drury Lane Theatre, had his leg severely fractured, in consequence of the upsetting of a coach, between New York and Philadelphia; that he came over to Britain, seven months afterwards, with

his limb all but destroyed by the American surgeons; and that he made his appearance at Vauxhall, quite convalescent, a few days after his arrival, and was altogether cured in about six weeks. This remarkable cure was performed by M. Amesbury, upon the recommendation of Sir Astley Cooper, whom Mr. Wallack consulted on his case.

This case we have selected as a preface to our review, on account of its notoriety, and to show, that though Mr. Amesbury does every thing short of performing miracles in his novel treatment of fractures, yet he employs no mystery, no quackery, but proceeds on philosophical principles, derived from physiology and mechanics. In the common mode of treating fractures, the cure is very frequently prevented, by the two ends of the fractured bone, being moveable, grating upon one another, and consequently rubbing off the newly formed portions, as soon as they are produced by nature to effect an union. By Mr. Amesbury's method, the two ends of the bone are rendered quite immovable, and are kept firm in their place, till a new layer of bone grows between to unite them. In Mr. Wallack's case, for example, he never felt the least motion of the fractured bones from the moment Mr. Amesbury's apparatus was applied; but while his limb was encased in the American apparatus 'he frequently felt the broken ends of the bone grate upon each other.'—P. 277.

The following case is no less striking. A man, aged 27, had his right arm broken across the middle, and was unsuccessfully treated by Sir Astley Cooper, in Guy's Hospital, for ten months. He still felt the yielding and motion in the fracture, which were evident when the limb was examined. I was now (May 11th, 1822) present when Sir Astley Cooper examined the fracture, and told the man that the only chance left, was for him to submit to an operation. I requested Sir Astley to allow me to try the effect of the apparatus, which I have described, for fractures of the humerus, before he proceeded to operate, to which he politely consented. The apparatus was applied, and the man was directed to carry the arm in a short sling. The broken ends of the bone were pressed strongly together for six weeks; and, at the expiration of this time, the apparatus was taken off, and the bone was found firmly united, and as straight as the other.—P. 242.

Without figures we could not hope to render any description of Mr. Amesbury's apparatus intelligible; but those who are interested in the subject will find ample satisfaction in the author's volume. One of the most remarkable things in the book, is the professional *bienveillance* or rather *bienveillance*, exhibited towards the authors by Sir Astley Cooper, Mr. Travers, Mr. Brodie, Mr. Green, &c., who all recommend Mr. Amesbury, and put unmanageable cases under his care, although his great aim, in the work before us, as well as in the magazines, papers, &c., which he has formerly published, is to demonstrate the inadequacy of their methods of treatment, and the advantage of his own. With this fact before us, independent altogether of the unquestionable success of his apparatus, we must say that Mr. Amesbury appears to be a man of no ordinary talent and address.

The Glacier of Boisson.—This glacier, like that of Montanvert, comes close to the vale, overhanging the green meadows and the dark woods with the dazzling whiteness of its precipices and pinnacles, which are like spires of radiant chrysal, covered with a net-work of frosted silver. These glaciers flow perpetually into the valley, ravaging in their slow but irresistible progress the pastures and the forests which surround them, performing a work of desolation in ages, which a river of lava might accomplish in an hour, but far more irretrievably; for where the ice has once descended the hardest plant refuses to grow; if even, as in some extraordinary instances, it should recede after its progress has once commenced. The glaciers perpetually move onward, at the rate of a foot each day, with a motion that commences at the spot where, on the boundaries of perpetual congelation, they are produced by the freezing of the waters which arise from the partial melting of the eternal snows. They drag with them, from the regions whence they derive their origin, all the ruins of the mountain, enormous rocks, and immense accumulations of sand and stones. These are driven onward by the irresistible stream of solid ice; and when they arrive at a declivity of the mountain sufficiently rapid, roll down, scattering ruin. I saw one of these rocks, which had descended in the spring, (winter here is the season of silence and safety,) which measured forty feet in every direction. The verge of a glacier, like that of Boisson, presents

the most vivid image of desolation which it is possible to conceive. No one dares to approach it, for the enormous pinnacles of ice which perpetually fall, are perpetually re-produced. The pines of the forest which bound it at an extremity are overthrown and shattered to a wide extent at its base. There is something inexpressibly dreadful in the aspect of the few branchless trunks, which, nearest to the ice-rifts, still stand in the uprooted soil. The meadows perish, overwhelmed with sand and stones. Within the last year these glaciers have advanced three hundred feet into the valley. Sanssure, the naturalist, says, that they have their periods of increase and decay. The people of the country hold an opinion entirely different, but, as I judge, more probable. It is agreed by all, that the snow on the summit of Mont Blanc and the neighbouring mountains perpetually augments, and that ice, in the form of glaciers, subsists without melting in the valley of Chamouni, during its transient and variable summer. If the snow which produces this barrier must augment, and the heat of the valley is no obstacle to the perpetual existence of such masses of ice as have already descended in it, the consequence is obvious; the glaciers must augment, and will subside, at least until they have overflowed this vale. I will not pursue Buffon's sublime but gloomy theory, that this globe which we inhabit will at some future period be changed into a mass of frost by the encroachments of the polar ice, and of that produced on the most elevated points of the earth. Do you, who assert the supremacy of Ahirman, imagine him throne among these desolating snows, among these palaces of death and frost, so sculptured in this their terrible magnificence by the adamantine hand of necessity, and that he casts around him, as the first essays of his final usurpation, avalanches, torrents, rocks, and thunders, and, above all, these deadly glaciers, at once the proof and symbols of his reign; add to this, the degradation of the human species, who, in these regions, are half-deformed or idiotic, and most of whom are deprived of anything that can excite interest or admiration. This is a part of the subject more mournful and less sublime, but such as neither the poet nor the philosopher should disdain to regard.

English at Florence.—The number of English at Florence is greater this year than usual; but there is little or no union in the society, which is divided into small sets. There are two rival theatres: that of Lord Normanby, which still goes on; and that of Lord Burghersh, got up originally and ostensibly for the purpose of exhibiting an opera of the composition of his Lordship, which has succeeded very well. It is not confined, however, to musical representations, as Lady Burghersh has availed herself of the opportunity to get up 'The School for Scandal,' in which she herself performs, with Lord Douro and Mr. Cornwall; this it is expected, is only the commencement of a series of plays, and it is supposed her Ladyship will not be disposed to abandon the amusement after the first experiment.

LIST OF BOOKS PUBLISHED DURING THE WEEK.

Sailors and Saints, by the author of 'The Naval Sketch Book,' 3 vols., post 8vo., 1l. 11s. 6d.
The Ellis Correspondence, edited by the Honourable George Agar Ellis, 3 vols., 8vo., 1l. 8s.
Memoirs of the Empress Josephine, &c., translated from the French, vol. 2, post 8vo., 10s. 6d.
Sabbath Meditations for 1829, by the Rev. John East, A.M. 3s. 6d.
Christian Souvenir, 32mo., 2s. 6d.
Essays on Universal Analogy, 8vo., Essay 1, Section 2, 6s.

Frid.	9.36	34	29.66	N.	Iditto.	Iditto.
Sat.	10.34	34	29.40	E.	Iditto.	Iditto.
Sun.	11.39	312	29.62	E.	Iditto.	Iditto.

Nights and mornings fair throughout the week. Highest temperature at noon, 36°.

Astronomical Observations.

The Moon in Perigee on Wednesday.
Venus 16 digits E., illuminated on ditto; apparent diam. 13".
Sun's semi-diameter on Sunday, 16' 17" plus.
Venus's geocentric longitude on Sunday, 19° 36' in Sagitt.
Jupiter's ditto ditto 6° 43' in Sagitt.
Saturn's ditto ditto 1° 46' in Leo.
Sun's ditto ditto 21° 6' in Capn.
Length of day on Sunday, 8 h. 6 min. Increased, 22 min.
Sun's hor. motion on Sunday, 2' 23" plus. Logarithmic num. of distance, 9.99785.

THE FOREIGN QUARTERLY REVIEW,

No. VI.,
will be published in a few days.

Under the Superintendence of the Society for the Diffusion of Useful Knowledge.

Just published price, 2s. 6d. sewed.
THE COMPANION to the ALMANAC, or YEAR-BOOK of GENERAL INFORMATION for 1839.
The two great objects which have been kept in view throughout this work, are—First, that the subjects selected shall be generally useful, either for present information, or future reference;—Secondly, that the knowledge conveyed shall be given in the most condensed and explicit manner, so as to be valuable to every class of readers.—*Preface.*
London: Published by C. Knight, 13, Pall-Mall East; and sold by all Booksellers: of whom may be had 'The British Almanac for 1839.'

In a few days will be published, in 8vo.,
AN INQUIRY WHAT IS THE ONE TRUE FAITH, and whether it is professed by all Christian Sects? With an Exposition of the whole scheme of the Christian Covenant, in a Scriptural Examination of the most important of their several Doctrines.
Printed for Whittaker, Treacher, and Arnot, Ave-Maria-lane.

This day is published, in 3 vols. 12mo., price 12s.,
REGINALD TREVOR; or, the Welsh Loyalists, a Tale of the Seventeenth Century. By EDWARD TREVOR ARWYL.

LEGIONS OF SCOTLAND, Third Series, 3 vols. 16s. 6d.
GILBERT EARLE, 2d edition, 2s.
BLOUNT'S MSS., by the same Author, 2d edit. 1 vols. 16s. 6d.
KATHERINE, a Tale, 4 vols. 12s.

THE CENSOR.—On Saturday the 10th, was published, No. X., price 3d. of this entirely original Work.—Containing *Noctes Censorie Hateræ*, a Tale, by Storza, concluded—*Impromptu* on the Censor Chester Meeting—*Ode to Silence*—*Vestris* and her Dress—*Dramatic Censor*, &c. &c. Cowle and Co., Paternoster-row; Ilbery, Titchfield-street; Clements, 17, Little Pultney-street; and Fores, Sackville-street, corner of Piccadilly.
Parts I. and II. containing upwards of Eighty Original Articles, are now ready.
N.B. The whole of the Number of 'The Censor,' which is the only entirely original Work extant, may be had of all Booksellers in town and country.

This day is published, by J. B. Nichols and Son, 25, Parliament-street, price 12s. 7s., the Fifth Volume of
ILLUSTRATIONS OF THE LITERARY HISTORY OF THE EIGHTEENTH CENTURY; consisting of authentic Memoirs and original Letters of eminent persons; and intended as a Sequel to 'The Literary Anecdotes.' By JOHN NICHOLS, F. R. S.
This Volume is embellished with Portraits of Joseph Gulston, Esq., Rev. Dr. Courayer, Rev. Francis Peck, Rev. Sir Herbert Croft, Hon. Daines Barrington, Bishop Barrington, Rev. John Price, George Stevens, Esq., and Joseph Pinkerton, Esq. It contains, among other interesting articles Memoirs of Joseph Gulston, Esq., Edw. Pearson, D.D., Rev. Hugh Moises, and Newcastle Schoolmasters; Rev. Sir Herbert Croft, Archdeacon of Hereford, Mr. Malone, Mr. James Boswell, Jun., Right Hon. Wm. Windham, Bishop Parsons, Bishop Barrington, Rev. J. B. Bishew, Mr. Pinkerton, Dr. Milner, &c. &c.; with much curious Correspondence, as well of those individuals, as of the historian Oates, Sir John Fenn, Dr. Priestley, George Stevens, Rev. J. Price, Mr. Astle, the Hon. Daines Barrington, Dr. Hoadly-Ash, and many others.
* * * The Four preceding Volumes may be had, price 27s. each.

On Monday, the 10th inst., will be published, with large Additional Matter, and several New Embellishments, price 2s. in boards, a Second Edition of

PORTUGAL ILLUSTRATED; by the Rev. W. M. KINGSLEY, B.D. Fellow of Trinity College, Oxford, and Chaplain to the Right Hon. Lord Auckland. Embellished with a Map, Plates of Coins, Vignettes, and various Engravings of Costumes, Landscape Scenery, &c.

The Author has been encouraged by the rapid sale of the first edition of his Work to undertake the publication of a second, which, he trusts, will come recommended to the favourable consideration of the public, not only from the sedulous revision which it has undergone, but also from embodying additional specimens of the national music of Portugal, and the following new illustrations, executed by the first Artists in the most finished style:—1. Belem Castle, on the Tagus; 2. The Aqueduct and City of Lisbon; 3. The Moorish Palace at Cintra; 4. The Cork Convent, near Colares; 5. The Fortifications of Alhambra on the Tagus, which formed the extreme right of the lines of Torres Vedras; 6 and 7. Portraits of Camoens and of Ignaz de Castro; besides several Vignettes by Messrs. Brooks and Harvey.—The additional matter, which extends to 100 pages, will comprise a brief Historical Review of the State of Literature, Arts, and Sciences in Portugal, from the earliest period to the present time; besides a full General Index.

A few copies will have proof impressions of the Plates, on India paper, price 2s. 10s.

Published for the Author, by Treuttel and Wurtz, Treuttel, Jun. and Richter, Foreign Booksellers to the King, 30, Soho Square.

Elegantly printed in two vols., post 8vo., with a Portrait, by Burnet, after Sir Thomas Lawrence, 12s.
THE POETICAL WORKS OF THOMAS CAMPBELL, Esq. Now first collected.
'This handsome though small edition of Mr. Campbell's Poetical Works must be received with universal favour. Never did poet produce a work more deserving of female acceptance.'—*Literary Gazette.*
Printed for Henry Colburn, 8, New Burlington-street.

In a few days will be published, in 3 vols. post 8vo., price 12s., embellished with a full-length portrait of the Author, engraved by Holl, after a drawing by Wageman,
MEMOIRS of the EXTRAORDINARY MILITARY CAREER of JOHN SHIPP, late a Lieutenant in his Majesty's 87th Regiment, Royal Fusiliers.
London: Hurst, Chance, and Co., St. Paul's Church-yard.

This day is published, in crimson silk, price 21s.,
THE KEEPSAKE for 1829. Edited by F. MANSEL REYNOLDS.
List of Contributors:—Sir Walter Scott, Sir James Mackintosh, Lord Normanby, Lord Morpeth, Lord Porchester, Lord Holland, Lord F. L. Gower, Lord Nugent, W. Wordsworth, R. Southey, S. T. Coleridge, William Roscoe, Percy Bysshe Shelley, Henry Luttrel, Theodore Hook, J. G. Lockhart, T. Croker, R. Bernal, M.P., Thomas Haynes Bayley, W. Jerdan, Mrs. Hemans, Miss Landon, M.L., James Bowden, W. H. Harrison, F. Mansel Reynolds, and the Authors of 'Frankenstein,' 'Gilbert Earle,' 'The Rôuë,' and the 'O'Hara Tales.'
A few copies are printed in royal 8vo., with India Proofs of the Plates, price 2l. 12s. 6d.; and for these early application is necessary.
London: published for the proprietor, by Hurst, Chance, and Co., 66, St. Paul's Church-yard; and R. Jennings, 3, Poultry; where may be had the few remaining Copies of the Keepsake for 1828.

This day is published, price 2s.,
THE JUVENILE KEEPSAKE. Edited by THOMAS ROSCOE, Esq.
Among the list of contributors to this volume will be found the names of—Mrs. Ople, Mrs. Hemans, Miss Alkin, Miss Porter, Miss Emily Taylor, the Misses Strickland, the Rev. H. Stebbing, William and J. E. Roscoe, the late Mr. John Taylor, Thomas Jevons, Thomas Pringle, D. L. Richardson, the Authors of 'Tales of the Munster Festivals,' and 'Gomez Arias,' &c., &c., &c.
The illustrations consist of eight beautiful Line Engravings on steel, some of which are executed by, and the whole under the immediate superintendence of, Mr. Charles Heath.
London: Hurst, Chance, and Co., 66, St. Paul's Church-yard.

In a few days will be published by EDWARD BULL, New Public Subscription Library, 36, Holles-street, Cavendish-square, London, The

ADVENTURES of a KING'S PAGE.
3 vols.
'If you would know whether virtues or vices keep a man farthest from a court, go to court and learn.'—*Winter's Tale.*
2. FRANCIS, THE FIRST KING OF FRANCE, MEMOIRS OF HIS LIFE AND TIMES, with a fine Portrait from Titian. In 2 vols. (printed uniform with the 8vo. edit. of Roscoe's Leo X.), price 38s.
3. CONVERSATIONS ON INTELLECTUAL PHILOSOPHY, or a Familiar Explanation of the Phenomena of the Human Mind. 3 vols. 12mo.
4. THE MANUAL FOR INVALIDS. By a PHYSICIAN. One small volume.
Just published,
5. THE ROMANCE OF HISTORY. By HENRY NEBLE.
New edit. 3 vols. 12s. 11s. 6d.

In 3 vols. price 12s. 11s. 6d.
THE TRIALS OF LIFE.
By the Author of 'De Laie, or the Sensitive Man.'
'The tragical vein of the first story is pursued through scenes and adventures with a skill which would not have disgraced Mrs. Ratcliffe herself.'—*Athenæum.*
The second story reminds us of the best performances of Mrs. Ople—its truth is alone comparable to the superior productions of Miss Austin.—*Examiner.*
'They are both full of thought, and in the highest degree pathetic. They are those romances of real life which Lord Byron says, most truly, we see and hear more than we shall ever read.'—*Times.*
Printed for Edward Bull, New Public Subscription Library, 36, Holles-street, Cavendish-square.

A ROWLAND and SON view it as duty incumbent upon them at the approach of a NEW YEAR, to acknowledge with the profoundest emotions of gratitude, that DISTINGUISHED PATRONAGE with which they have been honoured by the NOBILITY, GENTRY, and PUBLIC at large, with respect to the ORIGINAL MACASSAR OIL and KALYDOR; articles which have obtained a celebrity pre-eminently great. Messrs. R. and S., while they humbly solicit a continuance of that High Patronage they have been honoured with, must, at the same time, earnestly caution the Public against a base counterfeit imitation: the Original are distinguished by the Name of the Sole Proprietors, on the Label of each bottle, in Red:
The Genuine is sold by Mr. R. Hendrie, Perfumer to His Majesty, Titchborne-st.; Sanger, 150, Oxford-st.; Mr. Smyth, 117, Delcorio, 168, Gattle and Pierce, 57, and D. Rigge, 35, New Bond-st.; Atkinson, 39, New Bond-st.; and 44, Gerrard-st.; Butler, 4, Cheapside; Bayley and Blew, Cockspur-st.; Berry and Lloyd, 18, Greek-st.; Low, 330, Proust, 236, Strand; Burgess, 68, Holborn-hill; Sutton, Bow Church yard; Patey and Co., 37, Lombard-st.; Edwards, 67, Newberry, 45, St. Paul's Church-yard; Barclay and Sons, 95, Fleet-market; J. and T. Rigge, 65, Cheapside; Stradling, Exchange-gate; Nix, fronting the Royal Exchange; Tait, 41, and Johnstone, 63, Cornhill; J. and C. Evans, Long-lane.

MODERN DOMESTIC MEDICINE; or, a Popular Treatise exhibiting the Nature, Symptoms, Causes, and most efficacious Treatment of all Diseases, embracing all the modern Improvements in Medicine. Containing also a copious Collection of approved Prescriptions, Medical Management of Children, most effectual Methods of rendering assistance in cases of Emergency, Rules of Diet, Virtues and Doses of all Medicines, &c. The whole forming a comprehensive Medical Guide for the use of the Clergy, Families, and Invalids. By T. J. GRAHAM, M.D., &c.
'We conscientiously recommend Dr. Graham's Treatise, to the Public. It is very far above the celebrated Buchan's, and we shall preserve the volume as the advice of an invaluable friend, to which we can refer in the hour of need without any doubt of being benefited by its wisdom.'—*Literary Chronicle.*
'In the opinion of a respectable Physician, well known in our connexion, it is enriched with much of all that modern practice has ascertained to be valuable, and is not only incomparably superior to Buchan's, but also to every similar work in our language.'—*Wesleyan Magazine.*
'It will be found a very valuable acquisition to the Family Library, and no Medicine Chest, at home or abroad, ought to be considered complete without it.'—*Imperial Magazine.*
'It is altogether deserving of permanent popularity.'—*London Weekly Review.*

Published by Simpkin and Marshall, London. Sold by all Booksellers.
Also, by the same Author, second edition, revised and enlarged, price 2s. 6d.
A TREATISE ON INDIGESTION; illustrating the Symptoms, Varieties, Causes, and Treatment of the prevailing Disorders of the Stomach and Liver, with Practical Observations on some Painful Complaints originating in those disorders, as Tic Douloureux, Gout, Fullness of Blood in the Head, &c.
'We sincerely recommend it, and have long been convinced that such a Work was imperatively called for.'—*London Medical Journal.*

FASHIONS for 1829.—Parisian and English Corsets.—Mrs. HUNTLY respectfully apprises the nobility and gentry that she has for inspection, at her house, 51, High Holborn, two doors from Brownlow-street, and corner of Burlington-arcade, Burlington-gardens, her entirely new and elegant assortment of Parisian and English Corsets.—Mrs. Huntly particularly solicits ladies' attention to her improved Parisian Corset, so exceedingly elegant to the shape for the present style of Parisian and English costume; likewise to her newly-invented full-bone Stay, so extremely easy that the most delicate constitutions may wear them with great advantage, being a general support, without pressure in any part particular. She has also paid great attention to her patterns for children's and young ladies' Stays, whose figures are forming.—Mrs. Huntly is in constant attendance at 51, High Holborn, from eleven till four every day.—Spinal supporting stays and elastic bands of every description.—A respectable Shop-Woman wanted.

REMOVED TO 43, NEW BOND-STREET.
MR. A. JONES, SURGEON-DENTIST,
begs to acquaint the Nobility and Gentry, that from many years intense application, he has invented and brought to perfection a new system of Fixing Natural, Terro-Metallic, and Artificial Teeth, from one to a complete Set, which are so accurately fitted as not to be distinguished from the original, and answer all the purposes of mastication, articulation, &c.
Mr. A. JONES continues stopping Decayed Teeth with his unrivalled Anodyne Cement, which in one minute allays the most excruciating pain; and by this means Carious Teeth are wholly preserved and rendered useful, even if broken close to the gums. This being a metallic composition, it becomes hard as enamel in a few minutes, will not decompose with the heat of the stomach, and resists the effects of acids, atmospheric air, &c.—Cleaning, and every operation incidental to Dental Surgery.

CLERICAL, MEDICAL, and GENERAL LIFE ASSURANCE SOCIETY.
DIRECTORS.
GEORGE PINKARD, M.D., Chairman.
Rev. G. Beresford, M.A. T. Davis, Esq.
Rev. James Macdonald, M.A. Sir Charles des Vaux, Bart.
G. G. Babington, Esq. John Dixon, Esq.
W. Beatty, M.D. James Kibbiewhite, Esq.
Robert Bree, M.D., F.R.S. Samuel Merriman, M.D.
James Carden, Esq. Samuel Mills, Esq.
Arthur Chichester, Esq., M.P. Sir George Pocock.
H. Jas. Cholmondeley, M.D. Ashby Smith, M.D.

THE FOLLOWING ARE AMONG THE DISTINGUISHED FEATURES OF THIS SOCIETY.
1. In addition to the ordinary Assurance on Healthy Lives, this Society is entitled to the distinction of having been the first to extend the benefit of Life Assurance to persons not in a sound state of Health, without excepting those afflicted with gout, asthma, rupture, liver complaints, vertigo, insanity, spitting of blood, and the other diseases generally specified.
2. Reduced Rates of Premium.
3. Accepting Premiums in a single payment, annually, for a limited term, or annually during life.
4. Granting Policies to Persons going to any part of the Globe.
5. Apportioning to the Assured the greatest part of the profits every five years, which, at their option, may be added to the Policies, or taken in reduction of the payment of premium.
6. Purchasing the Policies of the Assured, if required.
7. Advancing, by way of loan upon the policy, (in cases of exigency,) any Sum not exceeding two-thirds of the value thereof.
Prospectuses and full information may be had at the Office, or by letters addressed to the Secretary.
J. PINKARD, Resident Secretary.

Office, No. 4, Southampton-street, Bloomsbury-square, London.
London: Printed and Published every Wednesday morning, by WILLIAM LEWIS, at the Office, No. 4, Wellington-street, Strand.

AND

LITERARY CHRONICLE.

No. 65.

LONDON, WEDNESDAY, JANUARY 21, 1829.

Price 8d.

STATE OF THE LITERARY MARKET IN ENGLAND.

[The doctrine that either party in a correspondence has a right to publish the letters without the consent of the other, has become rather prevalent of late years; but, as we do not subscribe to this doctrine, though backed by the authority of the Lord Rector of Salamanca and Catholic Primate of Ireland, we think it right to state, that the writer of the following article is as much privy to its publication as the receiver of it.—Ed.]

From Mr. H. C—— to M. Ladvocat, au Palais Royal.

New Burlington-street.

MY DEAR LADVOCAT,

IN your letter of the 10th instant, which contains so full a history of the publishing and bibliopolical trade, as it existed in France during the year 1828, and so intelligent a view of your prospects for the ensuing year, you express a wish that I would give you, in return, as complete a picture as I am able of the state of literature among ourselves at the present moment. I cannot refuse to comply with this request, and I will not waste your time and my own (both of them valuable) in disputing your assertion, that I am the most competent person in England to furnish you with the information which you need. Suffice it that I have some experience; and that, whatever that experience is worth, it is at your service.

From some passages in your letter, I collect, that there is a very marked difference between the state of affairs among you and among us. If I do not misunderstand your meaning, the end of each year is the sign that, in France, the old fashions are at an end, and that a new one is about to set in. The 31st of December, you remark (if I have translated your words rightly) is an agitating moment for cooks, milliners, and booksellers; not because they are in doubt whether long bills will be settled or new ones commenced, but because, at that eventful crisis, they are aware the public is expecting some new thing at their hands; because the moment has arrived when dishes, dresses, and novels, must change their character and condition; and because they labour under an agonizing uncertainty lest the innovation which they introduce should not be sufficiently strange to gratify the public demand for excitement, or so strange as to outrage the feelings which a year's experience has made habitual. Now this day, with us, is by no means so remarkable an epoch. I wish most heartily that it were; I would willingly exchange all the trouble you mention as resulting from the being obliged to alter all one's modes of proceeding at once, for the certainty of knowing when that alteration ought to take place. But in England we have no means of arriving at this knowledge. I have seen one year glide into another, and the new, and often costly, viands which I had provided from a notion that a change in the mode of noting time ought to be accompanied with a corresponding change in the modes of killing it, rudely neglected because the public chose to consider that the old were better. And, on the other hand, I have seen, in May-time, or in the dog-days, or in the fogs of November, the most sudden and unaccountable revolutions in the general taste. Memoirs one moment the rage, and the next utterly loathed,—novels that had been swallowed with greediness, disgorged in multitudes,—and huge quartos of tourists and travellers, on which I had fancied Englishmen would have fattened for a twelvemonth, proclaimed coarse and absolutely unactable. I have frequently

been obliged to make the most precipitate and awkward retreats, and to repair the mischief by the oddest shifts at the time when there was nothing in the season of the year, in the atmosphere, in the state of the government, to indicate the probability of a change; and when my spies, who are out in all directions, brought me assurances of the most perfect quietness and good order. To mention this circumstance both as an important peculiarity in English literature, and likewise to excuse myself for not being so systematic as you are in dividing my letter, I cannot tell you to a nicety what was the state of the market in 1828, and what it is likely to be in 1829; I can only tell you, as I can observe them, what are its fluctuations at present. In doing this, I will follow as nearly as possible your own order.

You say that a sudden fall has taken place among you in AUTOBIOGRAPHICAL scrip. I have not observed any similar change in the market here; but then, there has not within the last two years been much doing in that stock, and, consequently, the re-action would of course be less striking. About three years back, as you may perhaps have heard, I speculated largely in that line, and I cannot say the result was altogether satisfactory. But this I attribute, in a great measure, to a little bad judgment, which a now enlarged experience has corrected. The great general principle that nonsense, pure unadulterated nonsense, has the most chance of finding favour with all classes of the British public, as all general principles do, leads those who follow it into great mistakes. Mr. Cradock, the green-grocer, and Mr. Brasbridge, the knife-grinder, were excellent and worthy men, they had unquestionably the root of the matter in them, and I cannot honestly charge them with having introduced the slightest leaven of common sense into their compositions. And yet, my friend, (and what an instructive lesson is this to all publishers against the folly of being betrayed, even by the most promising appearances, into headlong speculations,) I must in candour confess to you, that neither the figs of Mr. Cradock, nor the steel-filings of Mr. Brasbridge, pleased the palate of the age. I confess, Ladvocat, that I was puzzled, and not a little mortified, as the conclusions of my reason and experience seemed to be so completely upset by this untoward event. A circumstance, slight in itself, but valuable inasmuch as it added a new law to the science of bibliopoly, helped me to a solution of the difficulty. A Scotch lady, an old customer at B——street, (she deserted Constable for me because she could not abide 'The Edinburgh Review,') came into the shop and inquired for Mr. Brasbridge's new volume. The work was handed to her. She looked at the title-page, turned over a few leaves, and then remarked, 'Aweel, Mr. ——,' addressing my shopman, who is a very sharp youth and a wit, 'this seems to me just like the last.'

'Like the last, Lady ——,' said he; 'which last does your ladyship mean?'

'Why the ither volume to be sure.'

'This is the only volume which has appeared, Lady ——, and I apprehend there will not be another; the sayings of Brasbridge, the son of Brasbridge, are ended.'

'What? and naething at a' about his wee bit improprieties. (You do not understand Scotch, Ladvocat, so I will translate, *rien des tout envi-*

ron ses nous morceau impropriétés.)* Oh, tell Mr. C——, wi' my compliments, that the book will never go down unless the author publishes a volume of the 'Follies and Amours of Brasbridge of Fleet-street.'

This conversation was only reported to me, and I think I may boast that I have somewhat profited by it. In all the personal memoirs that have issued from my press, (and I shall prescribe to myself the same rule in future) I have insisted that the plain meat should be flavoured with every variety of spice. In no class of writings, I am convinced, is attention to this point so necessary. As my shopman ingeniously remarked, 'In the lively waltz of the novel the mere interlacing of the figures and their airy evolutions are sufficient entertainment to any spectator; in the dizzy reel of history the many figures, and those constant and not easily explicable interchanges of position occupy his whole attention; but trust me, the *pas seul* of autobiography is the most monstrous of all imaginable exhibitions, unless it is ever and anon diversified with a *faux pas*.'

You are only half right in your notions about NOVELS. The report of four barons, two duchesses, three bishops' wives, thirteen governesses, eighteen footmen, sixteen ladies' maids, and twelve scullions, having been turned off my establishment, is undoubtedly correct; but the inference you drew from it—that I intend to discontinue in future the publication of novels evinced, if I may say so without offence, a little too much of the generalising spirit with which we are wont to reproach your countrymen. The dismissal of these menials was not altogether a matter of choice with me. The public had shown evident symptoms of nausea when their dinner was served up in their not very clean, nor delicate-looking hands, at least so I was informed by the gentlemen called critics, who sit at the side tables (not as the poor fools pretend, directing the appetites of their lords and masters, but as you and I know well, observing them with the greatest carefulness, and winking to us whenever the features express marked content or dissatisfaction). For my own part I was mightily disinclined to this harsh step; for my nature, and I believe that of all our tribe, is singularly gentle and averse from giving offence. I asked the poor souls whether they would have any chance of getting another place if I thrust them off, and it went to my heart to hear the answers they made me. One said that I should reduce him to the most abject poverty, that he should be obliged to part with one carriage and two mistresses; another assured me that he had been already blackballed at Crockford's, and if he was deprived of the support which he derived from writing fashionable reviews and moral reflections for me, he did not know where he should betake himself; a third,—but I will not trouble you with any more. The scene was truly heartbreaking, and I do not like recurring to it. My only satisfaction is, that the women are in no danger of getting into mischief; and that the footmen are able-bodied fellows, with good legs, upon which I trust they will eventually come down. But besides my having retained two or

* We apprehend that this version was furnished to Mr. C—— by the translator of Goethe's 'Memoirs of himself,' who is allowed on all hands to understand French, German, and English equally well, and to have equal talents for rendering any one of these languages into any other.

three who I found, under proper tuition, might become capable of doing useful jobs out of their old line, you are much mistaken if you suppose that the places which the discarded servants left, remained vacant many days. I had a set of new hands at work immediately, and very promising hands they are several of them; indeed, if there is one part of my career on which I look back with more honest pride than another, it is at my conduct in this critical juncture, when a universal cry was begun to be raised against the fashionable novels, and when a thousand conflicting interests demanded their continuance. Never, probably, did such a crisis occur in the life of any bookseller; and never (I may say it without vanity,) was a crisis met with more firmness and promptitude. Changing what the circumstances of the country required to be changed, but adhering, with undeviating constancy, to the principles of Government, abandoning no ancient name round which the feelings of the circulating libraries were entwined, and yet introducing the most important alteration in the thing of which that name was the symbol; making no disgraceful concessions, and yet yielding all that a wise man ought to yield, I have produced within the last few months a series of novels, resembling in all outward respects their predecessors, and so not alarming the fears of the most timid and unprejudiced watering-place lady, and yet so unlike them, both in their faults and merits, that the snarlers who came with their set phrases of abuse, to crush a foe they believed to be falling, found themselves balked of their prey, and retreated, confounded and crest-fallen, into the ranks. Among my most successful experiments in the new line I may mention 'The Disowned.'

Have you read it, M. Ladvocat; I am sure it would suit your countrymen to a hair, and I hope they have, long before this, had a good translation of it. Thus it suits nearly all classes. The novel readers buy it, because it is by the author of 'Pelham'; clever people buy it, because it is a clever book; our philosophers buy it, because it teaches good principles, by proving that every man acts from bad motives; and those mammas who will not let their daughters read foolish, trifling books that make them romantic, buy it because it contains so much instruction, and because (as a young lady in the shop remarked yesterday) 'Dear Mr. B—— tells us all about Epicurus, Beaumont and Fletcher, Diderot, Shenstone, Lord Bolingbroke, Bishop Percy, Shaftesbury, and that sort of people; and, besides, he is so handsome, and has such whiskers.' I said, nearly all classes buy this book; but I have published a novel this season which literally all classes buy.—'Zillah.' Ah! Ladvocat, that was a hit which you and all the booksellers in Europe may envy me! You have, probably, heard that a large portion of his Majesty's subjects, men, women, and children, are, at this moment, about to quit, for ever, their native shores,—not for Canada—let not Mr. Wilmot Horton fancy it; not for Van Diemen's land; not for South America; no,—but for Jerusalem. The Jewish monarchy, you are aware, is about to be restored; and it is from a preference to the form of government which these people suppose will be established there, that they (assisted by a Jerusalem loan, which has been contracted for by an eminent house near Charing Cross) are leaving their homes and their native land. You would not imagine that persons occupied, as they must be, in preparation for this great event, would care much about the light literature of our day. But you are not aware of the deep discernment and versatile genius of Mr. Horace Smith. Certain that his previous reputation would procure him all ordinary classes of novel readers, he applied himself exclusively to the task of producing a work which should secure the approbation of this apparently hopeless one; and wonderfully has he succeeded. By embodying in his book the most interesting statistical facts relative to this neighbourhood, such as what

lodgings let for on Mount Sion,—the price of coals, and of butchers' meat,—it has become quite a book of reference,—a sort of itinerary to those interesting emigrants. He is called, among his friends, the Mrs. Starke of travellers to Jerusalem.

There is less fluctuation in the VOYAGE and TRAVEL stock than in most others. Every gentleman who is furnishing a library, must have a certain number of quartos, and the newer they are the better the plates look. TOURS are at a discount; but I have serious thoughts of a great novelty in that line. A NEW TOUR TO PARIS, by the sheer audacity of its title-page, would throw the public upon its haunches, and compel it to swallow the volume, whatever it may contain. No one but a man of most original mind could think of such a subject.

When I first read that part of your letter in which you remark that METAPHYSICS are at a premium in Paris, I own I was a little startled. The notion,—not that such a speculation is desirable, but that it had ever occurred to any human being, or bookseller, certainly never entered my head. There is something, however, in every strange experiment, which has a fascination for me, and I determined, immediately on receiving your letter, to see whether a book of the kind you mention might not be obtained from some quarter or other. Having procured from a respectable gentleman a list of persons who were likely, from the turn of their minds, to engage in such an enterprise, I wrote letters to the following gentlemen: Dr. Coplestone, the Bishop of Llandaff; Mr. De Quincy, a gentleman at Edinburgh, who wrote a book on some medical subject; Mr. Morison, the Hygeist, whom you have probably heard of; Mr. Coleridge, a curious old gentleman, who lives at Highgate, near London, whom you have probably not heard of; Mr. Belsham, the Unitarian preacher; Mr. Lawrence, the surgeon; and two undergraduates at Trinity College, Dublin, asking them whether they would like, either separately or in conjunction, to write a book upon the human mind. The excuses I received were very various. Mr. Morison, the Hygeist, said that he was willing to undertake the work either alone, or with Mr. Lawrence; but as he said the whole might be written in ten pages, and I never like to publish less than three volumes, that negotiation was broken off. Mr. Lawrence and Dr. Coplestone, severally pleaded their engagements at Bartholomew's and the House of Lords; Mr. Belsham declared that he should be glad to write the work, but intimated he felt himself insulted by being associated with such persons. Mr. Coleridge, and Mr. De Quincy, and also said that the work could not be perfect in a year. Mr. Coleridge sent me a long letter, enclosing an article on Aesthetics for the 'New Monthly Magazine'; I was sorry to decline it: but Mr. Horace Smith goes a great deal more into company than Mr. Coleridge, and, consequently, is much better fitted to write on subjects connected with eating. The next polite letter I received, was from Mr. De Quincy. It ran as follows:—

'MY DEAR SIR,—I am bound to return you my thanks for the very great honour you have done me, not merely in writing to me, and thereby enabling me to contemplate in the concrete form of Mr. C——, one whom I had previously considered merely, in the abstract, as the first of heaven's booksellers, but also in expressing a wish that I should be concerned in a joint-stock company, the idea of which, if I understand you aright, will be realised *outwardly* in the shape of a work to be entitled, (I presume,) 'The Young Ladies' Complete Metaphysician,' and *inwardly* in the pounds shillings and pence to accrue from its publication. It is no slight addition to the satisfaction which I derive from your having considered me worthy to take a part in so great an undertaking, that those whom you have selected to co-operate with me, are, with the single exception of Mr. Coleridge, the very men I

should myself have pitched upon, as fulfilling most remarkably, with respect to myself and to each other, the two conditions which are necessary to the perfection of the idea expressed by the word (in a literary sense) *partner*, viz. the *negative* condition of not differing about the formal expression of their belief, and the *positive* condition of holding all the premises of their belief in common. I cannot, therefore, Sir, refuse to contribute my quota; and as the hint in your note, that dispatch will oblige, coupled with the utter impossibility of my having, at this distance, any interview with my associates, appears to take away all excuse from me for not at once furnishing the little aid which is in my power, I send you a receipt, which, if followed in the composition of your dose, will, I am convinced, make it exceedingly palatable. I ought to mention that I discovered the ingredients and the quantity by a careful analysis of fourteen volumes of modern French philosophy; and that the mere business of amalgamating them may be very well performed by any of the persons you mentioned, or by the person (if disengaged) who mixes up the biographies or makes the translations for your establishment. The receipt is as follows:—

Take three gallons and a quarter of Reid, five gallons of Stewart, and one gallon of Brown, boil them together, stirring the mixture gently with a spoon till it has acquired some consistency; (this would take a very long time) therefore, to quicken the operation, throw in about an ounce of Locke, and the same of Condillac; continue stirring till they both are dissolved (which will be in about three minutes at the furthest). The preparation will be now a very loose incompact jelly, and so far well; but the worst of it, that it is also a very tasteless jelly,—so we must have something to flavour it. For this purpose take three scruples of Plato, and two and a half of Plotinus, (you may procure them at any Parisian chemists,) pound them for a full hour in a French mortar, till they are a very fine powder, and then throw them into the saucepan. Stir again, but not so gently as before, for these new ingredients will take some time and trouble to combine with the former. Then I would recommend you, who are providing for Englishmen, to stop; but the Parisians, who are fond of every thing piquant and recherché, make it a rule to procure a few scruples of Kant, Fichte, or Schelling, or sometimes Leibnitz, and after pounding them for several hours, (as directed above,) to throw them in. These articles are very expensive, and the additional trouble which they occasion very great; I therefore leave it to yourself whether you will make use of them. After this skim the mixture, pour it off, and it will make an exceedingly pleasant beverage. I am, Sir, &c. &c.

O. De Q.

'I very much like your idea of the new volume of Sermons which

Cætera desunt.

SAILORS AND SAINTS.

Sailors and Saints; or, Matrimonial Manœuvres. By the Authors of the 'Naval Sketch Book.' 3 vols. Colburn, London, 1829.

WE hate to see a sailor imposed upon; there is something so engagingly defenceless in his character against the wiles of those terrestrials whom, launch them on his own element, he would so justly triumph over by the title of 'lubbers.' A most glaring case of this kind is before us at present. An honest tar, the author of the 'Naval Sketch Book,' and of every line in the Novel on our table, worth reading, has unluckily, in one or other of his shore-going trips, come athwart a detrimental and delusive Templar, (a second cousin, we suspect, by the mother's side,) and this Templar, cunningly availing himself of the various opportunities, and *tempora fandi* afforded by relationship or acquaintanceship as aforesaid, to worm himself into the confidence of our above-mentioned unsuspecting navigator, has not only

been successful, in persuading his cousin that he, (the Templar,) suggested the best hits in the 'Naval Sketch Book'—a production wholly conversant with nautical matters, of which the tailor of a Templar is intensely ignorant; but, furthermore, that he, (the said Templar,) is the fittest person possible on all future occasions to give a finishing touch to the rough pages of his cousin, to relieve them from the sameness of marine details, and in his own consummate diction, 'to consult the general taste, particularly that of the INFLUENTIAL FAIR, by presenting a story enlivened by the introduction of characters, to which parallels may have been found within the circle of every reader's society,' (for ourselves and our small circle, we disclaim the imputation.) Hence, the volumes before us, which, as we have already said, are nothing if not nautical, issue forth to the world under the joint professional anonymes of a **TEMPLAR** and a **NAVAL OFFICER**.

On the face of it, the thing is absurd. A Templar write a novel! What a moral contradiction! One would not stare so much at the appearance of a Set of National Melodies, by Jeremy Bentham, or a connected and intelligible series of Thoughts on the State of the Nation, by the Prime Minister. But a novel by a Templar—and not printed at the Minerva Press! Impossible! The statement contradicts itself. Where should he have found his plot, characters, and incidents? In good society?—which excludes him from its precincts—or, at best, only gives him such a glimpse of them as the devil enjoyed of Paradise; dropping shots of unrepented invitations from such families as are newest in town; fathers smiling middle-aged contempt upon his efforts to impress them with a suitable idea of the liberal and instructed spirit of 'us youth'—mothers taking exactly no notice at all of him, excepting that their daughters shall not take too much—and daughters drawing gentle conclusions of his character, as of a youth rather unsettled in his principles; nor, perhaps, very sane in his mind. We, ourselves, have once been garretteers in Fig-Style Court, and students (!!!) under the auspices of that learned society which has now the honour (nowise unappreciated,) to reckon us among its benchers. But we never thought of writing a novel. Let us see, though—did we never?—have we not some faint recollection—reminiscence rather—of attempting some exploit of that kind, prematurely quashed by the prudence of our publisher? Oh yes, it was at the dawning of the French Revolution, when our young hearts beat audibly at three debating societies, in the sacred cause of liberty all over the world. Our plot was, if we remember right, the Euthanasia of Common Law; our heroine the Goddess of Reason, whom we landed from the Dover Coach, at the sign of the Sauvage, on Ludgate-hill, escorted to the dens of special pleading, which she strangled at the inns of court *en passant*, and knocked Temple-bar and both the Strand churches into the street, in her awful path to purify the courts at Westminster. Who now could recognise the *fougue* of our youth in the chastened pride of intellect, which exalts our riper years, our modified opinions, and matured wisdom! Who now would recognise the stripling of the eighteenth century in the dignified *pater-familias* of the nineteenth, diffusing light upon all topics, from the head of our table, in a fluent yet not prolix stream; descanting so as never to fatigue for a moment the mute attention of our guests and dependants; in an impartial balance, weighing men, and parties, and principles, nor omitting a just eulogium of free trade and toleration, while we ridicule the dreams of the political economists, and reprobate the violence of Mr. O'Connell.

But return we to the Templar. We have no doubt, when his ultra-marine relative makes an occasional trip to town, he is *instantly* 'caught' by this atrocious kidnapper, and incontinently made the object of the most insidious attentions. With a mien of condescending benevolence, the

man of parchments quits his desk for the day; with an air of *nonchalance* and satiety conducts him through the 'sights' of London, depreciates the modern art of Somerset House by talking of his friend Lord —'s pictures, and damns the Tenerife of the Tavistock by comparison with his friend Lord —'s wines. Then he drags off his victim to the theatre, and subsequently stupefies his senses at the Cider-cellar, until he becomes the passive tool of his nefarious machinations. Finally, honest Jack weighs anchor, and leaves London, not materially improved by his sojourn there in either person, purse, or reputation; but impressed with a high notion of the tip-top qualifications of his knowing friend the Templar for a painter of life and manners. With the Templar, therefore, he leaves his manuscript sketches of 'Life Afloat,' which, as we have said, are the only things worth reading in the book, the said Templar undertaking, for good and valuable consideration,—half profits of the work, we dare say,—to enliven the monotony, and complete the three volumes by the counterpart varieties of 'Life on Shore.' Hence nothing but discredit to the book, though nothing but emolument to the Templar. On the strength of lettered ease and independence, he shines out in an entirely new character. His wretched animal in the shape of a laundress, though hardly in the shape of a female, is astonished by the payment of her long-despaired pittance. The lank waiter at the Economic Dining Rooms requires the order for a second pint of stout to be repeated; nor can the cause of this magnificence be veiled in obscurity,

'Long Chancery Lane re-echoes the report;
In Tottenham Fields the brethren with amaze,
Prick all their ears up, and forget to gaze—
and in all the pride of authorship, he claims a just supremacy in the haunts where the minor singers and performers most do congregate; or lounges with a more dissolute grace at the 'Saloon,' and ruffles it with a more egregious swagger at the 'Coal-hole.'

We do most earnestly entreat our courteous readers, that whatever they find of ignorance, ill-taste, and presumption in the 'shore-going' department of the volumes before us, and they will find enough, though we shall not soil our pages with it, they will at once ascribe it all to the pernicious Templar. Wherever a citation shows its nose in bad French, an indelicate expression in the presence of a female, a solecism in grammar through the itch of fine writing, it is flagrantly the work of the Templar. The tar must be expected to know nothing at all of such matters, and the Templar knows a good deal less than nothing at all. *Par contre*, it would be doing scant justice to the less assuming, and more efficient partner in this grotesque firm, if we omitted to quote some really clever dramatic touches in the nautical line, a track which may be often trodden without being worn or beaten, as the voyages of 'The Pilot,' the 'Red Rover,' and the author of the 'Naval Sketch Book' himself sufficiently prove.

The following scene in his Majesty's brig *Spitfire* has amused us:—

'Burton came down to "report himself" returned. He detailed the occurrences which took place, and the certainty of procuring provisions and water, with the invitation of Captain Crank to his commander.

Unaccountable as it may appear to any but the female reader, the circumstance of Crank's fair niece having joined in the request was not mentioned. Possibly arising from the suppression of this inducement, the valetudinarian expressed no inclination to accept the proffered civility; and the lieutenant, now more at ease as to any apprehensions that the odds were against him, or that two epauletts might be more attractive than one, solicited permission to dine on shore—a permission which was not withheld, as Burton threw out a politic hint that the advice of the veteran might be turned to present advantage.

Burton had scarcely closed the door of the cabin, before he cried out in the steerage passage—"I say, sergeant, send my boy aft, and one of the 'party,' if you please, to pipe-clay my white pantaloons."

"Pass the word for'ard for the boy Barnes," cried the sergeant."

"Sing out there for Skillygalee-Jack," said a saucy top-man, hauling up the slack of his trowsers.

"Him mus'na come—him turning a pit," cried the captain's black cook, with that air of authority so peculiar to the sable race when in office.

From all outward signs, the boy certainly seemed better calculated to turn the spit, than ever to succeed in the higher walks of the profession; and so far the intuitive instinct of the savage at the coppers proved a better guide in determining the bent, and, perhaps, capabilities of the ill-starred urchin, than the more aspiring pretensions of his affectionate parents; who, very judiciously, as it had been whispered, sent him to sea to learn manners.—The first week, however, he had instinctively discovered the galley to be his province.—Here, by a total negligence of his person, (notwithstanding the inspection and drill, to which boys are subject in the service twice-a-day) and a ready acquiescence in the various drudgeries imposed by his black superior, he had become a domiciled favourite; and his services frequently preferred to those of youths less ambitious.—And here a reflection may suggest itself, on the prevailing taste in officers of the navy for African attendants. It has been the fashion ever since the days of Benbow—no inglorious epoch, by the by. Were we in the habit of hunting for something *recherché*, in the shape of a precedent, this practice with respect to poor *Quamino*, who, all the world knows, often proudly traces his lineage up to sable royalty itself, might be supposed to originate in the classical recollection, that the vain glorious Romans imagined their voluptuous dainties acquired a higher relish when served up to table by royal captives.—As to some of the "births" occupied on board by our Negro brethren, even the amiable Wilberforce himself might augur, that the appointment originated in humane feeling.—But as to the cook, Jack uniformly and artlessly attributed it to the "Negur" being born in the torrid zone, and therefore better able by "natur" to bear the burning fervours of a galley-fire in dog-days.

From reflections far less philosophical than the preceding, our lieutenant was roused by hearing the bell strike seven.*

"What! Powers that be! is that seven bells?—only half an hour to rig and run ashore.—Come, lively," said he to his boy, who had reluctantly relinquished his post of honour to another youngster—"Come,—send the barber aft in a minute."

"Ay, ay, Sir," said the same loquacious top-man, who happened to be standing at the fore part of the steerage passage, and who appeared to be one of those "privileged men," or rather licensed wits, that may be found in every ship in the service.—"Pass the word there for 'Lathering Bob.'—Tell him to bear a hand aft: the second lieutenant wants his muzzel-lashing off in a crack."

"I'll muzzle you, Sir," said Burton, "if I hear any more of that sort of *singing out* about the decks;" when, retiring to the gun-room, he continued, as he rummaged his pockets, "I say, steward, did you see my keys any where?—But it's ever the way when one's in a hurry.—Come, Mister Purser, no tricks upon travellers; these sort of practical jokes are very well in a midshipman's birth; besides, they are but a poor recompense for my performance of your duty."

"My duty!" replied the purser, in a cynical tone, "I'm on the doctor's list.—Some one must have taken the 'demand' for beef on shore, or we should have had no fresh grub to have stopped your grumbling mouth."

"Please, Sir, all the black'ng's out this week past," interrupted Burton's domestic, drawing out his words monosyllabically.

This intelligence was quickly succeeded by another, of almost as pleasing a nature.—The marine to whose fostering charge the lieutenant's holiday inexpressibles had been consigned, appeared at the gun-room door with a woeful face, and preluding with a scratch of the head, reported—"The pantaloons, Sir, are rather out o' condition.—They must have been put by wet and got mildewed.—Besides, Sir, here's an ugly blotch of port wine in front.—I've been trying to coax it out with a little hot pipe-clay, but I can't come it.—I was thinking, if so be, Sir, as you must wear 'em, that you'd better keep a small bit of pipe-clay in your pocket, and touch 'em now and again as soon as they gets dry enough; but you'd better let them be, till you gets in the wind."

"In the wind!—curse you, I believe you're all in the wind."

* Seven bells half-past three.

"Some one with hurried foot came tumbling down the after ladder, and announced, "Sir, there's a whiff * flying ashore, and the first lieutenant thinks it for you."

"The rapid announcement of one calamity after the other, (for calamities they must all be considered by a man in a hurry,) strongly reminded him of the perplexities of that pattern of patience mentioned in sacred history, and he resolved to bear all his misfortunes with the equanimity of his parallel; but unluckily this composure was destined to be short lived, for in his eagerness to expedite his dressing, he the next moment thrust his heel right through his stocking. The weight of his woes, aggravated by this additional interruption, overcame all his self-possession, and with a hearty imprecation he shouted out, "What next?—any more of *Job's* comforters?"

"Irritated as he was by these occurrences, what must have been the effect produced on his too sensitive ear by the report of a gun, or, as ladies would denominate it, a cannon from the shore? Another of the messengers alluded to, determined not to lose this too fortunate opportunity of trying his temper, "sung down" the skylight, "Mr. Hasty says *that's* for you, Sir, and you'll be too late for dinner."

"The report of the gun was echoed by a crash below, arising from the violent contact with the beams above of a boot-jack, which lay too conveniently close to the hand of the irritated lieutenant, as he hove it at the messenger's head, exclaiming, "and *that's* for you, young fellow."

"The pantaloons were again exhibited, whilst Lively prostrated the tawney-coloured boots at his feet. This was too much for his philosophy. It was impossible, he thought, to make his appearance before the sex in such shabby attire. Not a lawyer's clerk at assizes—not a barber's apprentice parading Hyde Park on a Sunday—or a Jew rigged out on the shabbash in some of his best saleable second-hand clothes, thought he, but must appear more gay and debonair in the eyes of the sex.

"D—n it," cried Hasty, opening the sky-light hatch, "you're as long bedizening as a bride, and all for that old buffer on the hill. One would think you were bracing up for a ball, or rigging out for a levee of syrens.—Come, better bear a hand; the people are going to supper presently, and then we won't be able to spare you a boat."

"Spare!" said Burton, "that's just like you; it's long before you'd spare one *even* a bottle of blacking; and, when I do go on shore, (which is seldom enough,) I should like to support the character of the cloth."

"Well—rather than have a canonading from the old boy's battery ashore, I'll rig you out to the nines. But here we have it," continued Hasty, moving from the sky-light, and pointing his glass out of one of the port-holes, in the direction of the cottage—"here we have it, for there comes the gunner with a red-hot poker."

"Having so said, he despatched his servant for the necessary essentials for Burton, premising in a whisper—"By no means let him have my best shore-going swab."

"This intimation, given with respect to the poker, was no false alarm, for the conclusion of Hasty's speech was accompanied by a reverberation of echoes from the neighbouring hills, which sufficiently testified that much longer delay would be fatal to the festivities of the evening.

"What a provoking hurry!" cried Burton.

"On deck there!" cried the captain, through his sky-light, which was usually kept open when the weather was fine—"What guns are those firing?—Any thing in distress in the offing?"

"No, sir!" replied Hasty, "only Mr. Burton in distress for time and togs—I've relieved him from one embarrassment—perhaps you'll extricate him from another, and save time, by allowing the gig to land him.—Indeed, it may be best for ourselves," added the first lieutenant, rather drily: "for the old gentleman ashore seems so peppery, I should'n't wonder if the next gun was shot at!"

"Come, Hasty," said the captain, "that's rather a wild conjecture—but it's not fair to taunt poor Burton—he may yet have the laugh against you.—Man the gig, and land him at once, and tell him to say something civil to the old gentleman for me."

"With one spring from his cabin-door, on to the gun-room table; a vault upon deck, aided by the rim

* Whiff.—An ensign tied up transversely, so as to fly folded up at the extremity nearest to the mast, or flag-staff.

of the sky-light, he hastily descended the brig's side, and jumped into the boat, ere she had been completely manned. But his flight was not unattended by defeat; for the boat had hardly reached her destination half-way, when he thought he perceived the coxswain eyeing his dress with a significant look, as if he had detected his borrowed plumage.

"Why, coxswain," said Burton, "you seem to be overhauling my rigging very closely—is there any thing amiss?"

"I doesn't exactly know, Sir; but it looks to me, Sir, as if you'd carried away the weather topping-lift of your trowsers—the lee-leach, you see, Sir, is as slack as water."

"Curse it! if I hav'n't carried away my braces springing up that infernal skylight.—Back water your starboard oars—no, awast there—give way again—won't do to go back to the brig—I'll make shift with one o' yours."

"Mine, Sir!" said the coxswain, startled at the lieutenant's entertaining the idea that a sailor ever wore a suspender in his life—"Mine, Sir!—I hope you don't take me for a soger, Sir!—I never wants any thing to keep the eyes of my rigging from slipping down over the hounds o' the mast.—But here's a bit o' rope yarn in the bottom o' the boat."

"Why, Bill," said the bowman, "there's a piece of dry parcelling in the locker abaft, as 'ill make a good preventer-brace on a pinch."

"That's right, Jones," said the lieutenant, brightening up at the bowman's suggestion—"that's right, my man—put me in mind to-morrow to give you a glass of grog for the thought."

"Eye—eye, Sir," cried Jones, with good-humoured dryness—"I'll freshen your memory, if you'll only freshen the nip."

"Casting a glance once more at the flag-staff on shore, and dreading any further expenditure of powder from that quarter, he was fain to avail himself of the bowman's substitute, and consult the coxswain instead of his mirror, as to his appearance. That arbiter of fashion, after examining the lieutenant as fastidiously as a boatswain would a ship, when employed in a boat ahead, squaring yards, and repeating the usual commands on such occasions,—

"Top away on your starboard lift—now lower a little o' your larboard—hold-on of all—there you are, Sir,"—concluded with the consolatory assurance that all was now "square by the lifts and braces, and every thing taught fore-and-aft."

PRACTICAL CHEMISTRY.

Chemical Re-Agents or Tests; and their application in analysing Waters, Earths, Soils, Metalliferous Ores, Metallic Alloys, &c. Originally by F. Accum; improved and brought down to the present state of Chemical Science by William Maugham, Surgeon, Lecturer on Chemistry, &c. pp. 452, 12mo. Tilt, London, 1828.

ONE of the best methods of illustrating a science like Chemistry, is by reducing a multiplicity of experiments and observations to general principles; but, this it was impossible to do during its early progress, while the facts were not sufficiently numerous to be compared with each other, and while analysis was not brought to so great a degree of perfection as to exhibit in the products of an operation the cause and the results of all phenomena. Like the classifications of Naturalists, which could not be established till the knowledge of a vast number of animals allowed them to examine and compare their principal characters, Chemistry required facts to be collected, compared, and classified, as well as a knowledge of agents with their properties, actions, and effects. Much of this was effected about the close of the last and the beginning of the present century. Elements before unknown were added to those with which the chemist was previously acquainted; the analysis of air and water came forward to illustrate the action of those two substances; the decomposition of acids afforded an explanation of their principal effects; the principles of heat and light, those fertile sources of action and re-action, took their places among the elements of bodies. Chemistry, which had hitherto been confined to particular operations, became, all at once, a central and seminal science. Man soon discovered that nature, equally simple in her

principles of action, and fertile in the means of unfolding them, is governed by a small number of general laws; and artists, heretofore separated from each other in the vast field of genius, for the first time perceived that they were united by the closest relations, and that their operations were regulated by principles common to them all.

Of these general principles, the subject of *Tests* forms a very important part, and is well worthy of being treated in a separate volume like the one before us; though this one is not exactly what we could have wished, particularly in the arrangement of the materials, and in many points it is very materially defective. Thus, instead of giving in their order the substances which require to be ascertained, with their several tests, and the methods of applying them, we have an enumeration of the tests themselves, with scattered and desultory indications of the substances tested. This glaring defect might have been partially remedied by means of a good index, or a classified table of contents; but though we find both of these appendages in the book, they are so negligently executed, that they might as well have been omitted. In the second part, indeed, an attempt is made to obviate the evil, and we have sections on mineral waters, earths and stones; soils, alkalies, and acids; but on perusing these, we are strongly impressed with the notion of their having been copied from common books on the science, without regard to what ought to be, the peculiar aim of a work on tests. We may select as an instance of this, the section on soils, treating of their improvement as connected with the principle of their composition.

In cases where a barren soil is examined with a view to its improvement, it ought always, if possible, to be compared with an extremely fertile soil in the same neighbourhood, and in a similar situation; the difference given by their analysis would indicate the methods of cultivation; and thus the plan of improvement would be founded upon accurate scientific principles.

If the fertile soil contained a large quantity of sand in proportion to the barren soil, the process of amelioration would depend simply upon a supply of this substance; and the method would be equally simple with regard to soils deficient in clay or calcareous matter.

In the application of clay, sand, loam, marl, or chalk, to lands, there are no particular chemical principles to be observed; but when quick-lime is used, great care must be taken that it is not obtained from the magnesia lime-stone; for, in this case, as has been shown by Mr. Tennant, it is exceedingly injurious to land. The magnesian lime-stone may be distinguished from the common limestone by its greater hardness, and by the length of time that it requires for its solution in acids, and it may be analysed by the process of carbonate of lime and magnesia.—p. 324.

Now, we submit that all this, though interesting and accurate, is out of place in a book of chemical tests, and only serves to swell it in bulk and price; and to preclude the insertion of other matter, which ought not to have been omitted, such as a table of affinities, a table of specific gravities, and, above all, a list of substances for which there exist any appropriate tests, with references to the manner in which they are detected; the latter being unaccountably omitted, though it occupies a prominent part in the original.

The additions are not numerous, and though of some importance, particularly the table from Mr. Children on the blow-pipe, the table of the colours of precipitates, and the section on ascertaining the per-centage of acids and alkalies in the crude articles of commerce; yet we find a miserable deficiency in the more recent discoveries on chemistry, arising either from negligence or inacquaintance with the scientific journals. Very many substances of recent discovery are not mentioned at all, much less the tests by which they may be detected. Thus, under 'ascetic acid,' which is made the test for gluten, there is no hint given of Taddei's discovery, (published about five years ago) of the composition of gluten, though the test for zymome, one of the principles, is so im-

portant in distinguishing good wheat flour which the powder of guaiac tinges of a fine blue, while bad flour remains unchanged.

Those, therefore, who expect to find this book 'brought down to the present state of chemical science,' as the title promises, will be certainly disappointed.

A COURSE OF MODERN HISTORY.

Cours d'Histoire Moderne. Par M. Guizot, Professeur d'Histoire à la Faculté de Lettres de Paris. Histoire Générale de la Civilisation en Europe, depuis la chute de l'Empire Romain jusqu'à la Révolution Française. Paris, 1828.

THE name of M. Guizot is too splendidly known amongst us, by researches into our own history, unrivalled amongst our own countrymen, that we should need to introduce, by any notice of the author, our remarks on this his recent publication, which comprises the substance of a course of lectures on modern history, delivered in the last season at Paris, since the re-opening of those theatres of public instruction which a seven years' tyranny had closed.

The progress of European civilization (a term too often vaguely employed) is the leading internal fact of modern history, which M. Guizot applies himself to trace throughout the series of outward actions and events, which are the burthen of ordinary annals. Examining, in the first place, the meaning attached to this term by the common consent of mankind, he discovers two elements of human civilization,—the improvement of the social and material state of man, and the development of his individual powers and faculties. Into one or other of these may be resolved whatever events have been considered as conducive to civilization; and in the fortunate union of both, or, at least, in the extraordinary vigour of either has consisted the pre-eminence of those lands and eras which have been noted as the most civilized. It is the aim of M. Guizot to prove that the appearance, at any epoch, of one of those features of progression, to which we have already alluded, may be taken as a sure forerunner, though perhaps at the distance of ages, of corresponding development in the other. Hence, in laying out the chart of European civilization, he measures the influence of those leading events which have hastened its career, or modified its character, by their more or less bearing on the social amelioration or individual development of man.

After sketching the main lineaments of ancient civilization, and finding in its principles an uniform simplicity which produced its rapid growth and unredeemed decay, M. Guizot exhibits the following contrasted and animated picture:

'With the civilization of modern Europe it has been altogether otherwise. Without entering into any detail, look around you, consult your memory; it will immediately appear to you diversified, confused, tempestuous; all the principles of social organization co-exist in it; the spiritual and temporal powers, the theocratic, monarchical, aristocratic, democratic elements; every class and situation in society mingle, jostle; there are infinite gradations in liberty, riches, influence. And these diverse faces are in a state of constant struggle, without any one being strong enough to stifle the rest, and to take sole possession of society. In ancient times, at every great epoch, every society seems cast in the same mould; it is now pure monarchy, now theocracy or democracy, which prevails; but each in turn *does* prevail completely. Modern Europe affords examples of every system, of every element of social organization—monarchies, pure or mixed, theocracies, republics more or less aristocratical, have flourished simultaneously; and, in spite of this diversity, they have all a certain resemblance, a certain family likeness, which cannot possibly be mistaken.

'In the ideas and sentiments of Europe, the same variety, the same struggle. Theocratic, monarchical, aristocratic, popular creeds come in contact, combat, modify, and limit each other. Open the boldest writings of the middle age; you will never find an idea followed out to its ultimate consequences. The parti-

sans of absolute power recoil all at once, and, as it were unconsciously, from the results of their own doctrine; one feels that there are influences, ideas, around them, which arrest them in mid-volley. The favourers of democracy are subject to the same law. Now here is that imperturbable audacity, that blind force of logic, which break forth in the civilization of antiquity. Opinions offer the same contrasts, the same variety: an energetic love of independence, with a wonderful facility of submission; rare fidelity from man to man, and, at the same time, an imperious appetite of doing one's own will, of shaking off every yoke, of living alone, without disturbing oneself for others. Minds are as diversified, as agitated as societies.

'The same character betrays itself in literature. It is impossible to deny that, regarded in the point of view of form and of perfection of art, they are vastly inferior to the literature of antiquity; but in the point of view, of substance, of sentiments, and ideas, they are incomparably stronger and richer. One sees that the human soul has been moved on a greater number of points, and to a far greater depth. The imperfection of form proceeds from this very cause. The more copious and rich the materials the more difficult to reduce them to a form of simplicity and purity. What constitutes the beauty of a composition, what in works of art receives the denomination of form, is clearness, simplicity, symbolic unity. The prodigious diversity of ideas and of sentiments, which has been the offspring of European civilization, has made it much more difficult to arrive at this simplicity, at this clearness,

'Everywhere, then, this dominant characteristic of European civilization is manifest. Undoubtedly, there is the inconvenience annexed to it, that when we consider separately such or such particular development of the human mind in letters, arts, in all the directions in which the human mind can make progress, one finds it in general inferior to the corresponding development in antique civilization; but, on the other hand, when one regards it as a whole, European civilization displays itself incomparably more rich than any other; it has brought a greater number of different developments along with it. Accordingly, behold! it has now lasted fifteen centuries, and it is still in a state of continual progression; it has not advanced, by many degrees, at a rate of such rapidity as the Greek civilization, but its progress has acquired incessantly increasing acceleration. A boundless course is dimly before it, in which from day to day it moves with more and more velocity, because freedom more and more attends its movements. While, in other civilizations, the exclusive empire, or, at least excessive preponderance of one single principle, of one single form, has been a cause of tyranny. In modern Europe the diversity of elements in the social order, the impossibility of excluding each other under which they have laboured, have engendered the liberty which reign at this day. Want of power to exterminate each other, has obliged the different principles to live together, to make a sort of compromise amongst themselves. Each has consented to be satisfied with the portion of development assigned to it: and while elsewhere the predominance of one principle produced tyranny; in Europe, liberty has resulted from the variety of elements in its civilization, and from the state of strife in which they have continually existed.'

'Gentlemen, this is a real, a vast superiority; and if we go farther, if we penetrate below exterior facts into the nature of things, we shall have to admit that this superiority is legitimate, and stamped by reason, as well as proclaimed by facts. Forgetting for a moment European civilization, let us carry our contemplation over the world, over the general course of earthly phenomena. What is its character? How goes the world? It goes on precisely with that variety of elements, with that constant struggle which we remark in European civilization. Evidently it has not been assigned to any principle, to any particular organization, to any special force, to domineer over the world, to model it at once for all, and to exclude from it every other tendency. Different powers, principles, and systems, maintain incessant opposition and reciprocal limitation, by turns prevalent or yielding, never completely conquering or conquered. The general state of the world exhibits diversity of forms, of ideas, of principles, and their contests, and their struggle towards a certain unity, a certain ideal, which perhaps will never be attained, but to which the human race tends by liberty and labour. European civilization is then the faithful image of the world: like the course of things in the world, it is neither narrow, nor exclusive, nor stationary. For the first time, I imagine, the character of specialty has disappeared from civiliza-

tion: for the first time it has developed itself under an aspect as diversified, as rich, as laborious as the theatre of the universe.

'European civilization has entered, if it is allowable to say so, into eternal truth, into the plan of Providence; it advances according to the ways of God. This is the rational principle of its superiority.'

To pour new blood into the veins of an effete and lifeless polity in the last stage of the Roman empire's irrecoverable decay, was an experiment tried, and vainly tried, by some among its rulers, in particular by Honorius and the younger Theodosius, of whom a rescript is extant, addressed, in the year 418, to the prefect of Gaul, of which the sole intention is to establish, in the south of Gaul, a sort of representative government, and, by its aid, preserve the unity of the empire. The provinces and towns rejected the boon—none would either act as electors or as deputies. There was a fatal necessity for utter dissolution and decomposition, before the scattered elements of European society could reunite in the formation of a wholesome body politic. At a later epoch, in the earliest pause of barbarous invasion, and before municipal order was entirely effaced from the despoiled and bleeding bosom of Europe, a last effort to the same end was made; and the attempt, which failed to revive civilization, has immortalized the name of Charlemagne. A darker hour was doomed to succeed—an age of utter uncontrollable disorganization. Society was resolved into its elements; and a new element, introduced by the German invaders, unknown to the Roman world, as to the Christian church, or, indeed, to almost the whole civilization of antiquity,—the ruling passion of personal independence, broke forth in all its fierce and barbarous energy. That such a passion, acting on ignorant and ferocious dispositions, should conform itself to any order, national or municipal, was impossible; that, where all else was feebleness, it should draw to itself whatever still remained of social tendencies, was the natural and actual result. Such was the origin of the feudal system; and such, under various forms and names, has ever been, and ever must be, the first organization of nascent or revived human intercourse. Perhaps the universality of this law has not been seized by M. Guizot with his usual comprehensiveness; at all events, he has not thought the complete elucidation of it demanded by the task before him. Nothing, however, can be more complete and masterly than his survey of the system itself, which he tries by the two standards of civilization which, as we have seen, he had already laid down. We cannot refuse ourselves the pleasure of citing the results of his investigation.

'1st. Feudalism must have exercised a considerable, and, on the whole, a salutary influence, on the interior development of the individual; it excited in the mind energetic sentiments, moral wants, extraordinary developments of character and passion.

'2dly. In a social point of view, it was neither capable of founding a social order, nor political securities; it was indispensable, in order to regenerate in Europe society so utterly dissolved by barbarism, that it was wholly unsuited to a form more regular and extended; but the feudal form, radically vicious, could not possibly either regularise or extend itself. The only political right which the feudal regimen could maintain, was the right of resistance; I do not say of legal resistance,—there could not be any question about legal resistance in a society so little advanced. The progress of society is precisely to substitute, on the one hand, public power to individual will; on the other, legal resistance to individual resistance. This is the great end, the ultimate perfection, of social order: a great latitude is left to personal liberty; then, when personal liberty fails, when it is forced to render up an account of itself, an appeal is made solely to the public reason: the public reason is called upon to settle the litigation which has arisen about the liberty of the individual. Such is the system of legal order, and of legal resistance. You comprehend, without difficulty, how, under the feudal system, there was no room for any thing of the kind. The right of resistance which was maintained and practised under that system, was the right of personal resistance; a right terrible and noxious, for it appeals to force of arms, to the

destruction of society; a right, however, which never must be abolished at the bottom of the heart of man, for its abolition is the reception of servitude. All feeling of the right of resistance had perished in the corruption of the Roman society, and could not reproduce itself from its ruins; nor could it naturally originate, in my opinion, from the principles of Christian society. The feudal system has replaced it in the manners of Europe. The honour of civilization is to render it for ever inactive and useless; to have constantly professed and defended it, is the honour of the feudal regimen.

* * * * *

'In modern times, some men of talent have attempted to restore the credit of feudalism as a social system; they have chosen to see in it a state of law, of rule, and of progressiveness: they have made of it an age of gold. Ask them where they place it; summon them to find for it a local habitation or fixed era; they will not succeed in doing so: it is a dateless Utopia, a drama for which one finds in the past neither theatre nor actors. The cause of the error is easily discovered; and it equally explains the mistake of those who cannot pronounce the name of feudalism without annexing to it an absolute anathema. Neither the one nor the other have taken pains to contemplate the double aspect under which feudalism presents itself, to distinguish, on the one hand, its influence on the individual development of man, on his sentiments, his character, his passions; on the other, its influence on his social condition. The one party have not been able to figure to themselves, that a social system, in which were found so many noble sentiments and virtues, from which literature and morals took their earliest elevation—that such a system could be so mischievous, so fatal, as was pretended. The other party have seen nothing but the evil done by feudalism to the mass of the population, the obstacle erected by it against the establishment of order and liberty, and have been unable to believe that it was capable of originating any amelioration whatever. Both the one and the other have misunderstood the double element of civilization; they have failed to discern it, as consisting in two developments, of which the one might, in the order of time, manifest itself independently of the other; although, in the lapse of ages, and long series of events, they must call each other forth, and act reciprocally.'

(To be continued.)

PUBLIC CHARACTERS, &c.

Public Characters. Biographical and Characteristic Sketches, with Portraits, of the most distinguished Personages of the present Age. Vol. II. 18mo. pp. 324. Knight and Lacy. London, 1828.

This work begins with a portrait and a character of Prince Leopold, we suppose because he has more character than any person of the present day. Indeed, he is, from our author's account, a rare manifestation of the human animal.

'In early youth he was excellently tutored, and manifested a superior understanding and heart. As he advanced, he discovered a decided and habitual preference to those intellectual pursuits which ennoble the human nature in princes as well as subjects. He was always restrained, by careful tuition as well as a tender conscience, from dissipation and licentiousness. He became master of several languages—proficient in the mathematics—and so skilful in the fine arts, that it has often been thought he might have rivalled first rate professors. The several campaigns in which he had served, raised him to military fame, which has rendered his appointment as a British Field Marshal something more than a mere honorary designation due to his exalted rank.'—p. 12.

Lord Hill, who is a General at least, if not a British Field Marshal, occupies the next place, according to a new order of precedence, which seems to have been adopted since the accession of the present ministry. We are happy to notice that the present commander of the forces of this Protestant land is descended from the first Protestant Lord Mayor of London; and we are also delighted to assure our military friends, on the authority of the book before us, that, with respect to the management of the army,—

'On the suspicion that the Duke of Wellington is still the real head of the army, we need not stay to comment. Lord Hill is an honourable and independent man: there is not one more so in the army, or the nation, or the world; and to suppose that he would stoop to be the jackall of the great lion of the

age, is to imagine him, for the sake of office, to be capable of instantly transforming himself into a character perfectly the opposite. Lord Hill will act as he thinks proper, in every respect, while the Duke of Wellington will retain no more influence in the army than he can reasonably claim.'—p. 24.

We shall not particularly notice the account of Mr. Cobbett, because we regret to observe, that the enormities of his character have seduced our author into a deviation from his usual laudatory suavity.

'The name of Russell,' we are told, 'sounds in a British ear like the most delightful music and melody.' The virtues of Lord John Russell appear to have been got, in part, from his family; the rest of his moral and intellectual excellencies he appears to have picked up in company with Lord Mountcharles, the Duke of Devonshire, and others, at the Rev. Mr. Smith's school, at Woodnesborough. And, indeed, he must have made good use of his time, because on his first entrance into Parliament in 1819, 'assuming a modest, but important and influential station, he, in fact, at once took possession of the place vacated by the death of Charles James Fox.' We suppose that the fact of this contingent remainder of the leadership of his Majesty's Opposition has been learned from some unpublished chronicle of the Whigs, for it is rather surprising intelligence to the British public.

We pass over my Lord Wellesley, because he comes just before Madame Pasta; and we have music in our souls. 'Perhaps there never was a period when music obtained a more powerful ascendancy over the people of this thoughtful land than the present.' In this we entirely agree, having drawn precisely the same conclusion from hearing the boys whistle 'The merry Swiss Boy' in the streets. The criticism on Madame Pasta is really ample and judicious; and, if there is nothing original in the previous remarks on the musical taste of the British people, they are, at least, very true.

We mean no offence to Mr. Spring Rice, but we must say, that even the information that 'he furnishes a fair sample of that description of senators and orators from which Ireland, if she could find them multiplying in her land, would have much to expect,'—will not lead us to look further, so much are we repelled by the awful portraiture which is given as a resemblance of his outward man. The effect, indeed, which it has upon us is such, that we close the book, lest we should be shocked by any similar caricature of any of our public characters. But we cannot consider the author as responsible for the faults of the engraver; and we feel that we discharge our duty to him and to the public when we say, that this is a book which any father of a family may safely put into the hands of any of his children, who may have nothing better to do than to read it.

VIDOCQ'S MEMOIRS.

Memoirs of Vidocq, Principal Agent of the French Police until 1827; and now Proprietor of the Paper Manufactory of St. Mande. Written by Himself. Translated from the French. Vol. II. Hunt and Clarke. London, 1829.

We have already offered to our readers a notice and a sample of this very remarkable book. The second volume of the English translation has just been published by Messrs. Hunt and Clarke. The latter half of it is of a different character from the previous portions of the work, for it exhibits M. Vidocq as an agent of police, and instead of recounting the shifts to which he was compelled to resort to escape from punishment, displays the stratagems by which he attempted to subject to justice his former brethren. These confessions could not have been obtained in such perfection from a native of any other country than France. An English spy would have held his tongue; a German would have given us, indeed, the philosophy of trepanning, but glimpses

of individual moral feeling would have been mingled with it, and have interfered with the scientific interest of the performance; an Italian would have marred the value of his rascalities by bedaubing them with lies; a Spaniard would have made all the events of his narrative appear laudable by the simple fact of their connection with himself, but probably would not have opened to us that fine vista of public utility which M. Vidocq so much delights to make us contemplate. In truth, however, the very ground-work of this inimitable history could not have existed except in France, the country of organisation, where all that is most excellent, and all that is most vile,—both of them incapable in other countries of being materialised in institutions,—are regularly and uniformly systematised.

There is only one other observation which we are anxious to make before presenting our readers with some amusing extracts, namely, that nothing can be conceived more horrible or demoralising than the plan of prison-punishment adopted in France. Bad as these things are with us, in this respect the 'great nation' is many a year behind us. We doubt, however, whether their laws create so many frivolous offences as ours.

These two men, who for many years were sent away with every chain, and as frequently escaped, were once more back again in Paris; the police got information of it, and I received the order to search for them. All testified that they had acquaintances with other robbers no less formidable than themselves. A music mistress, whose son, called Noel with the Spectacles (Noel aux Bésicles), a celebrated robber, was suspected of harbouring these thieves. Madame Noel was a well educated woman and an admirable musician; she was esteemed a most accomplished performer by the middle classes of tradespeople, who employed her to give lessons to their daughters.

Madame Noel was obliging and good, but only towards those individuals who were at issue with justice; she received them as the mother of a soldier would welcome the comrade of her son. To ensure a welcome with her, it was enough to belong to the same "regiment" as Noel with the Spectacles; and then, as much for love of him and from inclination, perhaps, she would do all in her power to aid, and was consequently looked upon as a "mother of robbers." At her house they found shelter; it was she who provided for all their wants; she carried her complaisance so far as to seek "jobs of work" for them; and when a passport was indispensably necessary to their safety, she was not quiet until by some means she had succeeded in procuring one. Madame Noel had many friends among her own sex, and it was generally in one of their names that the passport was obtained. A powerful mixture of oxygenated muriatic acid obliterated the writing; and the description of the gentleman who required it, as well as the name which it suited his purpose to assume, replaced the feminine description. Madame Noel had generally by her a supply of these accommodating passports, which were filled according to circumstances, and the wants of the party requiring such assistance.

'Mother Noel had never seen me; my features were quite unknown to her, although she had frequently heard of my name. There was then no difficulty in presenting myself before her, without giving her any cause for alarm; but to get her to point out to me the hiding place of the men whom I sought to detect, was the end I aimed at, and I felt that it would be impossible to attain it without much skill and management. At first I resolved on passing myself off as a fugitive galley-slave; but it was necessary to borrow the name of some thief, whom her son or his comrades had mentioned to her in advantageous terms. Moreover, a little resemblance was positively requisite, and I endeavoured to recollect if there were not one of the galley-slaves whom I knew who had been associated with Noel with the Spectacles, and I could not remember one of my age, or whose person and features at all resembled mine. At last, by dint of much effort of memory I recalled to mind one Germain, alias Royer, alias "the Captain," who had been an intimate acquaintance of Noel's, and although our similarity was very slight, yet I determined on personating him.

'I had much to do in personating Germain; but the difficulty did not deter me: my hair cut, a *à la mode des Bagnes*, was dyed black, as well as my beard, after it had attained a growth of eight days; to embrown my countenance I washed it with walnut liquor; and to

perfect the imitation, I garnished my upper lip thickly with a kind of coffee grounds, which I plastered on by means of gum arabic, and thus became as nasal in my twang as Germain himself. My feet were doctored with equal care; I made blisters on them by rubbing in a certain composition of which I had obtained the recipe at Brest. I also made the marks of the fetters; and when all my toilet was finished, dressed myself in the suitable garb. I had neglected nothing which could complete the metamorphosis, neither the shoes nor the marks of those horrid letters *C A L*. The costume was perfect; and the only thing wanting was a hundred of those companionable insects which people the solitudes of poverty, and which were, I believe, together with locusts and toads, one of the seven plagues of old Egypt. I procured some for money; and as soon as they were a little accustomed to their new domicile, which was speedily the case, I directed my steps towards the residence of Madame Noel, in the Rue Tiquetonne.

I arrived there, and knocking at the door, she opened it: a glance convincing her how matters stood with me, she desired me to enter, and on finding myself alone with her, I told her who I was. "Ah, my poor lad," she cried, "there is no occasion to tell me where you have come from; I am sure you must be dying with hunger?"—"Oh yes," I answered, "I am indeed hungry; I have tasted nothing for twenty-four hours." Instantly, without further question, she went out, and returned with a dish of hog's puddings and a bottle of wine, which she placed before me. I did not eat, I actually devoured; I stuffed myself, and all had disappeared without my saying a word between my first mouthful and my last. Mother Noel was delighted at my appetite, and when the cloth was removed she gave me a dram. "Ah, maman," I exclaimed, embracing her, "you restore me to life; Noel told me how good and kind you were;" and I then began to give her a statement of how I had left her son eighteen days before, and gave her information of all the prisoners in whom she felt interested. The details were so true and well known, that she could have no idea that I was an impostor.

"Yes, yes, my friend," she said, "I know you well; my son and his friends have told me of your misfortunes; welcome, welcome, my dear captain. But heavens! what a state you are in; you must not remain in such a plight. I see you are infested with those wretched tormenting beasts who —; but I will get you a change of linen, and contrive something as a comfortable dress for you."

"I expressed my gratitude to Madame Noel; and when I saw a good opportunity, without giving cause for the slightest suspicion, I asked what had become of Victor Desbois and his comrade Mongenet. "Desbois and Le Tambour? Ah! my dear, do not mention them, I beg of you," she replied; "that rogue Vidocq has given them very great uneasiness; since one Joseph (Joseph Longueville, an old police inspector,) whom they have twice met in the streets, told them that there would soon be a search in this quarter, they have been compelled to cut and run, to avoid being taken."

"What," cried I, with a disappointed air, "are they no longer in Paris?"

"Oh, they are not very far distant," replied Mother Noel; "they have not quitted the environs of the 'great village' (Paris); I dare say we shall soon see them, for I trust they will speedily pay me a visit. I think they will be delighted to find you here."

"Oh, I assure you," said I, "that they will not be more delighted at the meeting than myself; and, if you can write to them, I am sure they would eagerly send for me to join them."

"If I knew where they were," replied Mother Noel, "I would go myself and seek for them to please you; but I do not know their retreat, and the best thing for us to do is to be patient and wait their arrival."

"In my quality of a new comer, I excited all Madame Noel's compassion and solicitude, and she attended to nothing but me. "Are you known to Vidocq, and his two bull-dogs, Lévesque and Compère?" she inquired.

"Alas! yes," was my reply; "they have caught me twice."

"In that case, then, be on your guard: Vidocq is often disguised; he assumes characters, costumes, and shapes, to get hold of unfortunates like yourself."

"We conversed together for two hours, when Madame Noel offered me a foot-bath, which I accepted; and, when it was prepared, I took off my shoes and stockings, on which she discovered my wounded feet

and said, with a most commiserating tone and manner, "How I pity you; what you must suffer! Why did you not tell me of this at first? You deserve to be scolded for it." And, whilst thus reproaching me, she examined my feet; and then, pricking the blisters, drew a piece of worsted through each, and anointed my feet with a salve, which, she assured me, would have the effect of speedily curing them.

"The bath concluded, she brought me some clean linen; and, as she thought of all that was needful, added a razor, recommending me to shave. "I shall then see," she added, "about buying you some workman's clothes, as that is the best disguise for men who wish to pass unnoticed; and, besides, good luck will turn up, and then you will get yourself some new ones."

"As soon as I was thoroughly cleansed, Mother Noel conducted me to a sleeping room, a small apartment which served as the workshop for false keys, the entrance to which was concealed by several gowns hanging from a row of pegs. "Here," said she, "is a bed in which your friends have slept three or four times; and you need not fear that the police will hunt you out, you may sleep secure as a dormouse."

"I am really in want of sleep," I replied, and begged her permission to take some repose, on which she left me to myself. Three hours afterwards I awoke, and, on getting up, we renewed our conference. It was necessary to be armed at all points to deceive Madame Noel; there was not a trick or custom of the bagues with which she was not thoroughly informed; she knew not only the names of all the robbers whom she had seen, but was acquainted with every particular of the life of a great many others; and related with enthusiasm anecdotes of the most noted, particularly of her son, for whom she had as much veneration as love.

"The dear boy, you would be delighted to see him?" said I.

"Yes, yes, overjoyed."

"Well, it is a happiness you will soon enjoy; for Noel has made arrangements for an escape, and is now only awaiting the propitious moment."

"Madame Noel was happy in the expectation of seeing her son, and shed tears of tenderness at the very thoughts of it. I will own that I was affected, and for a moment wavered if for once I would not betray my duties as a police agent; but when I reflected again on the crimes committed by the Noel family, and considered what was due to the interests of society, I remained firm and determined in my resolution to go through with my enterprise at all risks.

"In the course of conversation, Mother Noel asked me if I had any affair (plan of robbery, in contemplation); and after having offered to procure me one, in case I was not provided, she questioned me on my skill in fabricating keys. I told her I was as adroit as Fossard. "If that be the case," she rejoined, "I am easy, and you shall be soon furnished; for as you are so clever, I will go and buy at the ironmonger's a key which you can fit to my safety lock, so that you will have ingress and egress whenever you require it."

"I expressed my feelings of obligation for so great a proof of her kindness: and as it was growing late, I went to bed reflecting on the mode of getting away from this lair, without running the risk of being assassinated, if perchance any of the villains whom I was seeking should arrive before I had taken the necessary precautions.

"I did not sleep, and arose as soon as I heard Madame Noel lighting her fire; she said I was an early riser, and that she would go and procure me what I wanted. A moment afterwards she brought me a key not cut into wards, and gave me files and a small vice, which I fixed on my bed; and as soon as my tools were in readiness, I began my work in presence of my hostess, who seeing that I was perfectly conversant with the business, complimented me on my skill; and what she most admired was the expedition of my work, for in fact, in less than four hours I had perfected a most workmanlike key, which I tried, and it fitted almost accurately. A few touches of the file completed the instruments; and, like the rest, I had the means of unobstructed entrance whenever I wished to visit the house.

"I was Madame Noel's boarder; and, after dinner, I told her I was inclined to take a turn in the dusk, that I might find whether "a job" I contemplated was yet feasible, and she approved the suggestion, at the same time recommending me to use all caution. "That thief of a Vidocq," she observed, "is a thorn in one's path, mind him; and, if I were you, before I

made any attempts, I would wait until my feet were well." "I shall not go far," I replied, "nor stay away long." This assurance of a speedy return seemed to quiet her fears. "Well then, go," she said; and I went out limping.

"So far all succeeded to my most sanguine wishes; it was impossible to stand better with Mother Noel; but, by remaining in her house, who would guarantee that I should not be knocked on the head? Might not two or three galley-slaves arrive together, recognize me, and attack me? I, consequently, endeavoured so to lead her on, that she should herself suggest to me the necessity of quitting her house; that is, that she should advise me no longer to think of sleeping in her domicile.

"I had observed, that Madame Noel was very intimate with a fruit-seller who lived in the house, and I sent to this woman one of my agents named Manceau, whom I charged to ask her secretly, and yet with a want of skill, for some accounts of Madame Noel.

"The event proved that I was not deceived;—no sooner had my agent fulfilled his mission, than the fruit-woman hastened to Madame Noel with an account of what had passed; who, in her turn, lost no time in telling me. On the look-out at the steps of the door of her officious neighbour, as soon as she saw me, she came to me, and without further preface, desired me to follow her, which I did; and on reaching the Place des Victoires, she stopped, and looking about her to be assured that no one was in hearing, she told me what had passed:—"So," said she, in conclusion, "you see, my poor Germain, that it would not be prudent for you to sleep at my house; you must even be cautious how you approach it by day." Mother Noel had no idea that this circumstance, which she bewailed so greatly, was of my own planning; and, that I might remove all suspicion from her mind, I pretended to be more vexed at it than she was, and cursed and swore bitterly at that blackguard Vidocq, who would not leave us at peace. I deprecated the necessity to which I was reduced, of finding a shelter out of Paris, and took leave of Madame Noel, who, wishing me good luck and a speedy return, put a thirty-sous-piece into my hand.

"I knew that Desbois and Mongenet were expected; and I was also aware that there were comers and goers who visited the house, whether Madame Noel was there or not; and she was often absent, giving music lessons in the city. It was important that I should know these gentry; and to achieve this, I disguised several of my auxiliaries, and stationed them at the corners of the street, where, mixing with the errand-boys and messengers, their presence excited no suspicion.

"These precautions taken, that I might testify all due appearance of fear, I allowed two days to pass before I again visited Madame Noel; and this period having elapsed, I went out one evening to her house, accompanied by a young man, whom I introduced as the brother of a female with whom I had once lived; and who, having met me accidentally in Paris, had given me an asylum. This young man was a secret agent, but I took care to tell Mother Noel that he had my fullest confidence, and that she might consider him as my second self; and, as he was not known to the spies, I had chosen him to be my messenger to her whenever I did not judge it prudent to show myself. "Henceforward," I added, "he will be our go-between, and will come every two or three days, that I may have information of you and your friends."

"I faith," said Mother Noel, "you have lost a pleasure; for, twenty minutes sooner, and you would have seen a lady of your acquaintance here."

"Ah! who was it?"

"Mongenot's sister."

"Oh! indeed; she has often seen me with her brother."

"Yes; when I mentioned you, she described you as exactly as possible;—'a lanky chap,' said she, 'with his nose always grimed with snuff.'"

"Madame Noel deeply regretted that I had not arrived before Mongenet's sister had departed; but certainly not so much as I rejoiced at my narrow escape from an interview which would have destroyed all my projects; for, if this woman knew Germain, she also knew Vidocq; and it was an impossibility that she could have mistaken one for the other, so great was the difference between us! Although I had altered my features so as to deceive, yet the resemblance which, in description, seemed exact, would not stand the test of a critical examination, and particularly the reminis-

CATALOGUE RAISONNÉ.

cences of intimacy. Mother Noel then gave me a very useful warning, when she informed me that Mongenet's sister was a very frequent visitor at her house. From thenceforward I resolved that this female should never catch a glimpse of my countenance; and, to avoid meeting with her, whenever I visited Madame Noel, I sent my pretended brother-in-law first, who, when she was not there, had instructions to let me know it, by sticking a wafer on the window. At this signal I entered, and my aide-de-camp betook himself to his post in the neighbourhood, to guard against any disagreeable surprise. Not very far distant were other auxiliaries, to whom I had confided Mother Noel's key, that they might come to my succour in case of danger; for, from one instant to another, I might fall suddenly amongst a gang of fugitives, or some of the galley-slaves might recognize and attack me, and then a blow of my fist against a square of glass in the window was the signal which was to denote my need of assistance, to equalize the contending parties.

'Thus were my schemes concerted, and the finale was at hand. It was on a Tuesday, and a letter from the men I was in quest of, announced their intended arrival on the Friday following; a day which I intended should be for them a black Friday. At the first dawn I betook myself to a cabaret in the vicinity, and that they might have no motive for watching me, supposing, as was their custom, that they should traverse the street several times up and down before they entered Madame Noel's domicile, I first sent my pretended brother-in-law, who returned soon afterwards, and told me that Mongenet's sister was not there, and that I might safely enter. "You are not deceiving me?" said I to my agent, whose tone appeared altered and embarrassed, and fixing on him one of those looks which penetrate the very heart's core, I thought I observed one of those ill-suppressed contractions of the muscles of the face which accompany a premeditated lie: and then, quick as lightning, the thought came over me that I was betrayed; that my agent was a traitor. We were in a private room, and without a moment's hesitation, I grasped his throat with violence, and told him, in presence of his comrades, that I was informed of his perfidy, and that if he did not instantly confess all, I would shoot him on the spot. Dismayed at my penetration and determined manner, he stammered out a few words of excuse, and falling on his knees, confessed that he had discovered all to Mother Noel.

'This baseness, had I not thus detected it, would probably have cost me my life; but I did not think of any personal resentment, it was only the interest of society which I cared for, and which I regretted to see wrecked when so near port. The traitor, Manceau, was put in confinement, and young as he was, having many old offences to expiate, was sent to Bicêtre, and then to the isle of Oleron, where he terminated his career. It may be conjectured that the fugitives did not return again to the Rue Tiquetonne; but they were, notwithstanding, apprehended a short time afterwards.

'Mother Noel did not forgive the trick I had played her; and, to satisfy her revenge, she, one day, had all her goods taken away; and when this had been effected, went out without closing her door, and returned crying out that she had been robbed. The neighbours were made witnesses, a declaration was made before a commissary, and Mother Noel pointed me out as the thief; because, she said, I had a key of her apartments. The accusation was a grave one, and she was instantly sent to the prefecture of police, and the next day I received the information. My justification was not difficult, for the préfet, as well as M. Henry, saw through the imposture; and we managed so well that mother Noel's property was discovered, proof was obtained of the falsity of the charge, and, to give her time for repentance, she was sentenced for six months to St. Lazare. Such was the issue and the consequences of an enterprize, in which I had not failed to use all precaution; and I have often achieved success in affairs, in which arrangements had been made, not so skillfully concerted or so ably executed.—Vol. ii. pp. 214—226.

The version is almost always spirited, and generally accurate. The translator having gone so far as to paraphrase the slang terms of the thieves in 'St. Giles's Greek,' might as well have given us the English expressions for those foreign names of places which undergo transformation in becoming naturalized among us. The book is, in its kind, one of the most amusing, and, to him who knows how to use it, one of the most valuable we have seen.

The Life and Times of William Laud, D.D., Lord Archbishop of Canterbury. By John Parker Lawson, M.A. 2 vols. 8vo. Rivingtons. London, 1829.

We did not receive the work early enough to review it for the present Number of our Journal. We have seen enough of it, however, to judge that Mr. Lawson is exactly the proper kind of biographer for Laud. He is adapted for the task by an unhesitating faith in the perfection of his hero, and a hatred for his opponents, only qualified by contempt. In his eyes, every Puritan of the seventeenth century was either a fanatic or a hypocrite. We shall review the book in time for our next week's publication.

A Critical Investigation into the Merits of the Lecture delivered in the University of London, November 11, 1828, by Hyman Hurwitz, Professor of the Hebrew Language and Literature. By Solomon Bennett. 8vo., 18 pp. Printed for the Author. London, 1829.

We are sorry, for Mr. Hurwitz's sake, that he is not met by some worthier antagonist than this miserable and ignorant blockhead. There is no footman in London who does not know more of the English vocabulary, and the laws of grammar, than Mr. Solomon Bennett.

Belgic Pastorals, and other Poems. By Francis Glasce, Esq. 1 vol. 12mo. Rodwell, New Bond-street. London, 1829.

THE following is the 'Argument' of the first Belgic Pastoral. 'At the close of the usurped reign of Buonaparte, Belgium was allotted to the Prince of Orange, who then took the title of "King of the Netherlands;" soon after which, Strephon, formerly a Belgic shepherd, but for the preceding twenty years a soldier in the French army, on his arrival from Siberia, and while clothed in a French uniform, finds Hylas tending his flock by a road-side in the Netherlands, &c. &c. We assure our readers, that, to the best of our belief, Mr. Glasce does not design to write parodies. We have extracted literally, and the poems are worthy of this high argument.

Some Inquiry into the Causes which have obstructed the advance of Historical Paintings for the last Seventy Years in England. By B. R. Haydon, Historical Painter. 8vo. pp. 36. Ridgway. London, 1829.

'Nor stony tower, nor walls of beaten brass,
Nor airless dungeon, nor strong links of iron,
Can be retentive to the strength of spirit.'
Shakespeare.

A CONSIDERABLE portion, if not the whole, of this little work has appeared in one of the newspapers. We are glad that this is now published in a more permanent form. Mr. Haydon may be wrong in his views; in some of them he certainly is so. But it is a fine thing to see the workings of a mind so imbued with the love of art, and so wrestling against unfavourable circumstances. We have, unhappily, no means either of relieving Mr. Haydon's distresses, or promoting historical painting. We should be glad to do both. We fear the public will do neither.

NEW MUSIC.

Himmel's Polacca from Fanchon, arranged for the Piano Forte, and respectfully inscribed to the Hon. Mrs. Henry Cavendish, by M. C. Wilson. Cramer and Co.

A CLEVER, well arranged production, neither puerile nor difficult. An introductory allegro risoluto in B flat ushers in Himmel's graceful polacca in an appropriate manner, and the whole exhibits a successful divertimento.

'The Blue Harebell,' a Ballad, composed, and inscribed to David Morrison, Esq., by G. H. Gibbons. Lindsay.

As the name of the above writer was new to us, and musical composers spring up more plentifully than mushrooms, we were very agreeably surprised at the very pleasing and correct piece exhibited. The melody is quite simple, and does not lay claim to much originality; but the arrangement of the accompaniment is ingenious and clever, particularly the use made of the extreme sharp 6th, and the minor applied to the last verse. In the 6th bar of the 5th page, either the vocal part or the accompaniment should be altered, as they do not (in the edition we have seen) agree, and it is a pity the work should be disfigured by that which is apparently only a typographical error.

Rondo on 'Piu lieta piu bella,' from Rossini's Opera 'Elisabetta,' arranged for two performers on one Piano-forte. Composed and dedicated to the Misses Barton, by Frances Hünter. Op. 28. Cocks and Co.

THIS presents a brilliant, interesting, and well-arranged duet; possessing all those qualities, without requiring much practise on the part of the performers; a peculiar desideratum in musical writing.

In arranging duets for two persons to play upon one piano-forte, it too generally happens that the composer does not sufficiently employ the whole scope of the instrument, particularly in the bass part; hence the hands of the second performer are necessarily thrust upwards into an approximation with those of the colleague, in an inelegant and uncomfortable manner, and in the present example some improvements are wanting in that respect; and in the fifth bar from the end of the duet, in the treble on page 15, some very indefensible fingering is engraved, which should be reversed decidedly, at least the thumb and first finger marks. The whole, however, is adapted in good taste, and is worthy a place in the port-folios of every pianiste.

'They tell me thou hast gone from me,' a Ballad, sung by Miss Farrar; the Music composed with Orchestral Accompaniments, and also arranged for the Piano Forte, by T. Reed. Dedicated to his friend J. C. Hophé, Esq. Card.—The words (from an American publication) suggested by that part of 'Pen Owen,' which describes the affliction, the mute and uncomplaining grief of the beautiful, faded, and credulous Rose Weston, when informed of the baseness and desertion of Frank Wittenhall.

..... to propter eundem
Extinctus pudor, et quæ solâ sidera adibum.
Pama prior. ENNIS.

AFTER the perusal of the above diffuse and voluminous title (Latin and all!) it was impossible, but that the fable of the 'Mountain and Mouse' should present itself to the imagination, upon turning over to a quiet pastoral ballad although in full score for instruments! We, however, experienced much pleasure in finding it an expressive morceau, full of feeling, accompanied by correct and clever modulation. The ballad consists of two movements, in the highly superior key of A flat, and the composer deserves much credit for the unusual pains bestowed upon the whole arrangement.

An Echo Trio, sung at the Theatre Royal Drury-lane, by Miss Fanny Aylton, Mr. Braham, and Mr. Bedford. Written and composed by John Parry. Goulding and Co.

THIS is a playful and pleasing trifle, of the most simple and unpretending nature; the last words of each line being ingeniously adapted to form a reply, upon being repeated by other singers, who should be behind the scenes of a theatre, or out of sight in a concert-room, when practicable; otherwise, the echoes are to be sung very softly, the singers turning their heads on one side, when there are no extra vocalists to perform them; thus it is written in imitation of Dean Swift's humorous and famous 'Gentle Echo on Woman,' in the Doric manner; which we might be tempted to insert, if it were not too indelicate for the present period. The music and language of Parry's trio are well adapted to each other, and upon the stage must have been effective.

'I'd be a Dove.' Composed by John Barnett, arranged for the Piano-forte, and dedicated to Miss Richards, by E. Solis. Mayhew.

An easy, pretty piano-forte rondo, well adapted for incipient performers, and consequently will be found generally useful for teachers. An introductory adagio of one page in C minor appropriately precedes the melody, which is simple, gay, and trifling.

The Bohemian Brothers.—These singers are neither Bohemians nor brothers. The dress in which they appear is not that of the country to which they pretend to belong,—and their singing is decidedly Kamschatkan.

EDUCATION OF SPANISH REFUGEES.

Among the privations which present themselves as embittering the lot, in other respects sufficiently melancholy, of the unhappy exile, the want of the means of affording to his offspring an education adequate to his own rank in life, has ever appeared to us to be one of the most distressing. It seems to cast a cloud of gloom over the only hope which remains to cheer him in his desolation, the hope of seeing free institutions shedding their blessings on his native land. Sad, indeed, would it be for him, that should this consummation be at length attained, the self congratulations of the patriots should be allayed by the regrets of the parent, and that he should be doomed to the painful mortification of beholding his own children incapacitated by the want of education from participating their full share of the benefits of the regeneration of their country, and from assuming their station in the state for the sake of whose freedom he had himself endured so much. It was with no common degree of satisfaction, therefore, that we observed, in a number of 'The Times' of last week, mention of a suggestion received by the Refugee Committee for procuring the advantages of education to the sons of the exiled families in London. We have taken pains to inform ourselves on the subject; and in justice to the worthy men who have come forward to aid in so desirable an undertaking, not less than as an interesting piece of intelligence to our readers, we are happy to be able to publish the following particulars. The project, it seems, originated with the Senor Nunez Arenas, who has already, we learn, devoted much of his time during his exile to giving gratuitous instruction in mathematics to some children of companions in misfortune. His lectures became popular among his countrymen, and were attended, not merely by youths in the progress of education, but by grown-up persons, who found in them a remedy for the want of occupation incidental to their circumstances, and a distraction, worthy of refined minds, from reflection on the miseries of their situation. This success suggested to D. Nunez Arenas, and to his friends and fellow-countrymen, D. Mariano La Gasca and D. Pablo Mendibil, also exiles, the practicability of forming an establishment for the extension of the very limited range of tuition till then afforded to the instruction of the Spanish youth now in London, in most, if not all, of the necessary and ornamental branches of polite education. The two last mentioned gentlemen proposed to join their efforts with those of D. Nunez Arenas, and to take upon themselves the instruction of classes in such branches as came within the sphere of their respective capabilities. In the full persuasion that a number of their countrymen would be anxious to join in an undertaking so desirable, the three colleagues submitted their ideas on the subject to the Committee for the Spanish Refugees, with the intimation, that all that was required for carrying the plan in question into execution, were suitable rooms in which the lectures might be given, and assistance towards defraying the few incidental expenses actually required to be defrayed. The proposal was received with favour by the committee; a sub-committee was appointed to promote it, and an application was made to the directors of the Mechanics' Institution, who generously yielded the use of their lecture rooms, for the accommodation of the refugees. In the mean time, offers of assistance and support were tendered by several others of the most eminent exiles in London, in such number and of such qualifications that nothing will be wanting to render the system of education complete. The merit of the conduct of these gentlemen who have set this measure on foot, will be the more appreciated, when it is considered with what toil and difficulty they themselves, by the strenuous exercise of their talents, under all disadvantages, acquire the means of a

scanty subsistence, and, consequently, how precious to them must be every moment of their time. We have been favoured with the following list of the names of those who have agreed to combine their efforts for carrying this laudable project into execution.

We are glad to observe among them several well known for their literary attainments. Our readers, we feel assured, will pardon our devoting a line or two to record them. Don Agustin Arguilles, D. Felipe Bauza, D. José Calatrava, D. José Canga Arguelles, D. N. Cardano, D. Ramon Gil de la Cuadra, D. Antonio Alcalá Galiano, D. Mariano La Gasca, D. Pablo Mendibil, D. José Nunez Arenas, D. Cayetano Valdez, D. Joaquin Villanueva. All these gentlemen, about to become the instructors of their juvenile countrymen, have filled offices of state more or less important in their native country, and, with only three exceptions, have all been deputies to the Cortes.

We trust the plan may be put in execution without delay, and succeed to the utmost desires of its founders. Nor can we help entertaining a distant wish that this simple and humble scheme, might prove the origin of a Spanish college, to which the youths of the Americas more especially might resort for the advantages of an European education, which they now seek in Paris. That London would be preferred to the French capital by the inhabitants of the new states, as the place to which to send their children, were there an establishment for the purpose, is notorious.

ROMAN FRAGMENTS.

No. III.

THE AMPHITHEATRE.

THE greatest superiority of the modern over the ancient world consists in the use of public opinion: had the intercourse of political sentiment prevailed at Rome in anything like the degree in which it now obtains among most European nations, outrages like those of the Emperor Caligula could not have been permitted for the space of a day, and probably they would never have been attempted. But in times when there was no press, and no ready means of collecting or consolidating the sense of the community, the brutal despot went on plundering and butchering an unarmed population, long after almost every individual among them would have willingly abjured his authority. At this period, indeed, the high spirit of ancient days was gone, the people were contented to be slaves, and it was only when their servitude became intolerable that they turned round and murdered their oppressors. The emperors, on their part, never neglected some of the arts by which the people might be reconciled to their government, or at least diverted from plotting against it. By their edicts, corn, the contribution of the provinces, was distributed gratuitously to the multitude, and lest men who had no necessary employment should employ themselves in projecting mischief, public spectacles, prepared by the supreme authority, were continually soliciting their attention. At no period of their extraordinary history could the Roman people be considered as enjoying any rational political freedom; but now they were satisfied to depend upon a master who assigned them the food that supported life, and an occupation that rendered it contemptible. Of all species of popular amusement none appears to have been so favoured by the Romans as the exhibitions of the amphitheatre; indeed the extravagant and ferocious delight which such scenes excited might have been perfectly unintelligible in these days but for the histories we have received of pastimes somewhat similar among peoples of modern Europe.

It was to a spectacle of this nature, given by the Emperor Caligula, in the amphitheatre of Statilius Taurus, that Metellus was proposing to conduct his friend. They descended the Palatine together, and passing through the magnificent porticoes of

the Roman forum, entered the Via Lata, the same street by which they had traversed the city the preceding day. Here they fell in with a vast throng of citizens, of all ranks, who were pressing onward to the scene of amusement. The more wealthy and effeminate were borne in sellæ or lecticæ, (two species of litters, differing principally in size, in the number of bearers,) the rest of the company were on foot. For the space of more than one hour this immense concourse of human beings had been pouring through the street. The slaves, forbidden by the Roman laws from being present at these amusements, were eagerly gazing from the tops and lattices of the neighbouring houses upon the multitude as they passed along—every scene was full of bustle and animation, every countenance beamed with expectation and delight. When the two friends reached the amphitheatre, which was situated on the scite of the present Palazzo di Monte Citorio, Metellus repaired without delay to the interior, in order to place his friend as near as possible to the imperial pavilion, for Caligula designed to preside in person. The arena was occupied by a host of naked barbarians, who, drawn up in bands on opposite sides of the podium, were awaiting with amazing indifference the moment that was destined to lay most of them in a bloody grave; a promiscuous crowd of plebeians, seated on the upper benches of the building, were measuring out their expressions of approbation, or contempt, for the different nobles who entered at every moment to take their places.

'Are these indications of public feeling to be considered as much the test of merit now as in the days of Cicero, do you think?' asked Cœlius of his friend.

'You shall judge,' replied Metellus. 'You marked that tall senator, whose appearance was hailed with such idle tumult, I mean the man now standing with his arms folded; that is Protegenes, the direst villain, save one, in the Roman empire; and you will soon perceive that the distinguished exception I allude to, the man who never permitted a more meritorious deed than the murder of his uncle and benefactor, is a prodigious favourite with these ragged brawlers.'

'Hush!' exclaimed Cœlius, 'you mean Caligula; they are gathering round us, and will hear.'

By this time the capacious body of the amphitheatre was intensely crowded, and presented one vast horizon of human beings, ascending in regular gradations; the emperor's presence was alone required for the work of death to begin. His approach was soon announced,—a body of lictors entered, and clearing the avenue to the Imperial canopy, called aloud 'Room! room! give room to the Emperor.' Caligula appeared. As had been predicted by Metellus, a burst of thundering applause followed, and all ranks and orders of spectators rose to do him honour. Caligula* was of a tall, awkward, and ungainly figure, approaching in some degree to corpulency, at the same time a singular emaciation was visible in his face; indeed the hollowness of his temples, his deeply sunken eyes, a forehead distorted with wrinkles, and destitute of hair, communicated to him the semblance of a man worn out with illness or excess, and assailed before his time with the infirmities of age.

He advanced amid reiterated acclamations, leaning on the shoulder of his favourite sister Drusilla; several ladies and senators followed in his train; Caligula threw himself carelessly on the couch prepared for him, and, without waiting till his retinue was disposed around him, gave the signal for commencing the sanguinary festivity.

It was not long after he had taken his seat that the restless and suspicious eye of the Roman Emperor was fixed upon Cœlius: when he gazed at him for a moment, 'friend,' said he, stooping forward, 'methinks, we have known each other

* This description is founded upon the best existing authorities in history and sculpture.

heretofore, though the scene of our acquaintance dwells not in my memory.

'Cæsar has not forgot the camp of Ambiatanus.'

'No, by the life of Drusilla,' exclaimed the tyrant with his usual oath, 'and were I to outlast the days of history, I should not forget the nig-gard fare and sour wines of Germanicus; but Ger-manicus was right, a man should be an economist or an Emperor. Prithee, what is thy name?'

'Calus Cœlius,' was the reply.

Caligula did not seem to recal his name, and he gave Cœlius no further attention.

But that name seemed instantly to excite the interest of a lady who was seated near Drusilla, and whose mind had up to that moment been deeply absorbed in the combat of the gladiators. She turned round to Cœlius as if proposing to address him, but had not confidence to persevere in her intention; the scene was a little embarrassing to both parties. Metellus immediately came forward, and turning to Cœlius, 'Come,' said he, 'I must now complete your obligations to me, to-day, by presenting you to Orestilla.'—'Orestilla!' exclaimed Cœlius, with something like apprehension. But Orestilla did not seem to notice his confusion, she received him with much kindness and affability, welcomed him to Rome, and, under a pretence of affording him a better view of the arena, invited him to be seated by her side; and in the artful and fascinating conversation in which she engaged him, Cœlius had almost forgotten his admiration of Metella. But this agreeable intercourse was not to last; the attention of the whole assembly was suddenly attracted by the loud and angry accents of Caligula: it appeared that the tyrant, having taken offence at some criticisms passed by Proculus, a Roman knight, upon his gladiators, was insisting upon his putting their excellence to trial by descending into the arena and contending against them. Proculus hesitated; the Batavian guards of the Emperor, long accustomed to his wanton and extravagant purposes, approached to enforce obedience; Cœlius gazed on the whole scene with astonishment; but his astonishment was increased when he observed that the people, instead of testifying any indignation at this outrage, received the commands of the despot with delight and enthusiasm; even Orestilla, forgetting the part she was acting, rose and waved her veil in approbation. Powerless to oppose and hopeless of diverting the savage purpose of his master, the Roman submitted to his fate, and descended to the blood-stained sand. He had been furnished only with a sword, but he had wrapped his cloak round his left arm to serve him as a buckler. The general combat had terminated, and wretches trained and exercised for single encounter were the next objects of popular diversion. A gladiator was soon turned upon Proculus to destroy him; but the knight was a wary and an expert swordsman, and instead of falling an instant victim, as was expected, to the superior skill of the barbarian, he received him with a coolness that almost bordered on contempt. A few blows were given and parried on both sides, and then the gladiator was struck, mortally wounded, to the earth; considerable applause followed, and the people seemed now interested in the safety of the man they had just before so eagerly concurred to destroy. As the bloody hook dragged away the dying wretch to the spoliarium or charnel house; a second gladiator sprung forth. The new combatant, evidently presuming on his skill in arms, rushed upon Proculus with the confidence of a wild beast upon its prey; but he had miscalculated his undertaking; the rapid sword of the Roman instantly transfixed his body, and he fell with a hideous scream upon the sand. All the spectators, but especially those of the lower orders, appeared now personally participating in the triumph of their countryman; and some, bolder than the rest, called out that he should be released. All eyes

were bent upon Caligula, as if to read in his countenance the fate of Proculus. The tyrant's features were unusually calm and passionless; he conversed an instant with one of his guard, the soldier left his presence and disappeared from public view; conjectures were various as to the nature of his mission; but a few moments explained all. An old and well known Dacian, who had been liberated on account of his wonderful success in the gladiatorial shows, appeared on the theatre of destruction; at this sight the populace vented their feelings in a general burst of indignation, but there was little time for commiseration: Caligula called on his champion to begin; the two combatants were probably equally matched, the gladiator was superior in the skilful exercise of his weapon, but his adversary surpassed him in strength and agility. They approached amid the deepest silence of the spectators. The rapidity with which their blows were interchanged, made it extremely difficult for the eye to judge of their execution: at last it was evident, from the blood that poured down the side of the barbarian, that he had been severely wounded; but the combat was still courageously sustained; suddenly the sword of the Roman broke short off at the handle, and the unusual groan that followed, showed how assured his fate was disposed of in the minds of the beholders. But Proculus, with admirable address, received his adversary's next stroke upon his temporary shield, and rushing forward at the same time, he grappled on to him with the force and energy of despair; both parties came to the ground and lost their weapons: it was then that the strength of the Roman prevailed over an aged and a wounded enemy. After a short struggle he liberated himself from the dying grasp of the barbarian, and rose up a third time victor. Nothing could surpass the joy manifested in the amphitheatre after this hard-won victory: Proculus alone appeared indifferent, he took up the sword of his fallen enemy, and stood still, awaiting a new assailant. The populace at first saluted him with the title of imperator, as they used to do their generals after a victory, and showered palms and garlands at his feet; but their plaudits soon subsided, for every one felt that the hero's fate was undecided. Caligula rose to depart; but before he quitted the scene, as if to leave a terrible example of his power and barbarity, he commanded that Proculus should be disarmed and thrown to the wild beasts confined in the caves of the amphitheatre. Dreadful as Caligula had become, this order was received with the most open expressions of disgust, and men's minds kindling from mutual sympathy, some persons boldly interceded for the life of the intrepid victor.

'I tell you that he dies!' exclaimed Caligula, his countenance assuming an aspect scarcely human, with rage and ferocity; 'must I be bearded, and crossed, and questioned by slaves who should obey me?—get hence!' Then, raising his eyes to the opposite galleries, he added, 'I'll quell these shouts another day, or more Romans shall fight in the arena: I want not approbation from you, but obedience.'

With this expression he signed to his guards and retired.

LECTURES ON ARCHITECTURE.

THAT a correct taste in architecture should ever become a characteristic of the British public, appears to us, we confess, to be almost a desperate wish. That the whole nation should become Nomadic, and go wandering on the banks of the Tiber, the Ilyssus, the Mæander, and the Nile, in search of examples on which to found their judgment, is hardly to be expected, and our national professors are obstinate in withholding from them all opportunities of forming a taste at home. 'Tis pity! for John, after all, is docile, and shows at least a disposition to learn. Witness the courses of lectures, the best substitute for actual observation, which he has provided for his instruction, in not the least interesting of the Fine Arts in different quarters of the metropolis, viz., at the London and the Western Institutions. The lectures on architecture in

Moorfields, if our information be correct, have been delivered, or may be in the course of delivery, by Mr. Joseph Woods, the author of 'Letters from an Architect from France and Italy,' &c. They cannot fail to be both interesting and instructive, since, judging from the work just alluded to, we doubt whether a more fit person to inculcate sound principles of taste in architecture could be afforded by the whole range of the profession. But a journey to Moorfields, in the teeth of the biting east wind, while even the warm red gas flames shrink before the pale, silvery, hoar-be-spangling rays of the chaste Diana, while, too, we may seat ourselves in the painting room of the great master, (both by precept and practise) of excellence in another branch of art, the illustrious Sir Joshua, and there, in the presence of three hundred fellow auditors, all eager for instruction, receive the lessons from a teacher, who, if young and less known to fame, has also the pretension of having his memory fresh from the ancient examples on which he proposes to ground his doctrines, and who, if his introductory lecture form a fair criterion, is fully competent to the task he has undertaken!

Mr. Hosking commenced a series of six lectures on architecture, at the rooms of the Western Literary Institution on Thursday last. The first lecture was necessarily introductory and historical, tracing the progress of the art from the Egyptians to its revival in the middle ages; treating the Hindoo, Persian, Egyptian, and Greek as derived from the same source, and that source the Egyptian. The Roman the lecturer derived from the Etruscan, and the Gothic from the Roman. Of architecture, since its revival, the best specimens were stated to be in Venice, Padua, Vicenza, Bologna,—Milan is considered as inferior to those towns, and Rome and Naples still more so. The Greeks would have used the arch had they known it; the Romans obtained the knowledge of it from the Etruscans, and by it were enabled to do what had not been accomplished by the Egyptians and Greeks, viz. to cross rivers without embarking. The merits of the Corinthian order the lecturer awarded to the Romans, so great was the improvement and perfection they effected in it; its origin he traced to Egypt. In like manner the ameliorations introduced into the Gothic by the English were held to entitle them to give that style the name of English architecture.

The style which has prevailed throughout Europe since the revival of the arts, known as Italian architecture, is of all others that regarded with least favour by Mr. Hosking. He animadverted, very unceremoniously on the historian of architecture, Vitruvius, and his followers:—In expressing the errors the ancient Roman has been led into, by writing from the relations and systems of others, without satisfying himself by personal observation, the learned lecturer had our cordial concurrence; but we confess we feel some little repugnance at hearing a name so truly respectable in most regards handled so freely. Approving the matter, we could not but object to the manner of the censure,—the more so as we observed that the chastiser allowed his zeal to carry him beyond the limits of strict justice. In saying, for instance, that the existing examples of Ionic contradict the assertion of Vitruvius that 'the ancients' (the Greeks) 'appear to have avoided the use of the Doric order in their sacred buildings,' he has strained the meaning of the Roman author by not attending to the context. Other parts of the work of Vitruvius abound in instances in which he discourses and treats of the Doric temples of the Greeks, and prove that he could not intend to make the assertion imputed to him on the light it is taken. Indeed, had the passage extracted by the lecturer been considered in connection with the context, we doubt if he himself could interpret the few words of the author into so general a signification. It is quite clear to the dispassionate reader that they are to be received in the sense of the words which open the same chapter. *Nonnulli antiqui architecti negaverunt Dorico genere ades sacras oportere fieri, &c.*—In one or two instances, to make a point also, the learned lecturer has allowed himself to imagine an extreme case.

It sounded horribly heterodox to our ears, when we were told of the advances made by the Egyptians, while the Greeks were a race of savages; and that Egyptian Thebes was in ruins after an existence of centuries before most of the cities of the Greeks were founded.—We confess, we are not aware, what are these 'most of the cities of Greece,' founded during the century intervening between the destruction of Thebes by Cambyzes and the age of Pericles. With a few such exceptions as those, we have noticed, and a want of due refinement in some of his illustrations and allusions, the lecture

delivered by Mr. Hosking was simple and sensible, well calculated for an audience of uninitiated, and full of promise as to the value of his course. It was listened to with great attention, and several times elicited from the hearers marked expressions of gratification.

CONFESSIONS OF A TRIFLER.

I AM one of that class of persons who never speak seriously on any subject. None that is presented to me appears worthy of grave thought; or if, by chance, a moment's meditation escapes me, I am ashamed of so unusual an exercise of my reasoning powers, and conceal it beneath smiles and jokes. In general I never examine any question, except with a view of finding out some point of view in which it may appear ridiculous. My tone is usually that of giddy mirth; it sometimes rises to that of sarcasm: of deep feeling or earnest inquiry, it is always entirely void. The enthusiasm which, in others, I make the object of ridicule, I never exhibit in myself; and I scorn and discourage that love of truth which would disturb the serenity of my levity with the gloom of thought. While the countenances of others are worn with care, I revel in the sunshine of perpetual laughter. I toil not; neither do I spin the wearisome web of meditation. I am not required to instruct or to serve mankind, but am expected only to cheer them by the reflection of my own tranquillity.

Yet there are some moments in which, even to me, to laugh is painful, and to joke is disgusting. There are times, and I find them now of frequent recurrence, in which certain ideas of the folly of my foolishness force themselves on me. I recollect that there are some high and good objects for man's exertion; I feel that these are not to be attained by levity and mirth. I cannot help drawing the conclusion that they are unattainable by me. I feel, that in this world I am nothing worth; I am of no importance to my fellow-men; a mere insect on this great globe, which wants me not, and heeds me not. Man is placed in this world without aim or purpose put before him. To give himself such aim and purpose for his being, to choose it wisely and to follow it steadfastly, is his only hope of rendering that being noble, and even tolerable. In this I have failed; and, therefore, I feel that I have failed in the great business of life. I sometimes endeavour to bestir myself to search for some object which I may labour to attain; but, alas! there is none such for my reach, and the limbs that I have so long refused to move are now powerless and lifeless from inaction.

There is no character in the world so contemptible as the man devoid of seriousness. The lowest of intellectual beings, if he be steadily intent on any object, is his superior. With regard to the latter, we can understand the ends and the means of his existence; and whether they be bad or good, we can admire him, or pity him, or fear him. But for the man to whom life is not a problem, but a sport; who passes through time, but uses it not; who neither labours for us, nor for himself,—with him we cannot feel. We cannot sympathize with desires which he takes so little pains to gratify; and he excites in us none of the interest which is so often felt in skilful and energetic exertion in whatever cause it may be exhibited. The judgment of the public may be often distorted by ignorance or passion; the prejudices of particular sections of the public will always produce the same effect in some of them; but in this the feeling of the whole and the parts will always be consistent and uniform in treating with contempt him who contemns truth, and who, therefore, contemns alike the different objects about which all are employed, or at least pretend to be employed.

I cannot consider this want of seriousness as indicative of a great original intellectual defect, though it is always productive of such. It is a perversion of the intellectual by the moral nature.

Indeed, it is a vice particularly remarked in persons of talent, because the waste of their energies is obvious and lamentable. Its usual causes are, I conceive, nothing else than vanity and laziness. Vanity leads us to wish for distinction on every possible occasion; laziness prevents us from taking any but the easiest method of acquiring it. Of course, we must possess the faculty necessary for using even that easiest mode, which is, in my opinion, that of a sense of the ludicrous. Without that the greatest quantity of vanity and indolence only make a dull coxcomb.

I recollect well how my own present habits of mind originated. In my youth I had not wanted much love of knowledge, and enthusiasm for truth. I had read much—and thought no very little. I was aware that I had some information, and I had a suspicion that I had mental powers which would enable me to use it to good purpose.

The time came when I was no longer a youth; I had arrived at that period of life at which it was necessary for me to bestir myself. I entered into the world; I found others boldly expressing their opinions—constructing their systems—displaying their knowledge—and I saw that they were rewarded by esteem and applause. Had I not as much knowledge as they?—could I not build opinions as wisely as they?—was I not as capable of attaining distinction?—and should I not seek what all others sought? I determined that I too would display my acquirements, and be famous. Nor was my passion, once excited, moderate. I would not, could not wait. I would not waste my life and my energies in seeking a distant renown. I would get applause as quickly as possible—and then, in as large a quantity as possible; and, surely, if it were compatible with the acquisition of these two objects, I might just as well get it as easily as possible.

It takes long time and much labour to excite deep feeling—as much, nay, even more, to convince, where conviction produces instruction. The esteem and love with which those are rewarded, who have produced these effects in others, are uncertain, and often of slow growth. But any man who can jest, can jest quickly; and the slightest and easiest joke is almost sure to be rewarded by the ready smile of all who hear it. By raising a laugh, you please the many—and though you are very liable to offend one, you do it to great advantage, because you have all the rest on your side. And as the person offended is often the most serious and thinking of the party, you enjoy the pleasure of a triumph over him, which is no small pleasure, at least so I used to find it.

The jester, too, has this great advantage in society, that his mind is never disorganized by any regard for his opinions. He is never betrayed by enthusiasm into the too eager support of an unpopular truth; he can accommodate himself to the taste of any sect, or party, or coterie, because he can always raise the laugh which most men concede to a joke on their opponents. He is never hampered by a system which he must not desert, or opinions to the support on which he has previously committed himself. He utters the paradox or the sneer of the moment,—and who cares for consistency in paradoxes and sneers?

Vain and indolent as I was, it was thus that I became a trifier. The temptations which had first drawn me into the vortex, acted on me with greater force the longer I remained within their influence. I had used frivolity as a means, I came soon to love it for itself. By degrees, I chilled my own enthusiasm. I began to dislike the labour of severe thought. Study became purposeless to one who could not apply it, and, therefore, intolerable. I began, moreover, to pride myself on my levity. I felt, as it were, raised above the highest interests of my fellow creatures; and looking down, from the elevation of a superior nature, on the toils of an inferior race of beings.

I am a young man still; and, though a scoffer,

I have enough of benevolence to make me find some consolation in the thought that, as yet, I have injured none but myself. I have misused myself. I have sacrificed to the smile of the moment, all the deep and pure joys that are for those who have done their duty. I have done no good to my fellow-beings. But, have I done harm?—I trust not. But if so, I am innocuous only through the paucity of my abilities. But, if I live much longer, not even the paucity of my abilities will save me from the guilt of misleading and corrupting mankind.

There is no human being, though mischievousness is an attribute of the most insignificant of the species, that has so evil an influence on the circle of his private acquaintance as the brilliant scoffer. The subtlest reasoning of the most corrupting sophist, the most misleading eloquence of the advocates of vice, have nothing of the power of perversion which is wielded by him who laughs us out of reasoning and feeling.

I know a man whose genius,—for it is genius,—has given him a considerable literary reputation, not equal indeed to what his works merit, and certainly very much less than that which he might have insured to himself by a serious application of his powers. He has a noble fancy, an acute intellect, a fine and just taste, an immense stock of various information; but he has wanted earnestness. He never laboured to investigate truth, or dared to give forth an expression of deep feeling. On the contrary, it seems to be his object, more particularly in his conversation, to throw ridicule on every strong movement of either the intellect or the will. The suspicious taciturnity, which it takes long time to dispel, gives you the idea that he is lying in wait till you shall have committed yourself by saying something which shall arouse his sarcasm. When he does speak, he shows that his silence was caused rather by indifference than any hostile feelings. The subjects which interest you, ay, even the weightier matters which are the urgent business of men, appear as if they were beneath his regards, as if unfit to move his sympathies or exercise his reason. Express your own feelings, he will never reward you with a similar discovery of his own, or lay bare all your opinions, he will never allow you to see what are his. He answers your reasoning with a paradox,—and damps your earnestness with a sneer. The more important the subject the more trivial his tone: and the increase of another's interest in its discussion, but serves to render him more inveterate in his irony. Happy they whom his levity disgusts. I have seen most people grow ashamed of seriousness which appeared ridiculous in his presence,—abandon the cause which his indifference made them suppose unimportant—till their reason bowed down before his folly—their enthusiasm withered beneath his sneer, and they sunk into a reckless disregard of the truth, which his contempt had dishonoured in their eyes. Yet M—— is one of the kindest and most honourable of men. He wants not deep and right feelings, but his vanity prevents him from expressing them, and thus distorts the outward lineaments of a good heart, as well as wastes the energies of a strong mind.

I have seen this man in argument with another, who is the most earnest, and the most illogical of men. The one was weighed down by truths which he had not strength to wield, the other lightly armed with sophisms of which he was an unrivalled master: the one utterly bewildered by the enthusiasm which prompted, while it disorganised his efforts,—the other opposing to him the coolness of perfect insincerity; the one straining to excite feelings, which were far above the temper of his audience,—the other giving refuge to their vanity under the success of his own levity. Who can question which appeared at the moment to triumph? And yet, when I looked back on the contrast, it appeared as if the talents of one but rendered his indifference more despicable, while the other's honesty shone more brightly

for his very errors. The one might have found truth, but spurned it, and never now could he attain it, because he avoided it. The other might err, but even chance might direct him right. At any rate he did his best, and I could not but honour the man who used his slender means to such noble purpose. He had the right will, and even with little power he had thus the great essential without which no man can be useful to his fellow-creatures, no man can have a claim on their love.

J. D.

RUSSIAN LITERATURE.

To the Editor of the Athenæum.

SIR,—While I feel flattered by the very favourable opinion you lately expressed relative to the paper on Russian Literature in the 4th No. of the Foreign Review, and am equally obliged to you for having adverted to certain strange mistakes that occur in it, as it affords me an opportunity of exculpating myself from the charge of having committed blunders which unfortunately are of such a nature that the reader cannot help attributing them to the writer of the article.

After the paper in question had received the editorial *imprimatur*, and, in fact, subsequently to the proof having been revised by myself, objections were started as to its length, although it certainly would not have reached the extent of several other articles that have appeared in the same journal, both before and since. Aware that the utmost limits that could have been allowed me, would have been barely adequate to so comprehensive a subject, it was with extreme repugnance that I consented to its being curtailed. Not only were various passages struck out, which will account for the abruptness observable in several places; but the greater, I may add the *best*, part of the translated specimens omitted; and as some of these alterations took place after I had corrected what I considered to be the last revises of the proofs, it is to this circumstance that I must impute the inaccuracies that have crept in, to my great vexation and astonishment. Speaking of an extract from Shokorsky's dramatic poem 'Naina,' I had said 'We shall here attempt a version of it, availing ourselves of the loose structure of the original;' but unfortunately that portion to which the remark more particularly applied was suppressed, consequently, at present, it seems quite absurd. The expression, 'loose structure,' alluded to the following speech, in which Tavals addresses his companions, when exhorting them to abandon their pastoral and fishing occupations, and embrace a warlike life; the versification, consisting of different metres and rhymes, being only occasionally introduced:

'Brothers, in what are we inferior?

We were not nursed in down;

Our youth has not in chambering been spent;

Nor were we reared as timid girls.

No!—our barks our cradles were,—

The whistling wind our lullaby,

While rocked the surge to sleep.

When Autumn, that laid bare the trees,

And veiled in clouds the face of heaven,

Drench'd us with rains, and to our bones

Probed the keen blast,—

When on the storm-cloud flitted past

Death with his light'ning spear,—

This nought of 'vantage brought our hearts to cheer,

Still less it brought of fame.

The sea, my friends, shall be our trusty steed:

From land to land, from isle to isle we'll scour

Our well-pil'd oars. Our daring swords

Shall to the Lithuanian, the Swede,

And the Roman, prove that our race

Yields not to them in prowess or in might.

So shall our children to their children tell

With generous boast, that not in vain

Their sires up-ploughed the foaming main:—

So shall the rude rhyme by our daughters sung,

From age to age, from tongue to tongue,

Record our prowess. Or should they forget

Our praise to chaunt, our native plains

Shall yet preserve our names,—

Commemorate our deeds.

Homeward, laden we return
With silver breast-plates—sparkling mail,
Our children's heritage; and for our brides
Bring coral, lustrous pearl,
Translucent amber;—fairer yet
Unspotted ermine, and the sable's jet,—
Whate'er of gauds to deck the fair
Yields earth and ocean's depths,' &c.

Passing by minor errors, I will content myself with here correcting two glaring ones. At page 303, the lines

Men rail at law, and lawyers thrive the better,—
Abuse the sex, and yet the fools will wive,"—

were written and intended by me to have been printed thus:—

"Men rail at law, and lawyers better thrive," &c.

In the four lines from Kozlow, page 307, the second, as it now appears, is quite unintelligible; for it would puzzle an Oedipus to divine the meaning of

'Say, and is all life's toilsome passage trod?'

But the sense is, I hope, sufficiently clear when thus expressed.

'Is nought then left us?—must e'en hope expire?

Say, is all o'er life's toilsome passage trod?

Behold above our head yon worlds of fire—

Above those worlds, their maker—and our God!'

Apologizing for trespassing so largely on your columns, particularly as the whole subject may be deemed quite unimportant to every one but myself, I will here terminate an exceedingly disagreeable and ungracious task.

I remain, &c.,

W. H. L.

FOREIGN NOTICES.

THE ITALIAN UNIVERSITIES.

LITTLE seems to be known in this country respecting the present state of the Italian Universities, or the spirit which actuates the study of jurisprudence in a region, whence the civil law of Europe has derived its leading features. Strange indeed it is, that we should be so ignorant of what is passing in that land, which claims our veneration as having been not only the cradle of European civilization at two distant periods of political convulsion, but the shrine of intellectual advancement to which our forefathers thronged in pursuit of learning and science.

It is not an indifference to the subject on the part of their northern fellow-labourers, which has produced the pervading want of acquaintance with the state of the Universities of Italy, but the isolated situation to which the politics of its governors have reduced it, and the impenetrable barrier which they have raised against its literary connexion with the more enlightened north.—These are the causes why the Italian high schools, which were once the favourite resort of foreign youth, have almost passed into oblivion on this side of the Alps.

Partial, therefore, as the subsequent details may prove, they will have their use, by enabling the reader to conjecture what the state of human knowledge, and particularly of legal science, must be in a country where such narrow land-marks determine the paths of either.

There are three universities in the Roman states; those of Rome, Bologna, and Perugia,—the last of which scarcely deserves the name.

Rome.—The lectures delivered in the 'Arcigymnasium della Sapienza' at Rome, consists of courses of moral philosophy, and the elements of natural and inter-national law; the institutes of canon law; canon law, its prelegomena and sources; the institutes of civil law; civil law, ordinary and statutory; criminal law; law of medicine, and medical police; surgical jurisprudence.

No other history is taught but that of the church, from the times of Charlemagne to the first Lateran council; and Roman history, of which courses are given by a professor and a lecturer.

There is no chair whatever for the political sciences.

The pupils in all the faculties are required to attend the course of sacred natural history, in which the works of God, during the third and fourth days of the Creation, as narrated by Moses, are illustrated by chemical and physical experiments*. A gold medal and two silver ones are conferred upon those pupils, who evince, at the examination, that they have reaped the most fruit from these lectures.

Lectures are not delivered during more than one hundred and thirty-seven days in the year.

Bologna.—The subjects of the lectures delivered in this university, are archaeology; natural and international law; civil law, its institutes and notarial practice; criminal law; institutes of the canon law; eloquence and poetry; the sacred canons (*i sacri canon*); public economy, and Latin and Oriental languages.

Neither history nor the political sciences are taught at this university. The courses of archaeology, eloquence, and poetry, as well as those of the languages, are considered as belonging to the faculty of law! There is no faculty of letters: and the whole number of days on which lectures are given, does not exceed one hundred and twenty-one.

Pisa, in Tuscany.—In this university the lectures extend to canon law; rites, in explanation of those points of the canon law which affect promises of marriage (*sponsalia*) and marriage itself; institutes of canon law; institutes of civil law; criminal law; the pandects; logic and metaphysics; Greek and Latin literature; and Italian eloquence. The last three courses are comprised in the faculty of law, as there is no faculty of letters. The only branch of history which is taught is the annals of the church, from the twelfth to the sixteenth century; nor are any political sciences whatever taught here. The session begins on the 11th of November, and terminates in the first days of June.

Padua, in the kingdom of Lombardy and Venice.—This territory comprises the two universities of Padua and Pavia, the course of instruction pursued in both being precisely similar. The lectures comprehend an encyclopædical introduction to the study of law and the political sciences, (of which the text-book† is 'Jus Naturæ Privatum,' Vienna, 1819;) general statistics of the European States, and special statistics of the Austrian monarchy; agriculture, (text-book, 'Gli Elementi d'Agricoltura,' Venice, 1806;) public law of nature, (in conformity with C. A. de Martini's 'Positiones de Jure Civitatis in usum auditorii Vindobonensis,' Vindobonæ, 1773;) criminal law, (as taught by the Austrian 'Code of Offences,') a course which is only given during the last two months of the first year; Roman law and statutory law, (conformably with 'Heineccii elementa Juris Civilis secundum ordinem institutionum et pandectarum;') ecclesiastical law, (agreeably to G. Rechberger's 'Enchiridion Juris Ecclesiastici Austriaci, 2 vols. Lincii, 1819;) feudal law, a course confined to the last two months of the first year; Austrian civil law, in juxtaposition with French civil law, as derived from the text of the codes of both countries; commercial law, founded on the science of commerce and the laws relating to the bills of exchange, (the text book is A. Meneghelli's 'Treatise on the Commercial Code of the late kingdom of Italy Milan, 1808, and the government laws now in force;) maritime and navigation law, (using

* As each year's course is confined to two of the days of the Creation, the student must pursue the study of sacred natural history during a period of three years!

† The professors in the Austrian universities are obliged to adapt their courses to a manual which the executive prescribes; and these manuals are usually one and the same throughout those establishments. The courses, where no mention is made of a manual, are regulated by the professor's own judgment.

the preceding work of Meneghelli, and the public edict of the 5th of April, 1774, in reference to the commercial navigation of Austria;) science of police; and juridical proceedings, notarial proceedings, &c., with practical exercises, (conformably with the 'General Regulations for Civil Proceedings'.)

All law students are required to attend the courses of the faculty of philosophy, which last three years, and amongst which 'Universal History' is taught, according to Bossuet's Digest.

The studies of the faculty of law are disseminated through an interval of four years; and those who are designed for the profession of notaries, are expected to attend certain of the lectures in that faculty for two years.

THE DRAMA.

THE theatrical novelties of the past week have been, at Drury-Lane, a tragedy called 'Caswallon, or the Briton Chief,' the production of the Rev. Mr. Walker, author of 'Wallace.' We have no space for a detail of the plot. The character of the piece is melo-dramatic: its merits lie chiefly in the situations, the dialogue being little poetical, and rather tedious and vapouring. Its success, which was complete, must be attributed to the excellent acting of Mr. Young and Miss Phillips, the first of whom made a very indifferent part exceedingly effective; the last astonishing the audience by her pure style of declamation, and her beautiful and commanding attitudes. At Covent Garden, an opera called 'The Nymph of the Grotto, or the Daughters of the Vow,' has been produced, which secured unqualified approbation on account of the number of rather pleasing ballads introduced in the several parts of Madame Vestris, Miss Cawse, and Mr. Wood. Miss Jarman has to personate the nymph, *alias* the Daughter. Her woes respect the concealment of her sex. She falls in love, but being too religious to perjure herself, the usual machinery is set at work to get her out of the dilemma. Miss Jarman's acting, which was certainly very modest and natural, has so much pleased the correspondent of a Morning Paper, that he deems it fit to encourage her by the publication of an epigram, in which (has the man an ear?) her name is made to rhyme with, and turned into, *charmante*! The literary merit of this piece is less than that of 'Caswallon'; but ballads and Madam Vestris, like the Bourbons in Beranger's song, are *regnent toujours*.

THE COLOSSEUM.

We yesterday visited this magnificent and, as being the project of an individual, stupendous undertaking. As it is now in almost every respect incomplete, we shall not attempt a detailed description of its different parts, reserving ourselves till the last touch of the last artificer has been given it. The room for the reception of works of art, which will be admirably adapted to its object, is nearly circular, and in the centre is a small inclosure, called 'the ascending room,' in which, we suppose, the visitors will be raised by machinery to the higher parts of the building, and conveyed to the gallery answering to that above the dome of St. Paul's, and afterwards to the height of the ball and cross, (for, be it known, that an actual model of the cathedral occupies the centre of the Colosseum,) from whence are seen all the wide ramifications of this busy capital, the upward and the downward windings of its venerable river, and a circuit of surrounding country, the nearest point of whose verge must at least be distant twenty miles. The season is summer: it is market-day in Smithfield: the scaffolding is not yet taken down from before the façade of the New Post-Office; some bricklayers are repairing a stack of chimneys on a house top: Ludgate-hill and Fleet-street are crowded with vehicles and foot-passengers: states are stretched across the western avenue to Newgate Market, and their shadow falls upon the northern wall: and there is the sign of Howard and Co. in St. Paul's Churchyard:—these are selected as instances of the minuteness and animation of the picture. It was forgetful of us not to observe from any one of the multitude of steeples what o'clock it was. Coming out from the main entrance you go to the right of the building, and through a passage with anti-rooms, arrive at the intended library, a long and lofty apartment looking into a spacious quadrangle which as yet contains nothing but workmen. Returning then, and entering by the south lodge, you reach the conservatory; and, leaving on your right an apartment inscribed 'Intended Aviary,' perambulate a curved walk, arched

over with glass, and widening ever and anon into a circular space, which contains, among the fairest and the foulest productions of earth's womb, the *opuntia spinosissima*, bristling with ten thousand spears. This done, you are duly prepared, by the intervention of a dark, *quasi* subterraneous, passage, for a suite of rooms entitled the Swiss Cottage, grotesquely shaped and rustically furnished; in each of which, during summer, you will be able to luxuriate in the refreshing coolness of grotto and cascade; and in the first of which, during the prevalence of the present or any similar frost, you may derive no little comfort from a large coke fire, which sends up its small blue flames from the spacious hearth. Such is an epitome of what is now to be seen, but only half of what the completed plan will embrace.

This is a great and wonderful production. What it indicates as a sign of the times, we will elsewhere discuss. Ours is an age of luxury; but let us hope that luxury for once may not be the herald of decay. The mere artist is effeminate; the mere man of science, a recluse; and the scholastic, a pedant; but when science and literature are well proportioned and combined by the fusion of nature, do they not form the proper condition of society? We heartily wish the success of Mr. Horner complete, and that when through perils as numerous as those in the Apostolic list, and after having been in jeopardy of every kind every hour, he has put the last touch to his astonishing work, he may have nothing to do but rest from his labours, and enjoy the rich fruits of the paradise he has created. The Colosseum is an achievement for which every one will thank him—not in word but in deed—except, perhaps, the Dean and Chapter of St. Paul's, with whom the fine day does not, as with Mr. Horner's exhibition, last all the year, and who will consequently find their monopoly irreparably invaded.

POPULAR SCIENCE.

'How charming is divine philosophy!
Not harsh and crabbed as dull fools suppose,
But musical as is Apollo's lute.'—*Comus*.

I.—ANIMATED NATURE.

'And God said, let them have dominion over the fish of the sea, and over the fowl of the air, and over the cattle, and over all the earth, and over every creeping thing.'—*Genesis*.

1.—ANIMAL CHEMISTRY.

Indestructibility of Hair.—Mr. Rice informs us, that when on duty at Sheerness dock-yard, he collected several specimens of wood taken from old ships which had been dug out in the progress of the works carrying on there; and among them he found a piece of oak plank, with some hair adhering to its edge, which had apparently been used as the caulking material when the ship whence the plank was taken had been built. Upon inquiry, he was told by Mr. Knowles, of the Navy Office, that the ships in question had been laid aground in the time of Charles II., and subsequently, some as break-waters, and others as houses for artificers. It appears also from his work on the preservation of the navy, that *hair* had been long used for caulking, and was not discontinued till about 1791. The fact proves the indestructibility of hair; for any other animal substance could not have resisted the chemical agency of water, &c.

2.—ANIMAL ANTIQUITIES.

Professor Buckland probably mistaken.—There are few readers who may not recollect the sensation produced by the discovery, a few years ago, of a collection of the bones of hyenas, rhinoceroses, &c. in a cave at Kirkdale, in Yorkshire. Similar caves, containing bones, have also been discovered on the continent, and recently one near Maidstone, in Kent. Professor Buckland, in his 'Reliquiæ Diluvianæ,' has framed an ingenious hypothesis, tracing the deposition of these bones in the caves to a period anterior to the deluge of Noah, hyenas having, according to him, made these caves their dens.

Mr. J. Ranking has just published, in 'Brande's Journal,' some learned investigations, tending to show that Professor Buckland's conjectures are wrong, the bones in question being more probably the remains of the wild animals exhibited in the Roman amphitheatres, in the vicinity of those caves. Some of Mr. Ranking's references and quotations are very interesting, and merit further inquiry, but in the present state of the discussion we shall not take it upon us to decide for either party; Professor Buckland will, no doubt, take up the subject thoroughly, in the second volume of the 'Reliquiæ,' which he has just announced.

Mr. Ranking thinks he can also trace the recent origin of the remains of elephants and mammoths,

found in Behring's Straits, to animals belonging to Turks, Moguls, or Chinese, whose capitals are on the banks of large rivers, discharging their waters into the Arctic and Pacific oceans. We think this still more probable than his Roman conjectures; but he does not enter at all into the comparative anatomy, which may bring fatal objections to his views.

3.—ANIMAL GEOGRAPHY.

Fishes peculiar to certain Lakes.—Several travellers confirm the account given by Josephus, (*Antiq. iii. 18, and De Bello Jud., &c.*) that the fishes of the Lake of Genesareth are peculiar to it. Hasselquist says, 'I thought it remarkable, that the same kind of fish should here be met with as in the Nile; such as char-muth, silurus, boenni, nulsil, and sparus galileus.' Josephus says, that some consider the fountain of Capernaum as a vein of the Nile, because it brings forth fishes resembling the coracinus of the Alexandrine Lake.

4.—ANIMAL AGRICULTURE.

Hay-making Marmots.—It is said, that marmots, in the strictest sense, make hay: that they bite off the grass, turn it, and dry it in the sun. It is further reported, that they use an old she marmot as a cart, and that she lies on her back, till the hay is heaped on her belly, and two others drag her home.—*Med. Gazette*.

We have seldom met with a story which more palpably betrays credulity than this. We cannot, indeed, disprove the account by positive evidence to the contrary; but the very facts stated exhibit, from internal evidence, great exaggeration, if not improbability.

5.—ANIMAL MECHANICS.

The Nut-hatch.—The nut-hatch, (*Sitta Europæa*), by means of his strong beak, penetrates with facility the shells of nuts, and extracts the kernel, and when he is at work, his tapping may be heard at the distance of a furlong. A nut-hatch, having been wounded and caught, was placed in a cage, and during a night and day which his confinement lasted, his tapping was incessant. In that short space, he rendered the wood-work of his prison like worm-eaten timber, quite pierced and shattered. His hammering was peculiarly laborious, for he did not peck as other birds do, but grasping his hold with his immense feet, he turned upon them as upon a pivot, and struck with the whole weight of his body, thus assuming the appearance with his entire form of the head of a hammer, or similar to birds which may sometimes be seen on Dutch clocks, made to strike the hour by swinging on a wheel.—*Mag. of Nat. Hist.*

6.—ZOO-PHYTOLOGY.

Coral Polypt.—MM. Quoy and Gaimard, the Naturalists of the *Astrolabe*, in her late voyage of discovery, paid considerable attention to the habits of the numerous polypti inhabiting corals and corallines, and have thrown some light on their history. They always found, on examining with attention, that the polypti protruded only a very little their lamellar and fringed tetacula (*les étoiles lamelleuses et découpées*) from their abode, a circumstance which gives them a very peculiar appearance. In some milleporæ, the animals are very obvious, though in others they cannot be seen; but on passing the hands along the surface, the touch does not indicate the feeling of an immediately stony basis. In some no organic substance can be perceived, the surface being rough and dry as the most arid limestone; but in others, such as the *sek's-horn*, though similarly rough and dry, very minute polypti can be detected burrowing in the stony matter. It may be remarked that touching the polypus produces the same stinging sensation, followed by redness, as that produced by certain medusæ, which has obtained for them the name of sea-nettles. The sting of the polypti, it would appear, is produced by some acrid fluid, for it is communicable from the hands to any other part of the skin.

MM. Quoy and Gaimard could find no trace of animation in the substances called nullipora by Lamarck from their exhibiting no perceptible pores. They profess entire ignorance of their manner of growth.

Corals and corallines of recent formation are much more porous and fragile than when of some age, because the interstices in the former case have not been filled up, and even the parts which have been formed require exposure to the air to consolidate and harden them.

No polypti appear to possess, as has by some been supposed, life or animation in common. If they did, they would enjoy, as M. Lamarck shrewdly observes, qualities repugnant to the nature of every known animal, namely, the faculty of never dying. The stars and rosettes of the polypti, therefore, however nume-

rous, and however closely contiguous, have no mutual communication, nor continuity of substance, the only evidence indeed of which is the instantaneous and simultaneous retreat of the polypi into their cells, when accidentally disturbed.

It has been supposed by some naturalists, and is universally believed by the negroes, that fish are rendered poisonous by feeding on the coral polypi; but MM. Quoy and Gaimard argue that the flat obtuse nose of fishes cannot possibly detach the polypi from their encasements. In the instance of fish which have jaws strong enough to break coral, such as the diodon cæruleus, whose stomach they found filled with fragments of madreporæ, no nation is known to eat them. In the Marianes they are looked upon with disgust.

7.—ENTOMOLOGY.

Eyes of the Whirl-Wig.—One of the most striking instances of providential wisdom with which we are acquainted occurs in a species of pretty little water-bettles, which, during the summer months, may be seen on the surface of every pool weaving eccentric dances.

'Cycle and epicycle, multiplex and mixed,'

and twinkling their polished corselets in the sun. If their sports are intruded upon, however, by any one approaching them, they dive with the rapidity of lightning, and retreat to the bottom of the water. Their great quickness of sight is quite surprising, and is to be accounted for by the provision to which we have just alluded, and shall now explain.

Land animals see indifferently under water, and aquatic animals imperfectly in air; and an animal with an eye equally fitted for seeing in water and in air, can have, on account of the great difference of the mediums, but imperfect vision in either. The insect above-mentioned, the whirl-wig, (*Gyrinus natator*), to obviate this difficulty, is furnished with two sets of eyes, one pair being placed on the crown of the head for seeing in air, and another pair under the head for seeing in water. As it swims half submerged, the latter pair must be very useful in warning the insect of approaching danger from fishes, &c. below.

8.—CRUSTACEOLOGY.

Land Crabs.—In the forests of Guam, more than a mile from the shore, MM. Quoy and Gaimard found a very large species of pagura, with violet claws, lodged in the shells of buccina, and covered with an earthy crust, which appears to be their constant abode. Some of these pagura had the faculty of emitting a sort of froth when they were irritated. They were attracted by light; for one night, when encamped on shore, the sailors lighted a fire, and a large pagura came towards it from a considerable distance, and became the victim of his curiosity, being cooked in his own house, and afterwards devoured.

It appears that there are two divisions of this tribe, one living on land, the other in water; the marine species being distinguished by rounded eyes set upon the extremities of long cylindrical peduncles. The land species on the approach of danger always retreat either into accidental crevices or holes, or preferably under the roots, or into the hollow trunks of trees, never, or at least rarely, into the sea, though it be near them.

9.—ICHTHYOLOGY.

Artificial Propagation of Herrings.—Dr. Franklin having observed in New England, that the herrings ascended from the sea into one river of the country, while a single individual was never seen in some of the other rivers, though nearly contiguous, he procured the leaves of some plants on which the herrings had deposited their spawn, and conveyed them to the waters which were not visited by the fish. The success of this experiment surpassed his expectations, the spawn was completely productive, and the following year the river was filled with a numerous shoal of herrings, and, since that period, has been regularly visited by them every year.

Fish Spawn transported by Beetles.—A large water beetle (*Hydrophilus picea*?) feeds, it is said, upon the spawn of fishes, and as it takes wing during the night, it is not improbable that it may be the means of voiding some of the spawn which it has swallowed in an undigested state into ponds and lakes at a distance. It is reported, indeed, that fish have been actually bred from the spawn extorted from the beetle when caught.

10.—ORNITHOLOGY.

The Heather-blower of the Scotch.—This is the common bittern, miredrum, or marsh-boomer (*Ardea stellaris*, Linn.), and the sound of the bird is so very common, that every child is familiar with it, though the birds, from being shy, are not often seen. The poet, Thompson, seems to have had a very erroneous

notion of the manner in which the bird produces the noise, when he says—

'So that scarce
The bittern knows his time, with bill engulfed,
To shake the sounding marsh.'—*Seasons.*

On the contrary, we have repeatedly remarked, that the bittern usually booms while flying high in the air. Its lofty spiral flight, indeed, is a matter of common remark.

'Swift as the bittern soars on spiral wing.'—*Southey.*

Southey seems to be well acquainted with the boom of the bittern.

'At evening o'er the swampy plain,
The bittern's boom came far.'—*Thalaba.*

11.—MAZOLOGY.

Toed Horses.—M. Bredin, Director of the royal veterinary school at Lyons, has in his museum the hoofs of a horse containing on the right fore-part three toes, and on the left, four. Another chiropodian, or polydactylous, horse is in the museum of the veterinary school of Alfort. In the latter, there are but two toes on each foot.

Suetonius and Plutarch mention a similar horse, with toes, in the days of Julius Cæsar; and the haruspices decided that it promised him the empire of the world.

Two species of Giraffe.—The distinguished French naturalist, M. Geoffroy St. Hilaire, is of opinion that there are two species of the giraffe: one a native of the Cape of Good Hope, another of Nubia, differing in the form of the head, the distribution of spots on the skin, and also in size.

Bats in January.—The common bat, or flitter-mouse (*Vespertilio murina*) sometimes flits about on fine evenings, though the crepuscular moths which are its favourite prey, are still scarce, and it must often, we should suppose, hawk for a whole evening, without taking one. We once caught a bat, which did not refuse any sort of insect, grubs not excepted, and, perhaps, those bats which appear so early as January have other prey besides moths to pursue.—*Companion to the Almanac.*

12.—ANTHROPOLOGY.

Singular Fancies of Hypochondriacs, &c.—The celebrated Pascal believed one of his sides to be glass, and on the same side he always imagined that he saw a precipice yawning beneath him. M. Malebranche tells us of a woman who had seen a criminal broken on the wheel while pregnant, and her child, when born, was found to have all its limbs broken, like the criminal. Lavater, the physiognomist, mentions a similar instance of a pregnant woman, who having seen a criminal have his hand struck off, bore a girl without a hand. A man, as ugly and deformed as Æsop, is reported to have had a family of very fine children by filling his house with good pictures.—*Dictionnaire Infernal.*

Singular Woman at Marseilles.—M. Robert, physician to the Lazaretto at Marseilles, has just transmitted to the Académie Royale at Paris, an account of a woman who, besides the ordinary mammae, has one *à la cuisine*, so perfectly organised, that it has served to nurse several children; a fact as extraordinary as it appears to be well authenticated.—*Baron Cuvier, Analyse des Travaux, &c.*

II.—NON-ANIMATED NATURE.

'The meanest flow'et of the vale,
The simplest sound that swells the gale,
The common sun—the air—the skies—
To him are opening Paradise.' GRAY.

1.—VEGETABLE MECHANICS.

New Sensitive Plant of Australia.—Several species of stylidium, particularly stylidium graminifolia, possess a singular irritability of the column bending over the reflexed lip of the corolla, between the two upright appendices. When slightly touched near the base, the column suddenly springs up, carrying the anthers and stigma with a quick jerk over to the opposite side of the flower. If left quiet for a short time, it gradually resumes its former position, but is ready to spring again when exposed to any sudden irritation, though when irritated too frequently, the force of each successive spring becomes diminished. The use of this mechanism is probably connected with the dispersion of the pollen for the fertilization of the anthers.—*New South Wales Journal.*

2.—VEGETABLE GEOGRAPHY.

Plants of the Polar and Temperate Regions.—Immediately on having descended from the line of perpetual snow, we find nature indicating her care of the forests by producing on the dreary mountains of Lapland, a species of birch and of willow, though the cold be still so intense as to permit the former to put forth only three leaves from the bud by the end of June, which,

in a few weeks more, have fallen and withered. Yet, by this feeble effort of vegetation, life is sustained, and the acclivities of the snowy dofrines are covered by a miniature forest of dwarf birch, (*betula nana*), a beautiful little shrub, not uncommon on some of our British mountains. As we descend into more genial, though still severe climates, we meet successively, though not always on the same meridian, with belts of Scots fir, spruce fir, larch, and other species of pine, which form a broad zone of cone-bearing trees, covering the north of the world, and fringing the domes of snow which mantle the polar regions. Interspersed with the pines, and increasing in numbers and size towards the southern skirt, many species of hard wood or deciduous trees occur. The hazel, the birch, the mountain ash, the alder, the aspen, the sycamore, the ash, the lime, and others, are met with, till, by-and-by, the oak becomes the sovereign tree of the forest. This noble plant reigns over a broad territory, having first appeared as far north as Drontheim in Norway, and finding Europe almost too narrow for its southern extension. But its proper clime is the central region of Europe, whence the great rivers divide to pursue opposite courses to the Mediterranean and Black Sea on the one hand, and the Atlantic, the North Sea, and the Baltic on the other. Along with the oak, the beech, especially in chalk countries, the elm, the maple, the poplars, and many other trees occur, diversifying the landscape; while pines, seeking a colder climate, have betaken themselves to the mountains.

3.—GEOLOGY.

Submergence of the Continents.—M. Constant Prevost has just published an interesting memoir on the geological question, whether our continents have been submerged oftener than once. He attempts to prove that there does not exist, under alluvial formations, any beds or strata which can be regarded as having formed the surface of an ancient continent, covered for a considerable time with land vegetables, and inhabited by land animals, before it was enveloped in marine deposits. The debris of vegetables and of land animals, sometimes found in vertical positions, in sandstone, in diluvial strata, or in caverns, he supposes to be wholly accidental, and originating in the sea invading a country previously inhabited. He thence proceeds to explain the formation of the basins of London, Paris, and the Isle of Wight, according to the following series of epoques:

1. A deep tranquil sea deposited the two varieties of chalk which compose the bottom and the sides of the great tertiary basins.

2. Then, by the ocean becoming shallower, the great basin would be formed into a gulf in which chalk-breccias and plastic clay would be deposited and covered by the marine remains of the first coarse limestone.

3. The deposition was next interrupted by some commotion, which sensibly broke and displaced the strata. The basin then became a salt water lake, traversed by copious streams of water flowing alternately from the sea and from the continents, and producing a mixture presenting the second course, limestone, silicious limestone, and gypsum.

4. A large volume of fresh water, charged with clay and marl burst into the basin forming in the middle a deposit of marine bivalve shells, the basin becoming a lake of brackish water.

5. The lake now ceased to communicate with the ocean, the level of the waters going on to decrease, and the muddy deposits from the continental waters continuing.

6. The ocean burst in accidentally, whence beds of sand and the upper marine sandstone were deposited; and soon after, the basin being drained, contained only fresh water, of little depth. There was now much less influx of water; animals and vegetables made their appearance; and mill-stone grit and fresh-water limestone were deposited.

7. The succession of these different epoques was terminated by the discursive cataclysm.

4.—MINERALOGY.

Washing of Gold.—The art of washing gold was practised on the Rhine from early antiquity up to 1824, when it ceased near Basil; but a few continue to be employed in the environs of Lahr, as at Wittenweir there are three; at Nonnenweir fourteen, &c. The gold is found in a coarse alluvial deposit, and sometimes forms a coating on the pebbles. The banks containing the gold are usually about 100 paces in length. They are usually on the margin of the river, and rarely in the islands. The banks of pebbles containing the gold are covered with pebbles and vegetable earth.—*Zeitschrift für Mineral. Jahn, p. 533.*

5.—OROGRAPHY.

Mount Sorata.—From the observations of Mr. Pentland, alluded to in a recent 'Athenæum,' it appeared that the Nevado de Sorata is the highest mountain in America. The following is a more particular account. This mountain is situated towards the northern prolongation of the eastern Cordillera, and almost in the centre of a group of snow-covered peaks. Its latitude is 15° 30' S., and is to the east of the large village of Sorata, inhabited by native Peruvians. Mr. Pentland has determined its height to be 25,000 feet, by means of trigonometrical observations taken on the shores of the lake Titicaca, compared with the usual limits of perpetual snow in this climate, namely, 17,100 feet.

It is composed of transition slate in which porphyritic syenite abounds, traversed by auriferous veins, from which particles of gold are washed down into the streams which run into the Rio Beni, that runs through the celebrated El Dorado.

Mr. Pentland announces that he will publish in a few months the detail of his observations upon this and the other mountains of the Andes, as well as his researches into the history, antiquities, geography, and natural history of Bolivia, or Upper Peru. — *Annales des Sciences*, xiv. 299.

6.—NEPHEOLOGY.

Arched Clouds.—Mr. G. Harvey, of Plymouth, has published a description of a singularly beautiful cloud which he observed towards the end of May last, in which arches nearly complete, and diverging in some measure from a common centre, spanned the horizon almost like rainbows. A modification of that form of wane cloud, called *Windreels* by the peasants in Kent, corresponding exactly to the description of the Plymouth clouds, was observed on the 22d of May last, by Mr. J. Rennie, at Blackheath, and has been described and figured by him in 'The Magazine of Natural History,' No. V. It is a pity Mr. Harvey does not mention the precise day on which he observed the Plymouth cloud, as if it were on the same day we might infer that the arch extended from Plymouth to Blackheath, if not farther.

7.—METEOROLOGY.

Supposed Change of Climate.—Professor Schouw, of Copenhagen, has argued plausibly against the opinion that certain climates have changed in the lapse of ages. The date tree, for instance, he says, requires a mean temperature of 78° Fahr. to bring its fruit to perfection; and it is successfully cultivated in Palestine now as it was in the earliest times, of which he gives interesting notices. Jericho was called Palm Town; and Deborah's palm tree was mentioned between Rama and Bethel. Pliny mentions the palm tree as being frequent in Judea, and chiefly in Jericho. Tacitus, Josephus, Strabo, Diodorus Siculus, and Theophrastus, all speak of woods of palm trees there; and on the Hebrew coins, date trees are by no means rare, and are easily recognised by their fruit. — *Oken's Isis*.

8.—BOTANY.

Flora Virgiliana.—Sprengel of Halle, and Martin of London, have endeavoured to ascertain the identity of the plants mentioned by Virgil; and, more recently, M. Fée of Paris was employed upon the same subject by the editor of the Latin Classics; but Signor Tenore, of Naples, has not only had the advantage of their remarks, but has travelled over Italy with his Virgil in his hand, and has just published the result in a brochure, entitled 'Osservazioni sulla Flora Virgiliana.' He only mentions eleven: 1. The Arundo of Virgil is not necessarily the Arundo Donax, nor the A. Phragmites, as M. Fée decides; for Italy possesses other species of Arundo; 2. The Baccar is not the Valeriana Celtica, as M. Fée thinks, but rather the Asarum; 3. The Cerunthe must be either the Satureja Thymbra or S. Capitata; 4. The Cucumis of the line,

'Cresceret in ventrem,' &c.,

is not the cucumber, but the Cucumis Chate of Linnaeus, a plant originally brought from Egypt by the conquerors of the world. As to the Cucumis Cernuus of Virgil, Sig. Tenore thinks it must be the Melone Vernico of the Italians; 5. The Æsculus is, without doubt, the Quercus Robur, var. Latifolia, and not the Quercus Æsculus, of which the existence in the Flora of Virgil is doubtful; 6. The Hedera Alba is not the Antirrhinum Asarum, a common plant in the south of France, but which is not found in the Neapolitan territories; it must be that variety of Hedera called by Pliny Chrysocarpum; 7. The Hyacinthus is not the Lilium Martagon; it accords better with the Gladiolus Byzantinus; 8. The Oleaster is not the Eleagnus Angustifolia, or Bohemian olive, which never grew spontaneously in Italy, but the wild olive, at present known all over the

south of Italy by the name of Olivastro; 9. The Céræa Pruna belong to the variety named by the Italians Scaldatelle; 10. The Roseta is the cultivated rose; 11. The Viburnum is not the Lantana, but the Viburnum Tinus. — *Bulletin des Sciences*.

Flora Classica.—Dr. J. Billerbeck is publishing, under this title, descriptions of all the plants mentioned in classic authors, with the original passages in which they are mentioned. — *Annonc. Scient. de Götting.*, p. 479.

III.—USEFUL ARTS.

'Every new discovery may be considered as a new species of manufacture, awakening moral industry and sagacity, and employing, as it were, a new capital of mind.'

— *Edinburgh Review*.

I.—CULINARY CHEMISTRY.

To render Meat tender.—The surest and most convenient method of rendering meat or poultry speedily tender, is to wrap it in a cloth to preserve it from dirt, and expose it the preceding evening to a gentle and constant heat, such as the hearth of a fire-place or an oven, some time after the fire has been extinguished. — *Journal des Conn. Usuelles*.

Longevity of the Tortoise.—In the library at Lambeth Palace is the shell of a land-tortoise, brought to that place about the year 1623, which lived in the year 1730, when it was killed by the inclemency of the weather; a labourer in the garden having for a trifling wage dug it up from its winter retreat, and neglected to replace it, a frost, as is supposed, killed it. Another tortoise was placed in the garden of the Episcopal house at Fulham, by Bishop Laud, then Bishop of that see, in the year 1628; this died a natural death, anno 1753-4. What were the ages of these tortoises when placed in the gardens is not known.

Comparative Speed of English and Russian Travelling.—*English*.—The unhappy criminals, upon whom the Recorder presented his late Report, were kept in an uncertainty as to their doom for a night and day after it had been sealed; the sentence of death which was passed at Windsor at half-past eight the one evening, not having reached Newgate until half-past five on the next day;—a journey of twenty-one miles performed in twenty-one hours, or at the rate of one mile per hour. — *Russian*.—The intelligence of the death of Alexander reached St. Petersburg from Taganrog, and was there deliberated upon by the senate, Constantine proclaimed, and the news returned to Teflie, in Georgia; in the market-place of which the proclamation was publicly read on the twentieth day from that of his death, a distance, in all, of two thousand two hundred miles, (taken in a direct line, and including all delays and detentions,) traversed in nineteen days; being at the rate of one hundred and sixteen miles per day, or about five miles per hour. — *Moral*.—The comparative importance of the deaths of great men and small, is in the ratio of five to one in favour of the former.

LIST OF BOOKS PUBLISHED DURING THE WEEK.

- Annual Obituary and Biography, vol. 13, for 1829, 8vo. 15s.
Home's Comparative Anatomy, vols. 5 and 6, demy 4to., 4l. 4s.
Woollrych's Commercial and Mercantile Law, 18s.
Gift of an Uncle, royal 18mo., 2nd edition, 3s.
Wood's Account of Sessional Schools, 12mo., 4s. 6d.
Sermons by the Rev. Thomas Brown, D. D., 8vo., 9s.
Barr's Scriptural Student's Assistant, 12mo., 3s. 6d.
The Annual Peerage for 1829, 1l. 8s.
Turner's Modern History of England, pt. 2, 4to., 2l. 8s.
London's Magazine of Natural History, Vol. 1, 8vo., 18s.
Narrative of the Peninsular War, by Gen. the Marquis of Londonderry, 3d edition, 2 vols., 8vo., with Map, &c. 1l. 11s. 6d.
The Ball, or a Glance at Almacks in 1829, 1 vol., post 8vo., 7s. 6d.
Twelve Years' Military Adventure, 2 vols., 8vo., 1l. 4s.
Mr. Stephen's Comments, 8vo., vols. 13 and 14, 10s.
Bentley's Justification, abridged by the Rev. T. Jones, 3s.
Visits to the Religious World, 8vo., 10s. 6d.
Fate of Graysdale, 2 vols., 12mo., 14s.
Vincent's Explicatory Catechism, 18mo., 2s. 6d.
The Domestic Visitor, vol. 1, 1828, 12mo., 3s. 6d.
Hood's Analytical Physiology, 2d edition, 8vo., 7s. 6d.
An Enquiry, 'What is the one true Faith?' 8vo., 12s.
Baxter on the Knowledge of Ourselves, with an Essay. By the Rev. Dr. Young, 12mo., 4s.
Imperial Remembrance, on a sheet of drawing Atlas, 3s. 6d.
Rev. J. Slade's Twenty-one Prayers for the Sick, composed from the Psalms, 12mo., 4s. 6d.
Walsh's Narrative of a Journey from Constantinople to England, post 8vo., 3d edition, 12s.
Cullen's Practice of Physic, new edition, with Notes, by Drs. Cullen and Gregory, 2 vols., 8vo., 24s.
Barker's Cicero's Catiline Conspiracy, with Notes, &c., 12mo., 5s.
Marshall on Classification of Shipping, 8vo., 6s. 6d.
Thomson's Explanation of the Bible, 18mo., 2s.
Select Letters of the late W. Roman, 32mo., 2s. 6d.
A Help to the Private and Domestic Reading of the Holy Scriptures, 12mo., 2s. 6d.
A Plain and Short History of England for Children, with Questions, by the Editor of the Cottager's Monthly Visitor, 2s. 6d.

- Sandford and Merton, 1 vol. 12mo. 7s. 6d.
Noel's German Exercises, 12mo. 6th edit., 8s.
Palmer's Evidences, 1 vol. 8vo., new edit., 7s.
Reginald Trevor, 3 vols. 12mo. 18s.
The Pool of Quality, edited by the Rev. J. Wesley, new edit., 2 vols. 34mo., wood-cut, 6s.
The London Greek Grammar, on the Model of the London Latin Grammar, 12mo., 5s. 6d.
Auto-biography, vol. 23, containing the Diary of the late George Bubb Dodington, 18mo.
The New Scots Magazine, No. 11.

London: Printed for Samuel Leigh, 18, Strand.

A ROWLAND and SON view it as duty incumbent upon them at the approach of a NEW YEAR, to acknowledge with the profoundest emotions of gratitude, that DISTINGUISHED PATRONAGE with which they have been honoured by the NOBILITY, GENTRY, and PUBLIC at large, with respect to the ORIGINAL MACASSAR OIL and KALYDOR; articles which have obtained a celebrity pre-eminently great. Messrs. R. and S., while they humbly solicit a continuance of that High Patronage they have been honoured with, must, at the same time, earnestly caution the Public against a base counterfeit imitation: the Original are distinguished by the Name of the Sole Proprietors, on the Label of each bottle, in Red:

A. ROWLAND & SON, 20, HATTON GARDEN, The Genuine is sold by Mr. R. Hendrie, Perfumer to His Majesty, Tichborne-st.; Sanger, 150, Oxford-st.; Mr. Smyth, 117, Delford-st.; Gattle and Pierce, 57, and D. Rigge, 35, New Bond-st.; Atkinson, 20, New Bond-st.; and 44, Gerrard-st.; Butler, 4, Cheapale; Bayley and Blew, Cockspur-st.; Berry and Lloyd, 18, Greek-st.; Low, 330, Prout, 226, Strand; Burgess, 68, Holborn-hill; Sutton, Bow Church yard; Patey and Co., 37, Lombard-st.; Edwards, 67, Newberry, 45, St. Paul's Church-yard; Barclay and Sons, 95, Fleet-market; J. and T. Rigge, 65, Cheapale; Stradling, Exchange-gate; Nix, fronting the Royal Exchange; Tait, 41, and Johnstone, 68, Cornhill; J. and C. Evans, Long-lane.

BELGIC PASTORALS, and other POEMS,
by FRANCIS GRASSER, Esq.
London: Printed by J. Rodwell, No. 41, New Bond-street, 1829.

This day are published, in 1 vol. 12mo., price 6s. boards,
LETTERS TO THE YOUNG. By MARIA JANE JEWELL. The second edition.
Printed for J. Hatchard and Son, 187, Piccadilly. In the press, by the same Author,
LAYS OF LEISURE HOURS. In one vol. foolscap.

This day are published, 12mo., 6s. boards,
SERMONS, Plain, Brief, and Explanatory, on the LORD'S PRAYER, and TEN COMMANDMENTS. By JOHN NANCE, D.D.
Printed for J. Hatchard and Son, 187, Piccadilly; and John Elliott, Ashford, Kent.

This day are published, 12mo., 5s. boards,
PLAIN SERMONS on some of the LEADING TRUTHS of the GOSPEL. By the Rev. WILLIAM MOUSLEY, M.A., late of Queen's College, Cambridge.
Keep in mind that excellent rule I mentioned the other morning: "Never preach a single sermon, from which an unenlightened hearer might not learn the plan of salvation, even though he never afterwards heard another discourse."—*Memoir of the Rev. Legh Richmond.*
Printed for Hatchard and Son, 187, Piccadilly; and Hamilton and Co., Paternoster-row.

ESSAYS ON THE UNIVERSAL ANALOGY BETWEEN THE NATURAL AND THE SPIRITUAL WORLDS.

This day is published, in 8vo., price 8s.,
THE SECOND SECTION of the FIRST ESSAY, containing the Parallel between the Terraqueous Globe, including its Atmosphere, and the Soul and Body of Man. By the Author of "Memoirs of a Deist."
Printed for J. Hatchard and Son, 187, Piccadilly.

THOMAS MOORE, Esq.—This Day is Published,
THE MIRROR OF LITERATURE, AMUSEMENT, AND INSTRUCTION. Vol. XII., price 5s. 6d., with a Portrait of T. Moore, Esq., and Forty other Engravings.
The Mirror with its choice Engravings and inexhaustible varieties, is the cheapest and most entertaining publication of the day.—*Atlas*, July 13, 1828.
The Mirror is an ingenious and useful publication.—*Times* 1828.

ELEVEN VOLUMES of this highly popular miscellany contain 5,098 closely-printed octavo pages, 9 Portraits, and 469 other well-executed Engravings of popular interest, for the trifling sum of 5l. 19s. 6d. in boards, or 5l. 17s. half-bound.
J. Limbird, 143, Strand, London, and all Booksellers.

With Twenty Engravings. Price 5s. in Cloth.
THE ARCANES OF SCIENCE AND ART for 1829, contain all the Popular Discoveries and Improvements of the past Year, in Mechanical and Chemical Science, Natural History, Rural and Domestic Economy, the Useful and Fine Arts, and a Miscellaneous Register.
The ARCANES OF SCIENCE AND ART for 1828, price 4s. 6d.
PLUTARCH'S LIVES, with 50 Portraits, 3 vols., price 15s. 6d. boards.
The ARABIAN NIGHTS' ENTERTAINMENTS, with 160 Engravings, 6s. 6d. boards, half-bound, 8s.
J. LIMBIRD, 143, Strand, London, and all Booksellers.

This day is published, price 3s., second edition, beautifully done up in fancy coloured boards, with a Frontispiece,
THE GIFT OF AN UNCLE, or a Short Description of some of the peculiarities of the Animal and Vegetable World, with an Account of their first introduction into this Country.
We can strongly recommend the excellent matter of this unpretending and pretty little volume.—*Atlas*, Nov. 9, 1828.
A very interesting and well written little volume, full of amusing yet useful information, and one that we can recommend to the perusal of juvenile readers.—*Literary Gazette*, Nov. 16, 1828.

Printed for Wm. Joy, 66, St. Paul's Church-yard.
This day is published, price 2s. neatly bound,
TREATISE ON PRACTICAL ARITHMETIC AND MENSURATION, adapted to the Use of Schools and to private Tuition; on a New and Improved Plan, designed to accelerate the improvement of the learner. The part on Mensuration is accompanied by Copper plate Engravings. Third Edition, greatly enlarged, containing a variety of Useful and Important information never before published, and concluded with about Three Hundred promiscuous Questions for the Examination of Learners, during their Progress through the work. By S. P. REYNOLDS, Accountant and Teacher of Mathematics.

Also,
A KEY, containing the SOLUTIONS of the QUESTIONS, worked at length. Price 3s. neatly bound.
This is a useful and unpretending little compilation recommending itself by simplicity of style and cheapness of form.—*Monthly Critical Gazette*, Feb. 1825.

A youth of moderate capacity, if intent on acquiring arithmetical knowledge, will find this to be one of those works which will enable him to make a proficiency in learning, without any other aid.—*Imp. Mag.*, Nov. 1827.

This unpretending volume contains much valuable matter, carefully digested in small space, and expressed in clear and simple terms.—*Weekly Review*, Aug. 30, 1828.

We can recommend this little book to the attention of tutors, for the simplicity and clearness of its arrangements. The improvements in this edition are worthy of particular notice, and the engraved plates, illustrative of the study of mensuration, will be found to afford considerable facilities to the learner.—*Atlas*, Sept. 7, 1828.

This little volume embodies a mass of instruction in a narrow compass, it offers great facilities for a youth in pursuing the dry study of Arithmetic, than any other book of the class we have met with; it would be an improvement on the title to call it: "Learning made Easy."—*British Traveller*, Nov. 15, 1828.

London: printed for William Joy, 66, St. Paul's Church-yard.

EXTENSION OF THE TRADE TO INDIA, AND OPENING OF THE TRADE TO CHINA.

MR. BUCKINGHAM having formed the determination of visiting personally all the principal Towns in Great Britain, for the purpose of arousing public attention to the importance of opening a Free Trade to every part of the Eastern World, commenced, in the present month of January, with Liverpool, where, according to the testimony of all the Public Papers of that place, his Lectures were attended by the largest and most respectable audiences ever collected together on any similar occasion, and where, at the concluding Lecture, Mr. Buckingham was surrounded, as a mark of honour and approbation, by the principal Merchants and Bankers of Liverpool, when the following Vote of Thanks was moved by the Mayor, Nicholas Robinson, Esq., seconded by one of the leading merchants, James Cropper, Esq., and carried by acclamation:

'That the cordial Thanks of this Meeting be presented to Mr. Buckingham, for his exertions in exposing the injurious effects consequent on a continuance of the Monopoly of the East India Company: and that this Meeting cannot permit Mr. Buckingham to leave Liverpool, without expressing their best wishes for his success in the towns he is about to visit.'

Mr. Buckingham followed up these Lectures by a subscription of 100l., which has been paid by him to Mr. James Cropper, Mr. John Ewart, and Mr. William Rathbone, of Liverpool, as the commencement of a General Fund to be raised for the purpose of promoting, by all legal and constitutional means, the great object of extending our commercial relations with every part of the Eastern World.

The proceedings at Liverpool were terminated by the following Requisition to the Mayor:

To the Worshipful the Mayor.

Liverpool, 14th January, 1829.

Sir,
We, the undersigned Bankers, Merchants, Free Burgesses, and other Inhabitants of Liverpool, deeply impressed with the importance of extending the commercial relations of this country with his Majesty's dominions in the East Indies, and with China, respectfully request that you will call a Public Meeting for the purpose of taking into consideration the best means of removing the restrictions imposed upon commerce by the present Charter of the East India Company; and of prevailing on the Legislature to secure to the public all those benefits which a free commercial intercourse with India and China is capable of affording.

UNIVERSITY OF LONDON.

MONSIEUR MERLET, Teacher of the French Language at the University, begs to inform the public, that he has now resumed his Evening Classes, at his residence in the city, 9, North-building, Finsbury-circle.

Monsieur Merlet is now publishing a FRENCH GRAMMAR, in Four Parts; consisting of 1. The Pronunciation. Price 3s. 2. The Accidence; containing, among the other matter, a concise table of the regular and irregular verbs. Price 3s. 6d. 3. The Syntax. Price 3s. 6d. And 4. The Appendix, or Dictionary of difficulties. Price 3s. 6d. Each part is complete in itself; and being by means of the illustrations adapted to the age, capacity, and progress of all learners, each may be had separately, or the four parts in one volume, forming a complete French Grammar. Price 10s. 6d.

To be had of Mr. Richardson, 23, Cornhill, and of Mr. Taylor, 39, Upper Gower-street, Bedford-square.

NEW FLUTE MUSIC just published by R. COCKS and Co., 30, Priores-street, Hanover-square.

For the FLUTE and PIANO FORTE: Drossler's 15 Italian Fantasias, in which are introduced 34 elegant Songs and Duets, composed by Rossini, &c. This work is admirably calculated for sister and brother, both parts being obligato; 12 books, each 3s. 6d. Do's 17 Sacred Melodies, 12 books, each 2s. Berbiguier's Fantasia, Op. 69, 4s.; Tulou's Crada Sorte, 4s.; Dittio's celebrated March in Mose in Egitto, for two Flutes and Piano-forte, 3s.; Forde's 12 Trios for ditto, each 2s. and 4s.—FLUTE SOLOS: Mozart's Operas of Figaro, La Clemenza, and Così fan Tutti, by Saust, 3s.; Weiss' 15 Tyrolean Melodies, 3s.; Cabinet, 6 books, each 3s.; Drossler's Beauties, 12 books, each 3s.; Dittio's celebrated Preceptor for the Flute, 9s.; Dittio's Flutist's Daily Companion, 6s.; Dittio's 27 Melodies for one or two Flutes, Op. 70, 4s.; James's Flutist's Catechism, 1s.

MOON, BOYS, AND GRAVES' CATALOGUE.

Now ready, in 8vo., price 4s. half-bound.

A CATALOGUE OF ENGRAVINGS, by the most esteemed Artists, after the finest Pictures and Drawings of the Schools of Europe, systematically arranged under the Painters, and by Index to the Subjects; accompanied by a list of Works in progress, or recently completed; and also of various Books of Prints, forming part of the Stock of Moon, Boys, and Graves, Print-sellers to his Majesty, and Publishers of Works of Art, 6, Pall-mall.

. The Stock from which the above Catalogue has been made, is that which originally belonged to the old-established house of Boydell, with the extensive additions which have since been made to it by their successors, and the present proprietors; together it forms one of the most important collections of prints ever accumulated; it comprises the best works of the modern school, amongst which may be enumerated the names of Lawrence, Wilkie, Turner, Burnet, &c., and which are receiving constant accession: the standard works of the past century, including, among the painters, those of Reynolds, West, Hogarth, Gainsborough, and others; and among the engravers, the best works of Woollett, Sharp, and Barlow, and all other first-rate engravers of their time; it also embraces the works of the most eminent ancient masters of the Italian, Gorman, Dutch, Flemish, French, and English schools, formed from the most celebrated collections sold of late years. Such being the materials of which the Catalogue is composed, it is presumed it cannot fail to be useful to all who purchase and collect prints, whether for the portfolio, for ornament, or for use.

LONDON, WEDNESDAY, JANUARY 28, 1829.

Price 8d.

ON THE USE OF THE COLD SEASON TO FASHIONABLE NOVELISTS.

I TAKE it for granted that the modern novelists, however they may differ in other respects, are all alike in this one, that they entirely dispense with what is usually called *creative power*, as quite unnecessary in the fabrication of their works. I assume this, because it has been their boast, and I firmly believe it is a true boast, that they describe nothing but what they have seen. Some may describe accurately, some carelessly; and they undoubtedly beheld the objects which they describe from different points of view. In painting a dinner-scene, for instance, a few of them labour under the disadvantage of sitting upon chairs of the same height with those upon which the different figures in their group are sitting, and of being engaged in the same operation with them, while the majority occupy a more commanding station behind those chairs, and survey the process which is going forward with disinterested indifference. But neither of them attempt to describe dinners at which they have not assisted in one or other of these two capacities.

I take it for granted, also, that of late the Hippocrene of this gentleman has run rather drouthy, and that there is but little chance of the scenes and characters of fashionable life lasting another season. I draw this melancholy inference, first, from general principles; and, secondly, from my observation of the more recent novels. Among all the more shrewd and intelligent of these writers, there is an evident feeling that they must, in future, look abroad for their materials. For some time, they contrived to eke them out by one after another declaring that his predecessor knew nothing whatever about the life which he attempted to describe, and, consequently, that it must be described again. This was a good joke at first. The notion of revisiting Almack's, after the public had been fairly put to sleep by the former visit, was a courageous, and therefore a successful one; but it would not do again. The public wants story books, not books of controversy; and it will rather take up with false opinions about Willis's, than be insulted by being told that the reports which it had relied on as gospel were false and heretical. This contrivance having failed, there is no other resource but abandoning the well-worked mine; and this step our friends seem to be resolved on. The author of 'Pelham' is gone out among the gypsies, and Lord Normanby attempts to describe the middling class; and, though it must be owned that the clumsiest of 'nature's journeymen' never made more abominable mockeries of humanity than the personages which these clever writers have produced, we may fairly ascribe this to their want of practice, and take their good disposition as an earnest of better things.

We think, therefore, we shall be performing a real, and not an unbenovolent service, either to the public, Mr. Colburn, or the fashionable novelists, if we suggest a method by which they may turn the present inclemency of the weather to account in obtaining the materials of which they are in need. It is an ill wind which blows nobody good; and the present frost (interrupted for a day or two, but likely to be soon resumed) is an ill frost, if it produces nothing but chopped hands and starvation.

My Lords and Gentlemen,—You must prepare for an expedition into very strange and distant latitudes; and perhaps it would be as well, if you have any thing to dispose of, that you should make your wills. Our very first voyage will take us beyond the Pillars of Hercules, even to the very bottom of Oxford-street. We shall then tack round a little to the right, into what is called the north-west passage, to a place called Holborn. Passing by a singular structure, called after a canonised coachman of the name of Giles,—the calendar of this part of the world is composed entirely of coachmen,—we turn down a dark and narrow strait, into which it is my present purpose to conduct you. This is the principal street of St. Giles's, and is peopled with IRISHMEN and IRISHWOMEN. Now, I dare to say, that you fancy you have a very accurate conception of what an Irishman in London is. You fancy, I doubt not, that, when you have put together the notions of squalor, violence, rude generosity, lawlessness, and drunkenness, you have a thorough understanding of the compound of which these qualities are the elements. And it is possible that, if the animal were in a state of rest, if he were standing before you in a tolerable coat on a warm day, you might delude yourself into the belief that you had some imagination of the character. But it is now freezing,—it is six o'clock in the evening,—it is a dense fog,—it is St. Giles's: look there at that man,—had you the most distant fancy that such a being existed? Did the notion of poverty, valour, generosity, lawlessness, or all these together, enable you to conceive that starved eye, not the seat of one passion, but where all are holding their revels under the sceptre and ordinance of the one all-commanding passion of hunger? Had you any notion of that gesture, of his language, of his laugh, of his closed fist? Or could all your notions of the modes of Irish and of female nature combined, have given you the slightest hint of that woman who is reeling drunk across the street with a child in her arms, who, amidst all her oblique movements, she takes care shall not be in the least danger? Could you have conceived any curses so tremendous as those she is bestowing upon that child, or could you fancy any love more intense than that which she evidently feels for it, and which seeks a vent in these very curses? Well, you think that you know something more of Irish character now than you did a few hours ago? But you are mistaken if you suppose that you know much yet. You have only seen a few broad national outlines, you have only had time to catch some conception of the genus; you must come again, and again, and again, to investigate the species and the individuals. You will not find one huge Irish wolf, and all the rest made in his likeness. You will find crosses of the lion and the hyena, and the dog and the cat, aye, and strange to relate, of the lamb. You will see every form of animal nature, and there is not one, no, not a single specimen, in which, if you look for them, you will not discern some faint and shadowy traces of human nature likewise.

And now, if you please, we will go where we shall behold a noble spectacle of human nature predominant over animal nature; and that under circumstances in which the cravings of the latter are the most loud and importunate, and where

* Every reader knows the last passage in 'Christabel.'

the struggle to vanquish it is the most fierce and desperate. We will venture into that wide and dangerous sea, part of which, however, you may have already navigated for the purpose of seeing certain barbarous, but comical enough, jugglers called Perlet and Laporte,—Tottenham-court-road. I will not describe this long and hazardous voyage minutely, but will suppose ourselves safely landed at the point of our destination which is called SOMERS TOWN. You have seen the Irish,—you are now in the Spanish quarter; and, if your knowledge of the evil qualities of human nature had given you but a feeble notion of the aggregate and composite of these qualities, I will convince you, too, that the common-places about high feelings and high thoughts have never enabled you to conceive the actual power of endurance, the strength, the sublimity of character, which may be attained by those who seek for them. You observed the man of whom I inquired the road? His coat was not ragged; there was no meanness in any part of his attire; least of all, was there an approach to petition in his air. But, if you had looked into his manly and intelligent countenance, you would have seen what ravages had been going forward there; you would have had no difficulty in believing, what is the fact, that a dinner of potatoes is a luxury to him, which not above once or twice in the week he can attain to; and that he must dispense with this occasional repast, perhaps to change for it the rinds that few Englishmen would give to their pigs, because the inhabitant of a southern climate, in a piercing English winter, has need of a blanket for his children, if not for himself. All this is TRUE; and, if you ask why he does not proclaim his sorrow, I answer you, because he is an educated man, because he has pride, because he was a Castilian gentleman. Being bred in affluence, he does not ask you bread in poverty; having recollections of the times when the smiles of court ladies, or the better smiles of an applauding nation, were his, he conceals the fact that there are nothing but frowns for him now; labouring under every circumstance that makes his present misery more agonising and excruciating, he THEREFORE is silent respecting it. Not but that he has consolations in the loss of all worldly good, and, what is far worse, of all his powers of usefulness:

'What supports him, do you ask,
The conscience, friend, to have lost them, overplied
In liberty's defence.'

aye, in the cause of liberty, and order, and law, and morality, and religion.

As you have ventured so far out of all your ordinary tracks of walking, and as far out of all your ordinary tracks of thought, any new proposition I may make will scarcely seem surprising. What, therefore, if I conclude by recommending you to pass an entire night in the REFUGER FOR THE HOUSKLESS POOR? Start not, illustrious tribe of Lacys, Miltons, and Pelhams; there is no novelty in the suggestion. Shakespeare and Fielding did greater things than these; and yet I conjecture their necessities were not quite so pressing as yours. Sit yourselves down, therefore, in the very centre of the building,—not together,—there must be no winks and nods, no self-satisfied remarks that such an old man or woman is 'quite a study,'—nothing to remind you that you are come to survey all around you as superior, and not as

equals; for, trust me, there is no spirit so fatal as this to a right discovery of any mysteries, but, above all, of the mysteries in human nature. Let me, therefore, Mr. Lister, introduce you to that tall woman at the opposite corner of the room to the one at which we entered, who is cursing in a voice of such power and richness as might better befit the singing of anthems. She has been drinking gin, you perceive, all the evening; but never mind that, she will be quiet presently; and, in the mean time, you may examine her face and form. I do not think you ever saw or fancied a set of much more striking features, a much higher, fuller, or more marked forehead; eyes, though in colour they are not brilliant, more strongly set into the head; a nose more strong and definite in outline; mouth and jaw more indicative of animal power. And that manly, say rather, that martial figure. She cannot be much less than six feet in height; it surely never can have been fashioned into such vigour and proportion in a metropolis. No, if you listen, you will hear her history. She has only spent one day in London. She is telling no tale of confiding faith and base desertion; (I should like to see the man who would have betrayed her;) no, it is one of mighty strength, and will, and fixed hate. I think you seldom hear finer eloquence than that with which she is denouncing her mortal foe. True, that mortal foe is the inhabitant of a little village 300 miles off, and is, moreover a woman of no higher station in the world than herself. But how deeply every one around her is interested in the feud that has been going on between them for the last twenty years! How entirely our sympathies are with the speaker, and what contempt we entertain for her puny rival! How perfectly right we feel it was in her to revenge that insulting courtesy which, in the pride of her fine clothes, she made her one Sunday morning, by ravaging her garden, letting her bees out of the hives, and massacring a litter of young pigs! And then how mean, how utterly disgraceful, it was of the poor-spirited wretch to establish, during her short sojourn in the county jail for this offence, a rival sugar-candy shop next door to the house, in which she had long enjoyed a monopoly of that article. In spite of the sublimity of her character, she has some traces of human vanity; she cannot suppress the fact, and, though nowise germane to the matter, it did not seem to be awkwardly introduced, that every brick of her house—and it is the best-built cottage in the parish—was laid by her own hands, that she tilled the garden, planted the fruit trees, in short, redeemed the whole from a waste, and that, too, without asking leave of the lord of the manor, and in defiance of all writs, executions, and all copyhold processes whatsoever. Indeed, it is pleasant to collect from her narrative, that she is quite as much a terror to the gentle as to the simple of her neighbourhood; that rich and poor tremble before the superiority of her character and the magnificence of her exploits.

What a strong imagination she has! She has projected, as it were, the story she is telling into the minds of her hearers, and fancies, whenever she reaches any part of it, that they know what is coming. This, and not, perhaps, a guilty conscience, accounts for her zeal in explaining away the dark passage in her history relating to her husband. Yet the circumstances are awfully suspicious. Her attempt to throw the body into the well, at the bottom of the garden, I do not dwell upon; but why was the countenance black, and why were the hands clenched in death? And why does she provide against the chance of our believing her guilty of the act, by that half-profligate plea which she mutters in so low and hollow a voice, that she suspected him of intimacy with her detested rival?

I am glad to see you so well occupied, Mr. Ward. That man with his dry, sharp features, is a very good subject. You perceive, by his dialect, that he is Yorkshire; and he is not very communicative just now, for he has smelt a rat—in other

words, has discovered that you are a gentleman. But be patient, and you will presently know a great deal of his character. He is a very cunning fellow, indeed; but he is also vain of his cunning, and vanity is now unsealing his lips. All that he is telling you of his history, is false; but that is a trifle, for his way of telling is true, and reveals the man. He is one of those who have preferred the gratification of an evil propensity to the reward of it—a complete amateur in fraud—one who has lied and cheated against his most obvious interest, and who at last, by dint of excessive ingenuity, has come to want a friend and a home. But the ruling passion is strong even in the Refuge; and he would sooner trick you out of one shilling than receive a donation of twenty.

Indeed, Lord Normanby, you are wasting your time. That poor girl, with the bright, wandering, sunken eye, and locks that fall so beautifully over her faded and now rougeless face, is an interesting creature, and you may learn much from her. But why ask her for the story of her life? Whenever the moral feelings have been desolated by crime, the understanding will be perverted likewise; and she will weave, almost unconsciously, into her tale of sorrow, inventions that will change it from a dreadful history of facts into a childish romance. And you do not come here, my Lord, to get materials for a romance; you come to know something of human-kind. You do not come here to learn the crimes of your own class; you come to make acquaintance with another, in which the traits of character and individuality are far more striking. Tempt her, therefore, not to falsehood; but ask her of those things in which she cannot deceive you. See if you can find what good feelings still live in her, what star still illuminates her solitude and desolation; and let that star be the guiding light by which you discover all the other recesses of her heart.

And now, my Lords and Gentlemen, have you learnt any thing? Have you seen any thing which you would not have seen, and which, therefore, you could not have described, if you had remained enclosed within your own narrow circle? If you have, I trust you have learnt something more than merely what will be of use to you in concocting the next article for New Burlington-street. The means, I trust, will prove more valuable than the end. For I think you cannot fail to have perceived thus much—that human nature is not an easily deciphered manuscript—that it must be studied before it can be understood, and that, in order to understand it aright, you must sympathise with its weakness, as that of which yourselves are partakers, and reverence its majesty, as that which has proceeded from the Deity.

LETTERS FROM THE ÆGEAN.

Letters from the Ægean. By James Emerson, Esq. 2 vols. 8vo. Colburn. London, 1829.

THIS is, as our friend Jeffrey would observe, a very respectable little work; and, coming to hand at a time when we are cruelly beset with frost and fog, it has proved very acceptable to us. Honest Bob Acres, finding his courage oozing away at the near approach of a duel, felt very grateful to his ally, Sir Lucius, for talking to him about honour and courage: just so, in the midst of these scenes of gloom and snow-storm, when every thing in the world, save the easterly wind, has become torpid with the cold, we take it very kind of Mr. Emerson for telling us about 'sun-burnt hills,' 'blue, unruffled waters,' and 'skies crimsoned with the hues of sunset.'

Mr. Emerson is a young man, so, at least, we imagine the pages before us sufficiently testify; but we learn, from the preface to his work, that this is by no means the first time he has come before the reading public. He was a contributor to a work published three years ago, called 'A Picture of Greece;' he has also been a contributor to 'The New Monthly Magazine;' and we are sorely tempted to believe his name has been attached to

certain poetical effusions: but our business is not at present with his poetry. From notes made upon the spot, Mr. Emerson has now presented us with two agreeable little volumes; he conducts us over many interesting scenes in the Ægean, moving from Sunium to Syra, and from Syra to Smyrna. At the last place, he makes a short tour into Asia Minor, for the purpose of investigating the sites of the 'Seven Churches;' he then embarks once more, and visits successively Scio, Samos, Patmos, Antiphilos, Naxos, and Mycone, suddenly making an end of his tour at the island of Milo. The narrative is enlivened with several amusing anecdotes and interesting observation. The massacre of Scio, the Arundelian marbles, the Dukes of the Archipelago, and the Vampires, come severally under discussion. Mr. Emerson is a sentimental, and rather an ambitious gentleman, with some taste for picturesque, and a very Irish cast of diction, which some persons may call poetical. For our own parts, we remarked with pain the affectation which too often disfigures his pages, convinced, as we are, that Mr. Emerson is, in reality, an intelligent and an amiable man.

We are not prepared to decide on the degree of merit due either to the author of an epic or a book of travels, who bursts at once *in medias res*; but we felt obliged to Mr. Emerson for sparing us the usual commencement,—the going on board, leaving England, sea-sickness, and twenty other things which we equally nauseate. The author of 'Letters from the Ægean' sets sail, not from Portsmouth, but from the consecrated cliffs of Sunium.

On reaching Smyrna, the following observations on the personal appearance and habits of the Turks are very striking:

'Taken en masse, the Turks are the finest-looking race of men in the world: their oval heads, arching brows, jetty eyes, and aquiline noses, their lofty figures and stately gait, are all set off to full advantage by their ample robes and graceful turbans; all in ease and proportion about a Turk; there are no angles or straight lines in his features or person; in all we find the pure curve of manly beauty and majestic grace.'

'It is inconceivable what a miserable figure an Englishman or a European makes beside him; his black unmeaning hat, harlequin pantaloons, and hard-colored, straight-cut coat, (which will one day puzzle those of posterity who shall be antiquaries in costume,) contrast so villainously with the picturesque head-dress, ample trousers, and floating pelisse of the Ottoman, whilst his glossy beard sings contempt on the effeminate chin of the clipped and docked European. His arms, for "in the East all arm," usually consist of a pair of superbly chased pistols, stuck in a silken sash; a yataghan, with a jewelled handle; a larger and more clumsy knife, called a hanjar, and a scymetar swinging in a scabbard, covered with green or crimson velvet, (as the owner, being an Emir or otherwise, is entitled to carry it,) and ornamented with bosses of gold. The latter is, in general, the most important and valuable portion of his arms, or even of his property. I have seen some blades which were valued at 200 or 300 dollars: many are said to be worth triple that sum, and all retain the name of Damascus, though it is by no means likely that they have been manufactured there. The twisting and intermingling of the fibres of the metal are considered as the tests of excellence; but I have never seen any possessed of the perfume said to be incorporated with the steel in the real Damascus sabres.'—Vol. i., pp. 85, 86.

Some of our readers will perhaps learn of Turkish toleration with surprise:

'Their trades, their merchandise, and the exercise of their religion, however, suffer little or no suspension for the Turk, though the prince of bigots, is the most tolerant of professors. Provided he suffer no injury from his neighbour's creed, in property or person, he neither punishes him for his opinions, nor attempts to drag him out of them; and, consequently, Roman Catholics and Protestants, Armenians, Jews, and Greeks, have all their respective temples and religion equally protected by the Sultan with the mosques of Mohammed.'—Vol. i., p. 99.

It has been remarked by Madame de Staël, '*Voyager, quoi qu'on en puisse dire, est un des plus tristes plaisirs de la vie*;' and, probably, it is not until we have exchanged our own pleasant homes for

the heat, dirt, and discomfort, of a southern climate, that we become converts to her opinion. No doubt, there are many objects in Italy, Greece, and Egypt, very curious to behold; and, contemplated in the twilight beauty of imaginary prospect, they possess irresistible charms; but, when we approach them in reality, and find ourselves at *mal aise*,—when, for instance, after passing a restless night in a bed occupied by various created beings besides ourselves, or perhaps in no bed at all, we reach some point of universal interest, irritated by want of sleep, bilious with the effects of a hot sun and an unusual diet,—and, conscious that we have travelled to the scene before us for the express purpose of being pleased,—why, then, to say the least, the gratification we experience very seldom overpays us for all the privation and fatigue we have undertaken in search of it.

Among other inconveniences generally laid out of calculation when people propose to travel, is the Sirocco. The following are the observations of Mr. Emerson respecting it:

'It seldom, however, blows with force; it is rather an exhalation than a wind. It scarcely moves the leaves around the traveller; but it sinks heavily and damply in his heart. A stranger is at first unaware of the cause of the wretched misery he endures; his temper coarsens as his spirits sink; every person, and every circumstance, annoys him; it affects even his dreams, and sleep itself is not a refuge from querulous peevishness; every motion is an irritating exertion, and he trudges along in discontent and unhappiness, sighing, and thinking of home, and attempting to philosophise on the arrant folly that could induce him to leave England for an hour to come to such a dismal, miserable, uninteresting banishment as the Levant.'—Vol. i., p. 150.

If our author be correct on the subject of the Vampires of Eastern story, we must conclude that Lord Byron has made improper use of them:

'The grand interest of these narratives, however, seemed to arise from Santorin being the chosen abode of the Vronkolakos, or Vampires of the Cyclades. This popular superstition, which varies from the Vampire tales of Hungary, in the demons being merely attached to mischief and not addicted to blood, supposes the evil spirit to enter into the lately deceased body of his victim after interment and reanimating it, to visit the houses of his former friends, inflicting on them the bitterest torments and unceasing injury.'—Vol. ii., pp. 84, 85.

In the course of his tour, our traveller fell in with a Greek named Gregorio, a vine-dresser, whom he represents as the only sincere devotee he ever encountered of his nation. 'Morning, noon, and evening, was he engaged in his devotions; the lamp before the image of the Virgin in his chamber was never suffered one moment to be untrimmed.' It happened that, on one occasion, Mr. Emerson found the saintly Greek under the influence of strong mental depression. He inquired the cause, and was told that Gregorio, in a dream on the preceding night, had imagined he murdered a fellow-townsmen. Mr. Emerson endeavoured to cheer his spirits by representing that it was only a dream; but the Greek replied, 'Alas! *mikordo*, dreams are like feathers, which serve to show the winds of our passions.' This idea our author treats as something very singular and ' quaint.' We believe, however, that Gregorio is by no means the only person who has held this doctrine; Smellie, in his work on the 'History of Natural Philosophy,' asserts, that, were men desirous of ascertaining the tendency of their passions, they should keep a *noctuary*, in which every dream should be carefully registered. He adds, that, at one time, he kept a noctuary himself, and many curious things he appears to have inserted therein; among the rest, the following: Mr. Smellie imagined himself one night 'tripping it on the light fantastic toe,' in a very elegant society of ladies; suddenly, his inexpressibles, (so it is recorded,) from some unknown cause, descended to his heels; whereupon the same Smellie, even in his dream, painfully alive to the absurdity of his situation, exerted himself vigorously, as became a man in so singular an emergency, but to no purpose; the more Smellie tugged and pulled at his

imaginary small-clothes, the more the small-clothes refused to quit their very distressing situation. This was a real psychological curiosity: we quite forget what conclusion the philosopher deduced from it; but, no doubt, it was one eminently useful in practical life.

Mr. Emerson visits the Grotto of Antiparos, and finds it far below its reputation and Goldsmith's description. We suspect, that, after all, the Grotto of Antiparos is very inferior, as a natural curiosity, to that of Addlesberg in Istria.

The 'Letters from the *Ægean*,' contain a good deal of information and amusement, although we cannot but quarrel with the style in which they are written. What could possess a man of Mr. Emerson's good sense to pen such a paragraph as the following?

'Sunset on land is more reposeful and lovely, but sunrise on the ocean is grandeur itself. At evening *de* (?) sinks languishing behind the distant hills, blushing in rosy tints at his declining weakness; at morn, he rises all fresh and glowing from the deep, not in softened beauty but in dazzling splendour. With the weary pace of age, he glides, at eve, from peak to peak, and sinks from hill to hill; at morn, he bursts at once across the threshold of the ocean with the firm and conscious step of a warrior. His decline conveys the idea of fading brightness; his rise the swelling effulgence of mounting and restless light.'—Vol. i., p. 7.

We protest this is the very acmé of *fadeuse*. The next is but a few degrees better:

'Behind us was the Gulf of Smyrna, by which we had entered; its then turbulent waters now placid as the brow of infancy, and glittering in the beams of the morning sun like plates of silver on a warrior's mail, while the snowy sails of the Levantine barks which glided along them, were scarcely to be distinguished from their own dazzling whiteness.'—Vol. i., pp. 29, 30.

Then comes a passage like this:

'Its immense area, of six hundred and eighty-seven feet, was under a crop of wheat, which, as it bent in graceful waves beneath the faint breeze from the valley, seemed to heave a long-drawn sigh over the surrounding scene of departed grandeur.'—Vol. i., p. 135.

This would scarcely be tolerated in verse. Pray, Mr. Emerson, avoid the like extravagance in future.

LIFE AND TIMES OF ARCHBISHOP LAUD.

The Life and Times of William Laud, D.D., Lord Archbishop of Canterbury. By John Parker Lawson, A.M., 8vo. Rivingtons. London, 1829.

THREE parties have, at different times, promulgated their notions of the British Revolution; and we wish we could say their several contributions had conducted to aught resembling trial unity. First, most influential, as most interested, and endowed with most of active effrontery, a party which we need not name still speaks of the whole struggle as originating in the scruples of fanaticism, describes the popular faction as provoking mortal strife for the position of a table, or the use of a rag, and draws characters of its leaders from the dregs of the conventicles. Next advance a band of stout republicans, who, fixing their idolatry on the few ardent spirits whom the Civil Wars inspired with the bold project of a commonwealth, can see nothing in this period of history, except as it promoted or withstood their views. Lastly appears a party, if it deserves the name, of whom the only bond is literary fastidiousness and indolence, who never attempt to institute any scrutiny whatever into the real wants and tendencies of the age which they write about; but content themselves with 'calling from the heterogeneous mass of former annalists, whatever may best rouse the languid interest of those who find no stimulus in the search for truth, and with drawing such deductions as lie most upon the surface, with regard to the political and social results of the era they pretend to delineate. The partial views of which we have spoken, have each of them some basis of truth. We must not dissemble the existence and extent of fanaticism, while we laugh at the mean artifice of those who would attempt to throw its

shadows on the memory of the wisest and the best among our forefathers. Again, we cannot but be dazzled with the political light of that era which has bequeathed to us such works as those of Harrington and Milton, while we may not shut our eyes to the historical fact, that their republican speculations were too novel and daring to be suited to the wants of their age. And finally, we may perhaps not differ very widely in our estimate of general results from the careless writers to whom we have already alluded as contenting themselves with a general and superficial survey. But, as the former classes erred by giving only a partial view of the mixed elements of the epoch before them, so the latter fail to seize the distinguishing features which separate any one historical epoch from any other, or at least from any other of the same kind. It may, perhaps, be found that all the mistakes which are made with regard to the true character of a social revolution, proceed from not sufficiently discriminating the two main subjects of inquiry which every such event affords,—the social state and wants, namely, which form the real cause, as their satisfaction forms the rational object, of the conflict, and the particular state of individual feeling and intelligence which modifies the general result. The former knowledge is absolutely necessary in order that a general view of the subject may be obtained; the latter, in order that acquaintance may be made with the real life and actions of the period.

The lives of public men often afford the best epitome of the general dispositions and opinions of their era, or else the most striking examples of some one of those elements in excess. In the class of those whose characters are compounded from a variety of contemporary impulses, may be reckoned, on the one hand, Clarendon, whose conduct proved a tolerably complete exposition of the idea of government, civil and religious, which animated the efforts of one side in the contest. On the other hand, there could hardly be a more active embodiment of the mixed nature, temporal and spiritual, of that popular revolt from the combination of Church and State, which, imbued with a strong tinge of religious sentiment, yet fixed its views and taught its instruments in political reformation, than is afforded by the character of Vane. Examples of the narrower spirit which only embraced some fragment of the general feeling may be found chiefly among the Scottish Presbyterians on the one hand, and, on the other, has nowhere been displayed more broadly than in the character of their persecutor, the Archbishop Laud.

Of the spirit and feelings of the new biographer of this celebrated person, we shall have occasion to speak in another, perhaps in several future, articles. In the mean time, we will give two extracts from his first chapter, which will at once explain the nature of his opinions, and will prepare the ground for the observations we may hereafter have to make:

'On the fourth of January, 1600, he was admitted into deacon's orders, by Dr. Young, Bishop of Rochester, and, on the 5th of April, 1601, he was ordained a priest by the same prelate. We are informed that this prelate, "finding his study raised above the systems and opinions of the age, upon the noble foundation of the fathers, councils, and the ecclesiastical historians, early perceived, that, if he lived, he would be an instrument of restoring the Church from the narrow and private principles of modern times, to the more enlarged, liberal, and public sentiments of the apostolic and primitive ages." Nor was Bishop Young mistaken in his judgment, though he well knew that it would be a task of no small difficulty,—a task, indeed, not likely to be accomplished without bloodshed. For, after the English Reformation of religion, notions had been entertained by many persons in the Church, not only subversive of its constitution, but highly detrimental to the safety and well-being of the state. The discipline of Geneva, and the doctrine of expediency, as laid down by John Calvin, who has the merit, if merit it be, of contriving and introducing

a new system of ecclesiastical polity, and who, moreover, has the still more questionable merit of discovering in the sacred Scriptures certain doctrines which exhibit the Deity not in the most favourable light, as he himself was forced to confess, when with grief he admits it to be an *horrible decretum*.—this discipline had led many astray from the maxims of primitive truth and order, and the notions of expediency, as to the Church and its visibility, had engendered a lamentable callousness towards that very Church of which they all professed to be sincere members. Forgetting that the Church of Christ is one and undivided,—forgetting that the Saviour himself declared, “my kingdom is not of this world,”—and forgetting, too, that this union is not solely a spiritual union, composed at the same time of outward heterogeneous masses, but is, in truth, both a spiritual and a temporal union, no limits were assigned to the extravagancies of fancy, and no safeguard adopted for the preservation of that Church, the doctrine of which Latimer, Ridley, and Cranmer, had sealed with their blood. But the axiom which Laud subsequently assumed, though doubtless sneered at by Dissenters, is strictly true, that the Church must be guarded both against Rome and Geneva—that a Church founded on the Apostles, and not on Christ, is the Roman and the Genevan rock—but that the Church must have a more solid basis, or it has no foundation at all; and that, though it must be built on the foundation of the apostles and prophets, Jesus Christ himself must be the chief corner-stone. There were, therefore, only two positions,—either that the Church must be a regularly organised body, which, though a voluntary association, acknowledge Christ for its head, or it must not; there must either be systems of authority and regulation, or there must be anarchy and confusion; it must, in short, either be like a well-governed and well-organised kingdom, to which it is compared in the Holy Scriptures, or it must be so ill-regulated, as that all its members may literally do that which is right in their own eyes. The former, then, was the position of the well-wishers of the Church of England, the latter that of those who were preparing the way for its overthrow: the former was advocated by those who defended order and primitive truth, the latter by those who were on the point of holding out the right hand of fellowship to novelty and fanaticism. Laud hesitated not for a moment to decide; and his memory does truly deserve well of the Church of England, since he so early avowed himself the bold defender of its constitutions.”—Pp. 13—16.

Under the auspices of those and other leaders of the Puritans, the tenets of Geneva were making rapid progress in the University, engendering the most novel speculations about the Church, and producing a general carelessness about its constitution, which threatened to sap its very foundation. Forgetting the moderation and admirable caution of the great men under whose auspices the reformation of the Church of England had been conducted, they seemed as if they had themselves determined to commence a new reformation, while at the same time they admitted, that the line of demarcation between the Reformed Church and that of Rome was broad and insurmountable. Nor was their policy the less crafty than their general conduct; for, since they well knew that, were they to make any notorious innovation at once, they would be published by the civil and ecclesiastical power as disturbers of the peace of the realm, their sole hope lay in biasing the minds of the students in the University, over whom they were placed; while, at the same time, they merely corresponded about their differences with their friends among the laity who were in power and influence. Now it was, indeed, that the doctrines of the Church of England, founded on holy Scripture, were not only disputed, but positively denied. The opinions of Calvin respecting predestination, reprobation, election, and all the other kindred dogmas, were seasonally maintained, although their defenders might have known that, besides looking in vain for Calvin's *horrible decretum* in the holy Scriptures, the fathers, with the exception of St. Augustine, and his two disciples, Prosper and Fulgentius, never conceived such tenets, so far as individuals are concerned; and perhaps, in this view, even St. Augustine himself may not be conceded. The doctrine of Scripture and of the Church respecting regeneration in infant baptism was denied, as was also the doctrine of the Church respecting the holy Eucharist. It was absolutely denied that either of these sacred rites had any efficacy in man's salvation. The article in the Apostle's Creed respecting Christ's local descent into hell, as set in the Convocations of the Church in 1552 and 1562, was disclaimed as erroneous, merely, as Dr. Heylin well remarks, “because repugnant to the fan-

cies of some foreign divines, because they were in dispute among themselves about the meaning of it.” The episcopal government of the Church was held to be against the ecclesiastical constitution of the apostolic and primitive times, and this, too, by men who were conversant with the apostles and fathers. Presbyters and bishops were held to be synonymous, and the fallacious doctrine of expediency in church government was assumed, it being asserted that the apostles did not trouble themselves about ecclesiastical polity; the doctrine of the visibility of the Church was disclaimed, and sectarian conventicles were held to be as scriptural as the Church, though these, it was evident, were all founded on the visions of enthusiasts, and false positions erroneously drawn from holy Scripture. The Pope was furiously declared to be Antichrist; the ordination of the Church of Rome was pronounced invalid, as part of “the mark of the beast.” These, and other such opinions, were “as positively and magisterially maintained as if they had been the chief articles of the Christian faith.” The public services of the Church, according to the Book of Common Prayer, were either carelessly performed, or neglected; offence was taken at every sacred rite and ceremony which had been practised since the days of the apostles. “In a word,” to quote from Heylin on this very subject, “the books of Calvin made the rule by which all men were to square their writings, his only word (like the *ipse dixit* of Aristotle) admitted as the sole canon to which they were to frame and conform their judgments; and, in comparison to whom, the ancient fathers of the Church, men of renown, and the glory of their several times, must be held contemptible: and, to offend against this canon, or to break this rule, was esteemed a more unpardonable crime than to violate the apostles' canons, or dispute the doctrines and determinations of any of the four first General Councils; so that it might have proved more safe for any man, in such a general deviation from the rules and dictates of this Church, to have been looked upon as a heathen or a publican, than an anti-Calvinist.”—Pp. 22—25.

MONTMORENCY.

Montmorency; a Tragic Drama. The First of a Series of Historical and other Dramas. Together with some Minor Poems. By H. W. Montagu. 8vo., pp. 142. 5s. Joy. London, 1828.

As one of the ablest writers in ‘The Foreign Review’ has presented us with a view of the rise, progress, and present state of play-making in Germany, we think it but right that a similar history should be written of this staple manufacture as it exists among ourselves. We do not assert that we have attained all the excellence which our neighbours have reached in this department. The business here has been much less systematised; and each man goes after his own inventions in a way which he certainly would not do if the laws of his craft were settled, as they, no doubt, ought to be, at a general meeting of masters and workmen. Several of the machines, too, which it seems are in common use on the Continent, have never been introduced here. The fate-loom, for instance, of which a particular account is given by Mr. Carlyle, though, we believe, it is not unknown to some of the more eminent houses, has never worked with any great success. Yet we question whether there may not be even more interest attaching to the description of a great branch of national industry while it is in an unfinished state, than after all its operations have been reduced to uniformity. At any rate, if that be the consummation after which we should aspire, nothing can more tend to hasten it than a knowledge of all the different processes which are now commonly resorted to by ingenious and hard-working men.

With these feelings, it is our intention forthwith to commence a series of articles upon modern dramas, explaining, as succinctly and clearly as we can, the different processes through which a play passes from the first purchase of the raw material till it is completely fitted for the Drury Lane and Covent Garden market. The present moment, when the most dangerous opinions are in circulation, is the time at which we think it most advisable to undertake this task. The newspapers are every where proclaiming that a play called ‘Caswallon,’ which has been acted to very crowded

houses, is a tragedy, and, consequently, that it is expedient tragedies should be produced at our theatres. Now, if ‘Caswallon’ were a tragedy, we should take the liberty of arraigning the conduct of the managers most severely for allowing it to be acted, and of the audience for applauding it. Once in twenty years, a quasi-tragedy like ‘Rienzi,’ may, no doubt, be produced, and ought to be applauded, because, if it were not so, the public would not be able to talk of the legitimate drama, old English feelings, and so forth. But beyond this point, we affirm no manager has a right to go. There are a set of men regularly attached to the establishment of each theatre, whose business it is to make plays; and there is no man of honest feeling who must not scout the notion of depriving these men of their livelihood, by encouraging another class of productions, and thereby throwing discredit upon their useful labours. We are anxious to prove, therefore, that no such dishonesty has been committed; that, in engaging the services of Mr. Walker, Mr. Price has not committed the atrocity of employing a writer of tragedies, a measure which would unquestionably occasion a general strike among the playwrights; but that he has merely added, as he had a full right to do, a good serviceable person to his establishment, the workmen at which were many of them growing lazy, and few of whom were acquainted with the latest improvements in the trade. But ‘Caswallon’ is for our next number. In the present we wish to introduce, and we shall merely introduce, to our readers, a very promising young gentleman of the name of Montagu, who has written a book called ‘Montmorency,’ and who, having studied the stage for many years, proposes to write a series of historical dramas.

The fruits of this long study are apparent in this gentleman's volume. He has evidently considered Mr. Macready in all his best attitudes; and, having done so, he has then straightway consulted his books to find what man in history, and at what particular period of his history, might be supposed, without great violence done to history, to stand in these same attitudes. Now it has occurred to him, that Henry Montmorency, being a well-made Frenchman, and having involved himself in some scrapes, was as likely a person as any to assume, in theatrical language, the air and gesture of passion. This being settled, Mr. Montagu then devises a set of situations which will bring out these attitudes; and, lastly, he considers what words would sound well, as issuing from the mouth of a man in the various postures in which he has imagined him. Our readers will see that this is the rationale of the following scene. Julia of course is Miss Phillips.

‘Enter Duval, hastily.

‘Duval. This note, my lord, from the Duke of Orleans;—

Who, with his staff, is still at Melun, some Two leagues hence, unrecovered of fatigue: He bade the messenger deliver it with all speed.

‘Henry. Leave. (Exit Duval.) Hurried?—how's this?—

(Reads.) “The King and Parliament of Toulouse have publicly proclaimed us ‘Traitors!’—And set a price upon our heads.”—

Julia.——Julia.——read this;— Then say how I must act. (Gives the note.)

‘Julia. (After reading with great trepidation, exclaims with tremulous passion,) Oh dark—dark foreboding!—

The gulph is wide Before us,—and that which urges to its brink Is—the vulture-grip of destiny,—

And—will not be opposed!—

‘Henry. Collect thyself, my wife;—how must I act? ‘Julia. Alas, I know not,—think no more of’t—it may pass

Harmless, if unregarded,—unacted on.—

Oh,—my husband,—our child—our child!

‘Henry.——Traitor!— Sink that in dangerless obscurity?—

—Traitor!— ‘Julia. Oh!—dreadful word!—

‘Henry. How must I act?

'Julia. But my tortur'd heart!—
'Henry. How must Montmorency act?
'Julia. (In a stifled voice.)
I am faint,—must leave thee,—will return:—
(Montmorency calls for an attendant.)
Come to me,—
'Henry. I will:—but Julia,—the word,—
'Julia. (With dignity, after a severe struggle, and in a hoarse but significant undertone.)
Montmorency—must be—himself!—
(An attendant enters,—Julia leans upon her, almost fainting, and exit.)
'Henry. And shall be—himself!—
Condé was an excellent prophet!
Somewhat too close, though:—there is preknowledge
Founded on concert with the things to come!
Blacken'd to infamy? priced to a mob?
Hired out to a gallows-butcher? and by these
Puppets of royalty!—
Not while this scabbard knows its trust!
Fortune!—
Advance me in thy smiles, that I may stamp
Detection on their hypocritical brows!
That I may hurl them from their secure'd security!
Insidious Prelate!—Ministers of hell!—
Base panders to injustice!—
Ye call me young;—would laugh my threats to
scorn,—
The lion's whelp, when least we think, turns lion!
(Exit Henry de Montmorency.)

Still further to illustrate Mr. Montagu's
scheme, we quote the following:
'I know not how it is,—but close upon
Deeds which in their beginning we had stamp'd
Rightful,—there oft does steal a sickness
That almost turns decision from its bent.
The cause that I have ta'en up, is good,—but then
The means usher in such frightful consequence,—
And so poor the ends of human action,
That my opinion staggers.
The very business that brings me here
Is pictured to my soul's infirmity
As motiveless—
'Tis maddening, this dark contrariety:—
I cannot bear it:—must not:—need not!
His hand falls mechanically upon the hilt of his
sword, but slides from it as he appears more
deeply plunged in thought.

Who would be proud of life?—
To-morrow, at this hour,
Thousands shall have yielded up the last gasp
Of their strength, or of their feebleness!—and this
Is but a world's lesser repetition,
Each hour's—each speck of time's similitude!
Who, then, would crave this shadowy existence?
This all-unsatisfying dream?
This efficiency of man?—of man, that, now,
Exalts him to the gods,—and feels, anon,
Age or disease, or his rude fellow's arm,
Plucks from him the pillow of his security!
I'm almost tempted to rid me of the burden (Half
draws his sword.) (Energy.) Without me these war-
like preparations dissolve into a bloodless league.
(Draws his sword out of the scabbard. Voices heard
outside.)

Pshaw! this interruption:—Chautelute?
No!—some brawl,—swords out!
I will, for a time, be umpire. (Retires.)

We shall give no opinion of the merits of this
particular scheme of play-writing, till we have
acquainted our readers with some others with
which they may compare it; and we shall proceed
to Mr. Walker in our next.

CHRISTIAN SECTS.

An Inquiry, what is the One True Faith, and whether it
is professed by all Christian Sects: with an Exposition
of the whole Scheme of the Christian Covenant, in a
Scriptural Examination of the most important of their
several Doctrines. 8vo. pp. 394. Whittaker, Treacher,
and Arnot. London, 1829.

'In philosophy,' says the ablest layman that
ever wrote on theology,* 'when truth seems
double-faced, there is no man more paradoxical
than myself; but, in divinity, I love to keep the
road, and, though not in an implicit, yet in an
humble faith, following the great wheel of the
Church by which I move, not reserving any pro-

* Religio Medici, p. 15, edit. 1736.

per poles or motion from the epicycle of my own
brain.' Many readers of Sir Thomas Browne have
been puzzled by this sentence: not a few have
thrown the book away in indignation when they
reached it; and some even of the more tolerant have
perhaps perceived in it that very spirit of paradox
which it so zealously disclaims. But those who read
books, not that they may judge them by pre-con-
ceived rules, but that they may enter into the spirit
of their author, and so profit by them, will, we ap-
prehend, not be inclined either to give up a great
man for a single passage, or yet to believe that he
could have uttered so grave a sentiment in care-
lessness or wantonness. We believe that Sir
Thomas Brown had a meaning in the passage,—we
believe it was a meaning which, whether right or
wrong, whether of universal application or suit-
able only to his particular character, was nowise
at variance with the freedom of his general spec-
ulations, and does not the least militate against
the principle of free inquiry generally. What
we think his words imply is this, that he fixed
upon a certain Church, because it expounded
some principles which he held true and important,
more satisfactorily than any other; that he found
it a useless and unprofitable task to be constantly
sifting the opinions of his neighbours, to see
whether, along with these true principles, they
might not hold some false ones; that, re-
posing upon what was positive in his own creed,
he was always at liberty to go out into other
creeds,—not in quest of their falsehoods either,
but to see whether there might not be some truths
in them* which could combine with and illus-
trate those specially enforced by his own sect; and
that, by exercising this privilege,—of seeking true
opinions wherever they were to be found, instead
of endeavouring to coin new opinions in his own
mind, at the risk of their having been coined al-
ready, and moreover of their not being worth any
thing,—he was able to exercise a larger charity,
to obtain a greater quantity of truth, and better
escape the temptations to vanity and contention,
than if he had spent all his life in the detection
and exposure of error.

We repeat it: this view of the subject may be
false, but it is not hostile to the largest and freest
inquiry, to the most philosophical Catholicism; in
short, it is the very principle of Eclecticism which,
taking as a foundation one comprehensive idea, en-
deavours to connect with it every thing that there
is of positive in all other creeds, in which that idea
has been not at all or only imperfectly realised, and
excluding the negations in each of them. Thus,
to take an instance from the history of English sects:
An Eclectic philosopher like Sir Thomas Browne
becomes a member of the Established Church. He
is determined to this step because he finds more
to approve of in its doctrines, its discipline, than in
any other community; and, in addition to this, be-
cause in its character of an Established Church, it
fulfils, he conceives, more perfectly than any other,
the idea of religion embodied in social institutions.
Well, with this idea he starts in his examination
of other sects; not to see how far they differ from
it, or how far they are wrong, but to find whether
there is not something in these also that is right,
and which will fasten on to the truth he has already
mastered. In this inquiry, we will suppose he
discovers the Society of Friends; and they, he
finds, have been, throughout their whole exist-
ence, endeavouring to realise the idea of religion
embodied in the mind of the individual. He finds,
no doubt, that, along with this positive part of
their faith, they hold the negative opinion, that
religion ought never to be embodied in institu-
tions, or in any forms whatever; and he finds, too,
that some who hold his doctrine, and perhaps
that he himself, may have some tendency to think
that it is not needful to provide for religion fur-
ther, when once it has been established in a
Church. But these two negative opinions, he soon
convinces himself, are both exceedingly wrong,

* See his remarks just above the passage quoted, on
the truths which he was able to extract out of Popery.

(his own far the most so); and, accordingly, his
next object is to discover what copula there is
between the two positive truths, and how they
must be cordially and inseparably linked together.

The author of the inquiry, 'What is Faith?'
(who is a layman also,) is of a different school of
Eclectics from the one we have described; and,
though his pretensions are much more noisy,
and his language towards the majority of men
much more contemptuous, we take leave to say
he is of a much inferior school. He thinks (and
herein Sir Thomas Browne might not differ from
him) that there is a vast deal of error, confusion,
and contradiction, in the opinions of all sects.
But he thinks, also, that the way to arrive at
truth is to find out, not in what each sect is right,
but in what each is wrong. To see where each
sect is wrong, and how much it has deviated from
an imaginary standard in the author's mind, to
ascertain the degree of their declination, and to
set them all right:—this seems to have been the
object and the nature of his undertaking. Whe-
ther such a task is very favourable to the growth
of that humility which is the mother of truth,
or of that kindly feeling which is its nurse,
we shall not stop to inquire. That his zeal in
detecting other men's contradictions has not
saved him from many in his own statements, we
think we could satisfactorily prove by a few
quotations; but, as we have no wish to dogmatize
on points of doctrine, and thereby to fall into the
very error with which we are reproaching him,
we will, instead of quoting from the body of his
work, make a remark or two upon a passage in
his preface, from which we gather that he con-
siders his possession of one qualification, that
of being a layman, a compensation for the want
of most others:

'So long as the ministers of different persuasions
confine their endeavours to the vindication of their par-
ticular creeds, what can they tell us that we have not
been told before? What can they say that has not
been already said? And they must so confine them.
If they write at all on these subjects, they must main-
tain the doctrines of the Church to which they belong.
A minister who cannot conscientiously do this,—who
would be led by his own interpretation of the sacred
text to controvert or question some of those doctrines,
—must withhold his sentiments from the public, if he
would not incur the censures of his diocesan or of his
congregation, and lose the income on which, perhaps,
he depends for a livelihood. No long time hath elapsed
since a clergyman of talent and irreproachable char-
acter was deprived of his living by his bishop for
avowing tenets inconsistent with the creed of the
Church of England; and the more the bishop was right
in so dealing with him, (and, certainly, it is the bishop's
duty to take care that the clergy of his Church teach
the doctrines she insists upon,) the more reason have we
to expect a full, free, and impartial investigation of
such doctrines only from laymen. The clergy may be,
and, no doubt, generally are, when not prejudiced by
education in favour of particular tenets, more adequate
to the undertaking; but we cannot expect that, so cir-
cumstanced, they will be willing to enter upon it, al-
though their opinions and dispositions might lead them
to do so were there nothing to deter them. The author
of this work, therefore, thinks that it is no disparage-
ment to the clergy,—nor any unbecoming assumption
to himself,—to say, that the circumstance of its pro-
ceeding from a layman requires from him no apology,
lest presumption be attributed to him on that account.
In proportion as he is unskilled in what is called theo-
logy, he may be expected to be the more impartial; and,
although he is conscious that he has no just pretension
to the qualifications of a writer, he has a valid claim,
he trusts, to common sense; and that, according to the
old adage (true at least in this instance) "an ounce of
mother wit is worth a pound of clergy," is much
more valuable than that understanding which is ac-
quired by education for the clerical profession, and
which can seldom fail, as the profession is now con-
stituted, to be biased by the discipline it has under-
gone."—Pp. v—vii.

This passage we think erroneous throughout.
We deny that a clergyman must confine himself
to a mere bare repetition of old opinions; we
deny that he would expose himself to the censure
of his diocesan by any new attempt to 'justify

the ways of God to man,' we deny that a person unskilled in theology is, therefore, more likely to be impartial; and we deny that 'common sense' will at all avail in this or in any other subject as a substitute for deep, careful education and study. There is no doubt that a churchman, if he were to proclaim either from the pulpit or the press, or even in conversation, that he disbelieved in the doctrines to which he had subscribed, would subject himself to ecclesiastical censure; and we are free to confess, that the man who did so, is not one from whose wisdom or whose honesty we should expect much assistance in clearing up difficulties or discovering truth. But that a churchman, who, without setting himself up as a discoverer and a censurer of the false doctrines which may have mixed with the true in the faith of his own Church or of any other,—an assumption which we have endeavoured to show is as little sanctioned by philosophy as by religion,—who should fix his attention upon those principles which he believes are more completely realised in that Church than elsewhere,—who should endeavour, by every novelty of argument and illustration, to deepen the conviction of them in the minds of his hearers or readers, and, if he believes they hitherto have been wrong placed in the ordinary system, to restore them to their proper situation,—who should gather out of the opinions of any other sect those principles which, though in harmony with the principles of his, (and holding these, he could have no wish to take any that were not in harmony with them,) and even necessary to their complete fulness, had nevertheless never been sufficiently connected with them by his predecessor,—that a clergyman may do all this without even a nod of reprehension from his superior, we hold to be as certain as that he may use his discretion in the purchase of a horse or a picture. The restraint imposed upon him in each case is exactly the same. His free-will may be embarrassed in the one by the low state of his finances: in the other, by the low state of his mind: but in neither will it be interfered with by the bishop. And, if we think that the obstacles to clergymen's pursuing religious inquiries honestly are imaginary, or arise entirely from themselves, we are still more firmly convinced that the advantages which belong to them, above any other class of the community, for this work are enormous.

We should like to ask those who talk so largely about the impossibility of men with professional habits and 'class-interests,' fulfilling the appropriate duties of their calling, whether there is nothing in the circumstances of laymen which must give a narrowness and superficiality to their views? Have they no professional interests that are unfavourable to the growth of feelings which belong to a practically religious man, and, at the least, as unfavourable to the formation of that scientific habit of mind which is necessary to the systematically religious man—the theologian? Oh no, says our author; the farm, and the exchange, and the senate, are just the schools for nurturing men to supersede the monks of the cloister; because, forsooth, those who are bred up in them have such a vast stock of 'common sense!' Common sense, indeed! as if, in the year 1829, it were possible still to juggle mankind by the use of that precious phrase!—as if every person with that moderate knowledge of quackery which it would require some ingenuity in the present day not to possess, was not aware that 'common sense' is another expression for the impatience of every principle that cannot be made evident in half a minute's conversation—for the superficial coxcombry which laughs at whatever seems contradictory, not knowing that a system in which some things did not seem contradictions, would bear a *prima facie* mark of falsehood—for indolent indifference to truth, for self-satisfied ignorance. All the subtleties of schoolmen, divines, metaphysicians, councils, and systematizers of every description, have not introduced one tithe of the confusion into the studies of

theology and metaphysics, (with mathematics the empirics have fortunately been prevented from meddling, and this accounts for their dislike of them,) which have been brought into them by the blundering conceit of the worshippers of this bastard 'common sense.' It is owing to the apathy of the clergy, (an apathy arising, as we have before asserted, not from the necessity of their situation, but from a want of that strength and earnestness of feeling which characterised their forefathers,) that so many of these irreverent hands have been already laid upon the ark of the covenant, that so many crudities have been put forth as rational, exactly because the elaboration of them had caused no effort of reason to their inventor. They have fallen short of their duty, not in that they have not degraded their faith by bringing it within the ken of the sensual and fleshly eye to which they presented it, but in that they have not laboured to couch men's eyes that it might be beheld in its grandeur and purity. For this purpose, they should resort to all ancient expedients,—they should avail themselves of every modern invention,—above all, they should study the structure of the organ which they are required to heal. By fulfilling this high responsibility honestly, humbly, and fearlessly, they will show men that some of the very truths which, in their rashness, they would have torn from the system as useless excrescences, stand in its very centre, are dove-tailed into innumerable others, and would by their removal involve the falling of the rest; that principles of the most intimate importance to man's welfare are generally those of whose truth he must be convinced by inward consciousness, before they can be made clear to him by outward demonstration; and that the declaration that 'a wayfaring man, though a fool, need not err' in his path to heaven, is perfectly consistent with the assertion, that, if (parting with the humility which was his security) he were to attempt to lay down a system of theology, he might err most grievously; even as the same 'wayfaring man,' though excellent in the use of mechanical tools, might mislead his auditors considerably if he were to attempt a lecture on Mechanics.

THE LAST OF THE PLANTAGENETS.

The Last of the Plantagenets: an Historical Romance, illustrating some of the Public Events, and Domestic and Ecclesiastical Manners, of the Fifteenth and Sixteenth Centuries. 8vo., pp. 464, 12s. Smith, Elder, and Co. London, 1829.

RICHARD III., as our readers, if they likewise read 'The Gentleman's Magazine,' are aware, left two natural sons, the one Robert of Gloucester, the other a youth whose relationship he recognised the night before the battle of Bosworth, who afterwards passed through various accidents, was discovered, some time in the reign of Henry VIII., working as a builder, and survived all the reign of Edward VI. The adventures of this person, supposed to be described by himself, form the subject of the romance before us.

The author has evidently drunk deeply at those wells of English undefiled, the old chroniclers; and we do not know any sources from which we may derive more strength and refreshment. In these days, when not merely metaphysicians and natural philosophers, but even poets and novelists, use, even in their description of the living world, abstract *dried* words which are supposed to *represent* thoughts more effectually, and, as it were, disinterestedly, because they *embody* none of it—it is delightful to go back to this pastoral age of language when weeds were like roses fresh gathered; imperfect types, indeed, of the tree from which they came, but so rich with its juices and its dews, that the imagination apprehended its essence, though the eye could not comprehend its shape.

But the best use, we think, of studying this old language is, not that we may imitate it, but that

we may impregnate the dead phrases of our own age with a portion of its life and beauty. We can well forgive our author, however, for his attempt to give us a picture of the actual style as it speaks to the fancy, rather than of the spirit of the style as it speaks to the imagination. The best thing is to wear a friend we love in our heart of hearts, so that he may reform our character and spirit. But we like books occasionally to bring the picture of the man himself before our eyes, with his very look and gesture, and, perhaps, clad in the very costume in which we have been wont to see him and converse with him. The only danger, in the latter case, is, that our remembrance of him is not sufficiently distinct; that, being so much blended with our individuality, a portion of that individuality should have cohered inseparably to him; and that in our picture some of our own vulgar features should be joined, contrary to the Horatian precept, with his more handsome and striking ones. This accident has sometimes befallen our author. He has not been able always to keep up the spirit of the olden times, while he has been imitating their language; and sometimes the imitation has made him forgetful of the higher importance of giving interest to the narrative. But, on the whole, we have been very much pleased with the work. It breathes of the flowers of the olden times; and, if now and then we detect a little mixture of newer scents, lavender water or Eau de Cologne, we willingly attribute this to the age and not to the writer. The following extracts will prove that there is great interest in the story, as well as in the language:

'Great was my disorder at being thus left alone with so noble and exalted a personage; yet do I not speak of his greatness of rank only, but also of his goodly form and courteous manner; for that record of him is all untrue, which was written what time the Red Rose prevailed over the White, declaring that Richard was fearful to look upon. He was not, in truth, as one bath of late full slanderously described him, "little of stature, ill-featured of limbs, crook-backed, his left shoulder much higher than his right, and hard-favoured of visage;"—none of these was he: for, though his person were not of the tallest, it was well up to the middle stature of men; and, albeit one of his shoulders might be somewhat higher than it's fellow, yet he had a shrewd eye who did discover it, and a passing malicious wit who reported it to be a great deformity. As for his face, in good sooth it had none evil expression in it; though it was marked with much serious anxiety, and was pale and discoloured from weariness and an agitated mind, which scared his brief slumbers with fearful dreams, and gave occasion to his enemies to say that he was haunted by a guilty conscience. Nevertheless, his step and demeanour were full of pomp and royalty; so that it wanted not for any one to say even unto me, though but a simple cloister-bred youth, "that is the King;" since all men might well perceive that he could be of nothing less than the blood-royal, or the wearer of a crown. His habit was the close dress of red velvet which he wore under his armour, surmounted by a blue velvet robe lined with fair ermines, and choicely embroidered with the letter of his name in gold. The blue Garter of England embraced his knee, and the enamelled George thereof hung to an azure scarf round his neck; whilst upon his head he wore a chapeau of red velvet and ermine, which threw his rich and full brown hair back upon his shoulders.'—Pp. 19, 20.

'The sacred calm and silence, and the holy grandeur of the spot, seemed to bring back unto my mind those days when my young feet were wont to wander in the Cathedral at Ely, or around my father's tomb in the Church of the Grey-Friars at Leicester; and, towards the close of day, I again went alone into the chancel, telling the good Custos, or Decanus as he is now called, Christopher Urswicke, that I would vain pray awhile in secret on that evening, since early on the morrow I must hasten forward on my journey. It was then, enwrapped in thought, that I drew nigh unto the royal tomb by the high-altar, and, kneeling there, prayed audibly unto God and the Virgin for the salvation of all my House; and especially for King Edward, the Duchess Margaret, my noble cousin the Lady Bride Plantagenet; and King Richard, whom I called my father. As these orisons escaped from my lips, I heard a gentle voice near me exclaim, "Holy St. Edward!—

my cousin, and the son of King Richard!" whereupon I started, and, looking around, beheld that a leaf of one of the golden gates of King Edward's tomb was open, and that within was a maiden seeming also to be in prayer. She was clothed in a white habit, such as was worn by Novices of the Order of St. Austin, and the fading light was yet enough to show me that it was indeed no other than the Lady Bride at her father's sepulchre; now most wondrously increased both in beauty and in stature since I had last beheld her.

"Hereupon I hastily arose in much confusion; but, as she was about to depart, I noted that in her surprise her rosary had fallen from her hand, and I forthwith entered the tomb and restored it unto her; saying, albeit, with a hesitating voice, "Believe not, Lady, that I knew of your presence in this place, or came hither to trespass on your secret prayers and pious piety. Indeed, you may well deem that what I have now uttered is not to be spoken lightly, seeing that mine own safety is so much involved therein; nevertheless, I rest me securely upon the good faith of the Lady Bride Plantagenet."

"Stranger," responded she, hastily drawing her robe around her, as if anxious to avoid a more perfect recognition on my part, and yet speaking in a voice so sweet and gentle that it came upon mine hearing like the soft swellings of distant music:—"Stranger, you have in sooth awakened my wonder: yet whoever you may be, whether another false adventurer from Burgundy, or the true son of the blood-stained Richard, your words with me are as if they had never been spoken; since I have neither desire to expose thee unto danger, nor ought to do with the world or its vain-glorious honours."

"As she spoke thus, her visage became suddenly crimsoned over; yet was it but for a moment, as anon her pure and eloquent blood flowed onward in its wonted course, and her face resumed again its tranquil fairness; such as the still lake shows unto heaven, when the passing gale hath gone by, and the light ruffle which it called forth hath died upon the clear waters. When I last saw the Lady Bride, there was much of the glad look of childhood in her bright blue eyes, and the rich abundance of her hair of paly gold; and those golden locks did still remain even more beauteous than before, but methought that her merry glance was now shaded by a musing melancholy, which shall be full rarely noted in the countenance of one so young. Having awhile marked her in silence, listening with wondrous delight unto her voice, I now assayed to answer her; telling her, that, albeit I was indeed from Burgundy, and even from her noble kinswoman the late Duchess, yet was I no false adventurer who sought to disquiet the realm, nor was my noble father sought of that which the world was wont to call him. I then told her of the Lady Margaret's decease, of her mission which had brought me unto England, and specially of that touching the good Queen Elizabeth and herself; wherein, I added, I could not but rejoice, since it would lead me again to hear the voice of one who was so passing fair."—Pp. 278—280.

MEDICAL REFORM.

Analytic Physiology: Treating of the Cure of Nervous Diseases, by External Applications to the Spine. By Samuel Hood, M.D., A.B. Second Edition, with an Appendix. 8vo. pp. 207. Whittaker and Co. London, 1829.

THIS is about as marked a specimen of confident presumption as we recollect to have ever met with; the author congratulating himself, with all imaginary complacency, upon his discoveries, their importance, and the certain reform which they have actually begun to introduce into the practice of medicine. All this eclat and influence, however, must, we conclude, be entirely confined to the utmost sphere of his own fire-side; for, though we have had very considerable acquaintance with medical literature during the last twelve years, we do not recollect ever having heard either of Dr. Samuel Hood, A.B., or his book, before it was sent to us last week from his publishers. But, that we may exculpate ourselves from any possible charge of misrepresenting his extravagant pretensions, we shall here copy his entire preface:

"It usually takes about a quarter of a century to effect a revolution in the principles of any of the abstruse sciences: half of that period is past since I commenced trying to establish the treatment of nervous diseases on physiological principles; and, should I live

to the age of fifty, I venture to predict, I shall see the object which I have had in view accomplished. I was amused to hear, the other day, that a celebrated journalist declined reviewing my work, because my opinions were too new, whilst others assert that neither my facts nor conclusions are new. Such is the progress of science: first question the facts, and, when they can no longer be disputed, then deny the originality of the discovery. These observations indicate that a change has actually begun in the theory of medicine. As to the originality of the discovery, posterity will settle that point with its accustomed equity; and the object of this work is to drive empiricism from regular practice, by extending the knowledge of the animal economy."

After such a flourish of trumpets, we were prepared to look, at least, for singularity, if not for novelty or accuracy; but, instead of either, we find the work consisting chiefly of a collection of facts and observations from well-known authors, mixed up with a number of cases; most of them, as it appeared to us, of little moment, but detailed in so dogmatical and repulsive a manner, as must disgust and repel every class of readers.

Medical men will be able to understand the extent of the reform in the profession meditated by Dr. Samuel Hood, when we inform them that he is a believer in the identity of life (which he chooses to designate the *vital force*) and galvanism, the nerves and the blood-vessels in the animal system performing the same rôle in eliciting this vital force as the plates of copper and zinc in the galvanic trough or the voltaic pile. The original author of this great discovery, he further informs us, was not himself, but Sir Isaac Newton; for, though he is too proud and independent to allow himself to be biassed by any authority, how high soever it may be, he is right fain to shelter himself under every great name which he can by any means twist into his haband. For example:

"In the foregoing investigation of physiological causation, I have uniformly traced irritability and decomposition to a power generated between the blood and the nervous system. This power, I am persuaded, is either galvanic electricity or a modification of it; but, if I am wrong, it is an error which I participate with Newton, Gaubius, Hunter, Wollaston, Abernethy, and Philip; and who need be ashamed to err with such authorities, even if the opinion itself were unsupported either by analytic or synthetic analogy? It would be satisfactory to have an incontestible proof that the vital force is electric," &c.—P. 187.

No doubt it would be satisfactory to a theorist, if nature would condescend to create proofs expressly for his speculations; but, as it does not appear that this has been done in the present instance, we are put off with a string of *alleged* authorities instead of facts. We have said '*alleged*,' because three out of the six authorities above enumerated, did not even know, and could not know, of the existence of galvanic electricity, and of course could not by any possibility identify it with life. What could Newton or Gaubius know of it, though Galvani published his work a few years before Hunter's death? Be this as it may, we have here the dogmatic authority of Dr. S. Hood, (page 187), that the vital force '*is not an ignis fatuus; it is a substance perceptible by the senses; it is tangible by the thermometer*'"

We do not recollect of having ever met with a piece of more '*perceptible*' and '*tangible*' absurdity than this. Hartley's vibrations and vibratuncles of the brain were common-place sobriety to this announcement of the tangibility of life by the thermometer; nay, more, Dr. Hood affirms that this tangible vital force is not only identical with galvanic electricity, but with what Van Helmont called '*Archæus*,' and Stahl, '*the soul*.' Our medical readers will at once perceive the accuracy of our author's erudition, from this strange jumblement of things so distinctly different.

His practical facts appear to us to exhibit principles altogether worthy of the theories for whose support they are brought forward. His

title-page announces, indeed, that his chief remedies consist of external applications to the spine; but these are, almost in every case, limited to the forming of eschars with caustic. By means of nitrate of silver, he burns off a portion of the skin from the size of a shilling to that of a half-crown; and, in this manner, he proposes to cure all incurable disorders, such as tic douloureux, hydrophobia, epilepsy, Indian cholera, locked-jaw, &c., and also to stop the cold paroxysms of ague; not that he had any wish for this novel practice to supersede the treatment with bark, but because '*the bark is afterwards more efficacious*.' He appears to be altogether ignorant both of Fowler's solution and the sulphate of quinine, both of which are all but specific in the cure of ague; at least, he gives us no hint from which we can infer his knowledge of either. His eschar practice in this complaint we conceive to be harsh and cruel; and we infer, from his own showing, that it is not of great efficacy.

The evidence which he produces, from the success of the same practice in locked-jaw, is only worthy of notice in so far as it renders manifest the shifts of a theorist to impress every thing possible into his service. The only case which he gives is on the authority of a Captain Jackson, whom the author had instructed in his method of cure previous to his sailing to the coast of Africa. The treatment was, of course, as successful as that recorded of Madeira wine, with which it is said a whole ship's company was cured of locked-jaw, besides the authority of Captain Jackson's own letter, reporting the cure. The author adds:

'Being recently at Liverpool, I called on his excellent mother; she informed me, that she had often heard her son say that the treatment of tetanus recommended by me had been completely successful, and that Captain Jackson had instructed her second son, Richard, (also dead,) who cured Captain Owen, of the ship *Rathbone*, belonging to Thomas Tobin, Esq., of locked jaw.'—P. 206.

The reform of medical practice, announced by the author as already begun, we infer, has not been in the profession, but among sea-captains and their brothers! We no longer marvel that we never before heard of Dr. Samuel Hood; and our readers, after this, cannot feel much surprise, when we tell them that our author gravely proposes to prove the truth of Christianity by phrenology. To prevent the possibility of mistaking the learned Doctor upon this point, we shall state the matter in his own words:

'Philosophers have, in all ages, admitted an intimate relation between the physical and moral nature of man; it is, therefore, not a little strange that such a quantity of sarcasm should have been heaped upon Gall and Spurzheim, for bringing, with immense labour, this relation into a more tangible shape. The kind of ridicule now levelled at phrenology, was, in former times, liberally bestowed on chemistry, astronomy, and Christianity itself: and, like them, it will be likely to prosper under persecution; truth shines brightest from the collision of opposing sentiments.

'The Baroness de Staël has truly observed, that every discovery appears absurd at its first announcement; the new conclusions are tried by the test of known principles, while it is precisely by abandoning old principles, especially if they be false, that new conclusions are brought to light. Man feels a sort of selfish regard for the doctrines which he imbibes in his youth; he feels himself, as it were, personally attacked when they are assailed: it is a most difficult lesson to unlearn error; and to acknowledge it, requires no inconsiderable share of magnanimity. A discovery has to combat the prejudices of mankind as well as the difficulties of science; such, at least, has been the fate of Gall and Spurzheim. Fanatics have assailed them, as being irreligious, while they have only shown the moral law of the Evangelists is the best adapted to the physical and intellectual capacities of man, and have, in fact, drawn from natural history new and powerful evidence of the Divine origin of Christianity. Moralists have railed at them, as confounders of right and wrong, while they have been only laudably employed in pointing out a method by which man may become more easily acquainted with the predominant propensities of his nature, without the instructive, but often painful,

lessons of experience. The sages of antiquity, the legislators, philosophers, and divines of modern times, have all added to a knowledge of the general nature of mankind; but phrenology shows the individual to himself, setting his natural character naked before his eyes. —P. 115.

We conceive that our readers have now had enough, and more than enough, of Dr. Samuel Hood, the great medical reformer.

INTRODUCTORY CANTO TO A POEM ABOUT SOMETHING.

I.

THAT was a noble and a virtuous rage,
Which, in the midst of violence and lust,
Saw proud and helmeted warriors forth to wage
War on the Tyrant, to uphold the just,
To shield from wrong the helplessness of age,
To pour sweet balm on the corroding rust,
Which grief, deep, silent, gnaws into the heart,—
Methinks that was a great and generous part.

II.

And yet we're apt to laugh at these same knights,
And think them rather valorous than wise;
And wonder how men blest with the delights
And luxuries which affluence supplies,
Should prefer sieges, shipwrecks, perils, fights,
To their own home's endearing sympathies,
And, plainly scorning their domestic duties,
Should run about protecting injured beauties.

III.

'Tis very well for us, (who have the happiness
To live under a mild Administration,
And revel in security,) to profess,
We really think it mental aberration,
To study the 'redress of grievances.'
But, then, we take not in consideration
The altered circumstances of society;
For what is outrage now, was then propriety.

IV.

And then redress by law was so precarious,
That very few indulged in litigation;
The 'Bill of Middlesex,' and all the various
King's writs, had but a scanty circulation.
There was no such effective 'Certiorari' as
A good knight's arm; so that, in every nation,
Stout warriors did the business of attorneys,
And your Orlando's were the only Barriers.

V.

But now, the circumstances being new,
'Tis difficult to choose an occupation.
I must confess, I've often wished to do
Something might gain a decent reputation;
And I am wont to set before my view
Examples, best deserving imitation,
Of those who, in their several professions
Of arts, or arms, by conquests, or possessions,—

VI.

Have in their day made an important stir;
Yet against all some strong objections lie;
My politics are not such as, I fear,
Lead, in the Church, to highest dignity:
And of all nauseous objects, I aver,
That which excites the most disgust in me,
Is a Lord Bishop reading to the nation,
'In justice to himself,' a recantation—

VII.

Of principles, which (accidentally)
Might interfere with subsequent promotion.
For Painting I've by no means a good eye.
Of Music I have not the smallest notion,
Nor any species of philosophy.
Of love I've drunk a very decent potion.
A young man cannot study at the Bar,
Without, at least, two hundred pounds a-year.

VIII.

'Tis said, Lord Eldon was not worth a sou,
When first from Scotland he arrived in town;
But then I should suggest, that very few
Have brains or luck to do what he has done.
And your opinions must bend like a yew
To gain the emoluments of a silk gown:
I always have esteemed the bard's vocation
A gentlemanly high-road to starvation.

* Vide Bishop Doonham's—*passim*.

IX.

Yet, such a road! that, if my hope could rise
High as the wishes I have dared to build,
If I could e'er aspire to realize
The humblest of the many dreams that filled
The splendid future of my phantasies,
I'd starve content to have such hopes fulfilled.
But my friends tell me I'm so unmetaphorical,
My poems would be far too episodic.

X.

Ariosto is all episode. To my
Mind Ariosto is the very glory
Of a bard, who in England, Italy,
Portugal, Spain, have graced their nation's story.
Perhaps you'll think that *sentimentally*,
France is omitted in this inventory:
But the fact is, I have a deep contempt,
Mixed with a hatred, for the Government,—

XI.

Character, customs, literature, laws
Of the French people. I, of course, foresee,
That this most sweeping damnatory clause
Will raise a charge of 'nationality.'
For which I care not: I speak out, because
Such is my opinion. As for poetry,
I think a man might read French till his brains
Were added, and find little for his pains.

XII.

But this is episode.—The army is,
In war-time, very far from being agreeable
To all the notions I have form'd of him;
And though, in peace, you have a comfortable
'Amend' in the enjoyment of the mess,
I don't consider any luxuries able
To drive away the leaden, dead ennui
Of being tied to one society.

XIII.

There is no doubt, the glory of the nation
Mainly consists in her superiority
In naval matters: but th' accommodation
Is so deficient,—and the blasphemy
Of the Lieutenants—and the consternation
Created by a storm—appears to me
So dreadful, that a man had better far
Live in a mad-house than a man-of-war.

XIV.

Besides, the vice and immorality,
Which, as my good friend Smith* asserts, defiles,
From head to stern, the whole ship's company.
And therefore, no trade suiting, for awhile
I shall take up inditing poetry,
A few spare tiresome moments to beguile.
So for myself and my unhappy verses,
I crave the reading public's tender mercies.

XV.

The only difficulty I find in me,
The magnitude of which you cannot doubt:
(It meets me in every quarter like a dun,
And puts all my ideas to the rout.)
The fact is, ere my poem was begun,
I did not settle what to write about.
I can't think how I made such a mistake in
The very outset of my undertaking.

XVI.

The omission of this slight consideration
Is likely to occasion me much pain;
But, as the bark of my imagination
Has left the shore, I can't put back again.
So first I'll mention my determination
To have a MORAL PURPOSE in my strain,
And to the very best of my ability
Uphold the noble doctrine of Utility.

XVII.

'Twere to debase our faculties divine
Not to direct them to some useful end.
Seeing that Mr. B.—l—w—r's views and mine
Agree in this, and that my worthy friend
In 'The Disowned,' has managed to combine
Instruction with amusement, and to blend
The great truths of political economy
With a few scattered precepts on gastronomy,—

* See the Rev. G. C. Smith's work called 'Portsmouth,' containing an elegant detail of the immoralities prevalent in ships in harbour, and also at Mutton Cove and North Corner.

XVIII.

With similar designs, I lately wrote
Some pastorals defending 'Usury':
I'm shortly going to advocate the 'Vote
By Ballot,' in romance or tragedy.
And, if I've time to publish it, I've got
An epic on 'Our Foreign Policy.'
And after that I'll promise you a sonnet
On 'Codification,' or an ode upon it.

XIX.

I hope to rouse the spirit of the nation
Against the expenditure of Government,
By some Pindaric stanzas on taxation;
And, if to these a patriotic ear is lent,
I'll write a canto against emigration,
And set forth the true theory of rent,
Besides a very plaintive little ditty,
On the report of the Finance Committee.

XX.

But these are projects which do not admit
Of instant execution; and I'm fired
With an outrageous wish to benefit
The human species, and shall soon get tired,
If I've to wait 'till my slow-kindling wit,
Has had sufficient time to get inspired;
So I shall tune my harp to sing of fights,
And tales of ladies fair and armed knights.

XXI.

But, I assure you, not with any view
Of eulogizing either dame or knight;
For I hold with 'The Westminster Review,'
That it is very shameful to excite:
Ideas of feudal dames being chaste and true,
Or the male friends bold, generous, and polite,
And that Miss Landon, by her warlike strains,
Could only mean to turn young ladies' brains.*

XXII.

Oh! be! you naughty L. E. L. that you
Should show such an iniquitous intention
Of hurting the Reviewer's feelings so!
One, too, who showed you so much condescension!†
For my part, every deed of derring-do
Or helm, or lance, or steed, I chance to mention,
I shall subjoin a hint, that war does not
Increase the national capital a jot.

XXIII.

I shall have ferried sentiments, with touches
Of tender feeling, but no single thought or
Word that might shock the purest-minded duchess,
Or any lover of true 'milk-and-water.'
In fact, my poem, reader, shall be such as
No man need blush to read out to his daughter,
No father of a family need fear
To let his children of both sexes hear.

XXIV.

I dare say that all people will expect
To find my poem quite a 'perfect treasure':
But I must tell them they must not object
To wait a little for their 'lot of pleasure';
For really I can't promise to effect
Another Canto without much more leisure.
So, reader, you must wait with resignation
My period of poetical gestation.

* See the review of L. E. L.'s 'Troubadour,' in 'The Westminster Review.'

† We shall address Miss Landon as our equal, because we consider her unequal.—1844.

SOME ACCOUNT OF THE RISE AND PROGRESS OF LITERATURE IN HOLLAND.

We purpose taking some kindly notice of the writers of Holland,—a class of men who we think have hardly received justice at the hands of the literary world. Our own countrymen, who, in search of amusement or instruction, have ransacked the literature of other European nations, have overlooked our Dutch neighbours as if by general convention, and neither their language nor the minds that have ennobled it, have been much noticed among us, in the way of honourable commemoration. True it is that something has been spoken of the Hollander,—his rage for commerce, and his passion for tulip-roots, the magnificence of his dairies, and the bulky superfluity of his nether garments, have all in their turn attracted our attention, and with reason; but the Dutchmen have been remarkable for better things than these. It must be confessed, when we look at Holland,—a country planted in the waves, dependent for its very existence on the durability of its dykes,—a country essentially commercial, we should scarcely imagine it calculated to promote the cause of literature; but the fact is otherwise; few countries have a juster title to celebrity on that account, and the wise and learned of all succeeding ages will not deny that such men as Erasmus, as Grotius, as Julius Scaliger, and Isaac Vossius, have a just title to their gratitude. The lovers of science should always commemorate the names of Huygens, Boerhave, and of Swammerdam. While to those who delight in the quiet elegancies of civilized life, who should be dearer than Rembrandt and Gerard Dow, than Mieris and Paul Potter?

The same century, the thirteenth, which witnessed the rise of Bruges and Antwerp, presents us with the first distinct evidences of the dialect, since known as the Dutch language. The productions of the German minstrels, which were collected by order of Charlemagne, formed, perhaps, the model for the madrigals, or love romances, of Holland of the fourteenth century; the writers of which, Alaerlant, Jean Helu, and Melis Stoke were simple burghers; but their verses accompanied the breviaries of high-born ladies, and were, perhaps, more frequently perused as being the most interesting. Like the poems of Chaucer and Gower with us, these effusions contributed in some measure to fix the language in which they were written. The fifteenth century forms a new and remarkable era in the history of literature. The art of printing was then first discovered by Laurent Koster, an inhabitant of Haarlem. The greater skill or industry of the German trio, Gutenberg, Faust, and Schœffer have, however, won for them the eulogies due to Koster, whose merits are scarcely recognised beyond the walls of his native city. The first consequences of this discovery to letters in Holland, were not so important as might have been expected. At the court of Philip le Bon, of Burgundy, whose influence prevailed over the extent of the present Netherlands kingdom, French alone was spoken; and the 'Chambers of Rhetoric,' which had their origin at this period, following rather than leading opinion, served, by sanctioning the introduction of foreign words only, to corrupt the language over which they pretended to watch. The circumstance most worthy of notice in this age is the first appearance of prose writing.*

From this time, however, the ignorance that had so long prevailed began to pass away, and the impulse which had been given to human know-

ledge and curiosity at the end of the fifteenth, displayed itself with increased vigour at the commencement of the sixteenth century. In Holland, the treasures of antiquity were illustrated by Agricola and Erasmus; philology, by Hadrianus Junius; mathematics and geography, by Mercator and Ortelius; botany, by Dodonæus; chemistry, by the Isaacs; anatomy, by Vesalius; and jurisprudence, by Rævardus and Vigilius; but their works are in Latin. The University of Leyden had its origin in the following romantic causes: This city, having effected its preservation from the arms of Philip II. with the sufferings and death of 6,000 of the inhabitants, was offered by the Prince of Orange, an exemption from taxes for many years, or the establishment of a university. The citizens decided for the latter. Four months after the raising of the siege the university was founded, and, in a few years it became one of the most celebrated in Europe. About the same time, by the labours of Coornhert; of Marinix Aldegonde, the composer of the national song of 'Orange Boven'; of Wilhelmus van Nassauwen; and of Spiegel, the language was very greatly purified from its corruptions, and the poetry of Roemer Visscher gave it simplicity and grace. But it is to Hooft, who flourished in the beginning of the seventeenth century, that the Dutch language is most indebted. He brought it, it may be said, at once to perfection. Equally admirable in poetry and in prose, the partialities of his countrymen rank his 'Granada,' a pastoral, next, if not equal, to the 'Aminta,' of Tasso; and, in the history of his country, he proved his native tongue to be capable of imitating the sterner beauties of Tacitus, an author whom he is said to have perused fifty-two times, in order to fit himself for the task he had undertaken. Hooft is a rare instance of talents of the first order rightly employed and duly rewarded. The friend of Huygens and Descartes, and the protector of Grotius, he was the intimate and confidant of William I., Prince of Orange, and was ennobled by Louis XII., of France. Vondel, the Shakspeare of his adopted country, was the contemporary, and shared the friendship of Hooft. The subjects of his plays are generally scriptural; his best, as dramas for the stage, are 'Gijzebrecht van Amstel' and 'Palamedes'; his last, though Greek in name, has reference to the death of Barneveldt, and was felt and attempted to be avenged by that great man's murderers. But it is in his satires that Vondel greatly shines. In these he displays an energy of style and ideas, that has been equalled by no satirist of Holland, and surpassed by few of any other country. More popular than either Hooft or Vondel, though with less pretensions to purity and elegance, is Cats, the poet of low life. His writings, in their detail and strong nationality, remind us of the paintings of the Dutch school. In one of his poems, 'Het Huwelijk,' or the Marriage, in six cantos, he depicts, in description and in dialogue—the girl, the lover, the betrothed, the woman, the mother, and the widow. Hence his influence with the common people, to whom he speaks in their own way, recalling all their own familiar ideas; and hence, like Burns, he is the companion of the cottager's fire-side, in whose possession may often be found only two books, the poems of Cats and the Bible. We may also name, among the writers of this period, Grotius, who, happily for his fame, rejected the language of his country, and wrote in Latin; Scaliger and Justus Lipsius, professors at Leyden. It has been said by Niebuhr of this university, that, Rome or Greece excepted, there is no place that has greater claims on the lovers of antiquity than the hall of the university of Leyden, where the portraits of the eminent professors encircle that of the illustrious founder. The splendour which the efforts of the fifteenth and sixteenth centuries had shed over Dutch literature was now to decline; a foreign, and, consequently, a spurious, taste prevailed; the writers of the early part of the eighteenth century, instead of pursuing the bent of their own genius,

and obeying no laws but those which the nature of their subject and the taste of their readers instinctively require, adopted for their own tongue the rules which Boileau and less worthy critics had declared necessary for the French. As might have been anticipated, boldness and originality in style and thought gave way to the absurdities of pedantry and the feebleness of imitation; and it is difficult, from among the writers of the time, to select one of sterling merit. We must not, however, pass over the peasant, Poot. He is tame and almost below mediocrity when addressing a patron, but shows himself a true poet in his odes on the happiness of a country life; and the trees, under which he had so often reposed from his labours, the flowers at his feet, the sky above him, the gurgling waters, the birds and the breeze, live again in his then inspired lines. Next to Poot is Langendijk, who, notwithstanding the buffoonery of many of his compositions, has been compared to Molière, and must always be granted a high place among comic poets. Van Haren is chiefly known by his odes and his poem entitled 'Les Gueux,' wherein he celebrates the praises of the great founders of Batavian liberty. If polite literature lost ground in this age, the cause of science advanced. Philology, jurisprudence and physic, flourished under the auspices of Haverkamp, Oudendorp, Drakenborch, Heinecius, Boerhave, Albinus, Campen, Musschenbroek, Lyonnet, and Farenheit. From this person few writers appeared of such eminence as to attract or demand particular notice until after the French Revolution.

The first name that then occurs is that of Bilderdijk, a most voluminous writer, who unites the apparent discordant qualities of lawyer, grammarian, and poet. At an early age he obtained a prize from the poetical society of Leyden; after which he put forth translations of the Greek tragedians. A refugee from his country in 1795, he delivered lectures in London on poetry, in the French language, which were well attended. In 1806, he returned to Holland, became the instructor of Louis Buonaparte, and published three volumes of tragedies of unequal merit, together with translations from Pope, Horace, Pindar, Theocritus, &c. On the abdication of Louis in 1810, he lost his pension, and, three years afterwards, joined the triumphant shouts of his countrymen on the return of their native prince, an event which, in his 'Hollonds Verlossing, or Deliverance of Holland and Wappenkreet; or an Appeal to Arms,' he has celebrated in verses well worthy of the subject. His fame depends, however, very principally on his grammatical works, and we can recall no author who has treated with greater skill the delicacies and niceties of that crooked study, or who has evinced a deeper insight into the structure of their own language than Bilderdijk. He has been ably seconded by Siegenbeek in his profound remarks on the new system of orthography, by Wieland, the author of a Dutch dictionary, in eleven volumes, and of a work on Dutch synonyms, as well as a good elementary grammar; and by Kinker, in treating of prosody. In moral philosophy, Kinker's name, in conjunction with Van Hemert, again appears as the propounder of Kant's system, and in which endeavour they have been skilfully seconded by Schröder, Deiman, Falk, and Jeronimo de Bosch. Kinker is a wonderful man. He embraces in the wide circuit of his knowledge, it may be said, all that pertains to philosophy and the fine arts. His summary of Kant's system has called forth the highest and most marked praise from Degerando in France. He has written and translated tragedies and operas for the stage. His 'Janus Reviv'd,' and 'Ruminator,' prove his vast acquaintance with policy and government. His 'Essay on Dutch Prosody' has been mentioned. With the ancient he is equally conversant as with modern languages. Among his productions are remarks on an Egyptian manuscript, and on a Greek manuscript in

* In the library of Brussels is a general history in manuscript, composed about the year 1450, or 1460, with plates, in one of which is seen a monk consoling the last moments of Augustus; and, in another, the funeral of the emperor is celebrated with all the pomp of the Romish ritual, whilst the notary and other personages present at the writing of the monarch's will, are habited in the costume of the fifteenth century.

Egyptian characters. Like all great Dutch authors he is a poet, and a good one; and, to his other accomplishments, he adds a thorough knowledge of music. Yet, of the name of the Professor of Liege, how few in England have heard? Foremost amongst those who have deserved well of their country, stands the Count Van Hogendorp. Having entered the army at an early age, this nobleman proceeded, as a private individual, to the Northern States of America, where he was honoured with the friendship of Franklin, and resided under the same roof with Washington. Returning to his native land, he found it agitated with the first ebullitions of revolution: the people contending against their rulers, and he espoused the cause of the Prince of Orange. The final triumph of republicanism forced him to take shelter in the quiet of private life. This enlightened individual was one of a few whose hopes for the future rose superior to circumstances, and who, at the most fearful period of Napoleon's ambitious career, still looked forward to the final regeneration of their country. When the time arrived for expelling the invaders, he came forth to cheer and sustain his countrymen, and elevate their minds to the level of that exigence on which their freedom depended. The studies to which he had devoted himself during his retirement proved of eminent service to him, as the head of the Committee appointed, in 1815, to draw up *la loi fondamentale* of the Netherlands kingdom. The Count Van Hogendorp ranks with Kemper and Van Alphen as the most efficient and most eloquent members of the National Assembly. We wish we had room to quote a few only of the arguments of this statesman in favour of a free trade, from his 'Considerations of the Policy of the Low Countries.' His other principal works are, 'On the Commerce of India,' and on the 'Commerce, Culture, and Finances of Java.' In the eloquence of the pulpit, Dermont and Vander Palm have surpassed, in the estimation of their countrymen, all their contemporaries.

The Dutch language is rich in historical records; amongst later writers, Kluit has published a history of the different forms of government which have prevailed in Holland from the earliest periods. It is a work replete with information imparted in a clear and concise style. To any one who is acquainted with the entangled state of this country's earlier history, it is satisfactory to find for a guide a writer who has brought it into any degree of order, and has explained the origin and changes in the connection of the sovereign with the people; the state of the nobility and the commons at different epochs; the commencement of the corporative privileges of the different cities of Holland and the rise, influence, and power of the national assemblies and the stadtholders. Van Wijn in his 'Historical Evening,' and 'Sedentary Life,' has opened up to his readers a fund of information regarding the manners and customs of past times. The history of William II. Count of Holland, by Meerman, and the history of Guelderland, by the Baron de Spaan, may be consulted with advantage by the curious in the traditionary lore, laws, politics, and religion of the middle ages; and Herman Bosscha and Van der Palm have recorded the events which finally led to the restoration of the Orange family to the possessions of their ancestors. Some exceedingly interesting sketches of the characters who figured on the scene at that critical period, and who first raised the cry of Orange Boven, are to be found in Van der Palm's work, displaying all the fervour and animation of which that great writer is so capable. But the authors who have distinguished themselves on treating more recent subjects of history are Scheltema and Van Kampen. Scheltema would stand even higher than he does, if he had not too great a love for Hooft and obsolete phrases. He has taken Hooft as his model, who, as we have noticed, is himself an imitator of Tacitus. Even with these defects, his 'Russia and the Low

Countries considered in their connection with each other,' is of a high and lasting character. 'The History of the French Dominion in Europe,' by Van Kampen, is one of the most interesting with which we are acquainted. Van Kampen has also given to the world a very good geographical and political description of the Netherlands. It would be unjust to pass by unnoticed the very excellent Roman History of the learned and indefatigable Stuart, the author also of the 'History of the Country since 1753,' and of the 'Annals of the Netherlands since the Restoration.' The subject of ecclesiastical history has been ably treated by Plank, and Dermont, and Ypeij, and Hamelsveld. Numberless as the falling leaves of Vallombrosa are the poets. Mr. Bowring has already introduced some of the more ancient to the notice of the English nation: of the *irritable genius*, we could find much to say; but we know not where we should end, and we are prevented giving specimens to bear out our very favourable opinion. We believe no one could read, without emotion, the tale of the former world, by Bilderdijk,—'The Exhortation to Israel' of Da Costa,—even the Poems for Children' by Van Alphen—the patriotic songs of Bellamy,—'The Orion' of Nieuwland—the Tales of Tollens—the 'Merits of Women,' by Spandaw—the more lofty strains of Helmers, Kinker, Van Hall, and Schouten, or the 'Tombs' of the soft and melancholy Feith. We pass, finally, to the only department of literature in which the Dutch language does not boast any work of merit—the novel and romance of modern times. Loosjes approaches the nearest to the best models in his 'Life of Maurice Lijnslager,' and the Sieur Renaud Jean von Goldstein tot Scherpzel, and Madame Wolff and Agatha Dekken, have united their talents in some pleasing works of fiction; but the poverty of the rest shows the further necessity of exertion. Wherever there are successful examples, there will be abundance of imitators or rivals.

N.B.—Wagenaar, a voluminous and respectable author on Dutch history. Albinus, a celebrated anatomist. Hoogvliet, a poet.

MONTI AND THE ITALIAN WRITERS OF THE EIGHTEENTH CENTURY.

No. III.

Among the poems which Monti wrote in celebration of Buonaparte's victories, the finest is that which is entitled *Il Beneficio*. It is a sublime vision, in which he paints the sorrows and the hopes of Italy when the French General, descending upon it at the head of a formidable army, promised to relieve it of its misfortunes, and to restore to it the grandeur of its power and prosperity—a promise which, by the by, the said General never performed. The description of this warrior appearing on the Alps, and terrifying Europe with his frowns, recalls, perhaps, too exactly the picture of Achilles putting a crowd of enemies to rout, by merely appearing on the front of a vessel. In his personification of the Italy, under the form of a beautiful woman covered with wounds, and lamenting in desolation and mourning, he seems to have combined the powers of Michael Angelo and Raphael. We must quote the passage:

'Una donna di forme alma e divine,
Per lungo duolo attrita, e di squallore
Sparsa l'augusto venerando crine,
In vision m'apparve; e sì d'amore,
Sì di pietà mi prese e di rispetto,
Che ancor la veggio, ancor mi balza il core.
Era un sasso al bel fianco duro letto,
La sinistra a la gota; e scisso il manto
Scopriva le piaghe de l'onesto petto.
Insultavan superbe al suo gran pianto
Stranie donne scettrate; e la strigne
Or questa or quella di catene; e vanto
Traean dal lutto ond'ella si pascea,
E crescean strazio ed onta a la meschina:
Io le guardava, e d'ira il cor fremea.

Ma l'afflitta, che pur ne la ruina
De la prime fortune alma scerbava
Sdegnosa, e dentro si sentia regina;
Ricordivi lor disse (e il capo alzava)
Ricordivi che tutte io v'ebbi ancella,
Tutte... e rotto un sospir gli occhi inclinava.
Poi le luci nel pianto ancor più belle
Girando a i figli, chi di voi m'aita?
Sciamava. E i figli forsennate e felle
Volgean l'arme in se stessi, e la ferita
Del sen materno esacerbando, il poco
Misero avanzo le togliean di vita.
Mi corse a l'empia vista e gelo e foco
Per le vene, e gridai: pace, fratelli.
Per Dio pace: e trovar non sapea loco.
Pareami errar furante, irto i capelli
Per le saire di Roma erme ruine,
E percuoter col pugno i chiusi avelli;
E agitarli, e svegliar l'Ombre latine.
Ahi prisca gloria! ahi vani orgogli! ahi come
L'italica virtù cadde a vil fine!
Io chiamava le antiche Ombre per nome;
E quelle alzati i coperchi, e rimossa
Dai fieri aspetti le scorrenti chiome,
Sporgean le fronti per veder che fosse.
E de' nipoti la virtù veduta,
Le fraterne discordie e le percosse,
E l'arbitra del vinto Orbe venuta
In servitù del servo, dolorosi
Quei divi spirti di sì gran caduta,
In volto si guardan muto e pensosi.
Indi qual vergognando giù cadea,
Gli occhi nel cavo de le palme ascosi;
Qual ritto in piè spiccandosi mietea
Tutta fuori de l'area la persona,
E gridando vendetta, armi chiedea.'

The poem which approaches to this in form and grandeur, is that which bears the title of 'La Spada di Federico.' It is well known, that after the battle of Jena, Buonaparte carried off the sword of Frederick II. as a trophy of victory, to expiate the defeat of the French at Rossbach. The description of the Prussian hero rising from his tomb, and extending his hand with shuddering indignation, to prevent his weapon from becoming the prey of the conqueror, has some sort of analogy with that of the downcast King in the most forcible scenes of Macbeth, or at least it awakens the same horror, and causes the hair to stand on end from similar feelings. 'Il bardo della selva nera' is an incomplete poem, which the author has not finished. Buonaparte is also the subject of this; but it is a feeble production in comparison with the others, though it occasionally sparkles with beauty of a superior order. A great number of other poems of all kinds follow those which we have noticed, all bearing the stamp of genius. The pathetic cast of his elegies, the audacious flight of lyrical odes, the concentrated force of his sonnets, the biblical sanctity of his religious strains,—all, in fact, are clothed in a magical language, which makes us think and feel, and transports the soul into enchanted regions. The best analysis which could be made of so many celebrated productions, would be to reprint them, and place them entire before the eyes of all admirers of the just and beautiful.

Monti has also written some tragedies. We do not pretend to maintain that they have attained to the standard of Alfieri as to theatric perfection; but we confidently venture to assert, that he has caused tragedy to advance another step in the poetical forms of expression. Alfieri, from a laudable apprehension of falling into the musical harmony of Metastasio, and consequently into that mild effeminacy with which the Italian language has always been reproached, had adopted a system of versification certainly energetic and profound, but most frequently devoid of all pomp or splendour. Monti has shown that these two qualities may be very well imitated. His tragic productions are rich in those dazzling attractions of poetry, which the theatre stands in need of, in order to excite all our faculties at once, and to lead the affections of the soul by a simultaneous movement of all the organs of sense. Thus in his 'Aristodemus,' unquestionably the best of his tragedies, whilst we are rather shocked at the treaty of peace

between Sparta and Messina, which breaks in like an episode, quite foreign to the principal plot; we are yet delighted with the poetical beauty of the striking dialogue between Aristodemus and the Spartan Ambassadors, the pomp, dignity, and contrivance of which, leaves us nothing to desire. Under this point of view, it must be said that Monti has added to the reform of tragedy that was made by Alfieri, and has gathered to himself some of the ornaments from the brilliant crown of the Piedmontese Sophocles. Justice compels us to avow that this species of glory has also been shared by Piedmonte in his noble tragedy of 'Arminius.'

Besides his original poems, Monti has also consecrated his vigils to translating in verse the *Satires of Persius* and the *Iliad of Homer*. The first of these is known by the obscurity, constraint, and roughness of his style, and the second by his simplicity, majesty, and splendour. The address with which Monti has conquered all these difficulties, and the spirit and beauty which he has given to these two ancient poets are beyond all praise; consequently, with such a series of inspired works, following each other in quick succession, like prodigies on prodigies, the influence which he has over the age in which he has lived in, has been powerful and general. The vigour of his versification, which savours of his long theories upon Dante, has turned public attention to this first father of Italian poetry, whose immortal poem has once more become almost the exclusive aliment of all well constituted minds. The depths of his thoughts, the aerial colouring of his images, and the bold relief of his pictures, have given the death-stroke to those composers of verses who endeavoured to revive the redundancy of the *Arcadia of Rome*, or of the *Frugonian sect*. There was a time when young Italians commenced their literary career only by a frivolous sonnet or insipid *Anacreontic*. To do so, in the present day, would be to risk their reputation in the very outset, as it is well known that public contempt would be their sure and inevitable reward. Monti is at his post with his Herculean club in his hand, to make youth comprehend that they must either aspire to poetry worthy of the name, or remain silent. Hence arises the great number of tragedians with which Italy at present swarms. The poets run to the theatre to exorcise their powers, and learn to struggle with innumerable difficulties. Certainly they have no reason to be too proud of their success, for the career is immensely difficult; but, it must be observed, that if good tragedies are very rare, there are none that are absolutely worthless: with all their faults, they are all more or less strongly conceived in some respects, and invariably exhibit some talent and promise. We merely dwell on this fact, to show the noble inclination of the age, and what we owe to the generous influence of a single individual.

It has been said, that, by a remarkable phenomenon, all great poets are commonly bad prose writers. This remark is in general true, but it admits of exceptions. Voltaire gave the first example of this in France, and Monti has given a second in Italy. It would be long and tedious to enter into the origin of the dispute which he has undertaken to sustain for several years past, for the reformation of the great Dictionary of La Crusca. It is a question which can be interesting only to Italians, and we therefore pass it by. One thing is certain, that the poet has carried off the suffrages of all the enlightened men of Italy in favour of his opinion, and that the six volumes he has published on the subject are written with a vivacity, a propriety, and a purity and charm of style, the merit of which has not even been contested by his competitors. Aided by his vast literary knowledge, he has disclosed the faults and the *lacunes* of the Dictionary, and has so embellished with graces a theme necessarily cold and sterile, that the work is as entertaining to a well-informed Italian, as a romance would be in any other country in Europe.

SKETCH OF COUNT DE LA BORDE'S TRAVELS IN THE LEVANT.

[Continued from page 11.]

At a distance of twelve leagues from the plain of Konié rises an isolated mountain, called the Kam-Dugh, or black mountain; it is the object of several marvellous stories, and had never been visited by any preceding traveller. 'That mountain,' said the Turks, 'contains a thousand and one churches, which inclose treasures; and they fall down upon the heads of any person, who attempts to enter them. The stones of these monasteries, as we are informed by the Greeks and Armenians, walk in procession by night, and spread terror in every quarter.' In fact, neither Olivier nor Kinnaird could find a guide bold enough to accompany them to the spot. The truth of the matter is, that it has always been head-quarters for robbers.

Ali, Pasha of Konié, having given us one of his guards as our guide, we explored the mountain in several directions, in the hope of discovering the ruins of some ancient city. But, to our great regret, we found that the thousand and one churches, of which the Turks had spoken, consisted of monasteries and tombs of the fifth and sixth centuries; which were distinguished, however, by a very remarkable feature, inasmuch as all their façades were of the shape of a horse's shoe, an evident proof that this species of architecture, which is common to the most ancient Arabic monuments, did not originate with the Arabians, but is derived from the Byzantines, who were the parents of every thing relating to the arts in Asia as well as Europe. In truth, the Greeks did not surrender the sceptre of taste, even in the worst times of their decline.

From Konié we bent our course towards Mount Taurus and Caramania. The ascent to the most elevated point of that mountain did not consume above seven hours, though it took us three days to complete our descent to the coast; from which latter circumstance the great elevation of the Asiatic plane is manifestly apparent. I lament that I must abstain, gentlemen, from describing the interesting vicinities of the Taurus, the ruins scattered along the whole coast from Selefké to Tarsus, the remains of Corisum and Eleusis, the forest of columns at Pompeiopolis, and the memorable Tarsus, where the living waters of the Cydnus had well nigh engulfed Alexander, and the apostle Paul first drew breath! As we passed by the spot, where the roof of that apostle had once stood, I was forcibly reminded of the simple yet eloquent observation he addressed to a female, who had thrown herself at his feet:—'What is it that thou doest? I am but a man of Tarsus.'

We quitted this neighbourhood with all possible speed in consequence of the ravages which the plague was inflicting around us; our intention was to re-ascend the Pyramo and examine the remains of Anazarba, the ancient Anazarbo, and of Boudrou, six leagues beyond it, in which, as the Arabs informed us, there were more than two hundred columns, all of them standing; but on mentioning our wish to Nourid, Pasha of Adana, he dissuaded us from the attempt by acquainting us that the Turcomans, who inhabited the valley, were suffering dreadfully from the plague, and were in a state of open rebellion against his authority. We were much surprised at the inquiries he made about General Sebastiani and Prince Talleyrand, and found that he had known the former at Constantinople, where he had been Grand-Vizier, and became acquainted with the latter during his mission to France, previously to the embassy of Ghslib-Effendi. His conversation was of a far more lively and instructive cast than any we had hitherto had with other Pashas or Mussulmen, who had fallen in our way; and he invited us to assist at a species of *divan*, composed of the whole of his household, and held every day in the court-yard of his palace. The Delhi-bashi, Tartars, Tchautshes, &c., arranged them-

selves in a circle, and the spectators stood behind them; the orchestra, composed of drums and wind instruments, then ranged themselves in due order. Within the circle were posted five Tchautshes, who amused us with throwing up their long rods on high, and catching them as they fell; these rods were furnished with long silver chains, by means of which they whirled them backwards and forwards, much in the same way as the censors are swung at mass; besides this they ejaculated a prayer or two for the welfare of the Grand Signor and the Pasha. After these prayers had been said, one of them advanced a few paces, and asked, in a loud tone of voice, if any person had been unjustly dealt by, or had any complaint to make; assuring the injured party that his petition should be read in the presence of the assembly and presented to the Pasha. We were much pleased with this solemnity, and were expressing our feelings upon the subject, when an individual, who had kept himself in the back-ground, in the rear of the band, during the whole ceremony, advanced three paces towards the circle, and placing his right hand upon his scymitar, kept his eye steadily fixed upon the Pasha, as if awaiting his commands. We naturally imagined that this was the officer in attendance, but were informed that it was the *executioner*: an intimation at which the blood curdled in our veins, and the frightful despotism of the East rushed in all its terrors upon our imagination.

The route from Adana to Aleppo, is the same which Alexander traced when he crossed the Pili Maritimi on his way to meet Darius. The field of battle on the Issus is precisely such as history has described it; a plain inclosed between the sea, and an amphitheatre of mountains, and peculiarly adapted to give the fullest effect to the tactics of the Macedonian phalanx, as well as to afford bravery the preponderance over numbers.

Antioch and its magnificent ruins, the woody shades of Daphne, and the pellucid meanderings of the Orontes, detained us for a few days; but the ravages making around us by the plague, disconcerted all our designs. On passing through the village cemeteries, we were alarmed at the multiplicity of sepulchral hillocks, and the fresh-gathered appearance of the flowers which the Turks are accustomed to plant over the graves of their relatives or friends. The dismal impressions this scene excited had by no means diminished when we reached Aleppo. At a league in advance of that city, M. de Lesseps, the French Consul, having received information of our approach, rode out to meet us in company with the principal French merchants; though, in consequence of the ten days' quarantine to which it was determined to subject us, they did not venture to come in personal contact with us. When, however, we had reached our quarters, M. de Lesseps jumped from his saddle, exclaiming, 'I can contain myself no longer; happen what may, my feelings must have vent!' and with these words he threw himself into my arms. His companions did the same by mine; and every idea of quarantine and its purifications was from that moment laid upon the shelf. In fact, there are so few Frenchmen who are found travelling in eastern regions, that the arrival of a single individual of that race becomes a positive festival to their poor fellow-countrymen in exile. Alas! within two months afterwards the plague carried off several of our hosts, whom the earthquake had spared.

From Aleppo we took our departure for Palmyra. The difficulties of this journey form much the same kind of episode in our Levantine excursion, which that city itself forms when we refer to its isolated site amidst the encircling desert. The visitor generally starts from Homs, or from Hama. Among the inhabitants in these two towns, are several who keep up an intercourse with the Arab chiefs, and enter into terms with them for providing travellers with guides; in fact, they are to a certain extent the purveyors of the

desert. The most eminent of these agents is the Sheik Thala, who conveys the caravan of Mecca from Hama to Damascus; he instantly dispatched an express to a chief, who was the most influential leader of the surrounding hordes at the time of our visit; power, however, is but a fleeting commodity in the desert, and is incessantly merging from one tribe into another, as it is dependent upon the junctions or alliances which take place between them, and the fresh tribes imported every year from the Euphrates and Tigris. In four days' time the man who was to conduct us, made his appearance; he proved to be Nahar, the Sheik of the tribe of the Lions, which is a branch of the distinguished race of the *Aneses*. He was at the head of ten thousand men, living under six thousand tents, and scattered over a surface of thirty or forty square leagues. He was a man of fair stature, about sixty years of age, and spare in person, and brown in complexion, like all the Bedouins. He had a sheep's skin, dyed inside of a reddish colour, thrown across his shoulders; and this was the only circumstance which distinguished him from the rest of his suite. His motions were solemn and slow; and when a smile shot across the predominating gloom of his countenance his features assumed an expression of sweetness, though mingled generally with a touch of melancholy, which betrayed the corroding canker of some internal affliction; he was sparing of words, and never expressed himself with vehemence. The terms of our compact were speedily adjusted; but there was one condition to which we demurred, and ought never to have assented, that of laying aside our arms. He asserted, that he could not be responsible for our safety without we acceded to it; and added, further, that the most trivial act of indiscretion might prove our destruction. With this man, and three of his followers on foot, as our escort, we entered the Desert: our own little host comprised six horsemen, and three camels, carrying water and provisions. The first day's march brought us to the encampment of the Benekali Arabs, a branch of the Embaraki tribe, whose domain extends along the whole range of the Desert from Damascus to Aleppo. During the night we were suddenly called from our slumbers by the appearance of robbers at a distance; the whole camp was in instant commotion, and we became conscious, when it was too late, of the mistake we had made in leaving our arms behind us. The two following days were not marked by any particular occurrence. The Arabs on foot were generally sent in advance to see that all was safe, and would frequently stand upright on the back of a camel, to extend the range of their observations, with looks full of anxiety at the slightest noise, and earnestly attentive to the most trivial movement which occurred. Man, a stranger to his fellow mortals in these vast solitudes, is ever apprehensive of encountering an enemy in the first individual that threatens to cross his path. However great may be the distance, the moment one person catches a glimpse of another, he instantly seeks to avoid him; and a whole army might be lost on the very spot, where one human being would ineffectually strive to conceal himself from another.

The Sheik Nahar preceded us in silence, but halting at various intervals to say his prayers. One day, conceiving that he had lost his way, though he had in fact deviated from his course simply with a view of replenishing our stock of water from the supply afforded by a rock, with which he was acquainted, we could not refrain from expressing our apprehensions to him; upon which he replied with the greatest unconcern, "I promised Sheik Thala to accompany you to Tadmor, and bring you back to Homs: and I shall keep my promise. Do not alarm yourselves at what you may see." He did not fail to reach the spring which he was in quest of. The ensuing day, which was preceded by our passing the night under the open sky, without any fire to

protect us against its cutting chill, we were slowly prosecuting our course, when we discerned from fifteen to twenty Arabs coming down upon us at full gallop, and, with their lances lowered, commencing an attack upon our camels which had remained behind. We turned back to defend them, and a fierce conflict of fists and sticks ensued; they as well as ourselves being unprovided with fire-arms. The rest of the tribe had joined their comrades, and we were in the most imminent danger of being plundered and left naked in the midst of the desert, at sixty miles' distance from any supply of water or human habitation. Whilst our hands were mutually busied in tearing the clothes from each other's backs, our horses were exchanging blows with the Arabian mares, and the uproar was at its height. Messieurs Hall and Becker once had to struggle on foot with two Bedouins; my own son, who was the only one of us who had concealed a pistol in his girdle, was by its aid enabled to keep two Arabs at bay, after losing his turban. I was struggling to find my way through the hurly burly, in search of our guide, whose lance had been shattered at the first onset, when one of our party cried out 'We are saved!' In fact we now remarked the Arabs fighting among themselves, and their leader prostrated before our old conductor, anxiously endeavouring to apologise for his offence. Nahar, collecting his garments around him with the most consummate sang froid, regained his saddle, and showed no sign of indignation but a tear or two which rolled down his cheek, and certain upbraidings levelled from time to time at the young chief, by whom we were escorted three miles further on our road. This youth was mounted on a mare, worth fifteen thousand piastres; and yet, the only recompense he sought, for the service he had rendered us in arresting the despoiling career of his tribe, consisted in a small quantity of barley for his courser; to this we added a vest, in which he attired himself upon the spot.

FOREIGN NOTICES.

CANOVA'S RIGHT-HAND.—We scarcely know with what feelings we ought to regard the extraordinary communication contained in the following letter; whether to deplore the act it commemorates as the evidence of a meretricious refinement of sentiment, or to set it down as an honest, however eccentric, tribute of veneration to the memory of the 'illustrious departed.'

Dr. P. Zannini to Professor Rosini, of Pisa.

Venice, July 10th, 1828.

SIR,—The notice with which you conclude the 128th note of your 'Essay on the Life and Works of Canova,' calls upon me to acquaint you with the final disposal of that great sculptor's right-hand, which, as you very correctly observe, was intrusted to my custody. In placing this circumstance before you, I conceive that I am simply evincing my deference to the right which that essay has given you, of being made acquainted with every point affecting the memory of that illustrious Possagnese.

I believe you are already aware, that, on the day when the monument to Canova was inaugurated in the Church of the Frari, in this city, his heart was removed from the cenotaph which the members of the Academy of the Fine Arts had erected to his memory in their hall of private assembly, was transferred to the church of the Frari, and deposited in the pyramid of the monument. Whatever may have been the motives for this removal, and however great a dissonance may exist between the figures which adorn it, or, more properly speaking, of which the monument is composed, and the remains inclosed within it, it will be admitted that Canova's heart, which was the seat of so many active virtues, occupies a much fitter resting-place, in a spot consecrated to religious purposes, than in an institution ex-

clusively dedicated to the fine arts. To this latter establishment; the possession of his right-hand appears far more properly to appertain; this hand modelled a multitude of objects, few of which were not of marvellous execution, and impressed upon them that living and speaking portraiture of the chaste and beautiful, in pursuit of which the liberal arts are constantly toiling.

On this truly noble occasion, when the academicians found themselves deprived of their relic, they solicited M. Canova to replace it by the right-hand of our immortal artist; and he, after obtaining the requisite license from the Roman tribunal, cheerfully acceded to their request, and, by his letter of the first of May last, authorised me to deposit it in the safe-keeping of that academy. Nor did he attach any other condition to the gift beyond this,—that, whenever the Academy of the Fine Arts at Venice should be dissolved or removed elsewhere, the right-hand of his brother should be delivered to the arch-priest of Possagno, in order that it might be re-united with the mortal remains of Canova, which, in a short time, will be transferred from the ancient church of that district, to find a last repose under the sacred roof of its chief temple. In conformity, therefore, with the concession made by M. Canova to the said academicians, on the 9th of this month of July, 1828, I transmitted to the Venetian Academy of Fine Arts, Antonio Canova's right-hand, and caused a solemn attestation of this transmission to be drawn up by an official person, with a view to its enrolment in the archives of that body.

These lines will, therefore, preserve a perpetual record of the several spots where the remains of this great man will be deposited: his body reposing in the temple of Possagno, his heart in the monument 'ai Frari,' and his right-hand in the private cenotaph erected to his memory by the Academy of Fine Arts.—Continue to me your friendship, and believe me, &c.

FRANCE, 1828.—After minute inquiries, Chaptal has estimated the agricultural capital of France at 37,522,061,676 francs, or 1,563,335,900*l.* sterling. Of the 131,646,000 acres (English measure) which constitute the surface of its territory, there are 56,332,000 acres of arable land, 4,880,700, vineyards; 16,099,800, woods and forests; 8,702,300, pastures; 8,611,000, meadows; 17,280, turf for burning; 525,840, buildings, &c; 525,840, ponds or stagnant waters; 16,182,600, roads, rivers, rocks, &c. It is lamentable to reflect, that 9,941,600 acres, being more than a twelfth part of the whole territory, are occupied by marshes, sandy districts, or otherwise waste land, which are lost to husbandry or any other productive purposes.

The same intelligent economist estimates the annual crops of wool at 42,000,000 chilogr., or 826,170 cwt*s.* English; the number of sheep, whether of the Merino, cross, or native breeds, at 34,188,910; that of cattle, at 6,973,400; and of horses, at 1,872,617; independently of 250,000 of the latter, which are not employed for agricultural purposes.

The annual produce of the vineyards of France, says M. Cavoleau, averages 35,075,689 hectolitres, or about 926,000,000 English gallons, (old measure,) the value of which may be calculated at 22,156,200*l.* sterling. This valuation is taken at the prices on the spot of growth, to which must be added the expenses of carriage, indirect taxation, municipal dues, (*octroi*), mercantile profits, &c., which will nearly double the estimate, excepting as regards what is abstracted by the growers for their domestic consumption. The extreme lowness of the price at which the preceding valuation is estimated, arises from the disproportionately small quantity of good wine which is produced.

The department of the Gironde alone produces 74,052,000 gallons of wine, which, if bottled, would cover nearly two square leagues; and the

value of its annual produce will average 2,049,040*l.* sterling,—about one-eleventh part of the value of the vines yearly grown in France. The Charente stands next on the list, producing 48,206,400 gallons; and the Charente-Inférieure, with its 47,298,500 gallons, ranks as the third in importance.

The average annual produce of the *hectare* (2 a. 1 r. 35 p.) of vines for the whole of France, is 13*l.*, or very nearly 5*l.* 6*s.* per acre. It yields the greatest pecuniary result in the department of the Yonne, where the crop produces the grower 29*l.* 5*s.* 10*d.*, or nearly 12*l.* per acre.

JENA.—Its site is rendered exceedingly romantic by the group of mountains in which it is embosomed; but the town itself, which has a population of 7,000 souls, including the students, is an execrable gallimaufry of old tenements; save and except, perchance, the market-place, which still prides itself in its far-famed clock. Whenever this *mensur temporis* strikes the hour, the jaws of a huge head open wide their portals to receive a blow from a figure standing beside it, whilst a haunting angel lifts his book of hymns on high at each recoiling thump.

Jena stands foremost in age among the German Universities; it dates from 1558, when Charles V. refused to sanction its establishment. Nor did it, for some time, obtain more than a left-handed confirmation from his successor, Ferdinand, who at first refused it the privilege of granting degrees in the faculty of theology; but afterwards, an attack of imperial indigestion having been removed by Schröter of 'that ilk,' he allowed the doctors of divinity to rid themselves of polemical indigestion as best they could. In the seventeenth century, Jena became what Bologna had been in the middle ages, and is said to have been frequented by four and even five thousand students: in the nineteenth, their numbers have sunk to six and seven hundred.

Von Loen, in his portrait of Jena, as it existed one hundred and twenty-four years back, speaks of the students as wearing long swords, dangling behind them like spits, with an evident itching to jump from their scabbards: the wearer's garments, shoes, and stockings were of the most villainous description, as if such trifles were unworthy of his philosophical sobriety; yet his presence dispersed a gale, savouring of tobacco, beer, and brandy; and he would roam and lounge about in reckless idleness by day until night, seek quarrels in the midst of the market-place, and keep the honest burgher from tasting the balm of slumber. He delighted in riotings, mummeries, and mystifications, and would saunter forth in night-gown and slippers, with his sword drawn, in quest of an antagonist. A genuine son of Jena, whether then or at the present day, has never known what it was, or is, to leave his bear-glass dry; and I recollect seeing more than one of his brethren in the year 1802, drawing blood on the market-place by open daylight, with a black leathern helmet on his head, surmounted by a bush of tall red feathers. His mind and habits were pre-disposed for the inoculation of the 'Burschen-schaft,'—a fellowship, which was any thing but blameable in its fundamental principles; it was his misfortune to pervert them, and afterwards the error of the German Governments to goad him further onwards in his faulty path.

Nothing can exceed the beautiful scenery which characterises the environs of Jena. I would not set down the adjoining *Paradies*, as it is called, in this list, for it is a mere meadow planted with rows of trees; but I intreat the traveller to extend his perambulations to the more distant scenes, which gird the banks of the Saale. He must not neglect to ascend the 'Foxe's Tower;' the superb panorama it commands, will richly reward his pains; and, when he looks down from its height, he may imagine himself transported thirty years back, assisting at the rough ceremonies of inau-

guration perpetuated to the older students under the name of 'Penalismus,' or the Jena freshman, and helping to foment his hostility against the recusant Philistine, who shunned the presence of a *fox* (the chosen appellation of the initiated) with scarcely less dread than the Philistines of old trembled at the approach of Samson's foxes. Or the worshipper of the sharpest-nosed of all foxes may conceive himself looking down from the same hallowed pinnacle where stood the Corsican, on the 14th of October, 1806, eyeing the black eagle of Brandenburg, until the oracle issued from his lips:—'*Il se tromperont furieusement, ces perruques là !*'

None can visit this spot, or the adjacent hills, the 'Kunitzberg' or the 'Rauthal,' without travelling back on the wings of thought to the 'bloody day of Jena;' a day pregnant with far more portentous consequences than the 'scamper of Rossbach,' for it expunged the name of Prussia from the catalogue of monarchies in a single day, and swept the whole of Germany into a fell captivity of seven Egyptian years! The avenging fiend bivouacked on the height of 'Grafenberg' during the night of the 13th of October, whilst Hohenlohe lay quietly, drunk with sleep, in the hollow of 'Capellendorf.' The knell of Prussia tolled from the moment the enemy was allowed to occupy that height; the French had been lost, had Hohenlohe previously thrown himself upon the foe, before the main body had come up to cover Napoleon's daring and unsupported advance. But the Prussian host had no Blücher or Wellington that day on its muster-roll. The field of Jena was gained before the battle began. The leaders of the Great Frederick's descendants were at war with each other, and at war as to the plan of operations: the wiser one of Hohenlohe had been spurned; the push was devising on the other side of the Thuringian forest, when the thunderbolt burst upon their left flank and rear, severed them from their magazines, cut off their supports, and placed the Elbe in their front, and the Rhine at their backs: a mental as well as physical darkness overshadowed them. Brunswick, their veteran commander, stooping with age, was carried off blind from his wounds; his men were famished because no ambulatory gibbets had been provided for the Prussian commissaries; his adversary seemed even more familiar with the ground than the native guides themselves; the Saxon cartridges were too large to slip through the musket's orifice; the enemy was thought to be at a distance; and too true is it, that both officer and man deemed the very name of a Prussian soldier their certain safeguard against the 'folly of an attack.' Frederick himself could not have conquered under such circumstances!

EHRENHEIM AND GEORGE CANNING.—The Baron D'Ehrenheim began his career in the Ministry of Foreign Affairs at Stockholm in the year 1773, and subsequently occupied the post of President of the Swedish Chancery until the fall of Gustavus Adolphus, when he abandoned all political avocations and devoted the tranquil hours of retirement to scientific pursuits. One of the fruits of his leisure was a work on 'General Physics and Meteorology,' in which he signalled himself by great mental intelligence, extensive knowledge of his subject, and a clearness, precision, and simplicity of style, which place him on a par with the most distinguished of classical writers. As a statesman, he was entitled to and enjoyed the full mead of public esteem, and in private life, was respected for the integrity of his principles, and the possession of that share of 'goodwill towards men,' from which alone his conduct on the following occasion could emanate.

His official recompense, as leader of the Cabinet, for concluding a treaty between Sweden and Great Britain, was the customary present of a snuff-box of the value of 1,000*l.* sterling; but Ehrenheim requested the Swedish ambassador in London to hint that he was anxious to receive, in exchange for the box and its diamonds, the value

of the present in ready money. To this request he further added,—'In case the English Cabinet should feel surprised at so unusual a proceeding, I allow you to reveal my secret motive, by acquainting Mr. Canning, (who was at that time Minister for Foreign Affairs,) that the province of Bohus is labouring under a total want of corn, and that I am anxious to apply the money in alleviating its distress.'—Canning did, indeed, consider the request as 'passing strange,' but, when its purpose was explained to him, observed that Ehrenheim could not fail to be a man of large property, from the circumstance of his volunteering so handsome a donation.—'By no means,' replied the ambassador; 'M. D'Ehrenheim is not a man of property at all.'—'I admire him the more,' rejoined Canning with great animation; 'and you may rely upon it, his request shall be complied with; but I have a favour to ask of you on my own account; and this is, that you add the value of the box, for which I am a claimant on the Swedish Government, to the donation M. D'Ehrenheim is anxious to present to the province of Bohus.' The reader will determine for himself which of the two diplomats is *least* entitled to his admiration. Scarcely a twelvemonth elapsed, before the President D'Ehrenheim followed his generous competitor to the grave.

SAXONY.—The Electorate of Saxony possessed a population of nearly 2,500,000 souls, spread over a surplus of 723 square miles; its revenue amounted to 1,650,000 or 1,800,000 pounds sterling; and, until the middle of the seventeenth century, its preponderance was greater than any German Power, excepting that of the Emperor of the Romans; it was more considerable, more compact, and more bountifully gifted by nature than Brandenburg, and its military strength consisted of a fine army of 50,000 men. Even at the time of the French Revolution, it was superior to Bavaria; but, in more recent times, it has been compelled to barter its 'marrow and fatness' for an empty title! The kingdom of Saxony contains scarcely 300 square miles; nay, a recent calculator has reduced them to 271½,—with a population of 1,200,000 souls, (inferior to that of the British metropolis itself,) and, at a time when its debt is 2,750,000*l.*, straitened in its resources to a revenue of 927,000*l.* The pruning-knife of the Congress of Vienna was the instrument by which it was shorn of the larger and the more valuable moiety of its ancient possessions. To Prussia was Saxony called upon to surrender two-fifths of her inhabitants, and two-thirds of her income; and with these was she deprived of sources from which she drew three of the most indispensable necessities of life: to wit, Thuringia, her magazine of grain; Lusatia, her store-house of wood, and her salt mines, whence the plunderer generously allows her to import this necessary article, at a fixed price, to the amount of 20,000*l.* yearly. But a whole century will not reconcile the Saxon to his Prussian masters: the seven years' war engendered a hatred which has never subsided; and this transfer has thrown fresh fuel on its embers.

The contrast which the sixty miles' ride between Dresden and Berlin affords, is scarcely less striking than that between Dover and Calais, or 'either bank of Tweed.' The Berliner is lively, honey-tongued, vain, apologetic, and satirical; the Dresdener, thoughtful, sparing of words, and reserved in speech: the one thirsts after what is new, the other clings to what is ancient; the former is an enthusiast for public amusements, the latter is devoted to his home; the one loves to sparkle, and the other covets retirement. The Berliner, in short, is formed for the world and busy life, but his neighbour for domesticity and a private station; where the Dresdener is orthodox and frugal, his cousin of Prussia is prodigal and a free-thinker. The Saxon is a German of the olden times, as compared with the Brandenburg, who possesses the art of assuming so many faces, that one is often at a loss to determine which are his native lineaments.

MEDICO-BOTANICAL SOCIETY.

THE anniversary meeting of this Society was held on Friday, the 16th day of this month; the Right Honourable the Earl Stanhope, F.R.S., F.H.S., in the chair.

The minutes of the previous anniversary meeting having been read and confirmed, the treasurer's secretaries', librarian's, and conservator's reports were severally read; and the thanks of the Society ordered to those different officers for their services during the past year.

The secretaries' report gave a total increase of 245 members, of whom fifty-six were fellows; and a decrease of seven members, by the decease of four, and the resignation of three members.

The librarian's report showed an addition of near 100 volumes, comprising many works of great scarcity and value.

The conservator's report exhibited an addition of near 7000 different species of plants, and other interesting articles to the collection of the Society.

The following persons were then elected to form a council for the year ensuing:

The Honourable and Right Reverend the Lord Bishop of Bath and Wells; Henry Brandreth, Esq.; Commissioner William Burnett, M.D.; John Frost, Esq.; Humphrey Gibbs, Esq.; Thomas Gibbs, Esq.; Theodore Gordon, M.D.; the Right Honourable the Earl of Hardwicke, K.G.; Robert William Hay, Esq.; Sir Benjamin Hobhouse, Bart.; Thomas Jones, Esq.; Sir Alexander Johnston; Sir James M'Grigor, M.D.; the Right Honourable Robert Peel; Michael John Short, M.D.; William John Short, Esq.; the Right Honourable the Earl Stanhope; Sir John Edward Swinburne, Bart.; Joseph Fitzwilliam Vandercorn, Esq.; William Yarrell, Esq.; and John Peter Yosy, Esq.

A letter was then read from Sir James M'Grigor, addressed to John P. Yosy, Esq., secretary, informing him that he had, in consequence of his very numerous avocations in the public service, felt it incumbent on him to cease to hold the honourable office of President of the Society, though he would ever continue to feel a warm interest in the welfare of the Institution, and hoped to be able to render himself as useful as he had hitherto attempted to be.

The following were then elected officers for the year ensuing:

President, The Right Honourable Philip Henry, Earl Stanhope, F.R.S., F.H.S.—*Director*, John Frost, Esq., F.R.S., &c.—*Treasurer*, Thomas Gibbs, Esq., F.H.S.—*Secretaries*, John Peter Yosy, Esq.; and Humphrey Gibbs, Esq., F.H.S.—*Librarian*, Henry Brandreth, jun. Esq., M.A., F.S.A.—*Conservator*, Michael John Short, M.D.

The noble President then proceeded to deliver an address, in which he pronounced a warm and well-merited eulogium on their late president, and expressed his most grateful sense for the honour the Society had that day conferred on himself, by electing him Sir James M'Grigor's successor. He regretted to say, that, though the Society had many subjects of congratulation, yet there were also others which called for their condolence, namely, the loss by death of Sir James Edward Smith, late president of the Linnæan Society; of Sir Charles Peter Thunberg, professor of botany and medicine at Upsal; of Mr. Bose of Paris; and of Mr. Choris, a gentleman who had proceeded, under the auspices of the Geographical Society of Paris, to South America, and whose tragical death was some time since noticed in 'The Athenæum.'

His Lordship then congratulated the Society very warmly on the distinguished mark of royal favour which it had received by the condescension of his Majesty in becoming patron of the Society, and expressed his earnest hope that the members would consider it as an additional stimulus to use their best exertions in promoting the valuable and important objects which they had in view.

He afterwards noticed the appointment of a Committee of Correspondence, which had become requisite in consequence of the great increase of corresponding members, particularly on the Continent, which committee had already been of great service to the Society.

In recapitulating the proceedings of the Society during the past year, his Lordship mentioned, in terms of just praise, many valuable papers which had been read at the meetings, and presented Dr. John Hancock with the Gold Medal, which had been awarded to him for his excellent and important communication on the Angostura bark-tree. Another dissertation had also been written by Dr. Hancock on the Vandellia diffusa.

The silver medal had been adjudged to Professor Fresco Caldì of Florence.

His Lordship then dwelt on the general objects of the Society, and the means of promoting them by botanical inquiries, by chemical analysis, and, above all, by medical investigation.

These researches would, in some cases, be directed by an analogy in the exterior forms of plants, in others by a chemical analysis of their respective constituents, and also by the knowledge that they had already been employed with success in the cure of diseases. He observed, that it would be of extreme importance if indigenous plants could be employed as satisfactory, and even more advantageous, substitutes for some of the expensive drugs which are imported. Many of these same plants were now despised from an ignorance of their qualities, which might, under further investigations, be found interesting and important. His Lordship very strongly enforced the necessity of the members making exertions commensurate to the magnitude of their views, by which they would deserve more and more the approbation of the world, and the gracious protection of their sovereign, and concluded by moving a vote of thanks to their late excellent and revered President.

The thanks of the meeting were also passed to the Earl Stanhope, with a request that his Lordship would allow his comprehensive address to be printed for distribution amongst the members.

The meeting then adjourned.

THE DRAMA.

Drury-Lane.

THAT the popularity of 'Caswallon' has increased, is increasing, and ought to be diminished, we can say with quite as much confidence as Lord Ashburnham could have felt, when he brought forward his famous resolution respecting the influence of the crown. After much wavering and indecision of the critics on all sides, it is now evident that nothing could have made it successful from the first, but the good acting of Young, and what was still more for its advantage, his extreme judgment in getting over the ineffective parts in a manner almost equivalent to their omission, and in seizing, on the other hand, every practicable opportunity of producing effect, by tossing his arms and exerting the deep energies of his lungs. No doubt but another cause of its not failing was the prevailing delusion that it was the production of Miss Mitford, instead of the author of 'Wallace.' But now that its real fraternity to the latter is generally known, and its publication has enabled people to judge of it from itself, and not from the actors who have supported it, also when much more than is due has been conceded to novelty,—we conceive that now there is no earthly reason why it should not be quietly and decently withdrawn like its predecessor; and, if not withdrawn, why it should not be incontinently damned: if the play-going public could only be persuaded to awaken its better judgment, 'Caswallon' certainly would not be tolerated any longer. We are sure it has few merits of its own, either as a play or as a poem; and it is a hard case, that at Drury-lane, our best theatre, and possessing the best company, we should hardly once in a season be treated with a genuine tragedy, because novelty is more attractive to the public than merit. Another source of annoyance on such occasions is the mean opinion forced upon us of the actors, who can affect to enter into and feel characters which nobody else can; and of all persons aggrieved in the matter, no one has more right to complain than poor Miss Phillips, subjected as she is in the beginning of her career to make her way through such disadvantages as modern tragedies must present, particularly such as 'Caswallon,' which is no more to be compared to 'Rienzi,' than 'Rienzi' to a multitude of others, which the company at Drury-lane might be performing instead; fortunately, however, and as it were by accident, she has been allowed an opportunity of establishing herself perfectly in Juliet, and not even 'Caswallon' can now shake her reputation.

The Surrey.

UNDER the excellent conduct of its veteran manager, this handsome and capacious theatre seems to flourish in a style scarcely to be expected on the other side the water, both as regards its audiences and its performances. Large houses have been attracted thither lately by the appearance of Elliston himself, in some of his popular characters. We witnessed 'Wild Oats' on Saturday evening, and were well pleased to observe in Rover no trace of the gout or other infirmity,

either bodily or mental. We could not contemplate this wildly generous and high-spirited character without an interest and a feeling that had reference more particularly to the person of its representative himself. Playing in soberer years the semblance of a character, of which he had too well supported the reality in his better days, we felt that some retrospective glimpses of his own brilliant career, not unmingled as it was with disaster and mischance, must occasionally cross the mind of the actor; and, as in the present tranquil and quiet sun-setting of his fame and fortunes, such ideas could scarce be other than pleasurable to himself, we were delighted in referring to this source a reality in his tone and manner which was sometimes almost beyond the limits of acting. Rover is somewhat overdrawn, and on the whole, perhaps, less to our liking than his counterpart Jack Bunce in 'The Pirate'; but in the last scene a finishing stroke is given to this character than which we scarce know anything more happy and striking in the Drama: it is where covered with shame and confusion at finding that it is the real Sir George Thunder, and the father of his friend, whom he has been treating with ridicule and contempt, he still remembers the blow he had received from him on that occasion, and, instead of offering any excuse, himself requires an apology for his wounded honour. The painfully anxious and conciliating tone in which Elliston gave these words, 'I am sure that you, Sir, the father of my friend, will have no objection to apologise for the blow,' was touching to the last degree; and the man of honour and high feeling spoke with equal force in his manner and countenance, as in the expression of his voice. Mrs. Fitzwilliam is a clever comic actress; she played the part of Jane with a degree of humour which deserved all, and even more than all, the applause it drew from a rather promiscuous and occasionally indiscriminating assemblage in the pit.

'Virginus' was the after-piece; and, though we could not stay this out, yet we can say conscientiously that we were not once struck with any instance of bad taste in either of the performances; which, as the corps can scarcely be called more than respectable on the whole, reflects much credit on the management. Mr. Osbaliston, the hero of all tragedies performed here, is rather a deserving actor, though quite without genius, inasmuch as he rants within tolerable limits, and does not too much affect to imitate his betters, nor strain after things beyond his reach.

POPULAR LITERATURE.

'Ut in vitâ, sic in studiis, pulcherrimum et humanissimum existimo, severitatem comitantemque miscere, ne illa in tristitiam, hæc in petulantiam, præcedat.'—*Plinius Epistola.*

I.

'Collecting toys
As children gathering pebbles on the shore.'
Milton's Paradise Regained.

1.—POETICAL.

Ben Jonson inspired by Wm.—The following curious memoranda, by Ben Jonson, are now preserved at Dulwich College:

Mem.—I laid the plot of my 'Volpone,' and wrote most of it, after a present of ten dozen of palm sack from my very good Lord T—: that play I am positive will live to posterity, and be acted—when I and envy be friends—with applause.

Mem.—The first speech in my 'Catilina,' spoken by Sylla's ghost, was writ after I parted with my friend at the Devil Tavern [near Temple Bar, where Child's Place now stands]. I had drank well that night, and had brave notions. There is a scene in that play which I think is flat. I resolve to drink no more water with my wine.

Mem.—Upon the 20th of May, the King (heaven reward him!) sent me a hundred pounds. At that time I went often to the Devil; and, before I had spent forty pounds of it, wrote my 'Alchymist.'

Mem.—'The Devil an Ass,' 'The Tale of a Tub,' and some other comedies, which did not succeed, written by me in winter: honest Ralph died, when I and my boys drank bad wine at the Devil.'

The Rose.

Detente, aguarda, presumida rosa!
Y en la piedad de Mayo no confrées;
Porque eses hojas, donde agora ríes
En el seran tu perdición hermosa.
Francisco de Berja.

Translation.

Vain-glorious rose! thy boasts forbear;
Trust not May, though heavenly fair;
Now laugh amidst thy leaves, but know
Thy beauteous ruin thence shall flow.

2.—SENTIMENTAL.

Light Sentiments.—Light sentiments last long. Nothing breaks, because nothing binds them. They follow the current of circumstances. The profound affections irrevocably destroy one another, and leave only a painful wound in their place.—*Wieland*.

Love.

Love is of so mickel might
That it all pains makis light.—*Barbour*, ii. 1.

Ambition.

Den blutzen Lorbeer, geb ich hin, mit Freuden
Fiers erste veilchen, das der mers uns bringt
Das duftige Pfand der neuverjungten Erde.

Schiller, *Piccolomini*, I.

Translation.

Most gladly would I give the blood-stained laurel
For the first violet of the leafless spring
Plucked in those quiet fields where I have journeyed.
Coleridge.

3.—RHETORICAL.

Words.—Of words first; for it is one of the first things which we do, they are but the lackeys of reason, of which to send more then will performe the business is superfluous; me thinks an *esse videatur* at the close of a period is as nice as a tumbler ending his tricks with a caper; and Tullie's *venit, imo in Senatum venit*, mooves me no more against Catiline than the first *venit*. Me thinks this same Rhetorick, the child of words, is but a pickled herring to bring on drinke, for his diuisions and repetitions are for nothing but to bring his memory acquainted with his tongue, and to make three works of one. How shall a man hope to come to an end of their works, when he cannot with two breathe saile through a period, and is sometimes grauelled in a parenthesis. I wonder how Cicero got the people of Rome tyed so fast to his tongue; for, were his matter no better than his style, hee should not persuade men to looke vpon him? I make as great difference between Tacitus and Seneca's stile and his, as musicians between Trenchmore and lachrymæ. Me thinks the braine should dance a jigge at the hearing of a Tullian sound, and sit in counsell when it hears the other.—*Sir W. Cornwallis's Essays*, 43.

4.—PICTURESQUE.

The Vale of Urseren.—After passing the Devil's bridge and an undescrivable chaos of granitic rocks, with the Reuss foaming down in cascades upon the right, we entered a dark passage, which has been made in the rocks, about nine feet high, eleven broad, and thirty toises long. On emerging from this subterraneous passage, the traveller is surprised to see opening on his view, a pretty oval plain, all smiling and verdant, and the Reuss, clear and tranquil, and winding through the meadows every where margined with shrubs and saline trees. Wood cabins and isolated chalets are scattered up and down the valley; on the left of the valley, is the village of Indermatt, built some years ago with stone, while the back is finely terminated by Mount St. Gothard. The valley is a good league in length by a half-league in breadth, and has plainly been the bed of a lake, whose waters have escaped by the passage through which the Reuss now flows.—*Tableau de la Suisse*, 135—137.

5.—ROMANTIC.

Love of Danger.—Saussure gives the same account of the chamois-hunters of the Alps, as Kotzebue does of those of the Tyrol. The pursuit is exceedingly dangerous, by no means lucrative, but altogether most fascinating. A handsome young man, newly married to a charming wife, said to Saussure, 'My grandfather was killed in the chase, as well as my father; and so firmly persuaded am I that I shall end my life in the same manner, that this hunting-sack which I always carry with me, I call my winding-sheet, (*mon drap mortuaire*;) because I am certain I shall never have any other; and yet, Sir, though you would offer to give me a fortune on condition of giving up the chase, I would at once reject it.'

6.—ANCHORITICAL.

Pleasures of Imprisonment.—For me, I do not envy, but wonder at, the licentious freedom which these men think themselves happy to enjoy, and hold it a weakness in those minds which cannot find more advantage in confinement and retiredness. Is it a small benefit that I am placed there, where no oaths, no blasphemies, beat my ears? Where my eyes are in no peril of wounding objects? Where I hear no invectives, no false doctrines, no sermonizations of ironmongers, felt-makers, colliers, broom-men, grooms, or any other of those inspired ignorants? No curses, no ribaldries? Where I see no drunken conversations, no rebellious routs, no violent oppressions, no obscene

rejoicings, nor aught else that may either vex or affright my soul? This—this is liberty—who, while I sit here [in the Tower of London] quietly locked up by my keeper, can pity the turmoils and distempers abroad, and bless my own immunity from those too common evils.—*Hall's Free Prisoner*.

7.—MUSICAL.

A devilish good Musician.—Baltzar, a native of Lubbeck, so far outdid any thing which had ever been heard in England from the violin, that Wilson, the professor of music at Oxford, in a humorous way, stooped down to examine his feet whether or not he was a devil incarnate, (which are always, it should seem, punished with *pedes hircini*;) so much did Baltzar perform beyond the power of a man in exercising his fingers and his instrument.—*Wood's Athen*.

Impress of Musicians.—Thuanus relates that it was very common for boys who had fine voices to be carried off clandestinely or otherwise, and retained by princes to contribute to their pleasures.—*Burney, Hist. Mus.*, I. 313.

8.—CRITICAL.

Anah's Mules.—The passage in Genesis xxxvi. 24, rendered in the received version, 'This was that Anah that found the mules in the wilderness as he fed the asses of Zibeon his father,' has given some trouble to biblical critics. The Hebrew word *Imim*, here rendered 'mules,' is in the vulgate *aquas calidas*, 'hot springs.' Bochart is of opinion, that *Imim*, or *Emim*, is the name of a people or tribe; while Canne, the annotator, tells us that *Jemim*, as he Romanizes the Hebrew, means neither mules, men, nor waters; but 'elsewhere.' Houbigant, agreeing with Bochart, renders *metra* translated 'found' by 'fought,' or 'attacked,' *Dimicavit in deserto contra Emecos*. The question then, is, whether Anah found in the wilderness mules, hot springs, or nothing; or whether he made an attack upon a party of Emims. The latter is certainly the most improbable rendering: while the translation in the vulgate is the most plausible.

9.—CLERICAL.

Canonical Dress.—What enemies were some ministers to periwigs, to high-crowned or broad-brimmed hats, to long cloaks and canonical coats; and now to long cassocks, since the Scotch jump is looked upon as the more military fashion, and a badge of a northern and a cold reformation.—*Taylor, Artif. Hands*, 119.

Persons ecclesiastical may use any comely and scholar-like apparel, provided that it be not cut and pinked, and that in public they do not go in their doublet and hose without coats.—*Canon. Eccles.*, 74.

His scanty salary compelled him to run deep in debt for a new gown, and now and then forced him to write some paper of wit or humour, or preach a sermon for ten shillings to supply his necessities.—*Draper's Letters*.

10.—SUPERSTITIOUS.

Bad Omens.—Among other things anciently held ominous, we find mentioned a hare crossing one's path, but, above all, the owl. 'Maxime vero abominata est, tristis et dira avis, voce funesta et gemitu qui formidolosam dirasque necessitates et magnas moles instare portendit.—*Alexand. ab Alexandro*, v. 73.

11.—ONEIROLOGICAL.

A Five Days' Dream.—In the British Museum, is a scarce tract, with the following verbose title:—'The Sleepy Man awakened of his five days' dream; being a most strange and wonderful true account of one Nicholas Heart, a Dutchman, a patient of St. Bartholomew's Hospital, in West Smithfield, who sleeps five days every August; and you have a true relation how his mother fell in one of her sleeps on the first of August, she then being near the time of her labour; and on the fifth day she awakened, and was delivered. As soon as he was born, he slept for five days and five nights; together with the true dream which he and his mother dreamt every year alike. But, what is more particular than all the rest, he gives an account of one Mr. William Morgan, whom he saw harried to a dismal dark castle; and one Mr. John Paimer, he saw him going into a place of bliss: these two men were patients in the Hospital, and died while he was in his sleep. London: printed by Edward Midwinter, at the Sun, Pye Corner, Smithfield.'

II.

'That knowledge is not to be reckoned useless, which, though useless in itself, sharpens genius, and sets the mind in order.'—*Lord Bacon*.

1.—POLITICAL.

Poor Laws of Switzerland.—We are not informed whether the custom is general in Switzerland; but all around Chamouni, it is the custom for an orphan, or

an old person, who has no means of subsistence, to be kept alternately in all the houses of the parish to which he may belong; and, when the round is finished, he begins anew.

2.—HISTORICAL.

Honorius.—The chief amusement of the Roman Emperor Honorius was the feeding of poultry; in which he spent the greater part of his time; and, so childish and imbecile did he become, that, if we are to believe the reports of the time, he was greatly alarmed when Rome was taken by the Goths, till he was given to understand that it was not a favourite chicken of that name, but only the capital of the world, which he had lost.—*Procopius, de Bello Vandal.*, i. 2.

Ancient Ireland.—Hume had something better ideas conjecture and alleged prejudice to go upon, when he said that 'the Irish had been buried in the most profound barbarism and ignorance at the coming of the English.' Orpheus, indeed, the earliest writer who mentions Ireland, saying that the Argonauts touching at Ierne in their expedition, does not tell us any thing about the inhabitants; but Diodorus expressly affirms, 'that the Irish were cannibals: "Dicunt ex his nonnulli, et anthropophagos esse, sicut Britannos qui Irim incolunt." (Lib. v.) Pomponius Mela says, the Irish in his time were destitute of every virtue: "Cultores (Hiberni) inconditi sunt et omnium virtutum ignari, magis quam alium gentes, aliquentus tamen gnari, sicutis admodum expertes." We lately also quoted from one of their own historians, (Keating), a shocking instance of Irish cannibalism.—See 'The Athenæum', January 7, p. 15.

LIST OF BOOKS PUBLISHED DURING THE WEEK.

Romance of History of England, by Henry Neele, 3d edition, 3 vols. post 8vo., 11. 11s. 6d.
Buckingham's Travels in Assyria, Media, and Persia, 4to., 28 Plates, 3l. 12s. 6d.
Emerson's Letters from the *Ægean*, 2 vols., post 8vo., with Map, &c. 18s.
Rank and Talent, a Novel, by the Author of 'Truckleboro' Hall', 3 vols., post 8vo., 11. 8s. 6d.
Captain Clapperton's Journal, 4to., 2l. 2s.
Winstanley's Observations on the Acts, &c., 8vo., 5s.
Jenning's Views in Paris, Part I., contains 50 Views and an engraved Title, 5s. Common; India Proofs, 10s.
The Ladies' Library, Part I., 2s. 6d.
Hall's Precedents in Conveyancing, Part I., 12s.
Longhollow, a Country Tale, 3 vols., post 8vo., 24s.
Flowers of Anecdote and Wit, Woodcut, from Landseer, 16mo., 3s.
Old Ways and New Ways, folio, Plain 6s., Coloured 12s.
Q's First Spelling Book, 12mo., Plain 3s. 6d., Coloured 4s. 6d.
Westall's Views in Great Britain, Part I., 5s. Ind. Na Proof, 10s.
Herodotus, translated from the Greek, with Notes and Maps, by Isaac Taylor, Jun., 10s.
Living and Dead, 3d Series, 1 vol., post 8vo., 10s.
Tales of Passion, by the Author of 'Gilbert Earl', 3 vols., post 8vo., 11. 11s. 6d.
Pratt's Friendly Societies, 12mo. 4s.
Dodd's Beauties of History, 12mo., 4s. 6d.

Sun. 25	22	21	29. 31	S.W.	Fog.	Stratus.

The frost commenced on the night of the 16th, and continued unabated till Sunday the 25th. On Saturday last, at 9 h. morning, the thermometer was 15° below the freezing point.

Highest temperature at noon, 36°.

Astronomical Observations.

The Sun entered Aquarius on Tuesday, at 16 m. to 6 h. A.M.
The Sun and Saturn in opposition on Wednesday, about 3 h. A.M.
Venus's geocentric longitude on Sunday, 6° 55' in Capri.
Jupiter's ditto ditto 9° 18' in Sagitt.
Sun's ditto ditto 30° 30' in Aquar.
Length of day on Sunday, 8 h. 44 min. Increased, 1 hour.
Sun's hor. motion on Sunday, 2° 39' plus. Logarithmic num. of distance, 9.9333.

REMOVED TO 43, NEW BOND-STREET.

MR. A. JONES, SURGEON-DENTIST,
begs to acquaint the Nobility and Gentry, that from many years intense application, he has invented and brought to perfection a new system of Fixing Natural, Terro-Metallic, and Artificial Teeth, from one to a complete Set, which are so accurately fitted as not to be distinguished from the original, and answer all the purposes of mastication, articulation, &c.
Mr. A. JONES continues stopping Decayed Teeth with his unrivalled Anodyne Cement, which in one minute allays the most excruciating pain; and by this means Carious Teeth are wholly preserved and rendered useful, even if broken close to the gums. This being a metallic composition, it becomes hard as enamel in a few minutes, will not decompose with the heat of the stomach, and resists the effects of acids, atmospheric air, &c.—Cleaning, and every operation incidental to Dental Surgery.

EAST INDIA MONOPOLY.

ON the 1st of February, will appear, in a PAMPHLET, price One Shilling, a REPORT of all the PROCEEDINGS at LIVERPOOL, Connected with Mr. Buckingham's Lectures on Opening the Trade to India and China, compiled for 'The Oriental Herald.'

Just published by HENRY COLBURN, 9, New Burlington-street. **RANK AND TALENT, A NOVEL.** In 3 vols. post 8vo.

TALES OF PASSION. By the Author of 'Gilbert Elliot.' In 3 vols. post 8vo.

Contents: Lord Lovel's Daughter—The Bohemian—Second Love.

SAILORS and SAINTS. By the Authors of 'The Naval Sketch Book.' In 3 vols. post 8vo.

THE DISOWNED. By the Author of 'Pelham.' Second Edition, in 3 vols. post 8vo. 31s. 6d.

If 'Pelham' justly raised for its author a very high character, 'The Disowned' will raise it far higher.—*Literary Gazette.*

THE ANGLO-IRISH; or, Love and Politics, a Tale of the nineteenth century. A Novel in 3 vols. post 8vo. 31s. 6d.

TALES OF A WOMAN; or, Illustrations of the Female Character. In 3 vols. post 8vo. 18s.

THE BALL, OR A GLANCE AT ALMACKS. In 1 vol. post 8vo. 7s. 6d.

Important Works just published by HENRY COLBURN, 9, New Burlington-street.

MEMOIRS OF SUCHET, DUKE D'ALBUFERA. Comprising his Account of the Peninsular War. In 8vo., French, 10s. 6d.

N.B.—The Translation will be ready in a few days.

Second Volume of the MEMOIRS of the EMPRESS JOSEPHINE. By MADAME DE LAMOTTE. Comprising some highly curious extracts from the Private Correspondence of the Empress, now first published. In post 8vo., 16s. 6d. French, 8s.

THE MARQUIS OF MONDONDERRY'S NARRATIVE of the LATE WAR in the PENINSULA. Comprising the Correspondence of many distinguished Officers with the Author.

TWENTY YEARS' MILITARY ADVENTURES in THREE QUARTERS OF THE GLOBE; or, Memoirs of an Officer who served in the Armies of his Majesty and of the East India Company, between the years of 1803 and 1814, in which are contained the Campaigns of the Duke of Wellington in India, and his last in Spain and the South of France. In 3 vols., 8vo., 24s.

THE ELLIS CORRESPONDENCE, comprising many particulars of the Revolution, and Anecdotes Illustrative of the History and Manners of those Times. Edited from the Originals, with Notes and a Preface, by the Hon. GEORGE AGAS ELLIS. In 2 vols., 8vo., with a Portrait.

LETTERS FROM THE ÆGEAN. By JAMES EMERSON, Esq., containing among other interesting Narratives, the singular History of Crevelier, the Pirate, the original of Lord Byron's Corsair. In 2 vols., post 8vo.

BUCKINGHAM'S TRAVELS in ASSYRIA, MEDIA, and PERSIA. In 4to., with 27 Engravings, 31. 13s. 6d.

THE LIVING and the DEAD. Second Series. In post 8vo., 10s. 6d.

A SECOND JUDGMENT of BABYLON the GREAT; or, MORE MEN and THINGS in the BRITISH CAPITAL. By the author of 'Babylon the Great.'

Also, nearly ready,

TRAVELS in ARABIA, comprehending the HADJAZ; or Holy Land of the Mussulmans. By the late JOHN LEWIS BURKHARDT.

THE LONDON MAGAZINE.—Those who are desirous of becoming Subscribers to a Periodical Work, which unites the Useful with the Amusing, and whose political opinions, without being distorted by party-violence, are in accordance with the advancing intelligence of the age, have an opportunity of commencing a Volume with the last number of the London Magazine, published on the 1st of January;—being No. X. of the Third Series.

The number for February will contain the following articles:

1. The approaching Session of Parliament.—2. Elementary Education.—No. III. Children's Books.—3. The best Bat in the School.—4. The Tower.—A Letter from Dr. Mayrick to the Editor.—5. On the Supply of Anatomical Subjects.—6. You'll come to our Ball.—7. Paris in 1825.—8. A Looking-glass for the Country.—No. I. Windsor.—9. Steamers.—10. The Moral Tendencies of Knowledge.—11. Diary for the Month.—12. Hobbles.—13. Notes on Art.—The Colosseum, &c.—14. The Editors' Room.—15. The Journal of Facts.

London: printed for the Proprietors, and published by their Agent, Henry Hooper, at the office of the London Magazine, 13, Pall Mall East.

CATALOGUE OF BOOKS.

This day is published price 3s. 6d.

HARDING and LEAPARD'S CATALOGUE of VALUABLE BOOKS, ANCIENT and MODERN, FOR MDCCCXXIX. This Catalogue contains a most excellent Selection of all Books, in all Languages, and in every department of Literature; a Choice Collection of Manuscripts, and some remarkable Specimens of Early Printing and Block Books; the whole in very fine condition, bound by CHARLES LEWIS and others, with the price affixed; to be had at No. 4, Pall Mall East.

Of whom may be had the new edition of DIDDIN'S INTRODUCTION to the KNOWLEDGE of the RARE and VALUABLE EDITION of the CLASSICS. 2 vols. 8vo. 21. 2s.

The same edition beautifully printed on imperial 8vo., to range with the Lord Spencer's Catalogue. 2 vols. 6s. 6d.

DIDDIN'S LIBRARY COMPANION, or the YOUNG MAN'S GUIDE, and OLD MAN'S COMPANION, in the CHOICE of a LIBRARY. Second edition. One thick volume. 8vo. 11. 7s. Beautifully printed on a fine royal paper. 2 vols. 4s. 6d.

MR. BUCKINGHAM'S LECTURES.

EXTENSION OF COMMERCIAL INTERCOURSE WITH INDIA, AND OPENING OF THE TRADE TO CHINA.

THE satisfactory result of MR. BUCKINGHAM'S visit to Liverpool during the past month, being such as to strengthen and confirm him in his previous determination, he will accordingly follow up this first effort, by a similar personal visit to all the great towns and populous districts of England, Scotland, Ireland, and Wales, in the order of their importance or proximity of situation. This will be effected so as to embrace one or two places in the first fortnight of each month: and thus to admit of his being in London during the remainder of that period, to bring out the succeeding Number of 'The Oriental Herald,' to which his attention will now be chiefly directed.

The profits arising from his Lectures at Liverpool, amounting to £150, having been given over to Mr. James Cropper, Mr. John Ewart, and Mr. William Rathbone, merchants of that town, to be applied to the commencement of a Fund for promoting the general object in view; and Mr. Buckingham being particularly desirous of waiving all considerations of private, personal, or pecuniary benefit, from the delivery of those Lectures at other places, he proposes to devote the whole of the profits arising from this source, to the two following objects:

1. The first half of whatever sum may be realized, to be given towards the formation of a Select Library, for the use of the 'Oriental Free Trade Association,' to be formed in each town: to consist of all the best Works on India and the Eastern World, for the purpose of general reference and accurate information on all the topics likely to come under public discussion, as connected with the East India Company's Monopoly, in Parliament or elsewhere.

2. The second half of such sum to be given as a reward for the composition of a Prize Essay, without limitation of Candidates, containing a description of the particular Town or District in which these Lectures may be delivered; especially with reference to its commercial relations with other parts of the globe, its manufactures, trade, and resources; and a development of the advantages which would result to its population, from a Free Commercial Intercourse with the Eastern World. This Essay to be formed, as nearly as practicable, on the model of the 'Description of Bussorah, the chief port of the Persian Gulf,' and the 'Report on the Trade of Smyrna, the principal commercial city of the Turkish Empire,' as printed in 'The Oriental Herald,' vol. 18, p. 73, and p. 473, and vol. 19, p. 26. The claims of the respective Candidates to the Prize Premium offered for the best composition, to be adjudged by the Local Committee of the Town or District in which 'The Oriental Free Trade Association' is formed, and to a description of the commerce and resources of which the Essay will be especially directed.

It is hardly necessary to add, that by the first of these objects, the best information will be collected in the Town itself, respecting India and the Oriental World; and, by the second, a body of information of the most useful and valuable kind, will be collected into one form, and from thence distributed more widely than could be accomplished through any other channel, over every portion of the Eastern Hemisphere—where the circulation of 'The Oriental Herald' has, ever since its first establishment, been greater than that of any other English Publication that can be named.

LITHOGRAPHIC PRESSES and STONES, and every requisite Material used in the art, supplied, of the best quality, at DAY'S LITHOGRAPHIC ESTABLISHMENT, No. 17, Gate-street, the north-west corner of Lincoln's Inn-Fields.—Maps, Chart Drawings, Plans of Estates and Writings of every description, Lithographed in the best manner.

FRENCH LANGUAGE.

This day is published, price 2s., the twenty-first edition of **A NEW and EASY METHOD of LEARNING the SPELLING and PRONUNCIATION of the FRENCH LANGUAGE.** By JOHN FERRIN. Carefully revised by C. GROS.

Printed for Harding and Leppard; Longman, Rees, Orme, Brown, and Green; Baldwin and Cradock; T. Bossey and Sons; Harvey and Darton; Dolan and Co.; Harris and Son; Simpkin and Marshall; Sower; Baker and Fletcher; and Poole and Edwards; of whom may be had, the new edition of **DR. MAYOR'S ETON LATIN GRAMMAR,** with the Accents and quantity marked. By Dr. CAREY, price 2s. 6d.

MAYOR'S ETON LATIN GRAMMAR, with the Accents and Quantity marked.

This day is published, price 2s. 6d., a new and greatly improved edition, being the thirteenth, of

DR. MAYOR'S ETON LATIN GRAMMAR, with Explanatory Notes, and useful Additions to assist the learner. This edition has been most carefully revised, and the Accents and Quantity marked. By Dr. CAREY.

The sale of twelve very large editions, within a few years, is the best evidence of the value and estimation in which the notes of Dr. Mayor are held; and the patronage so liberally given, has induced the proprietors to spare no expense in rendering this edition in every way worthy of their support.

London: printed for Harding and Leppard; Longman, Rees, Orme, Brown, and Green; Baldwin and Cradock; Whitaker; Treacher and Arnott; J. Richardson; T. Bossey and Sons; Simpkin and Marshall; J. Dupcan; Hamilton, Adams, and Co.; E. Williams; Harvey and Darton; Poole and Edwards; Baker and Fletcher; Cowie and Co.; Sustance and Stretch; J. Collingwood; and C. and J. Rivington.

Of whom may be had, **FERRIN'S FRENCH SPELLING,** the twenty-first edition. Edited by C. GROS. Price 2s.

Just published.

THE FOREIGN QUARTERLY REVIEW,

No. VI.

CLERICAL, MEDICAL, and GENERAL LIFE ASSURANCE SOCIETY.

DIRECTORS.

GEORGE PINCKARD, M.D., Chairman.

Rev. G. Beresford, M.A. T. Davis, Esq.
Rev. James Macdonald, M.A. Sir Charles de Vaux, Bart.
G. G. Babington, Esq. John Dixon, Esq.
W. Beatty, M.D. James Kibbleshite, Esq.
Robert Bree, M.D., F.R.S. Samuel Merriman, M.D.
James Carden, Esq. Samuel Mills, Esq.
Arthur Chichester, Esq., M.P. Sir George Pocock.
H. Jas. Cholmondeley, M.D. Ashby Smith, M.D.

THE FOLLOWING ARE AMONG THE DISTINGUISHED FEATURES OF THIS SOCIETY.

1. In addition to the ordinary Assurance on Healthy Lives, this Society is entitled to the distinction of having been the first to extend the benefit of Life Assurance to persons not in a sound state of Health, without excepting those afflicted with gout, asthma, rupture, liver complaints, vertigo, insanity, spitting of blood, and the other diseases generally specified.
2. Reduced Rates of Premium.
3. Accepting Premiums in a single payment, annually, for a limited term, or annually during life.
4. Granting Policies to Persons going to any part of the Globe.
5. Apportioning to the Assured the greatest part of the profits every five years, which, at their option, may be added to the Policies, or taken in reduction of the payment of premium.
6. Purchasing the Policies of the Assured, if required.
7. Advancing, by way of loan upon the policy, (in cases of exigency,) any Sum not exceeding two-thirds of the value thereof.
8. The Society will grant Annuities, Endowments for Children, and will purchase Annuities, &c.
9. Making no charge for entrance, nor fine for non-appearance.

Prospectuses and full information may be had at the Office or by letters addressed to the Secretary.

J. PINCKARD, Resident Secretary.

Office, No. 4, Southampton-street, Bloomsbury-square, London.

IMPORTANT ADVANTAGE to the CONSUMER.—All Coffee roasted every day.

Berries of unusual strength and fine flavour, far better than inferior Mocha.

Real Bourbon (a choice article) 2s. 6d.

Very superior Mocha 2s. 6d.

Jamaica, 1s. 6d. to 1s. 4d., best 1s. 6d.

Raw Coffee one-fifth in the pound less than roasted.

TEAS.—Common Kind, 2s. 6d.; Coarse Common, 4s. 4d. to 4s. 8d.; Strong Rough Common, 4s. to 5s. 6d.; Choice flavour, 6s.; Bouillon, of extraordinary strength and peculiar fine flavour, 6s. 4d. to 7s.; Common Green, 4s. 10d. to 6s.; Hyson Kind, 7s. 6d.; Hyson, 8s. 6d. to 10s.

Chocolate and Cocoa Paste, 1s. 6d. per pot; Strickland's Broma, 2s. 6d. per pound; best patent Cocoa, 2s. per pound, all warranted best quality.

The trade liberally treated.—Orders by post attentively executed, and delivered free within five miles.

SAMUEL ANDREWS, (late Long, Youngs, and Co.), 43, Old Broad-street, four doors from Piccadilly.

COUGH, ASTHMA, &c.—The basis of most

of the advertised nostrums being opium, they often prove injurious by increasing fever and checking expectoration. The Lettuce Lozenge, introduced by the celebrated Dr. Duncan, not only allays Cough and feverish action in the Lungs, &c., but, by promoting expectoration and determining to the skin, effectually removes the cause of Cough and Asthma, and thereby prevents mischief. These Lozenges, made by directions of the celebrated Dr. Duncan, may be obtained, with full directions for their use, at the Medical Hall, 170, Piccadilly; of Sanger, 150, Oxford-street; and Harris, bookseller, corner of Ludgate-hill.

London: Printed and Published every Wednesday morning, by WILLIAM LEWIS, at the Office, No. 4, Wellington-street, Strand.

Price 1s.

THE VISION OF A GODLESS WORLD.

(From the German of John Paul Richter.)

[A considerable portion of the following extraordinary composition is inserted by Madame de Staël in her work on Germany, (part II., chap. xxviii.) But it is greatly defaced there, in part by the ragged and disjointed condition in which it is brought forward, and partly by that haze of indistinctness which French translators seem to be led by their language to throw over every thing lying beyond the narrow scope of their poetical eye-sight, not to mention sundry inaccuracies to which the English version has superadded the somewhat ludicrous substitution of *splendid basilisks* for *fiery basilisks*, thus converting a serpent into a church, a place such reptiles are not in the habit of frequenting, unless we can bestow that name on the temple of Pandemonium. Still, even under that form, it has been read by many who have been strongly impressed with the power and intensity of the conception; and perhaps these, and others too, it may be, will not be displeased to see it in a dress more resembling the one it received from its author. A variety of like compositions are scattered through the sixty volumes of John Paul's works; and the reader may find one done into excellent English by his great admirer amongst us,—an admirer, too, who is almost his rival in portraying the fantastic progeny of sleep, in the ninth volume of 'The London Magazine,' p. 242.]

If my heart should ever become so hapless and so withered, that every feeling in it which asserts the being of God should be destroyed, I would appal myself by reading over the following composition of mine; and it would cure me and give me back the feelings I had lost.

The aim of this poem is the excuse for its boldness. Men deny God's being with just as little feeling as most acknowledge it with. Even in our best systems of philosophy, we gain nothing more words, counters, and medals, as unisers collect cabinets of coins; and it is late before we convert the words into feelings, the coin into enjoyments. A person may believe in the immortality of the soul through twenty whole years; and in the twenty-first, on some great moment, be for the first time astounded at the riches contained in this belief, at the warmth of this fountain of naphtha.

Just so was I terrified by the poisonous vapour that steams forth to choke the heart of him who for the first time sets foot in the ante-church of atheism. It would give me less pain to deny immortality, than to deny God: the former act only robs me of a world that is enveloped in clouds; the latter snatches from me the present world; that is, its sun: the whole spiritual universe is blown up and shattered by the hand of atheism into numberless quicksilver atoms of beings, that glimmer, and course, and roam, and rush together and asunder, without unity or permanence. No one is so utterly forlorn in the universe as the denier of God: he moans with an orphan heart that has lost its Almighty Father, beside the vast corpse of nature, which no living spirit animates or holds together, but which grows in the grave; and his mourning ceases not until he crumbles away from that corpse. The whole world lies before him, like the great Egyptian stone Sphynx, half-buried in the sand; and the universe is the cold iron mask of a formless eternity.

It is my further view, by this poem to alarm certain reading or deep-read doctors; for, of a truth, these people now-a-days, since they have been taken, like captives condemned to hard labour, by our new philosophy for the task-work of its drainage and mining, will canvass the existence of God as coldbloodedly, and as coldheartedly, as if the question were about the existence of the unicorn or the kraken.

For the sake of others who have not advanced

so far as these learned doctors, I will yet remark that the belief in atheism and the belief in immortality may co-exist without any contradiction; for the self-same necessity which in this life has cast the light dew-drop of my being into a flower-cup beneath the sun, may re-produce it in a second; nay, it would be easier to give me a second body than the first.

On being told in our childhood, that at midnight, when our sleep comes nigh to our soul and darkens our very dreams, the dead raise themselves out of theirs, and walk into the house of God, and there mimic the worship offered to him by the living, we are wont to shudder at death for the sake of the dead: and in our lonely walks at night we turn away our eyes from the long windows of the still church, and fear to examine the gleams upon them, whether they fall from the moon.

Childhood, with her joys, and still more with her fears, resumes her wings, and sparkles anew in our dreams, and plays like a glow-worm in the little night of the soul. Do not extinguish these flitting sparks. Leave us even our dismal and painful dreams; they are half-shadows that set off the realities of life. And what have they to give us in the room of these dreams, which carry us up out of the roar beneath the easter to the quiet hill of childhood, where the stream of life was still flowing onward in silence along its little grassy plot, bearing the load of unconscious years, on its way toward the precipice.

I was lying once, on a summer evening, in the sun, upon a hill, and fell asleep. Then I dreamt I awoke in a church-yard. The rolling wheels of the clock in the tower that was striking eleven, had awakened me. I searched through the dark empty sky for the sun; for I imagined that an eclipse had drawn the veil of the moon over it. All the graves were open, and the iron doors of the charnel-house were swung to and fro by invisible hands: along the walls shadows were flitting, which no one cast; and other shadows were walking upright through the naked air. In the open coffins nothing continued to sleep, save the children. In the sky there was nought but a grey sultry cloud hanging in massy folds, and a huge shadow kept on drawing it in like a net, nearer and closer and hotter. Above me, I heard the distant falls of avalanches; below me, the first tread of an illimitable earthquake. The church heaved up and down, shaken by two ceaseless discords, which were warring against each other within, and vainly striving to blend into a concord. At times a grey gleam leapt up on the windows, and at its touch the lead and iron melted and ran down. The net of cloud, and the reeling of the earth, drove me toward the porch, before which two fiery basilisks were hatching their venomous broods. I passed along amid unknown shadows that bore the marks of every century since the beginning of things. All the shadows were standing around the altar; and in each there was a quivering and throbbing of the breast instead of the heart. One dead man alone, who had been newly buried in the church, was still lying on his couch, without any quivering of his breast; and his face was smiling beneath the light of a happy dream. But, when one of the living entered, he awoke and smiled no more: tollsly he drew up his heavy eyelid, but no eye was within; and his beating breast, instead of a heart, contained a wound. He lifted up his hands, and clasped them

for prayer; but the arms lengthened and lowered themselves from his body, and the clasped hands dropped off. Overhead, in the vault of the church, stood the dial-plate of Eternity, on which no number was to be read, nor any characters except its own name; only there was a black hand pointing thereat, on which the dead said they saw Time.

At this moment, a tall majestic form with a countenance of imperishable anguish sank down from on high upon the altar; and all the dead cried: 'Christ! is there no God?'

He answered:—'There is none!'

The shadow of every dead man trembled all over, not his breast merely; and, one after another, their trembling dispersed them.

Christ spake on:—'I have gone through the midst of the worlds, I mounted into the sun, and flew with the milky way across the wilderness of heaven; but there is no God. I plunged down, as far as Being flings its shadow, and pried into the abyss, and cried:—Father, where art thou? but I heard only the everlasting tenebrous, which no one sways; and the glittering rainbow of beings was hanging, without a sun that had formed it, over the abyss, and trickling down into it. And, when I looked up towards the limitless world for the eye of God, the world stared at me with an empty bottomless eyesocket; and Eternity was lying upon chaos, and gnawing it to pieces, and showing the end of what it had devoured.—Scream on, ye children!—these shades with your screaming: for He is not!'

The shades grew pale and dissolved, as white vapour that the frost has given birth to is melted by a breath of warmth; and the whole church became empty. Then—Oh it was terrible to the heart!—the dead children, who had awaked in the church-yard, ran into the church, and threw themselves before the lofty form upon the altar, and said:—'Jesus! have we no father?' And he answered with tears streaming down:—'We are all orphans, I and you; we are without a father.'

Here the screeching of the discords became more violent; the walls of the church tottered and burst asunder; and the church and the children sank down; and the whole earth and the sun sank after; and the whole of the immeasurable universe sank before us; and Christ remained standing upon the highest pinnacle of nature, and gazed into the globe of the universe, pierced through by a thousand suns, as it were into a cavern, burrowed into the heart of eternal night, wherein the suns were running like miners' lights and the galaxies like veins of silver.

And, when Christ saw the crushing throng of worlds, the torch-dance of the heavenly *ignes fatui*, and the coral banks of beating hearts, and when he saw how one globe after another poured out its glimmering souls upon the dead sea, as a water-balloon strews its floating lights upon the waves;—then with a grandeur that betokened the highest of finite beings, he lifted up his eye toward the nothingness and toward the infinite void above him, and said:—'Moveless and voiceless nothing! cold eternal necessity! frantic chance! can ye, or any of you, tell me? when do you dash to pieces the building and me? Dost thou know it, O chance! even thou, when thou stridest with thy hurricanes athwart the snow-dust of the stars, and puffest out one sun after another, while the sparkling dew of the constellations is perched up as thou passest along!

How desolate is every one in the vast catacomb of the universe! There is none beside me save myself.—O, Father! Father! where is thy world-sustaining breast, that I may rest on it! Alas! if every being is its own father and creator, why may it not also become its own destroying angel?

Is that a man still beside me? Poor wretch! your little life is one of nature's sighs, or the mere echo of it; a mirror flings its rays on the clouds of dust from the ashes of the dead on your earth, and, forthwith, ye spring up, ye beclouded, fleeting images. Look down into the abyss, over which clouds of ashes are floating; mists, full of worlds, are rising out of the dead sea; the future is that rising mist, and that which is falling is the present. Dost thou know thy own earth?

Here Christ looked down, and his eye filled with tears, and he said: 'Alas, I was once upon it; then I was still happy; then I had still an Almighty Father, and still looked with gladness from the mountains to the unfathomable heavens; and, when my breast was pierced through, I pressed it to his soothing image, and said, even in the bitterness of death—Father, draw forth thy son from his bleeding tabernacle, and raise him to thy heart. Ah! ye over-happy inhabitants of the earth, ye still believe in Him. Perchance, at this moment, your sun is setting, and ye are falling on your knees in the midst of blossoms and radiance and dew, and are lifting up your blessed hands, and, while shedding a thousand tears of joy, are crying to the open heavens: Me, too, even me, dost thou know, thou Almighty One, and all my wounds, and after my death thou wilt receive me and close them all. Miserable creatures, after death they will never be closed. The woe-begone mortal who lays his bleeding back in the earth, to sleep till the coming of a fairer morning, full of truth, full of goodness and joy, will awake amid the storms of chaos, in the eternity of midnight; and no morning comes, and no healing hand, and no Almighty Father. Thou mortal beside me, if thou still livest, pray to Him now, else thou hast lost him for ever.'

And, as I fell down and beheld the shining world, I saw the uplifted scales of the giant-snake, Eternity, that had spread itself around the universe; and the scales dropped down, and it wreathed itself twice round the universe; then it twined in a thousand folds around Nature, and squeezed world against world; and, with a crushing force, compressed the temple of infinity into a village church; and every thing grew dense, and murky, and dismal, and the clapper of a bell stretched out its measureless length, about to strike the last hour of time, and to split the fabric of the world to atoms—when I awoke.

My soul wept with joy that it was again able to worship God; and my joy, and my tears, and my faith in him, were my prayer. And, as I stood up, the sun was glowing low down behind the full purple ears of corn, and was quietly throwing the reflection of its evening glory to the little moon that was rising without a dawn in the east; and between heaven and earth a joyous short-lived world was spreading out its tiny wings, and, living, as I was, in the presence of an Almighty Father; and from the whole of nature around me came sounds of peace, like the voices of evening bells from afar.

I. C. H.

CONTRE-PROJET TO THE HUMPHREYSIAN CODE.

A Contre-Projet to the Humphreysian Code; and to the Projects of Redaction by Messrs. Hammond, Uniacke, and Twiss. By John James Park, Barrister-at-law. 8vo., pp. 260. J. and W. T. Clarke. London, 1828.

IN our former notice of Mr. Park's volume we took occasion to class him with that division of jurists on whom we bestowed the epithet of historical. From this, however, our readers must not conclude that the object of his book is to defend the general principles of any school. All who maintain that the goodness of a system of laws,

instead of being tried by maxims of pure reason, must be determined by the circumstances which are peculiar to each particular country, may, for general purposes, be called historical jurists. But in this class there is again a subdivision. However anxious the Codifiers may be to appropriate to themselves all theoretical honours, and to leave their opponents the distinction of being tolerable practical men, and however willing some of their opponents in this country may have shown themselves to acquiesce in this injurious allotment of parts,—it is known to every German, and nearly every Frenchman, that there is a body of historical jurists who occupy themselves solely with the theory of systems of law, and who have shown at least as much profound and philosophical acquaintance with *principles* as any of the more boasting disciples of the other creed. This valuable body of thinkers and writers are not, in general, professional lawyers. They are, for the most part, University professors—men who have been trained in scientific habits of thoughts—who have abundant leisure, and (what is not always the accompaniment of leisure) abundant diligence; and, best qualification of all, who are not distracted from hard closet study by the feverish wish to make immediate practical trial of any discovery they may chance to light upon in the course of it. The other class, whose business is not to form a general science of jurisprudence, but to discover the principles which are at work in some particular system of laws, and thence to form a judgment which of them must be retained, abandoned, or amended—must be the working lawyers of that country—men who, in addition to profound knowledge, have a great experience of the practical operations of the system. It is one argument in favour of the historical jurists, that all their general speculations have derived strength and illustration from these local experiments; for, when the additions to scientific discovery go on, *pari passu*, with the additions to empirical discovery, there is one striking evidence that the science itself is not empirical, an evidence analogous to that which has been dwelt on so powerfully in Adam Smith's 'History of Astronomy.'

To this last class Mr. Park belongs; and his work is the most successful attempt that we know of to give a complete *rationale* of English law, and thereby to point out the principles upon which all alterations in it must be conducted. The following passage is an excellent opening to the subject:

'But it may be asked, if the combination of facts, and of the transactions of mankind, are, as they must be, infinite, how can there be a redundancy of rules for an infinite matter? The right understanding of this question is extremely important, as otherwise the supposition would appear to clash with observations that may be advanced in the sequel of this inquiry, in speaking of codes of law. In the existing law of this country, that which I designate a *redundancy*, arises, in every case, from a body of rules and doctrines having, in former times, been concocted, in reference to some subject matter which, though then veritably existent and important, has now ceased to have any existence or importance, otherwise than in fiction of law. The spectre of the *thing* alone remains; while all the doctrines which were applied to it in its actual vitality continue to encumber the science. This is the redundancy of which I here speak. By an unnecessary rule, I here mean a rule which is without an object really in *esse* in the existent actions or relations of mankind; an abstract without a concrete; a case in which the rule itself alone calls into existence the *Ens Logicum* which it is to dispose of, and which, but for that rule, would not exist even in idea. Of such rules, it is obvious that a redundancy may well exist concurrently with an infinitude in the existent and veritable transactions and relations of civil society, and in the combinations of the machinery by which it is now conducted.

'From what has been already advanced, a sufficient foundation is laid for the observation, that a faulty state of the law may arise from two very distinct causes.

'1. Vices, or inconveniences, in the rules themselves.

'This cause, upon the supposition of its existence, requires no explanatory remarks.

'2. Redundancy of rules beyond the necessity which exists, although the rules themselves be indifferent, or equally capable of promoting or defeating justice, as the chances may fall.'—Pp. 14, 15.

The test of any part of a system being a *redundancy* is its being unnecessary to the consistency of the other parts of a system, or to fulfilling the idea of the system. To apply this test in the case before us, we must reduce the system of English law to a science. But can this be done? Is it possible, that, in that which has been so often called a medley of contradictions and barbarisms, there can be any principle of combination, any internal law? Hear Mr. Park's answer:

'But the common law of England, as it now stands before us in a connected stream of decision to the present time, may be stated to be a system for substituting argumentative corollary or inference for arbitrary and pre-constituted rule. In other words, it is an infinite series of conclusions drawn from some judicial premises already given. It has in so far the semblance of a mathematical science; though without its capability of *positive* demonstration. Every proposition once decided becomes a datum from which to reason to the conclusion upon a new combination; and it is commonly for this purpose that decisions, or precedents as they are called, are quoted by lawyers in legal disquisition or argument. It is consequently a system of analogies and dependencies, the *proof* of every new decision (for such in fact is the argumentative judgment or *conclusion* pronounced by the judge) being—its coherence and conformity to the principles established by former decisions, as its data; and its demonstrable grounds of distinction from those other decisions from which it appears to depart.

'It is important, in passing, to inquire in what the value of such a system consists; and it is remarkable that the same materials will conduct us to an equally important consideration; its specific inconveniences. Both these qualities, like the opposed points of a revolving index, turn upon one centre.

'The transactions of mankind, and the internal combinations of those transactions, being infinite, it is impossible to have any series of pre-conceived propositions (which must necessarily be a *finite* series) co-extensive with the questions of right which arise upon the *infinite* series.

If, then, there were no means furnished by the law, considered as a science, for adjudicating on the new combination, but the fiat of the judge, two consequences would follow: 1st, that *every new combination whatever*, however close in its analogies to existing rules of law, must go to the tribunal of justice to be adjudicated, with all the delay and cost involved by that process; and 2ndly, that the declaration of the judge, when obtained, would be an arbitrary resolution on the case, governed by the temperament, views, and notions, which the individual judge might happen to entertain of justice, policy, or convenience; to say nothing of partiality or prejudice.

'The common law of England, on the contrary, by a theory of its own, concludes every new combination to be under the influence of some one or more pre-established principles or rules of adjudication, and to be capable of being driven or hunted home to those principles by a dialectic force. Hence it considers the judge as merely *declaring* the law, not promulgating it;—in point of fact, he is deciding between contending intellectual gladiators, which of the two has proved his thesis;—that thesis necessarily being, on either hand, that the question of right arising upon the new combination is governed by such of the rules of law already declared, or the reasons upon which those rules are founded, as would favour, by their analogies, the right of the party who in his turn propounds his argument. "Show me the reason," as my Lord Coke pithily observes, "and I will show you the law."—Pp. 21—24.

This passage seems to us to sweep away, at once, immense heaps of rubbish which have been accumulating for the last fifty years about this question. Ever since the establishment of the Vinerian Professorship at Oxford, there has been a vast quantity of confusion congealing about the public notions of the common law. Mr. Justice Blackstone carried with him into his new situation a very high, and, probably, a very just, notion of the merits of the English law and of the English constitution. But, in expressing that high opi-

nion, he was not sufficiently attentive to the different force of the same phrases when addressed to a forensic and to an academical audience. If eminent judges had stated from the bench, that common law is the perfection of human reason, no mischief could accrue from the observation, because all to whom the observation was addressed, whether barristers, solicitors, or suitors, would instantly refer it to the standard of excellence in a system of law most present to their minds, which standard would be its adaptation to the wants and circumstances of those for whom it was provided. But, when those same phrases were used before persons who had another standard of the perfection of human reason in their minds,—namely, in the case of a few of the listeners to these lectures a strictly scientific standard, and in the case of the greater part of the readers a vague common-sense standard,—an exceedingly false and dangerous opinion was likely to be taken up. The uninquiring credulous part of mankind would believe the lecturer's words, and believe them in a sense in which they were utterly false: another part, discovering their superficial inaccuracy, would laugh the professor, his disciples, and the subject of their panegyric, to scorn. And this in fact has been the case. Immediately upon the publication of the 'Commentaries,' the common law began to be spoken of as *the* perfect system of law,—and also, as the greatest collection of barbarous nonsense ever accumulated by the perversity of human wit.* The English constitution fared in the same way. From the first years of George III.'s reign up to the commencement of the French Revolution, no one spoke of it except as the model of a system after which all the constitutions in Europe ought to be fashioned; and, since then, it has been denounced as the most absurd combination ever formed out of heterogeneous and warring materials. And what is, then, the third opinion we would set up against both of these? Why, this; that the common law is not the perfection of human reason, and that it *ought* not to be; that the British constitution cannot be a universal model, and that it would be a bad constitution if it were. Neither one nor the other can be tried by the pure reason, because they do not fall within its province; but both, nevertheless, may have a sound principle at work in them, and of both, therefore, a scientific account may be given. It is for furnishing this scientific account of English law, that we feel ourselves so much indebted to Mr. Park. The next passage is also valuable, as correcting the vulgar notions about the evil of adhering to precedent:

'And here—from this very necessity of consulting the public security—arises the first actual separation between the law and the sense of mankind. The judge himself tells you, that the decision he feels bound to make, judicially, is the reverse of that he could have wished to pronounce with a view to the deserts of the parties, or their real rights. The public, *not in the secret*, would say to the judge, Bend your rule to the justice of the case. No, says the judge, I am bound by the precedents. Bound by the precedents? the public would rejoin: say, rather, you are spell-bound; that, sitting here for the avowed purpose of administering justice between litigating parties, and with a case of clear right and wrong before you, you deliberately and solemnly disappoint the expectations of those around you, or to whom the facts of the case may be otherwise known, and, in the face of common sense and justice, make shipwreck of both upon some ideal shoal of legal fiction. Bound by precedent? And what is precedent? What is its binding power? Whence does it derive its omnipotence? If there are previous decisions, if there be a previous rule established, those decisions, that rule, must be either applicable, or not applicable. What is the guide for determining their applicableness, but the justice or injustice they will produce in combination with the case under consideration? If they produce injustice, does not the fact itself demonstrate that the particular case is without the reason of the rule; or that it was not contemplated when the rule was laid down; and, therefore, by inad-

vertence only, was omitted to be made an exception to it? Is it in precedent to shoulder out justice? Is it enough to be told that men are to be denied their rights, that their sense of right and wrong is to be invaded, that their passions are to be awakened, their indignation roused, their affection for the jurisprudence of the country alienated, only because in some case between A. and B., whom we never before heard of, and which took place out of living memory, Lord C. or Lord D. happened to say such or such a thing? Is this the way in which excellence is attained in any other science? Is this making the use of our forefathers which in every other branch of human knowledge we are told is the best use—that of standing on their shoulders, and trying how much further we can see?

'I know all that as well as you, the judge might respond. *But I know something, also, that you do not know*,—that, unless I resolutely preserved the *system of the law, and the uniformity of decision*, against all compulsion of my feelings, all desire to do justice, all influence of compassion, in particular cases like this, I should bring you, the public, into a state of confusion and uncertainty, which in twelve months would fairly bring the wheels of the whole social machine to a stop. This result I *dare not* bring about, and this is what I mean when I say, I am bound by the precedents.'—*Pp. 33—35.*

A collateral proof that there must be a scientific adjustment of parts in the system of English law, is furnished, Mr. Park remarks, by the existence of such a being as a professional lawyer. That there ever has been a human being capable of retaining one hundredth, or one thousandth part of all the points of which English law is made up, is a supposition quite monstrous to any one who examines a single volume of reports. What possible dependence can there be placed upon the opinion of any one of the body, even if their duties were far more minutely subdivided than they are? And yet dependence may be placed upon the opinion of a vast number of lawyers, upon an innumerable number of points connected with the most dissimilar subjects. How can this happen, he asks, except from the fact of that inhering in the mind as a science, a small fragment of which, if considered as a collection of facts, would be immeasurably too much for the memory of a Crichton. Hence he deduces an important argument against those reformers by way of *reduction*, who imagine that a classification of the points of law under heads and titles, would make all previously existing books useless. It would be nearly as hard labour to learn by heart fifty heads of that interminable index as to study the whole mass of English law; and yet, that learning would be exceedingly useless.

Mr. Park tracks Mr. Hammond, Mr. Twiss, and the other redactionists, very skilfully through the various windings of their scheme. We have not room to accompany him, but we recommend this part of the work especially to our readers.

The following summary of the arguments respecting Codification is too valuable to be omitted notwithstanding its length.

'The advantages of Codification are striking and obvious. By converting the tables of the law into *tabule rasee*, it for a time throws back jurisprudence into pure science; it makes a clear field for the admission of elements, so far as the materials of jurisprudence are capable of affording them; it disencumbers the existing science of the whole mass of matter which has accumulated in a period of the world comparatively barbarous, or under conditions of society which have no longer a real existence; it lays open to the uninterrupted influence of the human intellect, the whole material of law.

'Its effects upon legal literature, and the prosecution of the science of legislation and jurisprudence, are consequently novel and striking. Law assumes much of the character of one of the pure sciences; and a new race of jurists and politico-metaphysical writers start into existence. The general activity, discussion, and interest, which pervade the departments of the physical sciences, extend themselves in tenfold degree to the department of jurisprudence, from the greater amount of interest which that science, under a process of re-construction, exercises over the rights and conditions of civil life. The dull embers of a technical

science, receiving upon them the unctuous stream of human intellect, vivacity, and contention, blaze up into a flame which arrests the attention of every spectator, from its contrast to the dull twilight which had preceded. To those accustomed to the activity and intensity which pervade the departments of the physical sciences, and to which they owe so much of their successful prosecution, such a change in the department of jurisprudence cannot but be particularly gratifying and acceptable. It has the virtue also of opening new avenues to human enterprise. The monopolizer of conventional reputation and conventional importance are cast into the shade, as they always will be in such a passing transition of the elements of the world's structures, by unaccredited genius and unknown talent. New reputations are achieved, new sources to importance opened.

'In the mean time, the science of jurisprudence is found to have lost in certainty and in tangibleness, exactly as it has gained in splendour and interest. For fixed and technical rules, which, however they had originated, had by their very technicality obtained the tangibleness and manageability of *formulae*, and which therefore could generally be expressed and had reference to as succinct points, has succeeded an interminable mass of discursive argument, of elementary disquisition, of politico-metaphysical literature, of heterogeneous and contending elements of mind; attesting more the activity and the diversity of the human intellect, than any approximation to the reduction of jurisprudence to a certain science. Points of law, instead of finding their solutions in precedent, or analogy—in one or two arguments derived *per processum ad similia*—are to be hunted through controversies and disquisitions similar to those of polemics, and often equally discursive. The authority of past decisions is gone, and those which have come in their place are no longer held to be imperative precedents, but are only referred to as expressions of opinion, which, in a science placed upon the footing of other intellectual creations, can have little other authority on those who are to follow than the essential value which may appear to them to belong to them.'—*Pp. 120—122.*

We cannot conclude without saying that a more careful perusal of this volume has increased our admiration of it, high as the opinion was which we expressed in a former number.

TALES OF PASSION.

Tales of Passion: Lord Lovel's Daughter.—The Italianian.—Second Love. By the Author of 'Gilbert Earle.' 3 vols., 12mo., Colburn. London, 1828.

THE author of these volumes is very anxious to convince his readers that, in spite of the similarity of title, there is no similarity of purpose between his *Tales* and Miss Baillie's celebrated 'Plays of the Passions.' If he had said that there is a very great difference of power between the two works, we should not have taken much pains to disprove the assertion; for, whatever faults may inhere in the conceptions of the female dramatist, we think no one will deny that she has shown extraordinary genius in embodying them, and few, we think, will dispute that, even when the notions of the author of 'Gilbert Earle,' from not being his own, are tolerably good, his execution is generally very maimed and defective. But, if, as has been asserted, Miss Baillie sinned against the laws of art when she exhibited courses of action, each of which was the result of one passion, instead of being wrought out by the interlacing and cross-working of many, we do not see that the writer before us can escape the charge, merely because he has chosen to confine himself to that which is called in common parlance, *The Passion*. To suppose that love, because it is the strongest of all passions, therefore exists the most independent of all the rest, seems to us the vulgarest of all vulgar conclusions. Instead of living apart from the rest of human feelings, it absorbs them into itself; but so absorbs them, that each shall retain its proper qualities and its individual activity. How is it that every woman in Shakspeare is in love, that nearly every one of his women is a meek confiding creature, not distinguished by the possession of any intellectual qualities different from the others, and yet that each has such marked individuality, that it is absolutely i

* Mr. Bentham's first work was a 'Commentary on the Commentator.'

possible ever to mix or confound them in one's mind? For this reason: because in his poetry, love, though an overmastering, is never a levelling passion; it compels all powers into its service, to make use of them, not to extinguish them; it is rather the abstract and essence of all the feelings that existed in the mind previously, than a new one thrust forcibly in to expel and eradicate them. The ordinary tribe of love-writers, be they dramatists (so called) or novelists, treat the matter differently. Love is, with them, more than a tyrant: he is a tyrant of the Napoleon sort, bent upon changing human nature, and making it into a very vulgar sort of composite called a love-nature. And herein consists the great immorality of such writers, under whatever guise or fashion they may present themselves, and the immense distinction between those old English writers whom, in their insolence, they sometimes condemn as much more mischievous than themselves. If love, the most ardent burning love, be described as an active principle, the collected energy of human nature, nothing but good can result from the study of it. But, if it be represented as a passion not working in, but upon man and woman, heating down, and enfeebling, and rendering passive all the other powers,—it becomes the vilest of all instruments for debasing that which it is the business of art to elevate—it is converted into a worse, a more impious and immoral kind of necessity, because it is a necessity acting through those senses which are at all times too strong for us, and which it should be the business of our lives to compel into our service, not to exalt into our tyrants. It is well, consequently, that a judicial visitation descends upon those who commit this crime—that their descriptions of love are rendered far less powerful, far less passionate, by this very attempt to increase their vividness, and that we turn with delight, not from the immorality, but from the weakness, of sentimental love, to the genuine, glorious, native, womanly love of the *Violas*, the *Mirandas*, and the *Juliets*.

All these remarks are illustrated by the tales before us; and we trust, therefore, that we shall be excused from going into great details respecting them. Least, however, our observations should be misunderstood, we ought, in justice to the author, to say, that, upon the ordinary principles of the world's morality, there is nothing objectionable in his work, and that the observations which he intersperses are all exceedingly proper and orthodox, (besides having the advantage of being very common-place,) and that the style, though ordinarily much exaggerated, is occasionally powerful. As a specimen of the work, we give the following scene from the first tale, which, though it partakes of the evil qualities we have alluded to, is, nevertheless, somewhat redeemed by the parties in it successfully resisting the temptation to which they are exposed. The heroine is a young Catholic lady, in the reign of Henry VIII., who has nourished a secret passion for her confessor, a passion which he discovers with great horror, when he is one day giving her ghostly counsel. The following scene occurs two years after the discovery,—Hubert, the confessor, having very wisely gone abroad in the interval, lest the love of a fair devotee should be too strong for his powers of resistance:

'A few days after the news of the final dispersion of the rebels had reached her, Alice, according to her wont, proceeded, at evening, to the Abbey to pray. It was rather later than usual, and the sky was misty and dark. The stream rushed with a hoarser sound towards the ruins, dark masses of which rose before the eye with but little relief from any light behind. The heart of Alice was heavy in her bosom. The hope on which it had so fondly rested was stricken away. The heretic had again prevailed; and all that she most loved and venerated was prostrate beneath his power. If ever her spirit had needed prayer to cheer and strengthen it in its distress, it did so this night. She sought the Abbey to implore help to her failing soul—to weep, to watch, and to pray. A very different scene awaited her.

'As she approached the shrine of the Virgin, at which she was accustomed to pay her vows, she perceived a figure kneeling before it. A sight so unusual surprised her; but, thinking it was, perhaps, some pious traveller who, in passing, came, under cover of night, to pray at a spot so sacred,—she proceeded onward that she might not disturb him, and, taking a circuit of some extent, did not return to the shrine till a certain time had elapsed. She now approached it from the opposite direction to that in which she had come before—through the ruins, namely. She, therefore, fronted the person, who still knelt before it. She was again about to turn away, when, at the moment, the moon which had, hitherto, been totally obscured by thick clouds, burst, on a sudden, brilliantly forth into the clear heaven—and shed its first rays upon the stranger's face, upturned in fervent adoration—it was Father Hubert's!—Alice uttered one shrill scream, and sank, half-fainting, to the earth.

'Since the memorable day on which her heart had been laid bare before him, the eyes of Alice had never rested upon his form; but now, in shadow and in gloom, one slight glance sufficed to reveal to her the bodily presence of him who had ever been present in spirit—she knew him at once! A little more time was needed for Hubert to recognize who it was who had thus interrupted his devotions. A broken column, which had supported her as she sank to the ground, intervened between them. He hastened to pass it, and to raise the fainting form he saw prostrate before him.—When Alice opened her eyes, she found herself in Hubert's arms; and at the same moment he became conscious of who it was he held there.

'Let those whose happy fate has placed them free from temptation here pause; and, when they are about to condemn unfortunates who have sunk beneath the power of passion, let them remember that there are positions such as this; that fate carries on its course situations in which every thing which stirs, excites, inflames, maddens the senses and the soul, is conjoined—when all that is likely to check, to calm them—to show the danger which impends—to recall the reason which staggers—is silenced, is far away! Those who have been tried in the fire of such an ordeal as this, and have come forth pure, will be the first to pity and to pardon such as have sunk under its strength. They know how mighty the temptation is, how mighty the resistance must be!

'Let those who have loved figure to themselves the feelings of these two at the instant of their mutual recognition! Let them recall for a moment the light in which each had been viewed by the other—let them run over in their minds the sensations which, in the foregoing pages, I have endeavoured to trace. They will be able to appreciate the storm which shook their souls. Hubert felt the heart of Alice throb against his bosom!—this loveliest of created beings—this, the only woman who had ever called forth a soft emotion within his heart—now lay in his arms, too weak for self-support, yet retaining sufficient consciousness to cause her pulses to beat thus tumultuously, her breath to be drawn in those quick and broken gasps which made every nerve in his frame thrill electrically, as he felt them upon his cheek!—It was in vain, oh! it was in vain, that she strove now to check that passion which had fired and consumed her whole being for years!—the agonizing hours of restraint were passed; this, this at least, was a moment which love claimed as its own—and she gave herself up, body and mind, sense and spirit, to its entralling, its overwhelming ecstasy!

'The frame of the monk shook in the extremity of mortal agitation—a mist came over his eyes—his brain reeled—the self-control of years staggered before the breath of one passionate moment—he stooped his head to her's—and the first kiss of mortal passion which had ever polluted the lips of Hubert, burned upon their surface then!

'As he raised his head, with the deep, long-drawn sigh which is the reaction of passion in its excess—his eyes chanced to light upon that image of the Virgin, before which he had but now knelt with the calm, unclouded devotion which was his wont in the hour of prayer. Gracious Heaven! and what had a space of time scarcely capable of being numbered from its very briefness, wrought upon him! Years, years had not sufficed to do the work of that brief moment! The calm moon shone upon the holy image; and his soul sank abashed, in its guiltiness, from before its strong gaze. He shuddered; and, gently lowering Alice upon the column, who was scarcely yet restored from the first shock of surprise, followed as it had been by such rapid emotions, he sprang from her side, and sinking

upon his knees before the shrine, he sought that protection from his own rebellious passions which nothing but prayer can give!

'Lady, who deignest to read these pages, I trust that thou canst not figure to thyself the feelings which now reigned in the heart of Alice. None but those who have drunk deep of passion's most maddening cup, can judge of the tumult of her soul, when she felt the lips of Hubert pressed to hers. And when, a moment after, she saw him spring from her as though infection dwelt upon her touch, and kneel in agony of spirit before the Virgin's shrine,—the conflict was almost too much for her frame to bear. It was some moments before she was able to rise, or even to speak.

'“Father, pray for me!” she exclaimed, “pray for me—pray for us both!—I dare not, I cannot pray myself!”—and she sobbed bitterly.

'At the sound of her voice, he paused in his supplications—“Alice,” he said, “I am a weak and frail sinner, my prayers have no intercession. Oh! pride, spiritual pride!” he continued, scarcely addressing her, but almost, as it were, thinking aloud, “thou art the stumbling-block over which I have fallen—it is thou who hast shaken the self-subdued passions of years! But now is my haughty spirit humbled—I feel how weak and vain is human strength when it thinks itself the greatest—*ora pro nobis*,” he exclaimed, again turning towards the shrine—“*mater dolorosa, beatissima virgo, ora pro nobis peccatoribus!*”—And the large drops of cold sweat started upon his brow, as he bent himself to the earth in anguish.

'Alice remained by the column, trembling, overawed. The sight of this mighty spirit, which she had always revered as something almost superhuman, wrestling with the passions of humanity, struck her as a spectacle not to be contemplated without a sensation approaching to reverence. I do not mean that she thus analysed her feelings, but that they existed in her at the moment, and operated upon her unconsciously.—Some time elapsed without either party again speaking. The silence was, at last, broken by Hubert:

'“Alice Lovel,” he said, “this is no time for even such as you, bound by no restrictive ties or special duties, to give way to the vain and giddy passions of human affection. To me, at all times they are forbidden, like flesh to the Israelites in the desert—I cannot taste of them and live. But, at a season like this, when the ark of the Lord is broken from its resting-place, and his servants need all their strength and freshness to restore it—when their backslidings are noted and published as a scoff and bye-word wherewith to slander the true faith,—then to give way to the baits and instigations of the Devil—I shudder at the danger I have run: and here too! here in the scene of my former ministry—here, whither I came to pour out my spirit in prayer to the great Mother of all Purity!—alas! alas! I know not myself, thus fallen, thus stained. Alice Lovel, I can no longer address thee in the language of spiritual admonition—I can no longer call thee ‘daughter,’ and chide thee for thine errors as a father doth his child—I am now no more than a poor sinner, frail, weak, and liable to err as thou art—I am not fit to guide, who myself cannot walk alone. Years, Alice, have passed since we have met. When we last parted, I reproved in you that passion to which this night I have given way myself—that passion which so nearly led us both into deep perdition. My sister, let us return thanks to Heaven for having escaped the tempter's snare—let us implore pardon for the guilt we have incurred—let us pray for strength to preserve us in the time to come!”

'The tide of emotion had now ebbed—and the heart was softened by its influence. Like the flood of the Nile, it had ever borne every thing in its onward course—but, like it, its reflux had fertilized the soil. The fruits it now bore were repentance and humbleness of heart. With these did Hubert and Alice pray together—and the blessed calm of a spirit reconciled to its God pervaded them.

'After a long space, they rose from before the shrine. “Lady Alice,” said he monk, “this is, in all likelihood, the last time we shall meet in this world. The hour of my trials is probably at hand; and I hope my support of them will not disgrace my holy calling. We shall meet no more: the scaffold or the stake will be my portion, as it has been of those far more worthy than I am; and I shall receive, with the pride of a chosen servant, the crown of martyrdom as the completion and reward of my toils. But you are still young; length of years, honour, and riches, await you. Cast not from you those precious gifts. Forget the unhalloved and unhappy passion you have suffered to grow within your heart. Let the memory of this

might be blotted from your mind. Remember Hubert only as the monk of the Holy Cross—such as he was for years, not as what he sank to for one moment! But, above all, my daughter, shrink not from the true faith. In the midst of this rebellious city, let at least one just person remain! Remember the piety of your blessed ancestor—prove that you are not unworthy of him:—and now, daughter, fare thee well!"

"Oh, Father," exclaimed Alice, "I will strive, indeed I will strive, against myself,—but the feelings of years cannot be rooted out in a day. Penance will I undergo—prayer I will be constant in—but, oh! I have done penance, I have prayed,—yet my stubborn heart has prevailed against all my efforts. It has broken my strength and health—I shall not live long, and I rejoice at it—death approaches me, and I welcome him. I am an humble and useless worm—when my life is trodden out, what matters it, oh, to whom? But on your existence hang mighty fates! And, talk not so horribly as you did even now? Do not wait danger!—for the sake of heaven, do not! Fly to a safe and distant land. In Italy, you will find refuge and support. Reginald Pole is a noble gentleman: he receives and succours the suffering confessors of our faith! Fly to him—quit this land of heresy and wrath! Say that you will fly, Father!—In pity, say you will!"

"Alice," returned the monk, "I may not shrink from the cup which is prepared for me—I will not court danger—but I will not fly from it. In this country of England is my lot cast—and here will I see it to the end. For you, daughter, I see, indeed, that your cheek is pale and your form wasted, and it grieves my heart that so it is. But cherish not the serpent of despair within your breast. It is not lawful for you should thus act—it causes you to be your own destroyer! Strive, strive against the tempter, and assistance will be granted unto you. Watch and pray, that you enter not into temptation!"

"The moment of parting was come; Alice felt that life was about to close upon her for ever! The first hour in which she became conscious that she was loved by him whom her soul worshipped, was to be that of their final separation. If the emotion betrayed by Father Hubert had served, in some degree, to lessen the reverential distance at which she had been accustomed to contemplate him, it had flooded her heart with the rapture of a new joy—it had added a quality to the affection which burned within her breast such as it had never known before. Yes! the sensation of reciprocity—the knowledge that, in despite of all the obstacles which interposed, her attachment was not regarded wholly with cold disapprobation and unsympathising reproof—in one word, the consciousness of being beloved,—that far, far greatest of all the joys with which Heaven has blessed humanity,—now spread its exquisite influence over her heart, and raised her, as it were, into a higher nature. Probably, notwithstanding all the counterbalancing emotions, Alice had never tasted such rapturous moments as those which she had known that night.

"Farewell, dear daughter—farewell, Alice!" said Hubert, in a voice which strong feeling broke and thickened;—"Farewell! and the blessing of God and the Holy Virgin be upon you for ever!" He raised his hands in the attitude of benediction as he spoke; and, casting one last glance upon that form which had been the dearest to him of any that earth had ever borne, he broke away from it at once, and, moving at a rapid pace, was speedily lost in the darkness."—Vol. i., pp. 178—191.

LINGARD'S HISTORY OF ENGLAND.

A History of England from the First Invasion by the Romans, to the twenty-seventh year of the Reign of Charles II. By John Lingard, D.D. 4to. vol. vii. Baldwin and Cradock. London, 1829.

THIS age of character is gone—we can neither match the virtues nor the vices of our forefathers. It might be unjust, or, what is worse, unpopular, to deny that we are better for the loss of all irregular individual features; and that the principles of society have triumphed in the process which has melted us, and stamped us with one image and superscription. Undoubtedly, we now philosophise better on historical examples than in former times. But in those times, examples and events themselves, which we have leisure to examine and to analyse, exerted immediate influence on contemporary characters; and, though less favourable to tranquil speculation, spoke directly to the intellect and passions of men, awakening

high imaginings and deep reflections, though not arranging these with perfect philosophical accuracy. We would fairly give whatever has been gained, or said to be gained, by those abstract people, public opinion and rational liberty, for some portion of the strength, or, if that would be unreasonable, of the weakness, which characterised our ancestors. But we never hope to see the reproduction of either. We fear that the Home-secretary is not at all likely to exhibit himself at any balcony whatever, in Piccadilly, divested of

'The troublesome disguises which we wear,'

after the manner which excited so much scandal in some of the courtiers and councillors of Charles II. We have not heard of any lady at court whose secret influence is likely to shower an interesting degree of disgrace upon the hoary head of that rigid censor of morals, the ex-Chancellor; nor do we believe there is patriotism enough in the people or Parliament to drive the Duke of Wellington into exile, on account of the new facings of his house at Hyde-Park Corner, which, in plainer and in better days, would have secured him the report of taking bribes from the enemies of old England.

We purpose to devote a future article to a view of that momentous period of history which Mr. Lawson's 'Life of Archbishop Laud' exhibits in its origin and commencement, and which Dr. Lingard's present volume, at its close, leaves imperfect. We shall then inspect more narrowly the historical truth and value of the works of which a cursory notice is all that we have hitherto undertaken.

The following passage throws a just light upon those circumstances which, after the Restoration, conduced to the nourishment and exposure of all that has since drawn most discredit on the memory of Charles II., and which confirmed the ill impressions made on his character by the hardships and uncertainties of exile:

'Though the convention parliament had undertaken to make ample provision for the pecuniary wants of the Government, Charles was advised to apply to the two Houses for additional aid, and obtained from their loyalty a grant of four subsidies, the ancient but now obsolete method of raising supplies. It has been said of the king that he was improvident; that the establishment of his household was calculated on the most expensive scale; that he made magnificent presents to his favourites and mistresses; and that he squandered enormous sums in the unnecessary repair and improvement of the royal palaces; but it should also be remembered that at his restoration he found himself incumbered with a debt for which he could not be responsible, the enormous sum owing to the armies in the three kingdoms under the heads of arrears; and that he was moreover compelled from the destitute state of the several arsenals to expend 800,000*l.* in the immediate purchase of naval and military stores. We are assured that in the first fifteen months, the only sum which could be devoted to the ordinary current expenses of the state was the 70,000*l.* voted on account of the coronation. The parliament repeatedly listened to his solicitations: but the estimates were inaccurate; the taxes proved deficient; they were tardily collected; new debts were contracted before the original debts could be discharged; and, during the whole course of his reign, Charles laboured under the pressure of a burden which he was unable to remove. This gave a peculiar tone to his policy. To procure money became his habitual pursuit: it entered into all his measures as the principal, or, at least, as an important, object: it dictated to him the match with Portugal and the sale of Dunkirk to France; and it seduced him into that clandestine correspondence and those pecuniary bargains with the French monarch, which have left an indelible stain on his memory.'—Pp. 368, 369.

The sovereign, however, was not the only man in his dominions unscrupulous in the arts of acquisition; and the following instance is only one of many in that reign which showed his taste to be congenial, in that point, with his Great Council's:

'The objection which had been raised before their convocation was renewed after the return of the king. They had not been called by the royal writ; they were therefore illegal assemblies, and their acts might here-

after be disputed in the courts of law. The obvious remedy was to dissolve them, and to summon a parliament after the usual manner, which might legalize by its authority the irregular proceedings of the convention. But this to the king's advisers appeared, in the existing circumstances, a dangerous experiment: they were not disposed to part with a house of commons so obsequious to their wishes; and they preferred to pass an act, declaring that the parliament summoned in the 16th of Charles I. was determined, and that the two houses then sitting at Westminster constituted the two houses of parliament. It might, indeed, be asked, whence an assembly, illegal in its origin, could derive the power of giving to itself a legal existence; but it was hoped that, as long as the convention sat, no man would venture to moot the question; and on its dissolution every defect might be supplied by the authority of the succeeding parliament.

'The experience of former years had shown that, to restrain within due limits the pretensions of the crown, it was necessary to keep it dependent on the bounty of the subject; but the houses seemed to have adopted the contrary doctrine: they attributed the calamities which for so many years had afflicted the nation to the scanty provision made for the support of royalty; they found, on inquiry, that the annual expenditure of the last king greatly exceeded his income; and, to prevent the recurrence of wants which he experienced, and of the illegal expedients to which he had recourse, they raised the yearly revenue of the crown to the unprecedented amount of 1,200,000*l.*

'But, while they provided for the sovereign, they were not unmindful of their own interests. In the preceding reigns, the proprietors of lands had frequently and zealously sought to abolish tenures by knights' service, confessedly the most onerous of the existing feudal burthens; but their attempts were constantly defeated by the monarch and his courtiers, unwilling to resign the benefits of marriages, reliefs, and wardships. Now, however, in this season of reconciliation and mutual concession, the proposal was made and accepted; the terms were arranged to the satisfaction of both parties; and Charles consented to accept a fixed annual income of 100,000*l.* in place of the casual but lucrative profits of the court of wards. Still the transaction did little honour to the liberality of the two houses. They refused to extend the benefit to inferior tenures: and the very act which relieved the lords of manors from the services which they owed to the crown, confirmed to them the services which they claimed from those who held by tenure of copyhold. Neither did they choose to pay the price of the benefit, though it was to be enjoyed exclusively by themselves. Originally, the authors of the measure intended to raise the compensation by a tax on the lands which had been relieved: the amount had actually been apportioned to the several counties by the committee, when a member, as it were accidentally, asked why they should not resort to the excise; the suggestion was eagerly caught by the courtiers and many of the proprietors; the injustice of compelling the poor to pay for the relief of the rich, though strongly urged, was contemptuously overlooked; and the friends of the motion, on a division in a full house, obtained a majority of two. In lieu, therefore, of purveyance, military tenures, and their various incidents, fruits, and dependencies, the produce of one moiety of the excise, a constantly growing and more profitable branch of revenue than the original compensation, was settled on the crown for ever.

'The excise, as the reader will recollect, had been introduced by the parliament to defray the charges of the war against the king. To reconcile the nation to so odious a tax, it was first voted for only a short period; and, though it had been continued ever since by successive grants, an understanding always existed that, as nothing but necessity could justify the imposition, so it should most certainly cease with that necessity. By the last enactment, one half of it was now rendered perpetual; nor was the house slow to dispose of the other. It had taken no measures to raise the revenue to the amount which it had voted: the festival of Christmas approached; the king admonished the members of his intention to dissolve the parliament; and the houses hastily passed three bills to improve the receipts on wine licences, to regulate the post office, and to grant to the king the second moiety of the excise for his natural life, in full of the yearly settlement of 1,200,000*l.* From that moment, all hope of its extinction vanished; and, in the course of a few reigns, the streamlet has swelled into a mighty river. The excise then produced 300,000*l.*; it now produces 18,000,000*l.* per annum.'—Pp. 348—351.

The following passage, on similar grounds, deserves attention :

' Since the year 1642, a considerable portion of the landed property in every county had passed from the hands of the original owners into the possession of new claimants; and it was on this important consideration that the founders of the commonwealth rested their principal hope of its subsequent stability. Hundreds of their adherents had by the revolution been raised in the scale of society: they were become invested with the wealth and influence that originally belonged to their superiors; and it was their interest to oppose with all their power the return of a system which would reduce them to poverty and insignificance. Charles, in his declaration from Breda, touched on the subject in guarded and measured terms: " he was willing that all controversies in relation to grants, sales, and purchases, should be determined in parliament, which could best provide for the just satisfaction of all who were concerned." Parliament, however, made no such provision. It confirmed, indeed, as a measure of tranquillization, the judicial decisions which had been given in the courts of law and equity; but the royal promise respecting the transfer of property by grants and sales was forgotten, and, in consequence, no relief was afforded to two numerous classes of men belonging to the opposite parties. At the very commencement of the civil troubles, many royalists disposed of a portion or the whole of their estates, that they might relieve the pecuniary wants of the king, or enable themselves to raise men, and serve in the royal armies; and at its conclusion all of them were compelled to have recourse to similar measures, that they might discharge their debts, and pay the heavy fines imposed on them by order of the revolutionary governments. That these men had strong claims on the gratitude and pity of the king and parliament, could not be denied; but these claims were neglected: the sales had been effected with their consent, they were bound by their own acts, and consigned to murmur in penury and despair. The lands belonging to the crown, to the bishops, dean and chapters, and to a few distinguished cavaliers, had been granted away as rewards, or sold to the highest or the most favoured bidder. These were now reclaimed; forcible entries were made; and the holders, as they were not allowed to plead a title derived from a superior authority, were compelled to submit to superior rights or superior power. To the argument that they were, the most of them, bona fide purchasers, it was truly replied that they had taken the risk with the benefit: but, when they appealed to the "just satisfaction" promised in the royal declaration from Breda, Charles himself blushed at the rigour of his officers and adherents. By proclamation he recommended measures of lenity and conciliation; he advised that the revolutionary purchasers should be admitted as tenants on easy fines; and, at the united request of the two Houses, he established a commission to arbitrate between the contending parties. The consequence, however, was that, while the purchasers of the crown lands were in general permitted to remain in possession, the purchasers of the church lands were in numerous instances treated with extreme severity. The incumbents had themselves suffered hard measure; they were old, and therefore anxious to provide for the support of their families after them; and, instead of attending to the royal recommendation, they made no distinction among the bidders, but selected for tenants those individuals who made them the most advantageous offers.'—Pp. 358—360.

We extract the contrast drawn by our author between the characters of Charles and James, as, on the whole, correct, though tinged, as was to be expected, with partiality for the latter of the royal brothers:

' There was at this time a marked contrast between the characters of the royal brothers. Charles, though oppressed with debt, scattered his money heedlessly and profusely; James was careful to measure his expenses by the amount of his income. The king seemed to make gallantry the chief occupation of life; the duke to look upon it as an amusement; and, while the one daily spent his time "sauntering" in the company of his mistresses, the other attended to his duties in the Admiralty with the exactitude of the meanest clerk on the establishment. In point of abilities, Charles was considered superior; but he wanted strength of mind to refuse an importunate suitor, or to resist the raillery and sarcasm of those whom he made his companions. James, with a judgment less correct, and with knowledge less extensive, formed his resolutions with slowness, but adhered to them with obstinacy. His word was esteemed sacred; his friends relied with confidence

on his support, whatever sacrifice it might cost him: and his enemies knew that, till he had brought them on their knees, he would never forgive their offences. Yet no diversity of temper or opinion could diminish the affection of the two brothers. James was the most dutiful of subjects; and, however he might disapprove the judgment, he always concurred in seconding the will, of the sovereign. He was easy of access, and affable in discourse; but his constant attention to preserve the dignity of his rank, gave to his manner a stateliness and distance repulsive of that freedom and familiarity which the laughter-loving king indulged in the associates of his pleasures. In private life the duke was loved by few, but feared or respected by all: in public, his industry was the theme of commendation; and the fame which he had acquired in the French army, was taken as an earnest of his future military prowess.'—Pp. 430, 431.

But Dr. Lingard has afforded, in his notes, a view more striking of the character of Charles II. than any which (without disparagement to his acute discrimination) his text could have possibly exhibited. It is in the shape of an extract from a letter of the King to the Chancellor, and is certainly the rarest missive of imperiousness and blasphemy that ever issued from a 'gracious and religious king':

' Now I am on this matter, I think it necessary to give you a little good council in it, least you may think that by making a further stir in the business, you may divert me from my resolution, which all the world shall never do; and I wish I may be unhappy in this world and in the world to come, if I fail in the least degree of what I have resolved, which is of making my lady Castlemaine of my wife's bedchamber, and whosoever I find use any endeavour to hynder this resolution of myne (except it be only to myselfe), I will be his enemy to the last moment of my life. You know how true a friend I have been to you. If you will oblige me eternally, make this business as easy to me as you can, of what opinion soever you are of; for I am resolved to go through with this matter, let what will come of it, which again I solemnly swear before Almighty God. Therefore, if you desire to have the countenance of my friendship, meddle no more with this business, except it be to beat down all false and scandalous reports, and to facilitate what I am sure my honour is so much concerned in. And whosoever I find to be my lady Castlemaine's enemy in this matter, I do promise upon my word to be his enemy as long as I live. You may show this letter to my lord-lieutenant (Ormond), and if you have both a minde to oblige me, carry yourselves like friends to me in this matter.'—P. 625.

The last document we shall notice as illustrative of the policy of the reign which forms the subject of the latter part of Dr. Lingard's volume, is one which gives that volume peculiar value, as here, for the first time, it has been offered to the public, although referred to by most former historians. This is the Secret Treaty of 1670, published from the original in the possession of Lord Clifford, a descendant of one of its framers, the existence of any copy of which had previously been doubted. In the preamble of this instrument, Charles states his design of reconciling his kingdoms with the Church of Rome, and commissions Arlington, Arundel, Clifford, and Bellings, to confer with the Sieur Albert, Ambassador of Louis XIV., on the means of establishing a closer friendship, union, and confederacy, between their respective sovereigns, for the furtherance of that end. The general scope of this Treaty is already so well known to the readers of English history, that we content ourselves, at present, with translating for our readers two of its scandalous provisions.

' The King of Great Britain being convinced of the truth of the Catholic religion, and resolved to make a public profession of it, and to reconcile himself with the Roman Church so soon as the affairs of his kingdom will permit him, has every reason to hope, and to confide in the affection and fidelity of his subjects, that none of them, not even those on whom God shall not have as yet abundantly enough bestowed his grace to dispose them to conversion by his august example, will ever fail of that inviolable obedience which all nations owe to their sovereign even of contrary religion: nevertheless, as there are sometimes found unquiet and turbulent spirits who exert themselves to trouble public tranquillity, particularly when they can

cover their evil designs with the plausible pretence of religion; his Majesty of Great Britain, who has nothing more at heart (after the repose of his own conscience) than that general repose which the mildness of his government has procured to his subjects, believes that the best method of preserving it from disturbance would be the assurance, in case of need, of the assistance of his most Christian Majesty, who, wishing on this occasion to give the King of Great Britain indisputable proofs of the sincerity of his friendship, and to contribute to the success of a design so glorious, so useful to his Majesty of Great Britain, as well as to the Catholic religion, hath promised, and doth promise, to give for this purpose to the said King of Great Britain, the sum of two millions of livres tournois, of which one moiety shall be paid three months after the exchange of the ratification of the present treaty, in specie to the order of the said King of Great Britain, at Calais, or Dieppe, or Havre de Grace, or remitted by letters of exchange at London, at the risque, expense, and peril of the said most Christian King, and the other moiety in the same manner three months afterwards: and besides, the said most Christian King binds himself to assist with troops his Majesty of Great Britain, to the number of 6,000 infantry, if needful, and even to levy and maintain them at his own expense, so long as the King of Great Britain shall consider himself in need of them for the execution of his design; and the said troops shall be transported by the vessels of the King of Great Britain to such places and ports as he shall consider most proper for the good of his service, and, from the day of their embarkation, shall be paid, as aforesaid, by the most Christian King, and the time of the aforesaid declaration of Catholicism is entirely left to the direction of the said King of Great Britain.

' The said Sovereign Kings having, each in his own particular, many more causes than they should need to justify to the world their resolution of mortifying the pride of the States-General of the United Provinces of the Low Countries, and of destroying the power of a nation which has stained itself so often with ingratitude so extreme towards its founders and creators, and which has even the audacity, at this day, to design erecting itself into sovereign, judge, and arbitrator of all other potentates; it is agreed, resolved, and concluded, that their Majesties shall declare and make war conjointly, with all their sea and land forces, on the said States-General of the United Provinces of the Low Countries; and that neither of the said kings shall be able to make peace, truce, or suspension of arms with them, without advice and consent of the other; as also that all commerce among the subjects of the said Sovereign Kings and those of the said States shall be prohibited, and that the ships and goods of those who shall traffic, notwithstanding this prohibition, may be seized by the subjects of the other king, and shall be reputed just prizes; and all previous treaties made between the said States and either of the said kings or their predecessors shall remain null, except that of the triple alliance made for the maintenance of the treaty of Aix la Chapelle; and if, after the declaration of war, any subjects of the said kings shall be taken prisoners in the service of the said States, they shall suffer execution by the justice of the said king by the subjects of whom they shall have been taken.'

TRAVELLING EMPIRICISM.

Letters from an Eastern Colony. Richardson. London, 1829.

THESE letters were indited by 'the third or fourth cousin of a peer.' We learn, moreover, from the preface, that 'the spot whence they are written is not put down at full length; but the reader who has the least knowledge of geography will discover it from the initial and the local peculiarities.' For what good purpose, then, all this mystery about their birth-place is assumed, is more than we can divine. Nobody will a moment hesitate in pronouncing that they were penned at Trincomalee, in the island of Ceylon, and that the writer, or, as Mr. Mitford would doubtless call him, the soldier-philosopher-author, is an officer in some one of his Majesty's regiments,—an individual whose temerity and presumption are in immense disproportion to his talents or information. Though our Xenophon talks rather discursively about India and its inhabitants, it is, we think, pretty clear he has never set foot on that continent; and, with respect to

Ceylon, he does not even profess to be very learned. Indeed, he sagaciously remarks of the natives, 'It is surprising how little we know of their religious opinions or prevailing modes of thinking, which is chiefly owing to the impossibility of holding any intercourse with them.' We only wish his premises and conclusions on other matters had any thing like this strong relationship.

Our philosopher takes leave of most matters relating to the East about page 40 of his volume, and then etymology, lexicography, phrenology, poetry, prose, and Roman Catholics, together with education and religious missions, make up the book. What a deal of wisdom one gets by residing at Trincomalee!

There is not one syllable in these 'Letters from an Eastern Colony,' which might not have been equally well written in England, excepting always some blundering statements relative to the native inhabitants of Ceylon, and a style of reasoning, with respect to them, which we hope may never exist within our borders. We will take one specimen of each: 'I must now give you,' says the writer to his highly-favoured correspondent, 'some account of the Malabar population of T—Gentoo is a term expressing their religion, which is a slight modification of Hindooism.' Now, Gentoo is a word corrupted from the Portuguese; it means Gentiles, and is applicable to all the nations of India. Moreover, the religion of the people of Trincomalee is Buddhism, about as much a modification of Hindooism as it is of Paganism. So much for local information. But now comes something far worse than ignorance: 'The mass of the people here live from hand to mouth, are dependent on employment for their subsistence, and receive no more wages than is sufficient to purchase rice for the day: this seems to me to make them virtually slaves'!!! Suppose, now, instead of the word rice, we substitute potatoes or rye-bread, there is nothing in this description of the people of Ceylon that is not perfectly applicable to the larger part of the people of Europe. And our author wishes to argue, because these people are in misery and want, that, therefore, they are to be stripped of all civil and political rights, and included among the live-stock on our estates:—'Not that I,' says this liberal and humane individual, 'would advocate the slightest degree of oppression or injustice toward the natives; but to summon an *English gentleman* before a court of justice for a mere kick or a thump does neither the natives nor us any good; it lessens our authority over them, and adds to their insolence.' Fortunately, this is not the sophistry that will entangle any one. We do not wish to dwell long over a dull book; but we must say, that sentiments such as these, though held by 'the third or fourth cousin of a peer,' are much more calculated to make a man virtually a slave than any other calamity incidental to the human species.

Our 'English Gentleman' is a great scholar, though, by the way, to quote thrice over a fragment of Virgil in this style, *Non omnes possumus omnia*, is an indifferent specimen of scholarship; but the application of the Latin is more remarkable. 'We do not ask our watchmaker to repair our shoes, nor the contrary.' (Query, *The shoes to repair the watchmaker!*) 'Why, then, do we expect Dr. McCulloch the physician to reason accurately on the principles of political economy, or how can any one imagine that Mr. Joseph Hume, who is a Scotchman, a retired doctor, and a Presbyterian, will propose wise alterations for the army, the navy, the Court of Chancery, and the Episcopal Church of Ireland? The thing is impossible.' There is no resisting argumentation such as this, though, we must say, it is somewhat tyrannous in our author to use a giant's strength with so little consideration. Mr. Hume and Mr. McCulloch (who, we now learn for the first time, is a physician) are here annihilated with a single stroke of the pen. Our soldier-philosopher having

shown in like satisfactory manner the advantages of ignorance, and having pointed out that it was education which induced the lower orders in 1819 and 1820, to ascribe their distress to the employment of power-looms, and education that made the lower orders assemble in order to destroy these same power-looms, he then falls foul of the Missionaries in the East; and this, he tells us, is the most important part of his volume. Indeed, being, as he says, 'of a religious turn,' we have nearly half the volume dedicated to these considerations. His object is to show that the Church Missionaries, or Missionaries sent out by the Evangelical party, are a very ignorant and mischievous set of men.

Persons who are acquainted with Molière's admirable comedy of 'Le Medecin malgré lui,' and who remember the lofty galimatias adopted by Sganerelle, when compelled to officiate as a physician, may form some idea of our author's style, when he gets on the subject of religious missions. One day in the month of August, 1827, a ship touched at Trincomalee, and landed two Church missionaries and their ladies. 'I heard,' he says, 'one of the ladies, (much too loquacious a damsel, by the way, for a missionary's wife,) tell our chaplain's lady that she had brought nothing but white satin shoes and silk stockings from England.' Was there ever such a vixen! But this is far from the sum of her ill-doings. 'She also spoke of beer, port wine, and brandy, more than I thought altogether becoming in a female.' By and by, comes another foul offence of these same Church missionaries; our informer says he cannot vouch for the truth of it, though he heard it from high authority. A missionary, not of 'the old orthodox Church societies which have existed for more than a century,' but of that impudent set, 'the *soi-disant* Church Missionary Society,' who 'assume a misnomer for the very purpose, it would seem, of imposing on the ignorant,'—as we said, a missionary of the latter order was sent to China, and (impudent dog!) in the first letter that he wrote home he earnestly requested 'an immediate supply of fifty millions of Chinese New Testaments.' We are not told whether the request was complied with; but, whether or no, our author is hopeless of making many converts to Christianity, either in China or in India, unless recourse be had to a plan of his own. The nature of this plan is rather mysteriously developed; but enough is said to afford a very distinct idea of its meaning. 'There should be,' the author insinuates, 'some interposition of the existing authorities: the British Government has nothing to apprehend from its native subjects, in decreeing the abolition of institutions and customs which, however ancient, are irreconcilable with truth,' &c. 'The general order of things must be reversed; without which, the labours of missionaries, however judicious in themselves, will be cramped and unproductive.' No doubt, a little energetic persecution would produce an admirable effect in India: an *auto-da-fé*, ever and anon, at each of the three Presidencies, and one, also, at Trincomalee, would be an excellent device for winning over the natives to our religion, and in causing them to abandon the Gentoo faith, and all other modifications of Hindooism. We are told there is no fear of losing India; and this leads to some profound observations, which we cannot quite pass over without a word.

Every body who has read Hume's Essays, and almost every body who has not, will concede that the source of all political power is opinion; that is, the power of a ruler (sultan or president, call him by what name you will) is nothing more than the power, the actual force of muscle and mind which the strongest portion of his subjects consent to employ for the purpose of carrying his orders into execution. This is the beginning and the end of all political power, and its nature is the same in every form of government. Now what says Xenophon to all this? 'I know,' says

he, 'that the Government of India is a government of opinion; but I cannot help observing, I have never been able to discover what is meant by a government of opinion, as a term peculiar to India. If the phrase is to be taken in its obvious signification, I would ask this simple question, (simple enough, Heaven knows!) Is the Government of India founded on a true or false opinion of our power to uphold it?' What may be the drift of this doughty interrogatory, does not appear; but the original subject is resumed with great seriousness. 'After all the attention that I have been able to give to it, it seems to me that the Government of England is more a government of opinion than the Government of India.' Now, we think we have quoted enough; and, in taking a long farewell of the author of 'Letters from an Eastern Colony,' we think it right to observe, that we have not encountered in any work which late years have produced from the London press, any parallel display of ignorance, heartlessness, and self-complacency, and that all these disgusting peculiarities are exaggerated fifty-fold by the author's affectations and cant about the Christian religion, when almost every sentiment that he utters is in direct opposition to its sublime and expansive charities.

THE FRENCH CHAMBERS.

De l'Eligibilité et de l'Age des Eligibles. Par M. Emm. de Las Casas. Paris, 1828.

As this brochure, besides the particular purpose for which it is written, has a meaning and a merit of its own, we think it not unworthy of a slight notice. Every body knows that no Frenchman can become a representative of the people till he is forty years old: so says the Charter. Now, the Charter is in itself a very good, perhaps the best, formula of a constitution that was ever adapted to the wants and wishes of a people; and the strongest proof of this is, that, at the present day, all the moral politicians, all that are any thing better than compounds of wordiness and apostrophes, are its firmest adherents, and that the liberal cry, which elsewhere is raised in adoration of some false and unattainable theory, expends itself in 'Vive la Charte!' There are some people who consider a constitution an immutable thing; which, if once allowed to be good, it is sacrilege to alter; and so it is, and must be, in the principles on which it is founded; but so it cannot, and ought not to be, when it is regarded as a development of the popular mind, and of the ever-varying feeling of a nation. M. de Las Casas can make this distinction.

'D'abord il faut considerer dans la Charte les dispositions qui de leur nature sont inalterables et celles qui ne sont que des developpemens et des moyens d'execution. Les uns constituent nos droits; les autres en reglent l'exercice,' &c.

In 1815, an 'ordonnance' was made, authorizing all deputies to be eligible at twenty-five: in the assembly thus formed, a violent debate took place, in which nothing was done, and, since that time, the original rule has obtained. This session, however, it is intended to bring the subject again before the Chambers; and hence M. de Las Casas' clever pamphlet. His arguments are various, and very well put: he shows that there is no example in history of so late a limit as forty, and fortifies this opinion by a list of examples of 'bruted men,' who have gained glory in their early days. This catalogue is laughably heterogeneous: Scipio Africanus and Lord Liverpool, Mazarin and Montesquieu, Pitt and Corneille, &c. &c. This will, doubtless, have great influence on the French; as the spirit which created the hope of founding a Roman republic on the banks of the Seine, and turned every shoemaker into a Lycurgus, still lives in a modified form. But what follows is in better style:

'L'homme qui est propriétaire à quarante ans, doit sa fortune, ou à son industrie, ou à son heritage. De ces deux moyens, l'industrie n'enrichit que peu à peu; car la rapidité du gain est toujours en raison

directe des chances de perte, ce qui fait qu'une grande fortune ne peut, en general, se former que très lentement. 2. Quant à l'héritage, la vie moyenne de l'homme est, selon M. de Laplace, de 43 ans : (et, comme il s'agit ici de la classe aisée, il faudrait, pour être exact, élever un peu ce nombre.) Les parents possèdent leurs biens jusqu'à l'âge moyen de 43 ans, leurs enfants de 21, de 25, de 30 ans, restent sans existence politique.

Now, if we combine this statement with the calculation, that, if the age of eligibility were twenty-one, there would be in France, 14,817 eligible men; but, if it be thirty, they will be reduced to 11,082,—we shall perceive very strongly the effect of the limit in diminishing the number of possible representatives. We agree with M. de Las Casas in the conclusion he comes to; but we must say that his arguments are not exactly of that kind which are wont to convince us. We think the French restriction absurd, because, in our opinion, age has nothing to do with the matter: a fool of forty is certainly a more contemptible thing than a fool of twenty-one: there is a probability, that the heart, when the finer edge of the feelings is worn off, will be more sensual, that the desires will become more selfish, and that the mind, having been longer choked up and smothered with evil weeds, will have become effete, but, nevertheless, the man who has been schooled, or rather who has schooled himself, in the paths of thought and meditation, who has cut himself off from sordid feelings in the spring-time of his life, cannot degenerate in after-existence. The very act of being and seeing, which to others is an accumulating mass of false impression and a sensuous abandonment of the light of nature, is to him a series of steps in his progress to wisdom and to truth. M. de Las Casas seems to have omitted a strong feature in his case, viz. that none will apply themselves to politics as a study, but those to whom there is no immediate interest to study at all. Politics must be studied; they can be studied only in practice, and a man must be in some degree an acting politician, before he can be a thinking one. We could wish the converse were equally true. There is a note at the end of the volume containing a tolerably accurate account of our representative system: it is as well the French should be a little enlightened on this point. Of the University of Cambridge the author says, 'Le vote est sous l'influence du Ministère':—this is a singular proof how custom makes a law.

CATALOGUE RAISONNÉ

Popular Premises examined, a Philosophical Inquiry into some of the Opinions of Christians and Philosophers, on Deity, Doctrines, the Human Mind, &c. By Richard Dillon. 18mo., pp. 90. London, 1828.

ALTHOUGH we do not agree with the author upon many of the points which he has discussed, yet we hesitate not to say that his book is clear, clever, pointed, and (what is no small praise) brief and comprehensive. It is well worth the perusal of all who take interest in the abstruse doctrines which he has here investigated with considerable talent and acumen;—occasionally, however, tinged with dogmatism, though not with illiberality.

A plain and short History of England for Children, in Letters from a Father to his Son. By the Editor of 'The Cottager's Monthly Visitor.' 18mo., pp. 261. London, 1829.

To render this title a proper designation of the book, the word 'ecclesiastical' has been culpably omitted before the word 'history,' as the chief aim of the author is to render the Church the paramount object of attention. Those, therefore, who wish their children to be instructed in church history, strongly tinged with what Jeremy Bentham calls Church-of-Englandism, will find this little volume well adapted for that particular purpose. The style is plain and very suitable to the subject.

Parks and Palaces. Ridgway.

THIS is a lively and clever brochure, upon a subject which comes home to the bosom and pocket of every one. The exposure of Messrs. Nash, and Soame, and Bruton, is very amusing and satisfactory.

Hints designed to promote a profitable Attendance on an Evangelical Ministry. By the Rev. William Davis, Minister of the Croft Chapel, Hastings. 18mo., pp. 71. London, 1828.

AMONG other vices, the author is peculiarly severe in reprehending those who go from chapel to chapel for no other purpose than to pick up gossip and criticise the officiating clergymen. To those who thus err, we strongly recommend a perusal of Mr. Davis's hints.

The Cambrian Quarterly Magazine.

WE are much pleased with this attempt to rescue our aboriginal literature from the oblivion into which it has fallen. The writers are evidently men of ability and research, whose enthusiasm, though we may not enter into it, we shall admire, and whose learning, though it may run into tracks in which we are not habitually interested, we shall be glad to profit by.

The Censor.

THE publication of 'The Etonian' has stirred up the emulation of several of our other large schools; and, though nothing has yet been produced which can at all compete with that clever book, the attempt, at least, is worthy of attention and encouragement. The present periodical is a novelty in its kind. It is written, we understand, by boys of the first and second forms at one of the metropolitan seminaries, and has been printed by permission of the master. Of course, the youths will not be allowed to neglect their accidents for their periodical; and, this danger being guarded against, we dare say the practice which it will give them in English grammar and composition will be useful to them in after-life.

Roman Catholic Question. Ridgway.

SUCH liberal extracts have been made from this pamphlet of Mr. Blake's in the reviews and other newspapers, that we have no excuse for evincing it ourselves. But for this circumstance we could not have denied ourselves the pleasure of introducing to our readers what strikes us as the most plain, temperate, honest, and clever exposition of the question which is to be found among all the volumes that have been written upon this tedious and interminable controversy.

NEW MUSIC.

I see them on their Winding Way,' dedicated to Mr. G. Ford of the Leicester and Stratford Theatres, the words taken from an unpublished Poem by the late Bishop Heber, the Melody and Accompaniment by B. Hime. Latour.

AN advertisement upon the first page informs us, that 'the symphony is from a celebrated march in imitation of a band at a distance; upon hearing which, the late Bishop Heber wrote the poem from which the words are taken.'

This symphony and march commences exactly as the old tune in 'The Beggars' Opera,' 'When the heart of a man is depressed with cares,' and which same air is popular in the Lancers' Quadrille. However, new or old, the song is well imagined, well harmonised, and deserves to be well thought of and well encouraged, as a spirited, appropriate, and clever adaptation. The composer is the same gentleman who wrote the ballad, 'Lassie, let us stray together,' (noticed in the Athenæum, No. 63, p. 8,) in which notice, by a typographical error, his name is spelt Horne instead of Hime.

Nel Silenzio, the admired Chorus in Meyerbeer's 'Il Crociato in Egitto, with brilliant Variations for the Piano-forte. By Henry Hers. Op. 23. Cocks and Co.

THESE are, indeed, brilliant and beautiful variations, and the whole publication is truly magnificent, as a production for the well-educated and well-practised pianiste. The piece is written in the fine key of E flat, commencing with an introductory largo 'Maestoso e serio,' in which the very able writer exhibits some classical and erudite modulations; and it may serve to show the care he has evinced in his composition by our insertion of the following recommendations as to style, expression, &c., which he has prefixed to each part or variation: First varia. 'Brillante e leggier.' Second varia. 'Sempre staccato ed energico,' an ingenious arrangement of triplets. Third varia. 'Ben marcato, ma il Basso leggiero,' an excellent exercise for the left hand. Fourth varia. 'Piu lento e molto espressivo,' difficult but exceedingly tasteful. Fifth varia. 'Vivo e molto brillante.' Finale. An allegro vivo, in 6-8 time, forming a highly finished rondo of seven pages. The whole is a composition of the highest class.

A Selection of the most admired Airs from Rossini's Opera of Semiramide; arranged for the Piano-forte. By N. B. Challenor. In two Books. Mayhew and Co.

WE have noticed before, with peculiar satisfaction, the very concise and useful arrangements (especially to teachers) made by Challenor, of Mozart's 'Seraglio,' and Rossini's 'Il Barbiere,' in which the principal advantages were the unusually familiar style of adaptation, without injuring the effect of the various movements chosen; and 'Semiramide' is published as a sort of continuation, with the same attention to usefulness, thus fitting the whole of the works to the hands of incipient performers better than any other arrangement published. The first book contains the lively chorus 'Belo ai celebri,' the beautiful gem 'Di tanti regi,' the spirited movement 'Tremate il tempio.' The grand march 'Ergi omai,' and the graceful allegretto 'Ese ancor libero,' which resembles 'Di tanti palpiti,' and Carafa's 'Aure felice.' And the second book presents the prayer 'Al mio pregar.' The allegro 'La madre rea,' the andante 'Giorno d'orrore,' and the subsequent allegro 'Tu serena,' (which last three movements constitute the duet sung by Pasta and Brambilla, with such enthusiastic applause,) these are followed by the expressive andantino 'Serbami Ognor,' and the whole concludes with the vivace, 'Al gran cimento,' forming an appropriate finale.

An Invitation, written by Shakspeare. The Music composed and respectfully inscribed to Miss Drinkwater, by Walter Turnbull. Power.

IT might have been expected that Shakspeare's words, 'Come live with me and be my love,' would have animated a musical writer to some ingenuity of modulation, or, at least, a little novelty of melody; but, alas, no such thing! the piece is as homely as the compounded names of the author, composer, and the lady, to whom it is dedicated.

WE recommend our readers to visit, when they have a few minutes' leisure, the rooms of Mons. Edouart, a proficit, in the Regent Circus, Oxford-street. The title assumed by Mons. Edouart is one which by no means sufficiently indicates the spirit and beauty of his figures, which he produces by the aid of a pair of scissors from a bit of black paper. Among the portraits of many distinguished persons, those of Mr. Irving, (the clergyman,) and of Mr. Simeon of Cambridge, struck us as peculiarly forcible and accurate. Mons. Edouart, for the sum of a few shillings, furnishes his visitors with likenesses of themselves, which, considering the simplicity of the means he employs, are really exquisite. He will be happy also to show his collection or any part of it gratis, to any one who may visit his apartments; and half an hour may be very agreeably spent among these productions of ingenious and facile skill.

SONNET.

FROM CALDERON.

THESE flowers that were a glory and delight,
Awakening at the paleness of the morn,
At eve shall be a spectacle forlorn,
When sleeping in the lap of the chill night.
These tints, this rainbow, edged with airy white,
And gold and purple, challenging the sky,
Are an example to mortality
What one day in its limits may unite.

The roses have been born that they might bloom,
And, only blooming that they might wax old,
Found in a bud their cradle and their tomb:
E'en such do men their destinies behold:
Birth and the grave are compassed by one day;
Ages are hours when they have passed away.

SKETCHES OF HUMAN LIFE. No. I.

Charles.—Altered as you say you are, you at least retain your love of walking. You do not seem to become weary of traversing these old avenues.

Edward.—No; I have been too short a time in my country, not to take pleasure in objects which remind me so vividly that I am no longer an exile. This elastic turf seems to fill my limbs with a new life; and I wander, as in a half-conscious dream of serene rejoicing, among these broken vistas, and under the shadow of these green and tufted glens.

Charles.—It is well that you have not lost your affection for these things, as you say that you are comparatively indifferent to many in which you formerly delighted.

Edward.—Aye, Charles, I am indeed changed. Fourteen years of labours and perils, sickness, captivity, and sometimes despair, have done their work upon me. When I left the land in which we had both of us passed so many happy hours, my courage sank. I had not strength even to write to you; and I went on through a thousand circumstances of difficulty and danger, without being able to oppose to them more than a shadow of that energy which I had formerly been master of. Innumerable prospects such as this which surrounds us, floated continually before my mind. For the present I was nothing more than an inert heap of corporeal atoms; I lived only for the distant and the past. And, while all those intermediate years seem to me now but unimportant and unmeaning, that which occurred before them still presents itself to my feelings as the only real the only substantial portion of my existence, as all that concerns my true and inner being.—Frances was but fifteen, and my age was double this; yet how exquisitely was her character adapted to mine, her agile and brilliant, though not frivolous, youth of heart to my graver and severer humour. She was to me like the black-bird amid the dark foliage of yonder tree, filling it with a soul of melody. Only three days before I was unexpectedly called away across the sea, we met in these very gardens. We walked together, and our footsteps were as irregular as our thoughts. I feared to look at her, except with stolen and side-long glances. She fixed her eyes upon the ground, while we talked, in imperfect and difficult accents, about any thing which might be farthest from the emotions of each. At last, I caught the glimpse of a tear growing through those long lashes. My hand touched her's, and I felt the drop fall warm upon it. I spoke and she scarcely could falter a reply; and that evening I left her with a more exulting and winged sense of happiness than I had ever known before—than I have known since. Charles, I am now grey and blasted, not young in years, and very old in spirit; yet even all, the changes wrought by time and misfortune do not appear sufficient to explain the difference between what I am now conscious of within myself, and the man I then was. I am now crushed, motionless, and solitary; I was then a being of joyous exertions and bounding aspirations, and linked, as it seemed to me, in the profoundest and most delicious sympathy with one so fair and youthful, in whose mind the blossom was so tremulously beautiful, and the stem so straightly firm, that love for her was of itself power, and liberty, and virtue.

Charles.—What circumstance put an end to her affection?

Edward.—I know not. I wrote to her from abroad, but received no answer. And, though I have always in some degree consoled myself with the notion that my letter may have miscarried, I never had sufficient confidence to write again. I can now form no conjecture as to what may have become of her. She may still be rich, and gay, and lovely; or the low sod and the narrow

coffin may be all that remain to her; and even in this, O! how far happier than I who am left to the consciousness of such a present, and the recollection of such a past. But—but, Charles, she may also be at this moment another's wife. Would to Heaven the thought had never crossed me! But even so, God bless her! She is not, she cannot be mine; but, rich or poor, beautiful or withered, wedded or maiden, Frances must needs be the sweetest and the loftiest-minded creature that walks the earth.

Charles.—It may not be impossible to let you see her.

Edward.—She lives then! But no—no—I am a fool. What if she does live? She knows nothing of me. I hoped for a moment; but it is all—gone. By my eternal trust, if you are mocking me—

Charles.—Nay, this is folly. She lives; and within an hour, you shall see her.

Edward.—An hour, an hour!—it is years—fourteen years since I have beheld her except in visions, or heard her save when, in the watches of the night, I have groaned out 'Frances! Frances!' and the winds have circled and lingered near to scoff me with an empty repetition of the sound.

Charles.—You shall see her and hear her this evening. Do not fear to address her, and you may trust for a restoration of her favour.

Edward.—You say she is not wedded. But no, it were madness to think of it. She will not remember what I was; and I cannot forget what I am. Yet to look upon her again, to listen to her voice, again to follow and gaze at Frances—no—I am dreaming—I am dreaming; it cannot be.

Charles.—There will be a masked assemblage in these gardens this evening. See, they have lighted up the pavilions; and through those bushes there are glimpses of moving forms and brilliant dresses. She will doubtless be here. We will go put on masks and dominoes, and return in a few minutes.

Edward.—I little need these outward disguises; years, and troubles, and hopelessness, have masked me in a vizard which can only be loosened by the worm. But we will do as you please; only let us hasten. I would I had once more seen her, and then bid her farewell for ever!

Charles.—Come on then. The moon is gliding into her purple presence-room, from amid the curtains of her chamber. The music is beginning yonder in the thicket. We must be here anon.

Sophia.—My dear Frances, though you are in the character of a peasant-girl, and I of a sultana, I suspect our real inclinations are very different from those which our dresses would indicate.

Frances.—I know more of the world than you, Sophia; and, trust me, a little gratification for one's vanity is as necessary to the carrying on life agreeably, as is the satisfaction of our tastes and affections. I advised you, my cousin, to make yourself a Fatima; for nothing will be more delightfully exciting to the imaginations of your acquaintances than the contrast which they will discover between your fresh and delicate charms of voice, eyes, and spirit, and the gorgeous magnificence of these flowing robes and glittering jewels.

Sophia.—Yes, I understand; and your wit, and manner, and knowledge of society, and highly-finished beauty, will dawn, I suppose, with additional splendour from amid the grey twilight of this rustic garb.

Frances.—Perhaps so. I own that without some little view of this kind I can conceive no use in masquerading as a shepherdess. The natural rudeness and narrowness of the character would be very stupid, except as a foil to other qualities which may exist beneath it.

Sophia.—I have done as you pleased in the matter, because I think it very unimportant. But, for my own part, I see no value in admiration gained by these artifices. Yet I might be more

excusable for resorting to them than you who are so secure of gaining attention and applause, if you would only trust to your genuine self. Even my vanity, if I thought its gratification so necessary as you seem to think it, would be hurt at the notion of my being admired or loved for any thing but what belongs peculiarly to myself.

Frances.—Well, my dear, at your age it is very natural you should think this. I think I can remember the time when I too thought so. But I am grown wiser now.

Sophia.—Yet you sighed even while you said you had grown wiser. Wisdom surely does not make us unhappy.

Frances.—The gardens are filling. We have no more time, my dear, for moralising.

Sophia.—Yet see how the lamps have burst into a broken blaze; and how exquisitely is the music arranged to sound in concert with the rippling of the water, and the breathing of the trees, as if they were the voice of the whole landscape; and this mingling of a thousand gay colours and fantastic shapes around us is as splendid and strange as if all the clouds of sunset had taken wing, and flown hither from the west. There is a mystery too in the flood of disguised faces which I should be sorry to exchange for a full knowledge of the features the masks conceal.

Frances.—There, again, I entirely differ from you. To be sure, I can guess pretty accurately as to most of the people at all worth knowing; but, when I am in doubt, there is nothing I long for so much as to discover the secret.

Sophia.—Well, I will be as inconsistent as you wish. Who is that tall, affected-looking man, dressed as a troubadour?

Frances.—Do not speak so loud, when you give such very barbarian opinions, Fatima. What you call affectation is the very dew and bloom of unequalled accomplishment. That is my friend Frederick. See he is looking through the moving crowd with an air of careless superiority. He will find us out at a glance. Aye, I thought so, here he comes. Now, prithee, coz, do not spoil my game, either by openly declaring yourself, or by withdrawing from conversation with him.

Frederick.—Most queenly shepherdess, and most graceful Sultana, may a poor Troubadour ask the name under which he may be allowed to celebrate your beauties.

Frances.—You may call me Amoret, and my companion is named Fatima.

Frederick.—That voice belongs, methinks, to one who has not always worn a peasant's garb?

Frances.—You mistake the note of the thrush for that of the nightingale, Sir Troubadour. I am here in attendance upon the Sultana, like yonder cloud that waits upon the moon.

Frederick.—Say rather, like a seraph accompanying a mortal.

Frances.—Nay, master Giraud D'Alençon, do not speak in whispers. I have no secrets from my mistress.

Sophia.—I know these masks, Frances. There is my sister, I will join her, and you may find us, when you will, in the alcove, beside the waterfall.

Frederick.—Now, cruel Frances, for you cannot disguise yourself from me, will you permit me to converse with you more freely?

Frances.—See, we are watched by yonder pair in black. What can they require from us?

Edward.—Charles, it is, it is her voice. I must speak with her, were it but for a moment. Detain that masker, who is by her side; and I will address her.

Frances.—Well, sable spirit, what need you with a country Amoret?

Edward.—This black vesture is less a disguise to me, than that rustic garb to you, Lady.

Frances.—Good Heavens! do I not know that voice? I do not understand you, Sir.

Edward.—Frances, Frances! it was not always

thus. I remember a time, when no disguise could have prevented you from recognising me, when nothing I could have said as to myself would have been unintelligible to you.

Frances.—'Tis strange. It must have been long ago; for I profess I have, at present, no notion what you mean.

Edmond.—How false, and heartless, and trivial sounds that voice! How has it been sharpened and hardened by the evil discipline of the world! Lady, take off that mask. Aye, there are indeed the features I have loved to look upon. But the flower is petrified, and its fragrance has departed. You have shown what I asked, but would gladly have missed to see. Look here, Frances, is there ought in this face that you can recognize?

Frances.—Can this be life? Edward! O my God!

Edmond.—Yes, Frances, I am indeed one long lost to you, and to my country; yet even now too soon returned to find you thus.

Frances.—Your sudden re-appearance has agitated me so much that I must now leave you. We soon shall meet again.

Edmond.—And can indeed the bright and free-hearted being I remember be dulled and withered into this wretched hollow idol of the world's vanities? Then is all time destruction, and all change but death.

Frances.—How can I save myself from this importunate spectre of the past? I will wed Frederick to-morrow.

NOTES ON LISBON.

No. V.

HOUSES.

THE houses of Lisbon are all built of stone, found in great plenty in the neighbouring quarries, (when first taken from the quarries it is merely a clay, but soon becomes exceedingly hard by exposure to the air.) These stones are only squared, or rather smoothed, (for they are seldom used in a square or any regular shape,) on the side which forms the exterior of the wall; and, as the mortar they use is uncommonly strong, they bind into a solid mass of masonry, the mortar, when thoroughly dry, becoming harder than the stone itself. They use a great deal of timber in the framework of their houses, for the purpose of binding or tying the whole together, so as to be able to stand the shocks of earthquakes, to which they are so subject. Contrary to our mode, the whole frame of the house is first erected by the carpenter, and the mason is then called in to fill up the interstices. This and the great thickness of the walls considered, (from 2 to 3½ feet,) I am led to think that even such another earthquake as that in 1755, would not be attended with such serious consequences. Indeed, the mischief then occurred chiefly among the churches, which, from their lofty walls, unsupported roofs, and no intermediate floors to bind the walls, must necessarily fall in on any violent concussion; and it being a Saint's day, and the hour of high mass, when that dreadful event happened, all the churches were filled, and it has been computed that upwards of 60,000 persons perished in them alone.*

While speaking of earthquakes, I shall state the effect one had on me. About eight o'clock in the morning, on the 4th of June, a slight shock of an earthquake was felt in Lisbon, which, in a few seconds, was followed by another considerably more violent; so much so, that those who were asleep were awakened by the rocking of

their beds, the rattling of doors, windows, &c. The alarm was extreme: in several parts of the city, families ran out of their houses, praying more sincerely than I believe they generally do; however, no further evil ensued than frightening the women and children, and breaking a few windows. The sensation experienced by myself and a gentleman who was with me at the time, was rather singular. We were walking in Gold-street, which stands on a flat, nearly level with the Tagus, and very near it: on a sudden I felt a universal faintness come over me, and my knees and feet were seized with a weakness similar to that caused by excessive fatigue; at the same instant my friend complained of the same faintness and lassitude. It, however, went off in a few minutes, and we neither of us at the time had any idea of the cause; nor was it till we were told of the earthquake that we were enabled to account for our strange sensation. From what we experienced, I am confident that, had the houses been falling round us, we could not have escaped destruction, for we were in progressive motion, and yet the weakness, faintness, and even sickness, forced us to stop for at least two minutes, totally unable to move; and those two minutes would have been quite enough to have buried us and all Lisbon.

To return to my subject. The method of tiling their houses is well adapted to keep out the very rains of winter. The tiles are curved, and are placed the reverse way, alternately into each other, and the intermediate hollows are filled up with a thick paste of mortar, which, when dry, is impervious to the rain; and the roof has a very neat and pretty appearance, the tiles and mortar forming stripes of white and red. In many instances I have seen this effect beautifully diversified: the birds and the wind carry on to the roofs of the houses, various kinds of seeds of mosses, lichens, grasses, &c., which soon take root in the mortar, and the houses then present roofs of broad alternate stripes of light green and red, the *coup-d'œil* of which is uncommonly elegant.

The houses are generally from five to seven stories high; some few are carried to the fatiguing height of ten. The houses of the nobility or of rich individuals, however, seldom exceed two, sometimes have only one. Every separate floor is considered as a distinct house, and, as such, contains a distinct family; and it very frequently happens that those on any one floor cannot tell who occupies either of the others.* Each generally consists of a large sitting-room, a dining-room, kitchen, pantry, and one, two, or more small rooms fit for china closets, servants' bedrooms, &c. The bedrooms for the family are, in general, what they call alcoves; that is, they are rooms lying in the centre of the floor, communicating with the outer rooms by glass-doors, through which they receive the only light they have, as, from their internal situation, they are totally deprived of the benefit of any window of their own; and the only way there is to ventilate them is by throwing open the doors, as, with very few exceptions, they have two doors, one opposite the glass-door, leading towards the kitchen, for the convenience of the servant, who must otherwise pass through the sitting or dining-room to make the beds, &c. These gloomy chambers are, however, by no means so close and uncomfortable as might be imagined; on the contrary, I rather think, provided they are ventilated every day, they are cooler than if they admitted the sun.

I know not from what cause, unless it be from the filth of the streets, and the laziness of the people, but surely Egypt was never more sorely vexed with vermin than Lisbon is every summer;

fleas, bugs, and flies swarming in tens of myriads, and I much doubt if, in the whole city, there is one house free from the two former. The latter, from its nature, is equally a visitor of the palace and the cot.

In Lisbon house-rent is always paid six months in advance, lodgings the same; so that it is impossible the landlord can ever lose his rent. There are only two periods in the year in which either house or lodgings can be procured, (generally speaking,) which are on St. John's day (24 June,) and at Christmas. Those who intend to remove, must one month (exactly) before the expiration of the six months, put a square piece of blank white paper in each window; if they neglect to do that, it is supposed they intend to remain where they are; indeed the landlord can oblige them, as by not putting up the *Escritas*, as those blank pieces of paper are called, they prevent him from letting to others.

But in most instances the landlord will not receive his rent in advance, but prefers a *Fiador*, that is, some person who shall become security for you, not only as to the payment of the rent, but also that you shall make good all damages done to the premises. A short lease or agreement to this effect, is drawn up by the landlord, and signed by you and your *Fiador*,* in which, amongst other things, it is always stipulated that you shall not drive any nails into the walls, and that you shall not let the house to any other person without the landlord's consent. The former of these restrictions is very necessary, as, in general, the walls are very neatly, and, in many instances, very elegantly painted with various subjects, such as groups of figures, allegorical representations, fruit, fish, and flowers, particularly the latter. In some of the houses of the higher orders, I have seen rooms painted in groups of figures, in a style that would hardly be tolerated in England. In this kind of room-painting they are very clever, the execution, particularly in the houses of the rich, being masterly and exquisite.

In most of the large houses, the entrance-hall, the staircases, and some of the rooms are wainscoted about breast-high, with what we call Dutch tiles; but instead of each tile having a different subject, the whole of them, when united, form but one picture, (generally drawn from some subject in the Old or New Testament;) the tiles are very large, about 18 inches square, and if one should get broken the whole set of course becomes spoiled, as it leaves a hole in the ballad. They certainly have a very neat and cool appearance. The ground of them is white, and the figures, landscape, &c. blue.

With the exception of the houses of a few English families, none are to be met with that have a single fire-place, except in the kitchen. This is very well in summer, but during their rainy season, (or winter,) it is miserably uncomfortable, being damp, cold, and shivering.

It is impossible to conceive a more ludicrous picture than might be sketched by suddenly transporting an English cook into a Portuguese kitchen. No range or grate of any kind, no coals, no other cooking utensils than a few stew-pans, and a frying-pan; the fire, a few pieces of wood on the hearth, (which, to avoid stooping, is built in a large chimney, over an arch, and about waist high; under the arch the wood and charcoal is generally kept,) or else charcoal lighted in little circular grated holes, built up with brick-work for the purpose. With such means it would be no easy task to cook an English dinner; but as the Portuguese scarcely ever dress their meat in any other manner than by stewing, these answer the purpose better than any other; as every stew-pan can have its little separate charcoal fire, at a very small expense.

A friend of mine, an English merchant, who

* They are very particular that the *Fiador* should be what they call *capaz*, that is, capable, or what is called in the city of London a good man.

* I saw in Lisbon (in 1815) an old lady who was in one of the churches at the time. While attempting to escape, two falling columns coming in contact by their tops, caught her hair, and detained her safe, beneath the pointed arch thus formed, till she was the next day extricated. She told me every other person in that church perished.

* Instead of having bells or knockers to each floor, there is one general knocker at the gate door, at which you give as many distinct knocks as the number of the floor the person resides on you intend to visit; that is, one for the first floor, five for the fifth, six for the sixth, and so on.

has resided above thirty years in Lisbon, sent to England for a large kitchen range, with boiler, oven, &c., which accordingly was sent out to him; he, however, now has it to dispose of, but is likely to keep it, as he will not easily find a purchaser; his reason for wishing to part with it, being exactly the very one why no person will buy it, namely, *because in all Lisbon he cannot find a workman to put it up.*

If a house is to be let, and you apply to the landlord to hire it of him, and, from any cause whatever, he may not choose to let it to you, you have only to go to an office, established for that and other purposes equally *just*, and state that such a house is empty, and that you wish to occupy it, and are willing to pay the rent in advance into the public treasury; your object is now accomplished; you pay in six months' rent, and these official and officious gentlemen send one of their underlings, who writes upon the door of the house in question the words, *Principe regente*, (in the same manner as we place the broad arrow on custom-house seizures.) This lets everybody know that the Prince Regent has graciously condescended to take the trouble of letting the house into his own hands. The landlord dares not oppose this instance of royal favour, but lets you take possession. At the end of the six months, or perhaps *twelve*, he may receive his rent from the treasury; or it may happen that he never receives it all. The expense of this procedure is ten dollars.

A person who has resided any length of time in Lisbon, may form a tolerably correct idea of the circumstances of those he meets in the streets, for they being the constant receptacles of filth of every description from every house, to which may be added dead dog, cats, rats, (by thousands,) stinking fish, rotten vegetables, &c.; so those who live on what we call in England the ground-floor, and who are the petty shop-keepers and mechanics, are, from the putrid air which they constantly inhale, squalid and wretched looking in the extreme: the inhabitants of the first floor improve a little; the second-story inmate may be endured; but, from the third to the seventh, up to the tenth, the complexion, if not white and red, is however clear, and bespeaks health.

THE BRITISH INSTITUTION.

ON no occasion during the year—neither on the devotion of a 'valuable' column in a daily journal to an *exposé* of the secrets of the prison-house, from the pen of an artist certainly less favoured by fortune than by genius—nor on the proclamation of a hostile manifesto, in an autumnal number of 'The Fashionable Magazine'—not even when the open portals of the Royal Academy saloons invite the thronging population from the east and west to an exhibition of the universal range of national art—does the state of the highest and most interesting branch of painting in England, of that branch which, it may be almost said, deserves exclusively the name of 'fine art,' present itself so forcibly to the reflection, as on the annual opening of the establishment dedicated expressly to its use, its promotion, and encouragement.

Many are those who lament the dearth of productions, really deserving, by their qualities, without regard to their pretensions, to be called historical: all admit the fact of the scarcity of such works; and most are ready to assign a cause to which the low ebb at which that branch of the art at present stands, may be ascribed. Does the evil arise from a fatal predilection for specimens of Dutch excellence in the first patron in the realm? Is it to be attributed to the taste for the low and the little in a *ton-setting* courtier and peer? Is the cause of the mischief to be traced to the indolence and pusillanimity of patrons submitting their own better judgments to the guidance of common-minded counsellors, to whom the works

of art are objects of traffic and profit, rather than of intellectual gratification? Are the professors of history the victims of the envious and interested wiles, and undue advantages, used by the painters of portraits? Is the pursuit of the highest branch of art condemned to beggary by the growth, among men of power and influence, of the extraordinary and absurd notion that portrait-painting itself is a high branch of art, because Titian and Raphael, Rubens and Vandyke, elevated the character of all they touched, even while they condescended to paint resemblances; or because, under the Promethean pencil of the actual President of the British Academy, a Pygmalion in modern painting, the canvas itself may become animated; or because, with a skill not less admired, but with a taste far more questionable, the same President succeeds so happily in portraying the meretricious characteristics of the day, that, on regarding his representations of 'patrician elegance,' it would be difficult to assign the share in the composition, either of the original or the picture, due respectively to the arts of a Victorine and a D'Egville, to the atmosphere of Almack's, to the effects of a season of languor-working dissipation, or to the sacrifice of all expression of sentiment and individuality of character to the acquisition of the air and manners of the ton? Or does the state of depression in which historical painting has sunken proceed from a deficiency of taste in the public? Or, finally, is it to be charged to the want of merit in artists?

Each of the causes enumerated may have, and doubtless has, its influence. Most of them, however, can have but a partial operation,—an operation nearly insignificant, and such as might be neglected altogether, without danger of their working any important mischief, were matters but right with regard to the two last items of the account. Were the taste of the public refined and cultivated, the caprices of court and fashion might be set at defiance; but, in such a case, would the historical productions of the day satisfy the people?

The artists reply in the affirmative; the advocates of the people, in the negative. We will not undertake to decide between the two parties: we prefer taking for granted—and the position can scarcely be denied us—that some little amendment is required on both sides. The wants of the people of England are ultimately, if not directly, omnipotent. Did there exist a general desire for the contemplation of exalted works of art, a universal conviction of the beneficial effects resulting from a familiarity with them, the Government would ere long be under the necessity of providing the means of gratifying the wish. To inspire the public, therefore, with a desire so laudable, should be the first and grand object of all who love at once the arts and their country, who desire to see the former cherished by their nation, and the latter improved by the grace-imparting influence of the former. For this end, the surest and most obvious means are to familiarise the people with the productions of supreme excellence, by exhibitions of the masterpieces of ancient art, and of modern works which, if not equalling the best that former ages have left us, will not quite shrink from the comparison. We have been led to make this observation, almost too obvious to require stating, by the outcry which is too generally raised by artists themselves, and those who engage in the advocacy of modern art, with a spirit savouring somewhat of party-feeling, against the acquisition and exhibition of the works of the masters of past times,—an outcry which, as far as regards the grand interests of the arts, and not the mere employment of individual professors, is perfectly senseless.

It is misrepresenting the subject altogether to make the mere benevolent desire to favour the followers of an art the motive for patronage: the funds spent on that principle would better come under the denomination of charity. The only

sound and real incentive to the patronage of art, the only one which can benefit the arts, is—the love of art for its own sake, independent of its professors,—the gratification of contemplating those noble efforts of genius, to whatever age, country, or school they may belong, which cannot be regarded without exciting wonder at the powers of mind of man, and an exalted feeling towards the source whence he derives his endowments. The possessor of a collection of paintings who discards his old masters, if he have any real and valuable specimens, for the purpose, as it is called, of patronising art, and to make a modern gallery, gives a proof, it may be conceded, of a benevolent disposition, but by no means of a love of art. He does as the scholar who parts with his Hesiod, Homer, Æschylus, Virgil, Horace, Dante, Petrarch, Boccaccio, Chaucer, Milton, Shakespeare, Spenser, but preserves, perhaps, the *Waverley* novels, the works of Byron, Southey, Coleridge, and Moore, fills the rest of his shelves with the ephemeral productions of the modern ten thousand.

Let it not be supposed, however, that we are adverse to the encouragement of modern artists. We protest merely against the adopting, in this case, the vile English principle of making a party and a job of every thing: but, while we encourage and applaud what aspires to excellence and approaches the eminence, we must still admire that which has long since attained the summit, and served as a beacon to guide others in their course. Would to God, indeed, that we had our English Luxembourg! and would to God we had something truer and loftier than the works of West to fill it with! Would to God that our men of talent, in whom education and habits presuppose a refined taste, and who have had opportunities of cultivating their judgment, would shake off the trammels of fashion-mongers, and reflect, and judge, and act for themselves; or at any rate that they would use their common sense, and be persuaded that it would be as reasonable to ask the opinion of a publisher as to the merits of a new 'Paradise Lost,' as to defer to the judgment of a picture-dealer, merely because he is such, (for we do not see why such a person may not withstand the influence of his calling, and unite the advantage of his experience with a taste for the elevated,) in deciding on the sentiment, expression, and composition of an historical work of art.

Would to God, finally, that the ennobled, the powerful, the opulent of the land would disdain the slightest odour of jobbing, that they would encourage art for the love of art and in sympathy for the artist, and not for the sake of opportunities of benefiting a servant, a dependant, a family-retainer, or a political partisan, or of the opportunity of mutual interchanges of obligations, civilities, and patronage, with persons of equal station and power with themselves. Then may our artists work with confidence, not to propitiate a particular taste, but to produce what is excellent, in the assurance that excellence will be appreciated and meet its reward. Then may we look for works of art worthy of our works of utility. Then, instead of the mass of our people being simultaneously the best informed and the coarsest in Europe, may we expect to see them vie with the most urbane in all that gives charm to the outward man, as they excel them already in the most solid acquisitions. May we live to see the day when we shall have a Luxembourg under such circumstances! With this vow turn we to the productions of those who, had we such an establishment, would be candidates for the honour of hanging its walls with their works.

The exhibition at the British Gallery is composed much as usual, as regards the style and class of the works it contains. All appetites seem to have been consulted: there is wherewithal to set the imaginations of the poetical wandering; there is much to satisfy the connoisseur in the niceties of the art; there is abundance of sport for the schoolboy; both consolation and monition for

lovers; the sensualist also may have his feast; and there is matter, moreover, for the man of piety, and a theme of congratulation for the republican; nor are kitchen-folk or Quakers entirely neglected.

No. 1, Mr. Northcote's *Adoration of the Shepherds*, by its place in the collection, by the venerable age of the artist, and by the nature of the subject, first claims attention. There is a want of energy in the design, and of force in the colouring, for both are tame; but these are felt to be deficiencies rather than positive faults, while the picture has nothing that can offend the most fastidious. The chasteness and simplicity of the composition and treatment have a certain charm, which excites respect for the work and the artists.

No. 32, *St. George and the Dragon*, Mr. G. Hayter, is a small spirited picture, in every way legendary, in subject, landscape, composition, and colouring.

No. 50, *Love at Naples*, T. Uwins, a silly title, but a well-treated subject. The figures are graceful and handsome, and the colouring, both of the costume and of the landscape, warm and rich. There are several other very agreeable pieces by Mr. Uwins, which we shall take occasion to notice hereafter.

No. 56, *The Moon rising over a wild mountainous country*, F. Danby. The art offers no greater difficulty than the attempt to represent the effect of moonlight. We have never yet seen an effort of the kind at all satisfactory. This is more successful than usual, partly, perhaps, because too much is not attempted. The character of wildness and mystery thrown over the rugged summits of the mountain range, speaks powerfully to the imagination; and the volcano in the distance sending forth its flames, but calmly and without agitation, has a wonderful effect. We far prefer another production of Mr. Danby's, viz.

No. 67, *Sunset*. This is a painting replete with poetry: the effect is glorious; the gorgeous sunset, the illumination of the prow of the solitary galley, the ensign drooping in the calm, the reflection of the rays on the dark waters, the broad lights and shadows on the golden sand, the pair seated on the beach in richest apparel regarding the glorious spectacle and sharing the repose the spirit and love of all around them, the arm of the one reclining gently on the shoulders of the other, all so full of sentiment and of harmonious feeling—the composition is altogether very happy.

No. 78, *The Hookah Bearer*, H. W. Pickersgill, is a very clever picture of a black slave: natural, animated, and spirited in design, and effectively painted.

No. 77, *Cattle-boat crossing a River*, J. Dearman, although a small picture, is a delightful and brilliant effort in the manner of Cuypp.

The two Naval Pieces, ordered by the Institution for Greenwich Hospital, we fear, must be pronounced to be failures.

No. 62, *Battle of St. Vincent*, G. Jones, is one of these, and represents Nelson and Captain Berry boarding the *San Joseph* from the *San Nicholas*, another enemy's ship just captured. A more heroic exploit is not recorded in ancient or modern history; yet there is nothing elevating or grand in the picture of Mr. Jones. The difficulties of the subject, however, are said to be great; and it seems agreed to make allowances on that account. We will not prove an exception to the general practice: still less will we do so with regard to.

No. 150, *His late Majesty, after the Victory of the 1st of June, 1791, presenting Earl Howe with a Sword*. Mr. Briggs, we think, would have done better had he declined undertaking a subject so little to his taste.

No. 155, *A Native of Missolonghi, painted at Rome*. Holins is a delightful single figure of a Greek girl reclining on a couch. The head is superbly beautiful, and realises the general idea of the style of a Greek head: the expression is powerful, it speaks of

The land where the cypress and myrtle
Are emblems of deeds that are done in their clime,
Where the rage of the vulture, the love of the turtle,
Now melt into sorrow, now madden to crime.

In more sober reality, it is the habitual physiognomy which would be looked for in a female not devoid of all the softer feelings of her sex, but inured to scenes of horror and ferocity. The costume is gorgeous, and richly and powerfully coloured, while the background harmonises delightfully with the ease and repose of the figure.

No. 166, *The Disconsolate*, G. S. Newton, is one of the most delightful productions of that popular artist. It is full of feeling and sentiment. A picture without a face, however, is scarcely orthodox, and certainly not a subject for imitation.

The middle, and south rooms, and many pro-

ductions of merit in that we have noticed, we must reserve for a future occasion. We shall content ourselves with showing that we have not overlooked Mr. Etty's *Hermaphrodite*, which is a beautiful work and in a style a little more refined as to form than some of that artist's previous works. In the south room, the most striking picture is,

No. 472, *Satan*, J. Partridge, a conspicuous work, although, in assigning it a place in the gallery, the character of the subject, rather than the display of the picture, has manifestly influenced the hanging. It was natural to put in the dark room, as that at the south end of the gallery, is denominated, one, whose deeds, being evil, would love darkness rather than light. Not so the picture, we suspect. This we shall notice hereafter: the obscurity of the situation and the approaching dusk prevented our seeing it properly.

MISCELLANEOUS NOTICES.

Consanguinity of European Monarchs.—Köningswärd, the author of 'Harald Härfägers Aftkomlingar på Europas Throner; Stockholm, 1828,' has demonstrated by a set of tables, drawn up with very great care and accuracy, that the various thrones of Europe are occupied by sovereigns descended from one single family, whose common ancestor was Harald Härfäger (the beautiful-haired). This monarch was born in 883, and died in 934, after a reign of 49 years, during which he had five successive wives. From this intelligent work it appears, that, independently of the direct descent of the Swedish dynasty, the shades of descent are as follows:—The King of Bavaria in the 29th degree; Sweden, 31st; Naples, 31st; Wurtemberg, 30th; Denmark, 29th; Great Britain, 28th; Netherlands, 29th; Sardinia, 28th; Prussia, 28th; Saxony, 28th; the Emperor Don Pedro, 30th; Austria, 30th; Russia, 29th; King of France, 31st. During an interval of 350 years, the sceptres of Bavaria and Prussia, (or Brandenburg,) have changed hands more rarely than others; they have been held by only 12 sovereigns during that period, whilst Denmark has been ruled by 13; France by 14, (exclusive of the times of the republic and consuls,) Russia and Turkey by 24 each, and the Papal States by 39*. No European throne has been longer possessed by one regular dynasty than that of Denmark, where the son has invariably succeeded the father.

TRADE, REVENUE, &c.—Comparative Statements.—Maritime force of Great Britain, 18,631 vessels, 2,141,000 tons; France, 14,530 vessels, 700,000 tons; United States of Amr. 1,423,000 tons.

Trade.—Great Britain, per ann., 44,100,000l. impts; 58,823,000l. expts.; France, 23,112,970l. imports; 25,419,600l. exports; Amer. 19,418,000l. imports; 19,275,000l. exports.

Revenue.—Great Britain: per head, 2l. 14s. 2d.; France, 1l. 5s. 4.; Netherlands, 1l. 1s. 9.; Prussia, 14s. 3d.; United States, 10s. 1d.; Austria, 8s. 9d.; Russia, 5s. 3d.

Debt.—Great Britain: per head; 36l. 5s.; Netherlands, 26l. 10s.; France, 6l. 2s.; Austria, 1l. 18s.; United States, 1l. 8s. 9d.; Prussia, 1l. 4s. 4d.; Russia, 17s. 8d.

Representation.—France elects 430 members, or 1 for each 74,418 souls; United States 187, or 1 for 60,129 souls; Netherlands, 110, or 1 for 55,846 souls; Great Britain, 658, or 1 for 35,455 souls; Norway, 75, or 1 for 14,000 souls.

COMET OF 1811.—A recent letter from Dorpat mentions that Professor Lambert, of that University, has calculated, that the comet which remained so long visible in the year 1811, was 57½ times less than the sun, but seventeen times larger than Jupiter, twenty-five thousand one hundred and four times larger than the earth, and

* England, during the last 350 years, has seen seventeen legitimate sovereigns ascend the throne: independently of the intruders, Oliver and Richard Cromwell.

one million two hundred and fifty-five thousand two hundred times larger than the moon; whilst its volume exceeded the conjoint dimensions of all the planets of our solar system.

POPULATION OF THE HUNGARIAN TOWNS.—Our statistical readers will thank us for affording them an opportunity of rectifying, by means of the authentic details given by a native work of recent date, the inaccurate information hitherto conveyed on this subject by most geographers.

Free Towns.—Pesth, 46,646 inhabitants; Debreczin, 40,695; Presburg, 35,135; Szegedin, 31,716. *Towns not free and Market Towns*.—Keeskemeth, 31,339; Vesarhely, 25,002; Miskolcz, 21,393.

Transylvanian.—Cronstadt, 30,000; Clausenburgh, 18,210; Hermannstadt, 16,500.

RUSSIA.—The Russian empire presents a superficies of about 360,000 square geographical miles, with a population which may be estimated as little short of 50,000,000; so that there are one hundred and thirty-eight inhabitants to each square mile. It would appear from recent returns, the accuracy of which there seems no reason to impugn, that its effective regular force consists of 622,270 men; this is independent of the irregular corps, as well as the stationary force, such as the veteran regiments, and 76 garrison battalions. From these facts we gather that the regular military strength of Russia, when considered in reference to her gross population, is nearly in the ratio of 1 to 83, and the total amount of her armed force in that of 2 to 50.

ST. PETERSBURG.—The number of students matriculated at this university, during the autumn of 1828, amounted to 195; independently of 116 pupils, who were educating in the 'school of the nobility.' In the year 1825, there were not more than 43 in all.

THE PHILHARMONIC SOCIETY.

THE first general meeting of this Society for the present year, took place on Monday, January 26, for the purpose of a trial of new compositions, and the assemblage of the *dungs* and *flints*, (as they say of the tailors,) that is, the outs and ins, the conforming and non-conforming members of the late Opera band (now alas no more!) was rather interesting. Those whose sense of honour and propriety has led them to refuse to 'take service' under the disgraceful regulations proposed to them, held their heads proudly high, as they circulated their pamphlets upon the subject, while the poor *dungs* seemed to avoid communication, and to feel ashamed of their situations. However, if their feelings and sentiments did not harmonise, they endeavoured that their instruments should; and the performances of the evening commenced with an overture, composed by Henry Griesbach, who placed himself with his score at the piano-forte, and, with the leading of F. Cramer, produced an interesting and clever instrumental composition. It is written in the key of E flat, and consists of two movements; a maestoso as introduction, and an allegro for conclusion. This is Griesbach's second production of the overture species, his first having been performed at the trial night of the 31st of January, last year; and both exhibit good writing, without any striking novelty of modulation or effect.

This was followed by Onslow's very clever overture 'Du Col-porteur,' conducted by Bishop, and led by Mori. A beautiful and highly interesting andante in C common time, leads into an allegro agitato, in the minor of that key, in the 2-4 time, and the conclusion (which returns to the major) is worked up with the highest skill, and produced a delightful effect, appreciated and acknowledged by the whole assemblage, listeners and performers.

Cipriani Potter then produced a long and elaborate sinfonia of his composition, which was carefully led by Spagnoletti, and consisted of a

maestoso in E flat, in common time, an allegro in 3-4 time, a clever andante in A flat, a scherzo vivace, as a minuet, with corresponding trio; and a concluding allegro in common time. Great pains was taken by the orchestra, and great pains had been taken by the composer; the *sinfonia* exhibited excellent writing, but yet, in some measure, failed to excite the interest it deserved; some indescribable charm, that had pervaded the previous performance, was unaccountably wanting.

After this, Weichsell led, and J. Cramer conducted, a truly magnificent and brilliant composition of the great Spohr, whom we now think unequivocally the finest writer (at least of orchestral music) in the world! It was the overture 'De Pietro von Abano,' consisting of a larghetto in 6-8 time, and an allegro in common time, written in the superior key of A flat; and the enthusiasm displayed by performers and auditors, in their marked applause, augurs that the subscribers will hear it at one of the earliest concerts.

The overture written by young Hill, and tried upon the first meeting of the Philharmonics last year, was now again performed; and obtained some deserved encomiums. It has received several judicious alterations and improvements, and went off well. A poor piece of musical writing was then exhibited in the shape of an overture by a foreigner of the name of Perez, with which the trial concluded.

Upon the whole, the pieces were cleverly written, well performed, and received with merited applause; those of our natives, Griesbach, Potter, and Hill, were certainly placed to a decided disadvantage, being in immediate juxtaposition, as it were, with two of the most able writers of the day, Spohr and Onslow; but they stood the trial successfully.

The nights fixed for the eight concerts are as follow: February 23, March 9 and 23, April 6 and 27, May 11 and 25, and June 8; and it is expected that the Directors will be indefatigable in their endeavours to produce novelty, talent, and effect.

THE DRAMA.

King's Theatre.

AFTER a great deal of thunder and lightning, and convulsions of nature, and jarring of the elements, Jove—that is, Messrs. Laporte and Bochsa—ceased to nod, and the green curtain was peacefully uplifted. The public has heard enough of the contentions between the manager and his subordinates; but, knowing the fierceness of such fights, more especially when between those *traci celeres*, the popular musicians, they may be astonished to hear that the hisses and groans of the malcontents and their attacks on the first night of performance were not strong enough to check the perseverance of the singers in their dumb play nor disagreeable enough to cause half a dozen of the nuisances to be turned out. Their highnesses in the mountain holds made a simultaneous attack upon the fiddlers when they first twanged catgut; but the warfare was soon of the *guerrilla* kind, and all but two or three seemed to discover at once, that in booting the performers they were journeying against the sails of the mill instead of the miller.

The grievance thus essayed was the substitution of French instrumental players for their predecessors in the orchestra, Lindley, Dragonetti, Willman, &c., who succeeded upon rupture with the manager. The other injurious innovation, that of enclosing and making private certain front rows of the pit, appeared to pass with impunity.

Madame Pisoni, who appeared on Saturday night (for the first time in England) in the character which she sustained more than ten years ago when this opera made its debut before a Neapolitan audience, is neither young nor handsome. In these two respects, we will speak negatively; for it would be against our instinct of gallantry to define what she is. As a singer, she has very long been known to possess the most powerful of contralto voices, methodized and made ductile by great science and a delicate taste. The first notes burst upon the ear like thunder; and, after every little lapse, and throughout the opera, the repetition of the sound had the same effect of making every man turn to

his neighbour, and express audibly the astonishment he felt. This, however, is not the manifestation or the consequence of pure musical enjoyment; and, if there be nothing more than this, no real *fanatico per la musica* will be attracted to the King's Theatre, and certainly no *unmusical* person will find much to please him in Madame Pisoni.

Having perhaps too soon qualified our admiration of this singer, we should add, that the government of her deep and masculine voice is very wonderful, and her general style more varied, and comprehensive, and original than any that may be found elsewhere. She has some pitiful tricks; and amongst these may be particularised, that of *staccatoing* her words in recitative, so that they appear to have a twang of Piedmont about them, and quite lose the delicate and flowing softness of the musical Italian.

Signora Monticelli does very well, but could not be agreeably contrasted with Mademoiselle Sontag, who was her predecessor in her part. But Donzelli is a singer of very different merit. Long, indeed, is it since we have had the fortune to enjoy an exhibition of so many, and so different, and so well-blended accomplishments, in a male vocalist. He has a *portamento di voce*, which appears almost irreconcilable with sweetness,—a vigour and massiveness of tone, which would be supposed refractory to all tune; he gives the broad effects so well, that you would despair of the graces, and wreaths, and harmonising tints; yet it is all, and more than all, displayed in the happiest variety, and to the utmost extent. Upon his first *entrata*, there is scope for a development of his powers, and in a succession more rapid and complete than any thing of the sort we can remember.

But certainly the wonder of the evening was the strange promotion of the ballet to the rank of something worth waiting for. Its title ('*La Somnambule*') will remind our readers of its plot; for every one has seen or read some version of it. Mlle. Leroux is the sleep-walker:—why are there not such in real life? We say this mournfully, for such creatures as herself might be a compensation for many 'whips and scorns of time,' as our time now is. She makes this matter of the many twinkling feet a spectacle of absorbing interest and beauty. Imagine, ye vulgar, a series of love-scenes, whispings, sighs, and all expressed by pirouettes! Fancy the feet being the language employed to tell the quarrels of rival maidens and their restored amity, and the whole stock of adventures necessary to support the catastrophe of such a tale as this! And yet no language could be more explicit. It is the true 'mute eloquence that passeth speech'; and, if Bochsa had sinned before, he should now have absolution for thus making us acquainted, for the first time, with the charms of a species of entertainment which used to seem such inexplicable dumb show to us.

Touching the two questions raised by his revolution in the Opera economy, we have a word of our own that will out. The ex-fiddlers, Lindley and Co., being much prized on the score of their concerto playing, imagined that they were equally valuable in the orchestra. Bochsa thought otherwise, and preferred inferior performers at lower salaries; taking care, we presume, that the sum gained by the difference of these salaries should be more than tantamount to the loss arising from the difference of merit. Now, what have the public to do with this? If they are dissatisfied with their fare, they need not swallow it, and Bochsa will be punished. If the instrumental strength is decreased imperceptibly, and funds are thereby saved for the more expensive engagements in the vocal department, is any offended? Remember that the individual force of a violin here, and a clarinet there, is as dust in the balance, amidst such a crowd of instruments, especially in overtures, and the prevailing music of the day, which is certainly not orchestral, and, when employed in accompaniments, generally full and noisy. However, if the band be a bad one, there will be a proportionate diminution of support to the whole undertaking; if it be good enough to fill the house, Bochsa will be right in having resisted those monopolists who would have held their seats by patent.

As to the other innovation, of locking up two or three more rows of benches, we are disposed to look at it much in the same light. It seems to us that a farmer has a right to alter or improve his lands as he thinks most expedient to himself, unless there be some express prohibition from another, who has a greater interest in those lands. It is against all analogy that the purchaser should assign the price of his goods, or the visitor settle the entrance-money to the entertainment. Indirectly, he does so of course; for, without custom, no sale or entertainment can be carried on;

and the custom may be withheld till the terms are made to suit the purchaser. But it is only by so withholding it, that an exorbitant demand can fairly be corrected. Some exclaim that we British-born cannot submit to the regulations of foreign theatres; the *prece' ence* and distinctions intimated by this partition-line are not grateful to our free-born souls. Fie upon you, Sirs! If you love the entertainment genuinely, such notions will never enter your heads. It is because foreigners are more worshippers of music than yourselves that they are insensible such splenetic feelings. If this be the strong argument against the inclosure; it is a weak and vulgar one. No one, on the other hand, will fail to see many very great advantages gained by the alteration. In the first place, the pit may now be frequented by hundreds who could scarcely dream of it before. It is long since the decent habits of this part of the theatre rendered it a very comfortable resort for ladies: on some nights particularly—such as the benefits—no female could, by possibility, have ventured there. The confusion, and medley, and discomfort, at all times, have excluded from the performance a large class of music-lovers, composed of invalids and infirm persons, and families not resident in town, or unwilling to incur the expense of a box-subscription. We see many other advantages which, at our leisure, we may instance. At present, we are tempted to say but little more. It is by way of illustration of our view of the matter. We believe that, according to our law, any part of a common, previously enjoyed to a certain degree by the neighbours, may be inclosed and cut off from them at the pleasure of the lord of the soil, so he leave enough for their use as commoners. Now, if this be a parallel to the case before us, it will be seen that M. Laporte's right to appropriate a new portion of the pit, is only so far conditional, as that it is measured by the sufficiency of the residue for the use of the pitees. Hence, as long as there are thin h uses, he will be defended in what he has thus done; but, if the theatre becomes ever gorged and swollen with extra numbers, then let them break down the barriers if they will, and justify their violence by the necessity.

In common with the rest of the world, we are personally sorry for both the changes to which we have referred. The loss of the orchestral performers, however magnified, is sure to be painful. And, as for the stalls, we cannot help feeling, despite ourselves, that our tickets are now deteriorated in value by so many feet and inches in a direct line from the prompter's box, according to the increased distance at which we are compelled to seat ourselves.

POPULAR SCIENCE.

'How charming is divine philosophy!
Not harsh and crabbed as dull fools suppose,
But musical as is Apollo's lute.'—*Comus*.

I.—ANIMATED NATURE.

'And God said, let them have dominion over the fish of the sea, and over the fowl of the air, and over the cattle, and over all the earth, and over every creeping thing.'—*Genesis*.

1.—ANIMAL ANTIQUITIES.

Insects in a Mummy.—M. Figeac of Grenoble, while examining an Egyptian mummy, found amongst its fingers several dead coleopterous insects of a fine rose colour, in all its brilliancy. M. Jurine of Geneva ascertained that they belonged to a nondescript species of corynetes, (*Fabricius*), which he is disposed to call *C. Glaber*. Circumstances indicate that the eggs of those insects were laid on the mummy during the embalming process, and subsequently became perfect insects. The Arabs, indeed, had opened the mummy; but the envelope of the hands, where the insects were found, was untouched.

2.—ANIMAL ARCHITECTURE.

Coral Reefs.—It has been generally believed that the deep perpendicular reefs, very near to which the sounding line finds no bottom, consist wholly of coral; but MM. Quoy and Gaimard have adduced very satisfactory reasons to prove that the Zoöphytes, far from raising from the depths of the ocean perpendicular walls, form only layers or crusts of a few fathoms' thickness. They remark that the species, which always construct the most considerable banks, require the influence of light to perfect them; and it is well known that all those steep walls, common in the equatorial seas, are intersected with narrow and deep openings, through which the sea enters, and retires with violence; whereas, if they were entirely composed of madrepores, they would have no such openings between them, since it is the property of zoöphytes to build in masses that have no interruption. It is, besides, difficult to suppose that these animals can support such different degrees of

pressure and temperature, as they necessarily must, if they exist at such different depths in the ocean. It is, therefore, most reasonable to conclude, that the summits of submarine hills and mountains are the bases upon which the zoophytes form layers and raise up their fabrics,—a supposition which perfectly accounts for the great depths of the sea close to the reefs and islands which they have elevated to the surface of the water.

3.—ANIMAL GEOGRAPHY.

North-West Passage proved by Whales.—Whales which have been harpooned in the Greenland seas, have been found in the Pacific Ocean; and whales, with some lances sticking in their feet, (a kind of weapon used by no nation now known,) have been caught both in the sea of Spitzbergen and in Davis' Strait. The following is one of the authorities for this fact, which, of all other arguments yet offered in favour of a trans-polar passage, seems to be the most satisfactory:

A Dutch East India captain, of the name of Jacob Cool, of Sardinia, who had been several times at Greenland, and was, of course, well acquainted with the nature of the apparatus used in the whale-fishery, was informed by the Fischal Zeeman, of India, that in the sea of Tartary, there was a whale taken, in the back of which was sticking a Dutch harpoon, marked with the letters W. B. This curious circumstance was communicated to Peter Jansz Vischer, probably a Greenland whaler, who discovered that the harpoon in question had belonged to William Bastiaanz, Admiral of the Dutch Greenland fleet, and had been struck into the whale in the Spitzbergen sea.—*Beschryving der Walvisvangst*, vol. ii., p. 38.

4.—ZOOPLANTOLOGY.

Structure of the Sponge.—If a common sponge be carefully examined in a microscope, it will appear to be furnished with galleries and compartments, which rival in intricacy and number, those of the celebrated labyrinths of Crete; the ramified entrances of a marine pavilion, gradually extending upwards, and sending forth branches in different directions, till they at length unite, and form a compound reticulation throughout the sponge. The extremities of the upper shoots are furnished with small openings at the ends of their fibres; and, as we trace these fibres downwards from the openings, a soft whitish substance may be discovered filling the internal hollow part of the ramifications throughout the whole sponge; which ramifications resemble catgut, are of an amber-colour, and are undoubtedly the habitations of a particular kind of zoophytes. For, although we cannot distinguish either vesicles or cells, nor discover any other kind of organization than that of a variety of hollow tubes inflected and wrought together into a multitude of agreeable forms, some branching like corals, or expanding like a fungus, many rising like a column, others resembling a hollow inverted pyramid with irregular cavities, entrances, or apertures; yet, from many obvious resemblances to different other kinds of marine productions, as well as from the chemical analysis of sponges in general, we are amply justified in referring them to the class of animal productions.

5.—ENTOMOLOGY.

Winter Insects.—Several species of gnats (Culices and Tipulidæ) are almost the only winged insects which venture to sport in the winter's sun. A few moths, also, make their appearance, such as the early and winter moths. (*Geometra primaria*, and *G. brumaria*;) and the bay-shouldered button moth, (*Tortrix spadiceana*.) One of the most remarkable circumstances, however, regarding insects, is the subsistence of the autumnal brood of caterpillars upon a very scanty supply of food, and sometimes without any. In gardens, for example, the speckled and spotted caterpillar of the magpie moth (*Geometra grossularia*) may be found upon currant and gooseberry bushes, of which the more expanded buds only can afford them food; and yet they usually survive the hardest winters, though not advanced beyond their first or second skin, and not so thick as a crow-quill.

Like the seeds of plants, just mentioned, the eggs of many species of insects are deposited in the autumn, survive the winter, and are hatched in the spring,—the living principle, though not in a state of activity, being capable, as it would appear, of withstanding severe cold. As an example of this, we may mention the eggs of the lacquey moth, (*Lasiocampa neustria*), which are laid in a sort of spiral round the twig of a tree, and fastened with a strong cement.

The chrysalides, or pupæ of various sorts of moths and butterflies, also remain through the winter, but are usually shielded by a web, or crust, some above and some under ground.—*Companion to the Almanack.*

6.—SAURIOLOGY.

English Crocodiles.—The remains of several distinct species of animals, belonging to this genus, occur in those strata which are placed above the independent coal formation. Of these the following may be noticed:

1. In the year 1791, M. G. A. Deluc communicated to Cuvier the calcaneum of a crocodile from Brentford. It was found associated with the remains of the extinct elephant, rhinoceros, &c., in the Lacustrine silt of that district, one of the members of the modern or superficial strata. Baron Cuvier seems to consider it as having belonged to a species distinct from the recent kinds. If it be also distinct from the other fossil species, and have not been washed out of its original repository in some older bed, it must be considered as the most recent of the extinct species.—*Cuv. Rech.*, vol. ii. p. 269.

2. In the clay of the Sheppey, the jaw of a crocodile has been found. *Webster's Geol. Trans.*, ii. 194. *Cuv. Rech.*, vol. ii. p. 165. In the tabular view of the fossils of the London clay, in 'The Geology of England and Wales,' it is stated, 'That the remains of a crocodile, very nearly approaching to the characters of existing species, and especially to the crocodile *à massieu dignus*, have recently been discovered in the London clay at Islington.

3. In 'The Geology of England and Wales,' p. 172, it is said, Mr. Johnstone, of Bristol, possesses a very perfect head of a crocodile, found in Purbeck; but the character of the matrix is not quite decisive, as to whether it belongs to these or to the Portland beds.

4. Baron Cuvier, (*Rech.*, vol. ii. 161,) notices the occurrence of a crocodile in the iron sand of Filgate Forest, Sussex, and refers to Mr. Mantell's fossils of the South Downs.—P. 47.

5. In 'The Geology of England and Wales,' it is stated, that a 'well-characterised crocodile, but of a species distinct both from those now known to exist, from those found in a fossil state in Germany, and from one, at least, of the French fossil species, has been dug up at Gibraltar, near Oxford, and is now in the collection of that University; it is from a bed towards the upper part of this volutic system, perhaps the Cornbrash.' P. 208.

6. The alum-shale of Whitby, so fertile in organic remains, has furnished the skeleton of a crocodile, a figure of which has been published by the Rev. George Young, in the *Edin. Phil. Journ.*, No. XXV. p. 76, tab. iii. In the length of the snout, it approaches the Gavia. Mr. Young is disposed to consider the skeleton found at Whitby in 1758, a drawing and description of which by Mr. Wooller appeared in the *Phil. Trans.*, l. p. 786, tab. xxx., as probably belonging to the same species.

7.—ICHTHYOLOGY.

Fishes in the London Clay.—The remains of fishes are frequently found in the London clay, in various degrees of preservation; not only are the numerous teeth of cartilaginous fishes found here in their figures, triangular, conical, single pointed, tricuspidated, tridentated, lanceolated, &c., and from more than an inch in length to very small sizes; but others belonging to spinous fishes, varying considerably in their forms and sizes, are found still affixed in their bony sockets. The skeletons of some of these fishes still remain, but so fixed in their hardened matrix as to be very difficultly separable.

The teeth are most referable to different species of the genus *squalus*, and are spoken of, by former writers, under the different appellations, *Plectronites*, *Rostrago*, &c. The bony tongue and palates of different species of the genus *Raia*, particularly of *Raia pastinacea*, are also found completely mineralized in this formation.

Fishes of New South Wales.—These, it would appear, are all different from those in England. There are scarcely any shell fish on the coast, with the exception of oysters, which are only found on such rocks as are left uncovered by the water at low tide. And muscles, also, adhere to the stones that are always under water; and in some places cockles are plentiful.

8.—ORNITHOLOGY.

Remarkable Migrations of Birds.—By wonderful instinct birds will follow cultivation, and make themselves denizens of new regions. The cross-bill has followed the apple into England. Glenco, in the Highlands of Scotland, never knew the partridge till its farmers, of late years, introduced corn into their lands; nor did sparrows ever appear in Siberia until after the Russians had made arable the vast wastes of those parts of their dominions. Finally, the rice buntings, natives of Cuba, after the planting of rice in the Caro-

linas, annually quit the island in myriads, and fly over sea and land to partake of a harvest introduced there from the distant India. It is, however, only the female rice-bird which migrates. Of the myriads which visit Carolina, a single cock is never found.

Australian Birds.—The birds of New South Wales vary in size, from the emu which stands about six feet high, to birds little larger than the humming-bird, in the West Indies. Black swans, cranes of various colours, white hawks, black and white cockatoos, and thousands of parrots of the most splendid plumage, ducks and quails, are also common. Birds resembling our pigeon, pheasant, and turkey, are also got in numbers. Among the birds peculiar to the country, may be mentioned, one called the laughing-bird; another the coachman, from its whistle ending in a smack like a whip; another the bell-bird, from its voice being like the sound of a bell; and so on. There are swallows all the season, exactly resembling those in England.

9.—MAMMOLOGY.

Apes not rational.—Around Gibraltar is found a sort of ape in great numbers. These animals seem fond of warming themselves at the fires where the soldiers have boiled their kettles; but, although chips of wood are in abundance, the apes never think of adding them as fuel.

10.—ANTHROPOLOGY.

Colour of the Eyes.—In a scarce treatise, 'De Coloribus Oculorum,' by Portius, it is remarked, that in blue eyes the interior membranes are less abundantly provided with black mucus, and are thence more sensible to the action of light. That sort of eyes suits the inhabitants of the north during their long twilights; while the deep black of the negroes serves to support the vivacity of the light. The blue of the Laplander's eyes, however, but ill supports the light reflected from the snow, and renders them subject to cataract.

A singular Glutton.—Charles Domery, aged 21, when a prisoner of war at Liverpool, consumed, in one day, sixteen pounds of meat; namely, four pounds of raw cows' udder, ten pounds of raw beef, two pounds of tallow candles, besides drinking five bottles of porter; and, although he was allowed the daily rations of ten men, he was not satisfied. In one year he ate 174 cats dead and alive.

II.—NON-ANIMATED NATURE.

'The meaneft flow'et of the vale,
'The simplest sound that swells the gale,
'The common sun—the air—the skies—
To him are opening Paradise.'

GRAY.

1.—VEGETABLE MECHANICS.

Perception in Plants.—There are marks of perception in plants, at least they have been so accounted; perhaps, however, these are more apparent than real. If a cucumber be planted, and after the branches shoot there is placed a stone in the way of either of them, the branch will turn off and avoid it, without touching the stone, describing a circle around it. After having passed it, it will go on in a straight line. This, which is considered as a mark of perception, is only an instance of the law by which plants always turn to the light; for the plant turns round to get out of the shadow of the stone.

2.—VEGETABLE GEOGRAPHY.

Forests.—In warm climates the heat is so favourable to the decomposition of vegetable matter, and the number of mosses, and dwarf woody and fibrous plants, is so small, that moss is not formed, and forests look as if, in as far as nature regards them, they were to be permitted to live till the destruction of the world. The existence of forests, indeed, in tropical climates seems so much a part of the economy of nature, that they could not be destroyed, without involving in the catastrophe half the plants, and almost all the animals, of those regions. In cold climates, where we maintain that there are natural processes for the destruction of forests, there are very few parasitic plants, or others necessarily depending on trees for their existence, and as few animals that can live only in the woods. The few bats we possess can hang on the ruins and rocks, which seem more natural to them than the forest. The squirrels would, indeed, be poorly off without wood, and, perhaps, pass into the class of extinct quadrupeds. But the different species of the mouse kind, the hare, the weasel, the fox, the cat, the horse, the goat, the ox, the deer, the hog, the otter, and the other species of quadrupeds in these climates, might exist among the remaining woods and coppices of the uplands, or on the open plains, as well as in a universal forest. If, on the other hand, nature destroyed the tropical forests, the splendid epiphytous, and other plants depending on the existence of trees, would perish; and, as to the animals, what would become of

the poor monkeys, especially those with long prehensile tails, formed for twisting round the branches? unless we suppose, as, perhaps, some naturalists, who believe in the transmutation of species, might be disposed to do, that they could eat off their tails, thus at once accommodating themselves to their new circumstances, and supplying with animal, the want of vegetable food. The vampire bats, too, the sloths, and many other tropical quadrupeds, would instantly die out with the destruction of the forests. The birds would be no better off. The parrots, with their toes so curiously arranged for climbing, and a host of other species in those climates, depend for the continuance of their race on a perennial state of wood; and we have now attempted to suggest the law by which nature, always provident of every part and the whole, preserves them.

3.—MINERALOGY.

American Coal.—The Anthracite of Pennsylvania is similar to the Kilkenny coal of Ireland, burning without smoke. In some places it is dry, and is nearly pure carbon, the earthy part being only five per cent. In others it leaves much ashes passing into the adjacent carboniferous shale. In others, it is saturated with water, and assumes a fine pavyonine hue burning with a bright flame—no doubt from the decomposition of the water.

The shale that overlies the Anthracite being 110 miles by four to eight miles and twenty to thirty feet thick, contains much carbon, but no bitumen, as in England. Many vegetables are seen in it, and perfect specimens of fossil charcoal are found in the Anthracite mines. The ligneous structure is as well marked as in recent charcoal.

4.—GEOLOGY.

Fuel of Volcanoes.—Water seems to be a necessary agent in the production of volcanic fire; for only extinct volcanoes are found inland. The most active are in the immediate vicinity of the sea, and some are actually submarine. The matter that feeds them does not seem to be universally diffused, but rather collected in different spots. Hence, they always exist in groups; yet the action of one of the volcanoes of the same group is found to be completely independent of that of the others, Stromboli being asleep while Ætna is raging. The fire is probably seated at some considerable distance under the surface; but the erupted matter does not appear to come from a very great depth. The source of this fire remains unknown, notwithstanding many plausible conjectures. Beds of coal and pyrites do not account for it, neither does the pure metallic basis of potash and soda.

5.—OROLOGY.

Mount Illemani.—The Nevados de Illemani, the second American mountain in point of altitude, which we mentioned in a recent number of 'The Athenæum,' is situated in the province of Paz in Bolivia or Upper Peru, and is twenty marine leagues south-east of the city of Paz. It is farther south than any of the other peaks of the eastern Cordillera, and according to the astronomical observations taken near its northern base Mr. Pentland, it is situated between 15° 35' and 16° 10' S. Lat., and between 67° and 68° W. Long. Its summit forms a ridge, traversed by four peaks in a line parallel to the axis of the chain, and lying N. and S. The most northern of these peaks is 24,200ft., and the most southern appeared to Mr. Pentland still higher up; but he has not yet determined the exact differences.

The mountain is composed of grauwacke, or transition slate, the beds of which are often separated by strata of quartz rock, and flinty slate. These are associated with porphyritic syenite and true granite veins, beds, or stratified masses. The transition slate is traversed by numerous veins of vitreous quartz, containing particles of native gold or auriferous pyrites. Some of these veins, at the height of 16,000 feet, appear to have been explored by the ancient Peruvians.

Captain Basil Hall, it appears, has objected to the statements of Mr. Pentland, that Illemani cannot be seen from the sea, forgetting that it is 310 geographical miles from the coast, and could not therefore be seen.

6.—POTAMOLGY.

Colour of Rivers in Floods.—The reddish brown colour so common in freshes of rivers in Europe, and every where else, is almost entirely the effect of cultivation; and the natural colour of rivers even in the highest and longest continued floods, where all the country is still in woods or pastures, is ever that of a dark brown or blackish, but more diluted than that coming from peat bogs. It is comparatively very clear, and deposits but a trifling sediment.

7.—BOTANY.

Alpine Flowers.—A little above the point where timber disappears, a region of extraordinary beauty commences—intervals of soil of some extent covered with low creeping matted Alpine plants of astonishing brilliancy of colouring. Deep blue prevails; and the pentstemon erianthera, the agnægin cerulea, and other plants, were more intensely coloured than in lower situations. May it not be that the deep blue sky, the atmosphere being for the most part clear and unclouded, influences the colours of this Alpine Flora?

III.—USEFUL ARTS.

'Every new discovery may be considered as a new species of manufacture, awakening moral industry and sagacity, and employing, as it were, a new capital of mind.'

Edinburgh Review.

I.—AGRIQUETURE.

Scots Farmer's Weed-Fine.—By an old Act of Parliament proper persons were appointed to ride round the farms in Scotland to see whether they were clear of gule-gowans, (chrysanthemum segetum.) For each of these plants found, the farmer paid 3s. 4d., or a wedder sheep; it is still kept up at Cargill, Perthshire; (see Sir John Sinclair's 'Statistical Account of Cargill;') but, the fine being there only a penny a plant, the riders can hardly make a dinner of it.

VARIETIES.

Finden's Engraving of the King.—It is said that his Majesty is delighted with this engraving, and has ordered two hundred proof-impressions to be sent down to Windsor, which are intended as presents to the friends and favourites at court.

Managerial Liberty.—Mr. Price has presented Mrs. Planché, the wife of Mr. Planché, author of that successful little drama, 'Charles the Twelfth,' with a superb service of tea equipage, in silver. He is also reported to have given Mr. Planché a larger sum for his farce than has been paid for any similar production since the appearance of Morton's 'Invincibles.'

Concession to Literature.—It is said that the Lords of the Treasury will shortly issue an order to the Postmaster-General, permitting the free transmission, through the post-office, to authors residing in the country, of the proof-sheets of any work in the press. The proofs, it is said, are to be sent to Sir F. Freeling, who will enclose them in a post-office cover, according to the address; and they may be returned in the same manner.

Medico-Botanical Society.—On Tuesday evening, the King of the Netherlands, the King of Denmark, the Spanish Minister, (the Chevalier de Zea Bermudez,) Viscount Mahon, and Earl Powis, were elected Members of this Society. The Earl Stanhope, President, was in the chair, and was invested with the gold-chain of office, which his Majesty has commanded shall be worn by the President for the time being.

Latin and Loyalty.—Bolívar has exhibited an incontestible, though, perhaps, not very disinterested, proof of his attachment to learning. He has ordered the study of Latin to be restored to its former footing, requiring it to be pursued every year in the course; and no one is to be admitted to the higher degrees who is not master of that language. He attributes, in part, the late conspiracy to the neglect of Latin!

Gray.—Good scholars and elegant writers may sometimes lapse. Grays both: yet he says, 'Their name, their years spelt by the unlettered Muse,' &c. There were nine, mythologists tell us; but they have forgotten to inform us which was the unlettered one. We might as well talk of the powerless Jupiter, the lame Mercury, and the squinting Venus. In another poem, 'the court was sat,' is not English; nor is the note in 'The Ode to Music' on Mary de Valence, 'of whom tradition says, that her husband's tradition does not speak here of her, but of the husband. Gray was a very learned man, and no mean poet. I wish he had not written 'Ah, happy hills! Ah, pleasing shades! Ah, fields beloved in vain!' for, in the next breath, he tells us that they were not beloved in vain; quite the contrary, that 'they soothed his weary soul, and breathed a second spring.'—Landor.

Taste and Utility.—A garden is made at Buckingham Palace, as if the genial climate of the southern parts of Europe had existed here: lakes, orangeries, and flower-gardens appear where no flowers ever can flourish, and where orange-trees, like the common laurel, and many other hardy shrubs, cannot endure the atmosphere, impregnated with the smoke of London. The Prime Minister, Lord North, called the shrubs of London the 'never greens;' so may Mr. Nash, while at the same time he laughs at a country which allows him

thus to squander its money upon gigantic but ridiculous alterations. The triumphal arch at the entrance of the garden, which has already cost 30,000*l.*, one would suppose was intended as a suitable, though private, approach for his Majesty to arrive, through the garden, at his palace. It, however, appears that the reservoir intervenes: therefore no approach can be made this way. The public will be puzzled to know to what use this arch, under such circumstances, can be converted.—Hints and Observations respecting the Parks and Palaces, &c.

Mixture of Woods.—It is supposed that the mixture of woods from all parts of the world, as in the hull of a ship, generates diseases of various kinds, from the chemical influences of their several juices or saps; and that they thus destroy each other. In proof of this, it was observed lately, when the *Shannon* was examined, that the oak treenails had destroyed the fir planking for two or three inches round each treenail hole; and in another instance, where oak combings were used in a teak ship, both woods were destroyed for several inches where they were connected. This, it is justly observed, is matter for a scientific and philosophical inquiry.

Water.—Professor Brande estimates the total number of gallons daily supplied by the several water companies at 29,000,000; in raising which, twenty-one steam engines are used, equal to the power of 1,346 horses. The Professor considers filtration the best means of purifying water; and, at a recent lecture, exhibited the model of an invention, now in use by one of the water companies, which filters 500,000 cubic feet of water per day. He had the day before seen the apparatus at work; and though the surface of the water was frozen, the process of filtration was going on below as usual.

Beet-Root Sugar in France.—There are about a hundred refineries of sugar in France, and they produced the last year, 5,000,000 kilogrammes of raw sugar. In four or five years the produce will be sufficient to supply the whole consumption. Before that time the improvement in the manufacture will considerably lower the price. At present, sugar from beet-root ought, by theoretical calculations, to be obtained at twelve or thirteen sols the kilogramme; but, in fact, it costs more than this. The price must, in a short time, be reduced at least one half. On the necessity of favouring the production of this native sugar, the present duties on sugar imported into France are defended.

LIST OF BOOKS PUBLISHED DURING THE WEEK.

Lingard's History of England, vol. 7, 4to., 1*l.* 18s.
Tales, Characteristic, Descriptive, and Allegorical. By the Author of 'Antislavery in the Miserie,' &c., 12mo., 6s.
Liber Scholasticus: an Account of Fellowships, &c., at Oxford, Cambridge, &c., royal 8vo., 10s. 6d.
Prophecies of Christ and Christian Times, 8vo., 6s. 6d.
Dr. Stegall's Manual for Apothecaries-Hall, 18mo., 5s.
M'Kernan on Silk Dyeing, &c., 8vo.
Horne's Manual of Parochial Psalmody, 18mo., 1s. 6d.
Henshaw's Psalm and Hymn Tunes for Horne's Manual, 6s.
Laennec on Diseases of the Chest, translated by Dr. Forbes, third edition, 8vo., 2*l.*
Dr. Gibney on the Vapour Bath, 8vo., second edition, 7s.
A Second Judgment of Babylon the Great, 2 vols. post 8vo., 2*l.*
Mémoires du Maréchal Suchet, Duc d'Albufera, vol. 1., 8vo., 10s. 6d.
Encyclopedia Metropolitana, First Division, (Pure Sciences,) vol. 1., 2*l.* 2s.
Allen's History of London, 4 vols. 8vo., 2*l.* 2s.
George on the Dry Rot, 8vo., 10s. 6d.
Clarke on the Teeth, 8vo., 8s.
Cooper, (Sir A.), on Diseases of the Breast, Part I., imperial 4to., 1*l.* 11s. 6d.
Plumbe on Diseases of the Skin, third edition, 8vo., 15s.
Whewell's Mechanics, 8vo., third edition, 15s.
Morrison's Book-keeping, 8vo., fourth edition, 3s.

WEEKLY METEOROLOGICAL JOURNAL.

Temperature registered at 5 A.M. and 5 P.M.	Jan.	Therm. A.M. P.M.	Barom. at Noon.	Winds.	Weather.	Prevailing Cloud.
Mon.	26 34	40	28. 68	S.E.	Moist.	Cirrostratus

London: Printed for the Proprietors, and Published by their Agent, Henry Hooper, at the Office of 'The London Magazine,' 12, Pall Mall East.

THE NEW MONTHLY MAGAZINE, FOR

FEBRUARY, 1869, contains, among a variety of Original and Interesting Articles:—Irish Lord Lieutenants. By Lady Morgan.—Castle of Dublin. The Marquis Wellesley.—Lord Fitzwilliam.—The Marquis of Anglesea.—Sir John Perrot.—Earl of Essex.—Sketches of the Irish Bar.—Mr. Leslie Foster.—A Tour in Mexico in 1857.—Real del Monte.—A Day at Cambridge.—Professional Sketches. No. IV.—Mr. Brodie.—Sadness and Mirth. By Mrs. Hemans.—The Patent Theatre.—Mr. Garrik.—Mr. Keen.—Mr. Elliston.—Mr. Braham.—Lord Byron.—Mr. Godwin's History of the Commonwealth of England.—An Every Day Character.—School Discipline.—Parliamentary Society.—Rumors of a Deserter's Mas.—The Lover's Leap.—London Lyrics.—Poetical Epistle from Araminta to Medora.—Spanish Historical Romance.—The Castilian.—Political Events.—Critical Notices of New Publications.—The Drama.—Fine Arts.—Varieties, Domestic and Foreign.—Biographical Particulars of Eminent Persons, lately deceased.—Provincial Occurrences, &c. &c. &c.

Printed for Henry Colburn, 5, New Burlington-street.

GEOGRAPHY, WITH ATLAS, ON AN ENTIRELY NEW PLAN.

In royal 18mo. price 3s. 6d. neatly bound and lettered, embellished with numerous Engravings, illustrating Manners, Customs, and Curiosities.

RUDIMENTS of GEOGRAPHY, on a NEW PLAN, designed to assist the Memory by Comparison and Classification.

By W. C. WOOLFE, A.M.

The Geography is accompanied by AN ATLAS, exhibiting, in connexion with the Outlines of Countries, the prevailing Religions, forms of Government, degrees of Civilization, the comparative size of Towns, Rivers, and Mountains, and the climates and Productions of the Earth, in royal 4to. coloured, price 2s. half-bound.

This Atlas has been compiled from the best authorities, and contains all the late Discoveries of Parry, Weddell, Denham, and Clapperton. But its principal claim to attention is founded on the entire novelty of the plan: each Map presents, not only the geographical outlines of countries, but a series of numbers alluding to the Mountains, Rivers, and Cities, which indicate their comparative rank, and enable the Student, by reference to the table of Classification, to discover their actual magnitude. The Isothermal Chart exhibits the Climate of distant Regions, as determined by thermometrical observation, with their most important productions, and presents a striking illustration of the diversity existing in the same latitude, according to the situation of countries.

In the Moral and Political Chart, the outlines of each country contain a number, showing its Population, and several emblems indicating its Government, Religion, and State of Civilization, and forms, in effect, a Moral Picture of the World.

Printed for Whitaker, Treacher, and Arnot, Ave Maria-lane. Of whom may be had, gratis, a Complete School Catalogue.

MR. BUCKINGHAM'S LECTURES.

ON Monday the 2d inst., was Published, in a separate Pamphlet, price One Shilling, the Heads of the LECTURES on the EASTERN WORLD, as recently delivered by Mr. BUCKINGHAM with such extraordinary success at Liverpool, and intended to be repeated by him in all the principal Towns of the Kingdom, preceded by a Sketch of his Life, Travels, and Political and Literary Labours, as the grounds of his claim to public confidence and support.

Also in a separate PAMPHLET, price One Shilling; a REPORT of all the PROCEEDINGS at LIVERPOOL, Connected with Mr. Buckingham's Lectures on Opening the Trade to India and China, compiled for 'The Oriental Herald.'

Published by W. Lawas, No. 4, Wellington-street, Strand; and to be had of all Booksellers.

THE UNITED SERVICE JOURNAL, AND

NAVAL AND MILITARY MAGAZINE, for February, price 2s. 6d., contains:—An Account of the War in the East.—The Battle of Navarino, by an Officer engaged.—Storming of Badajoz.—Recollections in Quarters.—Adventures in the Woods.—The Lost Dragon.—An Enslaved Slave.—History of the Siege of Vienna by the Turks, in 1683, and of its deliverance by John Sobieski, King of Poland, translated by Miss Porter.—Origin of Lord Byron's Shipwreck in Don Juan.—Cutting out; a Galley Story.—Memoirs of the late Lieut.-Col. Denham.—The British Gunner, by Captain Sparrman.—Anecdotes of the Duke of Clarence.—Distribution of the Royal Navy.—Battle of Marango.—Regimental Records.—Memoirs of the Extraordinary Military Career of John Shipp.—Admiral Raper's New System of Signals.—Hydrography.—Works of the late Captain Hure.—Twelve Years' Military Adventure.—Original Correspondence.—Anecdotes, connected with the Army and Navy, &c. &c.

Printed for Henry Colburn, 5, New Burlington Street; Bell and Bradfute, Edinburgh; and John Cumming, Dublin.

CATALOGUE OF BOOKS.

This day is published price 3s. 6d.

HARDING and LEPARD'S CATALOGUE OF VALUABLE BOOKS, ANCIENT and MODERN, FOR MDCCCXIX. Fallmayer's Geschichte des Kayserthums vort Trapezant.—XXII. German Almanacs for 1869.—Eighty-two Miscellaneous Literary Notices from Denmark, France, Germany, Italy, Netherlands, Russia, and Poland, Sweden, Switzerland, and concerning Oriental Literature.—A List of Four hundred and sixty-nine of the Principal New Works published on the Continent, from September to December, 1868.

No. VII. will appear in March.

Published by Treutzel and Wurtz, Treutzel Juno. and Richter, Foreign Booksellers to the King, 30, Soho-square.

VOCAL and DRAMATIC INSTITUTION—

Established upon the principle of the Foreign Conservatories, for the Scientific Vocal Education of a numerous Body of Pupils; combining Languages, Elocution, Action, Dancing, Fencing, Exercises, and all Dramatic Requisites; Theatrical Practice, &c., to qualify for the Orchestra and Theatre; with an exclusive department for tuition in Dancing, Action, &c., to accomplish for the Ballet.

The Terms are a very moderate Admission Fee, and a small quarterly payment.

Professors.—Vocal Department.—Singing (Italian), Signor Lanza and Signor Crevelin; Ditto (English), Mr. Groatorex, M. H. Phillips, Mr. Hobbs, and Mr. Hawes. Elocution, Mr. Wright. Italian Language, Signor Ziliani and Signora Rebuffo. Dancing and Dramatic Action, Mr. D'Egville. Fencing and Sword Exercises, Mr. George Roland. Organist and Pianist, Mr. C. Guichard.

The Ballet Department will be under the immediate direction of Mr. D'Egville, with Mr. Noble, and a Professor from the Royal Academy of Paris.

Full particulars to be had at the Office of the Institution, No. 26, Regent street, near Cavendish-square; and by letters (post free), addressed to the Secretary; also at the principal Music Establishments and Libraries.

NEW LIVING OBJECTS for the MICRO-

SCOPE, with their Zoography, &c. &c., compiled with accurate Descriptions of the Diamond, Sapphire, Aquamarine, and other Microscopes. Illustrated by superior Coloured Engravings. By C. R. GORING, M.D., and ANDREW FRITHARD.

This work contains the most approved methods of employing these instruments for scientific investigation and amusement.

No. 1, complete in itself, is published this day, by Frithard, 78, Piccadilly-street, Strand; Sold by Hessey, 63, Fleet-street. Price 5s.

PART XXV. ENCYCLOPÆDIA METRO-

POLITANA; or Universal Dictionary of Knowledge, on an original Plan: comprising the two-fold advantage of a Philosophical and an Alphabetical Arrangement, with appropriate and entirely new Engravings.

London: printed for Baldwin and Cradock, Paternoster-row; C. J. G. and F. Rivington; J. Duncan; B. Fellowes; Suttaby, Fox, and Suttaby; E. Hodgson; J. Dowling; H. T. Hodgson; G. Lawford; Laycock and Son; and for J. Parker, Oxford; and J. and J. Deighton, Cambridge.

* * * One half of this great Work being now printed, the Proprietors have the satisfaction of being able to announce, what has been earnestly desired by many, a republication in perfect volumes. To those persons who have not become Subscribers to this Encyclopædia, nor made themselves acquainted with its peculiar and original plan, it may be necessary to state, that it will ultimately form three grand divisions, viz. 1. Treatises in every department of Science and of Art, (classified in two Subdivisions of Pure Science and Mixed and Applied Science).—2. History, with Biography intermixed.—3. Miscellaneous, arranged alphabetically, and comprising a Technical Dictionary, a Gazetteer, and an Etymological Lexicon of the English Language. In every Part, as hitherto published, a portion of each of these Divisions has been given, and the Reader has had the advantage of enjoying, in every new fasciculus presented to him, all the distinct features of the work. Still, however, satisfactory this plan has been to many, others have been desirous of having perfect volumes, and this wish is now attainable by the completion of the first Volume of the Work, comprising Grammar, Logic, Rhetoric, and a large portion of Mathematics. Price 2l. 2s., or on royal paper, with proof-plates, 3l. 12s.

THE ORIENTAL HERALD for FEBRUARY,

Conducted by J. S. BUCKINGHAM, contains, among other Articles, equally interesting to Oriental and General Readers:—Proceedings at Liverpool connected with Opening the Trade to India and China.—Song: 'Godlike Liberty.'—On the Distinction in the American Colonies arising from Mixture of Blood.—Song: 'Flora bella, te amo.'—Voyage from Basrah down the River Euphrates to Basrah.—Greece.—On the Mitigation of Negro Slavery.—The Kenite.—Advantageous Position of Egypt as a connecting link between England and India.—The Manise.—On the Danger to which British India is exposed from a Russian Invasion.—Historic Sketches Written in India.—Recent French Scientific Expedition to Egypt.—Song: 'A Wee Drapple o't.'—Memoir of Mr. John Powles.—Trade of Russia with China.—On an Ill-timed Wish of 'A Happy New Year.'—Journey in the Interior of New South Wales.—Sonnet on Visiting the Ruins of the Savoy Palace, early in the Morning.—Character of Lord Byron.—Memoirs of Cleopatra.—Shipwreck.—Opinions and Maxims of the Hindoo.—Shree Trade at the Island of Nias, Singapore.—Statistics in India.—Statistics of the Province of Bascelin.—Sonnet: 'Evening.'—The Press at the Cape of Good Hope.—Latest News from India: Death of Sir E. West and Sir C. Chambers.—Civil and Military Appointments, Promotions, and Changes in India.—Births, Marriages, and Deaths.—Shipping Intelligence.—General List of Passengers, &c. &c.

Printed for the Editor and Proprietor, and sold by W. Lawas, at the Office, No. 4, Wellington-street, Strand.

STAMMERING, and other Defects of Speech,

whether Organic, Natural, or Acquired, effectually and permanently removed, by MR. HUNT, No. 125, Regent-street, London, and late of Trinity College, Cambridge, (Successor to Mr. Sans, of Bath.) Mr. Hunt has practised this system with unprecedented success in the West of England, and very recently in the counties of Sussex, Surrey, and Kent. From Two to Six hours, (one hour a day,) will be generally found sufficient to remove the most inveterate case of Stammering, unless the defect is organic, when a longer time will be requisite. Mr. H. has cured persons in a few hours, after they had been instructed by other Professors for months without deriving benefit.

Instructions given gratis to the children of any of the Charitable Institutions of London. A Prospectus containing letters, references, &c., given on application. Post-paid letters will be promptly attended to.

DEFORMITY OF CHILDREN.—The

practical instructions for the prevention and cure of Deformity of Children by Mr. Sheldrake which appear in the Number of 'The Monthly Gazette of Health,' (148) published on the First Instant, merit the serious attention of parents of a young family. The full account of the extraordinary Trance near Cambridge, by Dr. Haveland, &c.; in the same Number, remarks on the late Trial of Cooper versus Wakley, for a libel, are also very interesting. Among the Medical Intelligence, may be particularly noticed new and effectual Remedies for Chills, Rheumatism, Stiff Joints, Worms, Indigestion, general and local Debility; and, also, Epilepsy, Wagon, Scrofula, &c.; Exposure of the Adulteration of Wine, and the Consumption Effects of the practice of a pretended Curer of Consumption: a new Operation for Inverted Eye-lids, by — Stanford, Esq.; Vaccination, as practised at the Small-Pox Hospital. A Number of this popular work is published on the First of every Month, price 1s., and may be had of all Booksellers in the United Kingdom.

London: Printed and Published every Wednesday morning, by WILLIAM LAWAS, at the Office, No. 4, Wellington-street, Strand.

THE ATHENÆUM

LITERARY CHRONICLE.

No. 67.

LONDON, WEDNESDAY, FEBRUARY 11, 1829.

Price 8d.

REVIEWS OF NEW BOOKS.

REFORMATION AND REVOLUTION IN ENGLAND.

Life of Archbishop Laud, &c. Lingard's Hist. vii. &c. &c.

It is a just remark of one of those writers whose works have done the most, and the most unalloyed service, towards clearing up the records of the past, for the enlightenment and guidance of the present, that the separation of the spiritual from the temporal authority, in its origin, instead of being a device of priestly tyranny, 'instilling barren hearts with conscientious slavery,' was, in intention as well as in effect, a vindication of the spiritual liberty of man, a last enclosure of what yet survived of mental cultivation in the midst of utter waste and barbarity—a sole asylum of oppressed and homeless intellect, where it might flourish and aspire, unchecked by feudal and hereditary bondage. It is true that its collective independence on all secular authority, proclaimed by the Church, was hardly, at the earliest period, founded on the rights of individual conscience. It is also true that, so soon as individual opinion could make itself heard in the relenting din of outrage and violence, that which had been the sanctuary of mind became its prison—the dark and fir-like forestry of monachism, which, with its formal lines, had sheltered fairer foliage from the tempest, was only fit to be lopped down as an obstruction to the mature and spreading honours of intelligence. And yet it would be cynical and wretched philosophy, unworthy of historians, unworthy of men, to judge an institution altogether by the vices, of which the germs seemed inoffensive in its origin, and of which the fruits have withered with its decay; or to heap with indiscriminating ignorant abuse the aids and appliances of national childhood, because they are dispensed with, or speedily to be so, in the manhood of civilisation.

Nor less absurd are the comments on a later period of history, when the principle of which the rude and general recognition belongs to the first ages of the Church, came to receive a more consistent and particular application, at the era of religious reforms. Setting down, with the habitual logic of half-instructed minds, the superficial forms and features of the epoch before them, as if these expressed its real and entire character, some have mistaken the half views and abortive struggles of the combatants as involving the whole meaning and results of the conflict. The Reformation, in their narrative, is nothing but a tissue of the motley freaks and follies of sects, with, of course, a salvo in favour of that pure and scriptural communion to which they themselves happen to belong. More especially, when they get to that momentous crisis, when the spirit of free inquiry, which had been roused by the Reformation, and which the narrow ecclesiastical policy of Elizabeth and James had been unable to lay, came at length into direct and hostile collision with those monstrous politico-religious jurisdictions, the deformed and hybrid progeny of Church and State, 'a mighty maze without a plan' is all they can discover in the quick successive incidents of that memorable revolution.

* We have already taken some notice of the works of which the titles stand at the head of our present article; but the importance of their subject-matter appears to ask for more than we had hitherto leisure to know, either in the shape of direct criticism, or of general historical speculation.

They can neither conceive nor describe (except in the flash language of party) the mixed opinions and characters, necessarily produced by mixed religious and political influences, operating on, and modified by, immensely various individual natures. The evanescent shades of difference from others—the hidden fund of inconsistency with self—are alike undescried and unsuspected by them. The Loyalist, avowing to his comrade an invincible contempt for the bishops,* the Presbyterian swearing from the bigotry of his sect, and the Independent mingling with obscure flights of enthusiasm the wisest maxims of policy and the largest views of tolerance, are characters as utterly unknown to them as the heroes of New Zealand tradition. Nor less unknown the impulses of popular commotion, although its violence be viewed with unreflecting disgust. For the outrages of established power are seldom undisguised with some exterior show of gravity and decency; unsustained by some authoritative precedent, unhallowed by some sacred name. But the justice of the people, how provoked soever, to heedless eyes must ever wear the aspect of aggression. With such, fanaticism must bear the blame of one revolution, as jacobinism that of another.

But, although the times of which we are speaking might be fertile of anomalies in speculative matters, of opinions ill-grounded and incongruous, originating in confused and inadequate perceptions of the nature and demands of the crisis; yet, on the other hand, the conduct of statesmen was, comparatively, exempt from that sort of vacillation, infirmity, or duplicity of purpose, which has been, it must be owned, the growth of later days; requiring for its nurture and encouragement a fiercer soil and more benign influences than were granted at that rough and honest era. The social interests which joined in that struggle were marked out with a degree of distinctness, and defended with a singleness of purpose, scarce conceivable in these days of moderation and of compromise. The old established principles of sovereignty stood committed in hostility with a power which, if not of recent origin, had put forth too recently effective claims to partnership in government, either to be received without resistance within the pale of recognised authority, or divided into manageable corps and factions. On the one side, prerogative, supported by the enervated and spiritless wreck of feudal nobility, by the maxims of the English law, and by the sermons of the state-clergy; on the other, the aspiring independent Commons, professing to restrict their claims within the legal limits of undoubted and repeatedly confirmed franchises, yet intent upon securities for freedom more ample than their charters could pretend to bestow, and, in effect, relying less upon prescription and parchments than on that formidable and growing strength of property and intelligence which were sufficient to secure their political preponderance, and to constitute the natural aristocracy of the land. However otherwise aristocratic in connexion might be many of the members of this body, the popular interest prevailed amongst them; nor was the struggle which arose for purely popular institutions definitively closed but by the return of Charles the Second.

And then took place a very different order of things. It seemed as if the Puritan severity of principle were to be followed and contrasted by

* Sir R. Varney.—See Clarendon's Life,

its utter abandonment,—as if the lofty wish of saving, in its own despite, a people yet unripe for working out its own welfare, had subsided in the base desire of making that people a tool to aid the low pursuits of selfish ambition. There might have been amusement in contemplating that scene of solemn hypocrisy unmasked and ridiculed,—of mock patriotism and sportive apostasy. But the moral of the play was too tremendous. Those figures dressed as royalists, and churchmen, and patriots, were not mere mummers licensed to amuse a vacant hour; but men in authority, to whom was entrusted the government and instruction of a whole people. Great God! what governors—what instructors! And how fearful the event of their ministry! Yet, happily for England, the access of popular frenzy, of which the fruitful source may be found in popular ignorance, produced by the suppression of free discussion and inquiry,—after the brief and shameful paroxysm of the Popish Plot, still left enough surviving of a better mind to prepare its wearied people for the asher acceptance of a mixed constitution and a modest enfranchisement.

Dr. Lingard's present volume is in no way remarkably distinguished from those which preceded it, except by the importance of the events which it records. It exhibits the same acuteness of research and general accuracy of statement, combined with philosophically calm deduction, which the public was prepared to expect from his pages; although these qualities are here and there obscured for a moment by the pardonable influence of that class of feelings which those who most exclaim against them in others, most unconsciously indulge themselves. Of this a notable example is afforded by the biography which now lies before us, and which is just such a production as at this day an apology for Laud might be expected to be. Not that we have the smallest wish to depreciate the really curious facts which may be found in these volumes; or to intercept whatever good impression may be made by the still more curious accompanying sentiments, in the quarters for which they are intended. Of the latter (the sentiments) some idea may be formed from the extracts which we made in a former article; of the former (the facts) we find it gratifying to record a single instance of the amiable pliancy, by which they are induced—not to distort or contradict themselves—but only to appear with such reserve and discretion as may best befit the author's conclusions:

'To assert that Laud persecuted men who were united with him in every point of Christian faith, is, to say the least, an evidence of very superficial knowledge, as no opinions can be more opposite than those of the liberal man, who believes that salvation is within the reach of every human being to whom it is preached, if he choose to accept it; and those of the gloomy Calvinist, who plunges into the secret things of God, presumptuously brings forward his dogma of predestination, and sets limits to the grace of God, which God himself never set. In this instance, Dr. Symonds' bigotry and blindness are farther evident. Nor is his assertion, that "the Prelate noted in his Diary the execution of the butchering sentences of the Star-Chamber and High Commission with the cool malignity of a fiend," in any respect more veracious. From this a reader would infer, that there are many such sentences recorded, whereas Leighton's is the solitary instance: even the sentence of Burton, Pryme, and Bastwick, in 1637, in many respects merited, which the frenzied authors of the "History of the Dissenters" designate "a most infamous tragedy," is not recorded

by Laud, though he delivered a speech on the occasion. And I greatly fear that Dr. Symonds' bigotry and inveterate prejudice precluded him from perusing the Diary, or the account of those transactions in which Laud was concerned. Ignorance is indeed in some measure an excuse; but, if the above sentiments were written after such a perusal, the writer is unpardonable.—Vol. i. pp. 529, 530.

Ignorance of Laud's Diary may perhaps be an excuse for Dr. Symonds, who was not writing his life; but ignorance of every writing of Laud, except his Diary, will hardly be an excuse for Mr. Lawson, in suppressing the invectives against sympathy with the sufferers which occur continually in the *Letters* of that prelate. Take an instance—

'A little more quickness in the Government would cure this itch of libelling. But what can you think of Thorough, when there shall be such slips in business of consequence? What say you to it, that Prynne and his fellows should be suffered to talk what they pleased while they stood in the pillory, and win exclamations from the people.'

Or the following:

'A prince that loseth the force and example of his punishment, loseth withal the greatest part of his dominion. If the eyes of the Triumviri be not sealed so close as they ought, they may perchance spy us out a shrewd turn, when we least expect it. I fear we are hugely mistaken, and misapplying our charity, thus pitying of them, where we should indeed much rather pity ourselves.'

Or the following:

'It is strange to see the frenzy which possesseth the vulgar now-a-days, and that the just displeasure and chastisement of a state should produce greater estimation, nay, reverence to persons of no consideration, either for life or learning, than the greatest and highest trusts and employments shall be able to procure for others for unspotted conversation, of most eminent virtues, and deepest knowledge; a grievous and over-spreading leprosy; but where you mention a remedy, sure it is not fitted for the hand of every physician; the cure, under God, must be wrought by one Esculapius alone, and this, in my weak judgment, to be effected by corrosives rather than lenitives: less than Thorough will not overcome it; there is a cancerous malignity in it, which long since rejected all other means, and therefore to God and him I leave it.'

We think it fair to quote the following account of Dr. Bastwick, as a favourable specimen of our author's zeal in collecting the matters of fact which form his premises, however oddly they may now and then be linked to his conclusions:

'Let us, however, turn to the "Letany," in which there is "An Universall Challenge to the whole world, to prove the parity of ministers not to be *jure divino*," and which Bastwick says, is "a booke very usefull and profitable for all good Christians to read, for the stirring up of devotion in them likewise, Prov. chap. xxv. ver. 2. Printed by the speciall procurement, and for the especial use of our English prelates, in the yeare of Remembrance, 1637." There is a libel in the very title-page; but he fulminates most lustily in the opening epistle, which he entitles, "John the Phisitian to the virtuous and elect Lady, the Lady Walgrave, at her house in Worminford, in Essex." "I dare boldly maintaine," saith this Medico-Mastyx, "they (the Bishops) are more disobedient and worse than the devils themselves, to say nothing in passion and perturbation. Of all creatures, bishops, priests, and deacons, are most wicked, ungratefull, disobedient, and rebellious. The Lord Jesus saith, Bring those mine enemies to mee hither, that I may slay them that would not that I should rule over them. If slaughter to a kingdom be the preservation of it, then the prelates are the maintainers of it, for of all creatures they are the most rebellious and impious. Nay, I peremptorily affirm, that the prelates are worse than the devil." They are "rook-catchers, soule-murdering hirelings, atheists, a commonwealth of rats." "The truth is," says he, "they are God's rebels, and enemies, both by the law of God and the land, to God and the King, and, like the giants of old, warre against the clouds, and, if to say so be a scandall, I will live and die in it." "To say nothing of the Bishop of London, who was put into his office with such supreme dignity and incomparable majesty, as he seemed a great king or mighty emperor, to be inaugurated and installed in some superlative monarchy; see the prelate of Canterbury, in his

ordinary garb riding from Croydon to Beeshot, with forty or fifty retainers well mounted attending upon him, two or three coaches, with four and six horses," &c., and in this style he proceeds in his railing, till he signs himself the virtuous and elect lady's "poore orator." But the other parts are, if possible, still worse. He talks of "Father William of Canterbury, his Holiness, and William London, Magnificent Rector of the Treasury,"—the "Prior of Canterbury there, William the Dragon, and your Abbey lubber of York, the oracle of the north." "I will stand to," says he; "I am resolved never to leave the field by flying, but to join battle, and fight against the great dragon, Father Antichrist, and against Gog and Magog, as long as I can stand upon my legs. For, had I as many lives as I have haire on my head, I would be prodigal of them all in this cause; and, had I as much blood in my veins as would swell the Thames, I would spill it every drop in the quarrel I am now embarked in. If Father William of Canterbury think that I am afraid of him, he is metropolitically mistaken; for I neither fear nor love him, neither is there any affection or passion in me so contemptible, that I deem him or any prelate in England, worthy to be an object of it." The Archbishop is styled his "Reverend Highness of Croydon;" and, "had not the prelates lived under a gracious prince, they would have been hanged for their doings." The Attorney-General is termed "Doctor Satan, the accuser of the brethren." Bishop Wren, "Saint Wren, now Pope of Norwich," and the office of a Bishop is, "the office of Satan, and Judas that Archbishop and Primate of traitors." In short, so hardened was his medical fanatic in his wickedness, that he ends his Litany in these words: "Heare is the end of the First Part of the Letany of Doctor Bastwick, there are seven parts more of it yet to come."—Vol. ii. pp. 148—151.

CASWALLON.

Caswallon; or, the Briton Chief. A Tragedy, in Five Acts. By C. E. Walker, B.A., Author of "Wallace," a Tragedy. 8vo., pp. 83. Miller, London, 1828.

THE newspapers, we perceive, observe respecting 'Caswallon,' that it is a very excellent tragedy, exceedingly legitimate, poetical, and in short every thing that a drama should be, only that by some accident the author omitted to enliven it by the introduction of any character. This omission, of course, the newspapers explain away as exceedingly unimportant; but, at the same time, we cannot help thinking there was something ungenerous in alluding to the circumstance at all. If Mr. Walker had advertised in the papers, or in his title-page, that his was a tragedy with characters, he might with some shadow of reason be rallied at for not fulfilling the engagement. But we can find no such pledge any where. It is a tragedy, simply a tragedy. If Mr. Price want characters, 'an uncommon want' among theatrical managers,—and we must add a most imaginary want,—they should be contracted for separately. There is one individual on the establishment who undertakes to provide scenery and decorations; and why, we would humbly ask, if there is a need of such articles, should not that individual have an increase of salary, upon condition of his furnishing them likewise? To insist upon the playwrights providing them, is one of those exactions which we are sure the liberal mind of Mr. Price would never think of enforcing; and, should he do so, we, for one, were we a playwright, should follow the spirited example set us by Mr. Lindley and his co-signers at the King's Theatre, in the full assurance that the managers would find it absolutely impossible to replace us by any German or French importations whatever. As the question is one important to a large and respectable body of the public, we wished to meet the critics of the daily press upon their own grounds. But we should have been more right to dispute the use of the word character, in this sense, altogether. It originates from an entire misconception of the principles of play-making. The introduction of characters is not so much an act of supererogation on the part of a playwright, as a positive offence against the duties of his calling; and for this plain reason—Every theatre has a company

of actors and actresses, who have been hired at a considerable expence, who are the characters, and whose characters it is important should be exhibited to the greatest possible advantage. Various classes contribute their assistance to promote this important object. Of these we consider the following as the best known and most important: the inventor of the dresses; the tailor or milliner, who makes them up; the posture master, who teaches the expression, feeling, and passion; the perfumer, who supplies the rouge; and lastly, the playwright, who supplies the names and the dialogue. Without attention to the distribution of parts,—and they might be still more minutely subdivided,—it is impossible to determine the limits of the province which we are now considering; but, this being premised, we may now proceed to Mr. Walker's tragedy.

In finding NAMES for the actors, we think Mr. Walker has been very successful, and is deserving of the highest praise. The great art in this department is to preserve a gradation of emphasis according to the rank of the performers in public estimation,—the best actor having the best name; the second-rate actor, the next best; and so on: the prima, secunda, and *terza donna* being, of course, fitted on the same principle.* At the same time, it is well, where it can be helped, not to offend the inferior herd by any very ill-sounding or offensive designations. Mr. Walker has arranged this very cleverly. Mr. Young's name for the night is Caswallon, with which we are sure he has every reason to be satisfied. The inferiority of Mr. Cooper is very evident; and yet there is nothing to wound his feelings in the name of Arnyrn Fitz-Edward. Again, the rising talents of Miss Phillips are admirably flattered by the pretty appellation of Eva, while we really think, considering Miss Curtis is at present very little known, she cannot consider herself ill-treated in being called Goervyl. So far all is well; and, if the other half of the business be as well executed, we shall have no hesitation in saying, that Mr. Walker is a master in his craft. But, as the lady who wrote the prologue to the tragedy remarks,

'But to the test—the expected scenes appear:
Caswallon speaks, and generous Britons hear.'

We will first try the 'generous Britons' with a passage upon which we are sure Mr. Walker piqued himself; and with reason, for it is admirably appropriate to call forth the voice of the actor for whom it was written, and what greater merit can there be than this?

(Enter Carador and Hoel.)

'Cara. 'Tis this way, then, he must have pass'd.
Hoel. And lo!

Where the broad arms of yon outspreading oak
Embrace a secret dwelling.—We will enter.—

'Tis haply there that—
Mad. (advancing.) Hold, rude man—nor tempt
Mine order's curse.—What would'st thou?

Cara. Sire revered,
We bend before thee.

Mad. Wherefore have ye sought,
From the far world, these desert shades?—a spot
Sacred to holiest solitude; and e'en
From the first birth of nature, unprofaned
By sound of steel, or sight of armed men.

Cara. Thy pardon, that we rudely dare to break
Upon its privacy.—If known the cause,
It surely might absolve us.

Mad. Briefly tell it.

Hoel. As briefly answer.—Shrouds not yon lone
hut

The chief, Caswallon?

Mad. Whence hadst thou the thought
To find him here?

Cara. He cross'd us even now.—
Nay, think not, holy Bard, we trace his steps
With traitorous aim.—Too well we know the price
That barbarous England sets on his brave head;—
And oh! too well, what harlot charms bath gold,
E'en in the eyes of our own countrymen.

* The late Mr. Dibdin, we believe, never allowed more than two syllables to the name of an actress receiving less than ten guineas a night.

But with far other hopes we seek Carwallon.
We follow him, to place within his grasp
The avenger's sword.—It now awaits his wielding.
Let him but lead the way in freedom's path—
And know, there are not wanting, through the land,
Hearts prompt to dare, and hands to execute.
(Carwallon here re-appears at the door of the hut.)
Mad. I hear thee, and am lost in strange amaze.—
Mean'st thou, that Cambria, our poor bleeding country,
Hath dared again—?

Cara. To shake the tyrant's foot
From her down-trodden neck!—I tell thee, Father,
That, did I blow but one blast of this bugle,
The sound should summon forth from their retreat
Two thousand armed Britons.—Hear'st thou that?
A band, that, were Carwallon but to head them,—
Were he, who now is absent—

Car. (unable to restrain his emotion, and rushing forward.) No—he's here!

Hear at thy side.—Thou heavenly messenger
Of life and light, where all around was darkness!
Oh, instant sound the trumpet—or take me hence
To yon bright spot, irradiate with the shine
Of spirits like thee, and the last drop of blood
In these fall veins shall fall for them, and freedom!

Mad. Thou honour'd warrior, who for sixteen years
Invincible to every eye hast been—
Do we again behold thee?

Car. And thou risest
Beautiful in thy strength, my native country!
And thou hast girded on thy sword of valour,
And with the iron heel of indignation
Hast spurn'd the spurner from thee!—The loud sum-
mons

To liberty and vengeance has gone forth
Amid thy mountains!—Snowden, the great king,
Hath issued it—and Idris echoed back
The inspiring sound!—Aye, shout, ye hills!—high lift
Your everlasting heads, and shout for joy!—
Ye shall be free!—ye shall again be free!

Now, conceive this roared forth at the highest
pitch of his melodious voice by Mr. Young, and
then deny that Mr. Walker is an admirable play-
wright. The deafening three times three and
'one cheer more,' which must have followed the
words, ring in our ears.

The galleries, the great gods,
Have issued it, and the pit echoed back
The inspiring sound. Shout ye boxes, lift high
Your bonnet-buried heads, and shout for Young!

But our praise must be confined to the last
paragraph. We object to the early part of the
passage, because it does not seem consistent
with the general order of nature and the har-
mony of the green-room, that all the inferior
actors should be allowed to talk in heroics. We
do not, of course, complain of this arrange-
ment upon any mystical or metaphysical grounds
—we do not, for an instant, mean to assert that
there should be any difference between the lan-
guage of the same men at different times—and
when they have different wants to express. We
know that tragical persons should get upon stilts,
both when they are running for their lives, and
when they are taking an ordinary evening's walk.
We know perfectly well, that, when Shakspeare
would have said, 'unbutton my waistcoat,' a mo-
dern playwright ought to say,

'Loosen the foldings of my second garment
That with its heavy weight confines my chest,
Presses my heart down, chokes my utterance,
And will not let me speak a single word.'

(though he has just spoken four lines :) we know,
in short, that the poetical diction in which no one
actually speaks at any time, is that in which the
persons in these tragedies ought to speak at all
times. But this is not the question. It is, whe-
ther an actor who only earns, say 4*l.* a week, has
a right to say as fine things as another actor who
earns 20*l.* a night.

We think not, and we think there is great rea-
son to fear a very serious disturbance, equal to
the OP. rows, but proceeding from behind the
scenes instead of before them, if men are thus
taken out of the station which Providence has
assigned them.

The following is a scene between Mr. Cooper
and Miss Phillips who have fallen in love with
each other, and are never likely to meet again.

The coolness which they display under these
distracting circumstances is truly exemplary, and
raises those eminent performers very much in our
estimation.

Fitz-Ed. My prayers are vain!—I've warn'd them
and they scorn me!

As though my father, from his banning lips,
Breathed a contagious spirit—all—all—reject me.
(Observing Eva.) Ah! but thou still art here.—Angelic
sweetness!

That did'st with tender and compassionate aim
Lift up thy pleading voice: yet, what avails it?
Thou art thy country's Princess—and even thou
Must with the rest despise me.—

Eva. Heaven forefend—
Despise thee!—

Fitz-Ed. And thou dost not?—And at least—
All blessings light upon thee!—there is one
Who doth not quite abhor me—who reveres
The claims of gratitude, and owns their force:—
Heaven, for this sweetening in my cup of gall,
I thank thee!—

Eva. Hear me, thou exalted youth.—
Ere yet we part never to meet again,
Hear, while I speak one last and hurried word.—
There was a time thy providential arm
Wrought me a signal service.—Out upon
A most unworthy girl, who scarcely since
Hath proffer'd thee the bare return of thanks.—

Fitz-Ed. Unworthy!—Princess—

Eva. Nay, reply not now.—
The minutes speed, and we must haste our parting.—
Take, then, the only recompense, save thanks,
A grateful heart can make thee, this small chain;
And let it be to thee, in after times,
'Mid happier scenes, a slight remembrancer
Of one—who would not have thee—quite forget her.—
(throwing it over his neck.)
Now—now—farewell—(turning away.)

Fitz-Ed. Stay yet—thou heavenly maid!
Trust me there needed not a link like this
To bind thee to my bosom.—Since the day
When, as some sweet presentment in a dream,
Thy transient form first shot athwart my view,
Here hath it lived—down—down, tumultuous heart.—
What is it I have said? Forgive me, Princess—
And yet, an hour ago—and I had deem'd
This might have been—

Eva. I must not hear thee.—

Fitz-Ed. No.
'Twere madness now to think it.—Then—oh! then
It was no sin—no wild extravagant hope—
But I have held thee, Eva, to my bosom—
Have felt thy throbbing heart to mine—have pressed,
Forgive the free avowal—(taking her hand)—on thy
lips

Have pressed—
Eva. Release me.—At a time like this,
Such thoughts are sinful.

Fitz-Ed. The rebuke is just.—
Go.—Go.—But we may meet again.—But leave me
That blessed hope.

Eva. It must not be.—Nay, deem me not, I pray
thee,

Thankless, or cold, or cruel; but the slave
Of hard imperious duty.—We must part.—
But oh! think kindly of me!—do not hate
My memory—mid the gay and glittering scenes
That now demand my presence, give at times
A thought to the lone wanderer of the hills;
Who in her constant orisons to Heaven
Will not forget Fitz-Edward.—Fare thee well—
Would that I were not forced to add—for ever! Exit.

Fitz-Ed. She's gone:—and now I may defy thee,
Fate.

The latest arrow of thy wrath is sped!
Hark! 'twas the tramp of martial men.—They haste
Headlong, with outspread arms, to clasp perdition.
My father! is there not a voice will warn—
A hand will snatch thee from the perilous verge
Whereon thou stand'st? And thou, oh Eva, thou—
A tender maid, mid clashing hosts exposed—
But no—all guardianless thou shalt not be.
Still, though unseen, I'll hover near thee, still
Be as a shield of fire—far—far to scare
Each ravaging hound of war that would molest thee!
Exit.

We have not room for any further extracts.

We shall probably be accused of not having
written this article in that kindly spirit of criti-
cism which we cultivate as much from taste as
upon principle, and from which, we trust, the

paltry vanity of exciting our readers to laugh, or
the more malevolent gratification of wounding the
feelings of an author, will never induce us to
swerve. But, be it ever remembered, these
writers of five act dramas in rattling heroic
verses, who never degenerate into vulgarisms, or de-
part, as they would express it, for a single instant
from the gravity which befits the Tragic Muse, are
the very persons who indulge in the most con-
ceited taunts at the expense of all genius of a
higher order than their own. It is these men and
their admirers who have driven about the
coarseness of our old dramatists: it is they who
have proclaimed Shakspeare an irregular genius,
who wrote, without law or method, in the
worst in the world: it is they who date the com-
mencement of polish and perfection from the ap-
pearance of 'Cato,' and who conceive that
common sense and refinement can only exist
in the utter dearth and vacuity of thought and
meaning. They are the hawkers who retail all the
petty jokes which circulate in society against the
men who in our own day have dared to be origi-
nal—theirs is the supercilious sneer against the
childishness of Peter Ball—theirs the silly simper
about those who call the 'Lyrical Ballads' poetry
—theirs the conceited affectation of ignorance
which sets down 'Christabel' as a very fine poem
to those who know what it means. It is idle to
say that such persons are not worth the trouble of
an exposure, or that they are too weak to exert
any influence. The influence which they used to
possess through the press is undoubtedly at an
end: they dare not vent their impertinencies in
great reviews, as they once did; or, if they did,
they would be laughed at. But in society they
are not weak—they do exert an influence, and
exert it there where it is most pernicious. If
their conversation were confined to our sex, we
should dread it as little as their writings; for on
those men who could be induced by it to laugh
at a great poet, that poet would never produce
any valuable effect. But with women the case is
different: all women, without a single exception,
in the present day, read poetry: it produces greatly
more impression upon them than upon us; and
yet from the imperfect cultivation of their under-
standings, they are constantly liable to be led astray
by empirics who talk about it. It is of immense im-
portance that they should not be led astray: it is of
immense importance that the love of the beau-
tiful which nature has planted in their hearts,
should be nursed and cultivated, as a counter-
action to the evil influences which they receive
from education and society: it is of immense im-
portance they should not be permitted to admire
what is feeble and debasing. For their sakes, we
are determined to expose the mawkishness of
our modern drama. They have been told to laugh
at men of genius; we will teach them to laugh at
men without it: they have heard that there are
persons who rely upon the gifts of nature, and
despise the laws of art; we will prove to them
that the men who have none of the gifts of na-
ture, are palpably ignorant of the laws of art:
they have heard that there are spirits who soar
into the skies far above the comprehensions
of vulgar mortals; we will convince them
that there are people who are equally hid-
den from view by the dust under which they
crawl. All this we propose to do—and that we
may do it, we are compelled, in a certain degree,
to adopt a language very different from our
vernacular one. We cannot judge men by those
high laws, which they do not comprehend, and
the validity of which they deny. We cannot
measure them by standards which they scoff at.
We must talk with them in a manner which they
can understand, however bad that manner may
be: just as, in case we were thrown into the com-
pany of a person who could speak and could learn
no other, we should strive to acquire even the
poorest of the world's dialects, though it were
Kamschatkan, or even French. The language
of banter and ridicule is that in which they are

in the habit of conversing: we will try, in concession to their weakness, whether it is not possible for us, also, to learn such a stock of the words and phrases of this tongue as will enable us, if not to talk in their own fluent style, at least to make ourselves sufficiently understood for all ordinary purposes.

AMERICAN ANNUAL REGISTER.

American Annual Register, for the Year 1826-7.

THE last good thing that we look for at the hands of our transatlantic brethren, is a history. They may write political treatises, *ad infinitum*, though most of them are too weighty (with truths or something else) to cross the Atlantic; there is no reason why they should not now and then indite a decent sermon; they have produced novels not a few; but it will be long, very long indeed, before they will produce a history. A nation which has no past life, whose inhabitants have no recollections beyond the generation immediately preceding them, are ignorant in general of the classics, and have never cultivated those habits of reflection upon the history of their own minds, which (if that habit ever existed without national feelings) might supply the want of them:—such a nation must be content to dispense with this important branch of literature.

It is well, however, for the Americans to practise composition of this kind, though they cannot hope to arrive at any great success in it; and it is still better if they can contrive to turn their practice to some account, besides the indirect one of giving a more historical direction to their minds. This end they can accomplish in no better way than by writing annals of the occurrences which are passing each year under their eyes. Such writings must want all the principal and highest characteristics of a history; but, as 'The English Annual Register,' while it was under the direction of Burke, proved most clearly, it may embody much of the spirit of history, and may lay up a store of immense advantage to generations of future writers. Of this kind is the work before us, which, we are happy to say, displays a much more practical, as well as a more Catholic spirit, than we are wont to observe in American publications. The writers, as will be perceived from the following extracts, have a bias in favour of the Adams party; but they are moderate and liberal in their advocacy.

'During the long and peaceful administration of Mr. Monroe, the public mind had been unusually tranquil. The bitterness of party spirit had subsided, and the leaders of the conflicting parties into which the nation had been divided, forgetting their past differences, were often seen harmoniously co-operating to advance the general interests. The citizens, who had in former times been stimulated by an active political zeal, now remembered they were politicians, only when they were called upon to act as electors, and amalgamated almost into one mass the American people, with an unparalleled unanimity, approved of the policy of the federal government. This satisfaction with the conduct of their rulers, unfortunately manifested itself in too great an indifference towards public concerns, and the electors did not scrupulously examine the conduct of their representatives, nor nicely canvass their pretensions to popular favour, so long as the measures of the Government did not come into collision with their private pursuits. In consequence of this indifference, a class of mere politicians appeared in public life, who were indebted for their success to the absence of all powerful excitement, and of those strong motives which call into the service of the nation men of commanding talents.

'The machinery and organization of parties, which, in the heat of the political conflict, have the effect of concentrating the suffrages of the electors upon candidates selected when there exists no indifference as to success, now promoted the views of men, who owed their advancement solely to a pliancy of principle and a ready subservience to the will of others.

'In this state of things, it was easy to produce a factitious political sentiment in legislative bodies, very different from the deliberate opinion of the community. The yeomanry of the country, and the industrious in-

habitants of the towns and cities, reluctantly yield their attention to intricate political questions, and are slow to form an independent judgment as to conflicting opinions, especially when parties are in an embryonic state. It is not, however, so difficult to gain the attention of those who are jealous of power, and who drink with a thirsty ear all reports derogatory to those who administer the Government. This jealousy, although praiseworthy in itself, may be carried to excess; and, when it loses its power of discrimination, it is ready to confound liberal expenditure for what is necessary with extravagance, and to charge the accidents and misadventures, to which all human affairs are subject, and from which the complicated concerns of Government are not exempt, upon the incapacity or negligence of those who administer it.

'With the view of enlisting the prejudices of this class against the administration, charges of extravagance were freely made against those now at the head of the Government; resolutions were introduced into Congress, insinuating rather than asserting, that the patronage of the executive was too great; and it was proposed to vest such checks upon it in the legislative branch of the Government, as in effect to confer the appointing power upon that department. The ordinary and established expenditures of the Government were examined with new and unexampled rigour, for the purpose of producing the belief that they originated with the present administration; and an assertion on the part of the President of his constitutional right to appoint, in the vacation of Congress, diplomatic agents to transact the foreign business of the country, was construed into a usurpation of a new and unconstitutional power. Exceptions were also taken to certain of his recommendations to Congress, as indicating a wish for a magnificent and expensive scheme of government, and a tendency towards consolidation on the part of the federal authorities. These objections, which at first were confined to that class of politicians who contended for a strict and narrow construction of the constitution, were not at once adopted by the friends of the Vice-president. They professed to found their opposition on the corrupt origin of the administration, and asserted that it was the clear and manifest will of the people, that General Jackson should be elected President.

'This portion of the opposition, (for it was obvious that there was no cordial agreement between the two sections of the party, either as to the powers of the Government or the mode of administering it,) at once declared open hostility against the administration, and proceeded to nominate a candidate for the presidency. In conformity with one of the grounds of opposition, they fixed upon General Jackson, who, in the month of October, 1825, was nominated by the Legislature of Tennessee as a candidate in opposition to Mr. Adams. This nomination was formally accepted by him, in an address delivered before both branches of the Legislature, in which he resigned his seat in the senate of the United States. After stating that he was originally induced to accept the station he then held, because he understood that he would not be required to serve longer than for the term of one Congress, he says, that he still would continue if any important service could be performed; but that he was not aware of any important business likely to be brought before Congress, except an amendment of the constitution in relation to the choice of a chief Magistrate.

'He then alluded to the nomination of himself as a candidate, and proceeded as follows:

'Thus situated,—my name presented to the free-men of the United States for the first office known to the constitution,—I could not, with any thing of approbation on my part, consent either to urge or encourage an alteration, which might wear the appearance of being induced by selfish considerations—by a desire to advance my own views. I feel a thorough and safe conviction, that the imputation would be ill founded, and that nothing could prompt me to any active course, on that subject, which my judgment did not approve; yet, as from the late events it might be inferred that the prospects of your recommendation could be rendered probable only by the people having the choice given to them direct, abundant room would be afforded to ascribe any exertions of mine to causes appertaining exclusively to myself. Imputations thus made, would be extremely irksome to any person of virtuous and independent feeling; they would certainly prove so to me; and hence the determination to retire from a situation where strong suspicions might at least attach, and with great seeming propriety. I hasten, therefore, to tender this my resignation into the hands of those who conferred it, that, in the exercise of their constitutional rights,

they may confide it to some one deserving their confidence and approbation."

'After commenting upon the amendments proposed, and approving of them, on account of their removing the election entirely from Congress, he recommended an additional provision, making all Members of Congress ineligible to any office under the general Government, excepting judicial offices, during their term of service, and for two years thereafter. He concluded in the following manner:

'“We know human nature to be prone to evil: we are early taught to pray, that we may not be led into temptation; and hence the opinion, that by constitutional provision, all avenues to temptation, on the part of our political servants, should be closed.

'“My name having been before the nation for the office of chief Magistrate during the time I served as your senator, placed me in a situation truly delicate; but delicate as it was, my friends do not, and my enemies cannot, charge me with descending from the independent ground then occupied, with degrading the trust reposed on me, by intruding for the presidential chair. As, by a resolution of your body, you have thought proper again to present my name to the American people, I must entreat to be excused from any further service in the senate; and to suggest, in conclusion, that it is due to myself to practise upon the maxims recommended to others; and hence, feel constrained to retire from a situation where temptations may exist, and suspicions arise of the exercise of an influence tending to my own aggrandisement."

'The strong insinuations in this address against the propriety of the last election by Congress, plainly indicated his dissatisfaction at the result, and manifested a willingness to sanction an opposition to the administration, on the ground of its corrupt origin. This same ground was taken by the adherents of the Vice-president, in the discussion on the amendment proposed to the constitution by Mr. M'Duffie, in the first session of the nineteenth Congress. These insinuations were at that time warmly repelled, and none seemed disposed to rely upon this ground of opposition, except that class of politicians, who in all questions of the constructive power of the federal Government, and the mode of administering it, agreed rather with the friends, than the opponents of the administration.

'This discordance in the materials of the opposition, prevented any harmonious concert of action and purpose at the first session of Congress; but during the vacation and the succeeding session, great progress was made towards a stricter union between its different divisions, and before the adjournment the party had assumed a consistent shape. At what time this more intimate union took place, it is difficult to ascertain; but, shortly before the termination of the second session of the nineteenth Congress, a leading opposition member from Virginia announced to the public, that the combinations for effecting the elevation of General Jackson were nearly complete, and, in fact, greater concert was manifested in their party movements after that time. During the session several topics were introduced, developing the principles of the opposition, and arraying the parties more distinctly against each other. Among these may be enumerated, the bankrupt act, the bills for the gradual improvement of the navy, authorizing dry docks and a naval school, the appropriations for surveys and internal improvement, the controversy between Georgia and the general government respecting the Greek treaty, the bills augmenting the duty on imported woollens, and closing the ports of the United States against British vessels from the colonies, after a limited period. On all these subjects the opposition party took ground, either from a real difference in sentiment from the friends of the administration, or from an unwillingness to permit it any measure to succeed, which could reflect credit upon them. So great was this opposition to the business before Congress, during the last session, that it was generally believed that the minority had concerted to stop the passage of all important bills, for the purpose of rendering those administering the government unpopular. The ordinary business of each day was opposed, with almost the same vehemence, as that which had a political bearing. In this manner much of both sessions was consumed, and as the adjournment of congress approached, many important bills were lost for want of time to mature their details, and to reconcile the two Houses upon points which a little reflection would have placed in a clear point of view.' Pp. 18—23.

The following extract is instructive—to whom, we leave the writer on the American Constitution

in the last Number of 'The Westminster Review' to answer:

'The temporary interests of certain portions of the mercantile community, are often brought into collision with the permanent interests of the country; and any suspension of their gains, even for their general benefit, is submitted to with an ill grace. They are too apt to believe that their own government has been unreasonable, and that greater sacrifices might have been made for the purpose of preserving a trade, which in their estimation was vitally important. This disposition creates among a portion of the trading community, materials, of which the opposition in this government has always been prompt to avail itself; and the opposition to the present administration eagerly sought, to render the discontent on account of the loss of the colonial trade, subservient to their political designs.

'The interested feelings of all concerned in the colonial trade, would naturally enlist them against an administration; which, they might be easily led to believe, had deprived them of a lucrative traffic; and every effort was made to throw the blame of its loss on the American Government. It was accused of having neglected to improve the favourable moment of terminating the negotiation; and its wish of arranging the terms of the intercourse with the islands by a mutual agreement, was imputed to an undue fondness for diplomacy.'—P. 62.

Our readers will be interested in an American character of Mr. Canning.

'His life, and the particulars of his political career, belong to the department of biography. His character as a politician, in order to be fairly estimated, should be viewed with reference to the fact, that he was emphatically a British minister, purely and exclusively British; in his education, feelings, principles, temper, in every thing, indeed, which goes to constitute the peculiarities of a consummate statesman. In condemning some of Mr. Canning's official writings, in which the language of the rhetorician and man of wit occasionally broke in, to relieve the formal staidness of diplomatic composition, Americans should be careful not to exhibit too much sensitiveness of feeling, lest the censure bestowed upon him should be charged to national prejudice. We freely admit, that all departures from the established style of diplomacy are extremely hazardous and unsafe, and seldom produce a salutary effect; and we think Mr. Canning erred, in permitting himself to indulge a tone of ill-timed sarcasm, upon more than one occasion, in his correspondence with ministers of the United States. But this was a blemish in his character which ought not to blind us to his many and pre-eminent merits. Americans should be slow to depreciate the reputation of a statesman, who, in the maturity of his understanding and the zenith of his power, was most assailed for his attachment to liberal institutions, and for acts in which that attachment was displayed. Mr. Canning was the first living orator of Great Britain. He was devotedly attached to literature; and by means of his literary excellence was originally introduced into public notice. His uniform and consistent support of the claims of the Catholics, and the manly and independent principles of his foreign policy, sufficiently show that he had caught the spirit of the age, and dared to act in conformity with its dictates.'—Pp. 333, 334.

OPENING OF THE SIXTH SEAL.

The Opening of the Sixth Seal. A Sacred Poem. 12mo., pp. 190. Longman. London, 1829.

Our monthly and quarterly contemporaries are in the habit of sneering at the judgments of us, the hebdomadal critics, because, say they, it is impossible that, in the space of two or three days, a book of ordinary size can be more than half read; and quite impossible by any half-reading process to arrive at a notion of its general merit. Now, this, with deference to our censors, is sheer absurdity, and, what is worse than absurdity, hypocrisy.

We assert, that of nine-tenths of the books that are forwarded to us from the respective stalls whence they have issued, the most full, important, and complete judgment may be formed in the space not of three days, but of three hours; and we assert, moreover, that there is not an editor of any periodical in London, who does not practically act upon this great principle, and who would not think it a culpable waste of time to bestow

any longer reading upon these books than we, by the showing of our opponents, are able to yield them.

We will add yet further, that a man who fancies that, when an ordinary book comes before him, he must have one month or three months to digest it in, before he can give a conscientious verdict respecting it, will never give a conscientious verdict at the end of that time. He who has not a standard in his mind, obtained from previous thinking and reading, which enables him to say of a drivelling book, 'This is drivelling,' after reading it once over in a cursory manner, may despair of ever making the discovery, if he pores over it for a twelvemonth or a millenium. And what is the great additional difficulty of being able, at the same time, to refer the book in question to its appropriate head of drivelling—of saying, 'This is sentimental drivelling—this is egotistical drivelling—this man knows that he is drivelling, and is proud of it—this man exists in blissful ignorance of the melancholy fact:—what, we say, is the great difficulty of all this? To a well-arranged mind, none whatever; and, if our minds are ill-arranged, we shall succeed as little in a quarterly as in a weekly review.

With a decided work of genius, the same is true on exactly the opposite ground. A weekly critic cannot get to the bottom of the work—cannot discover all its hidden meanings—cannot bring up to the surface all the rich ore which lies embedded there; but so neither can a monthly, nor a quarterly, nor an annual, nor a lustral, nor a centenarian reviewer. And he can say with a full and deeply grounded confidence: 'This is a work of genius. I feel, I know it to be one: it speaks to me; it has entered into my feelings in a way which no work not having that character, could have done; and, though I cannot tell you one millionth part of the good which it contains,—though it has much, infinitely much, which no line of mine will ever fathom,—yet I do from my heart recommend it to you, as a work in which you will each find treasures suitable to your estate and condition.'

There are, however, and we do not wish to dissemble it, some works, bearing, indeed, a very small proportion to the whole multitude which issue from the English press,—but still enough to constitute a class, on which a weekly critic, unless his mind is more thoroughly matured than we profess to consider our own, has no right to express a sudden judgment. To this class especially belong a great many poems published in this age, where the *mécanique* of poetry has been carried into such perfection, that a critic may, on the one hand, well tremble to pronounce an opinion in its favour, when it does not possess any of the certain footmarks of genius; though, at the same time, he ought even more carefully to beware of discouraging an author, merely because he does not at once discover those clear indications, which have often not appeared in the early writings of the greatest men. To praise a man as a poet, merely because he was a successful verse-writer, would betray a gross want of experience; to deny him that claim, because he had this merit, would show an equal want of candour and sense.

The Opening of The Sixth Seal has thrown us into a difficulty of this kind; and, as we know not how to untie the knot, we shall cut it. The poem has pleased us; but we dare not pronounce decisively on its merit. We will, therefore, quote a passage by which our readers may judge for themselves, at the same time assuring the writer, that he has so far entertained us, that we shall return with great pleasure to the consideration of the poem, when we can speak of it more to our own satisfaction.

'But though all love, and nature's fondest ties,
And doubt, and unbelief, and joy, and hope,
And all the soft affections of the heart,
In horror and despair had passed away,—
Yet faith failed not, nor shrunk the Christian then
From coming judgment;—he looked on the sky,

And at the terrible crashings, and the jar
Of shocking systems, and the lurid flames
Of fire-star distant gleaming, and the roar
Of rushing planets trembled and was pale,
For none could dreadless such a scene behold;—
But he, believing, for the coming God
Waited, and fearless of the Judgment throne,
And the Redeemer's glory pondered much,
Upon the heaven path, for his angel train,
Anxiously gazing. So the burning worlds
And perishing Creation were to him
Most awful things, but he beheld in them
Celestial beings beckoning to the realms
Of bliss eternal, and to him the flames
Were as the pathway to a ceaseless heaven.

'The multitudes that on the desolate vault
Were gazing, and the fear-struck faces raised,
Quivering and quailing, to the lurid sky,
Oh! how can fancy frame?—If, on the stars
That, in their fearful flight, sped over them,
Was aught of being, and, upon their eyes,
Fear had not flung his mantle as they fled,
Swifter than flies the heaven flash from the cloud,
How sad a sight it must have been to look,
Though but a moment, upon this near earth;—
For there were myriad eyes upturned, of youth,
Once brightly beaming, and of haggard age,—
Love-glancing orbs of azure hue upraised,
And the dark-flashing glare of warrior stern.
Many a fair hand, to the heavenly way
Extended then, waved forth imploringly:—
And sightless eye-balls sought the place of woe,
As they would trace the horrors gathering there.
Soft, silken ringlets, by the sportive hand
Of nature woven, and dark flowing curls,
And silvery locks, time-hallowed, in the sweep
Of rushing flames, waved tremulous, as wave
The restless grass blades in the North wind's breath.
Thousands on thousands thronging stood, where once
Some far-famed city raised its mighty domes,
And its illimitable walls, and towers,
And monstrous temples, and huge palaces,
Mocking the mountains, that, in humbled pride,
Raised their cloud-covered summits, nodding high!
All forms of beauty, and all forms abhorred,
Together thronged in undistinguished groups:—
And the rich heeded not the poor who grasped
His trembling arm, and on the tyrant hung
The fearless slaves, by mutual horror stayed,
That sigh with sigh, and prayer with prayer, upsent,
Together sought the place of the Most High.
The shrieking infant, and the shuddering youth,
And helpless age, and beautiful maid, and wife,
And son, and sire, and child, and mother, thronged
In one vast group, nor heeded of the forms,
Once loved like life, that walling stood by them;—
But each sent up a sigh, and a deep groan,
And a low-muttered prayer for himself,
But none implored for others. So they stood,
Staring upon the heaven vault, and so sad
Must they have seemed to those who fitted by,
Borne on the bosom of some bounding star.
And yet more fearful, for, upon the cheeks,
Pale and woe-sunken, and the straining eyes
That were upturned, the dim, red, rayless glow
Of the on-speeding world reflected fell,
And the eyes sent the horror back again.

'Oh! have ye never, in the mid-watch hour,
When leaden sleep lies heavy on the brow,
And the blood, fevered, through the throbbing pulse
Rushes convulsively, some dreary dream
Pictured in the night glooms, all dim and dull,
Yet seeming terrible,—when thought hath glanced,
While the frame slumbereth, to another sphere,
But not of bliss, and wandereth up and down
A dark and desolate void, where never light
Speedeth, and where the wanderings never end:
Then the sleep-woven spectre of the soul,
After long struggling, wingeth from the void:
To seek new horrors, and far off ye see
Strange, visionary forms, that not of earth:
Nor of heaven be, and they all noiseless sit
Before, behind, above, beneath ye there;
A host, innumerable as the ocean sands;
Their spectral hues, flame painted, and the glare
Of their fire-flashing eyes, most fearfully
Rack the hag-haunted breast, till from her sleep
Nature upstarteth with the agony,
And, shuddering, ye recall the unearthly forms,
And ponder on their hues, sickening the soul,
Till ye look on them as the things that were.

'And so, if on the wild stars that fled by
Was aught of being, seemed the distant groups

That gazed upon their swift flight, and the cheek,
Pale as the purest snow-sheet, and the eye
Caught the red hues of what it looked upon,
And, like the spectre shadows of the dream,
Dim and unearthly were.

'Such, when the trump,
Loud pealing, stayed the systems in the path
Which they had traced in harmony and love,
Was the sad scene;—all that was beautiful
Faded, and all things that were bright grew dark,
Love died in the commotion, and Hope died;
But Faith failed not, nor did the Christian fear,
Though trembled he to view the desolate scene.'

ANTIQUITIES OF NORTH AMERICA.

Nachrichten über die frühern Einwohner, &c.—Account of the earlier Inhabitants of North America; and of the Memorials of them now extant. Collected by F. W. Asall, and published, with an Introductory Notice, by F. I. Mone. 8vo. Heidelberg, 1828.

This interesting publication is the production of a minor, who served as a common soldier under the orders of San Martin, the South American leader, in 1818, and subsequently settled in the States of Ohio and Pennsylvania. On his return to Germany, the editor induced him to commit to paper an account of such North American antiquities as had attracted his attention and inquiries; and he was thus enabled to present the public with a series of notices respecting the earliest periods of American civilization, which possess far more of interest and value than many a ponderous quarto of the 'passing hour.'

Much has been said and written respecting the antiquities of the North American Continent, and especially those of the State of Ohio. The endeavour to reconcile them with a European origin has given rise to the most absurd blunders, conjectures, and exaggerations. Sensible of the detriment which has resulted from this mode of treating the subject, our present inquirer has striven to shake off the trammels which previous writers have imposed upon their inferences; and, though he has not omitted to peruse whatever has been hitherto published on the point at issue, he has sought to dismiss all bias or prejudice from his mind, in accounting for the origin of the singular memorials which have undergone his personal investigation.

He is of opinion that a rigid line of demarcation must be drawn between the remains of the Aborigines, and the scanty and unimportant vestiges which occur of the earlier Europeans and Indian tribes. The former of these, the origin of which is involved in mystery, are spread over extensive districts, and afford evident proofs that their authors must have been acquainted with many of the useful arts. The superficies they occupy, and the regularity of their structure, no less than the frequency of their occurrence, are well calculated to strike the beholder with astonishment; and it is the more incumbent, therefore, upon the present age, seeing that every successive year records their gradual spoliation by the rude hands of encroaching settlers, that their present state should be faithfully chronicled.

Among the *aboriginal* vestiges we find walls, ditches, wells, and other remains of buildings, many of them of considerable extent, which, when in a perfect state, were evidently constituent parts of human habitations, burial places, enclosures for pastimes, temples, camps, forts, places of arms, and even towns and villages. The northernmost of these antique memorials are situated on the southern shore of Lake Ontario; and the more extensive are found at Circleville and Chillicothe, to the south of the Scioto River; but the most remarkable of all of them is that which has been discovered on the Paintbach. Their size and numbers increase as they approximate to the Gulf of Mexico; and our author has given us ten lithographical outlines on a small folio scale, drawn from the most interesting of these ruins, which bear a great resemblance to those of ancient Syracuse, as depicted by modern tourists.

One of these memorials existing at Newark, in the Province of Licking, consists of several parts. The first is formed by a circular wall of earth, thirty feet high, inclosing an area of twenty-six acres. An open passage leads through this outwork to a second inclosure, the walls of which are ten feet high, and encircle a space of twenty acres. Long walls, running parallel with each other, range from thence until they meet an octagonal inclosure, containing forty acres, which is furnished with eight entrances, one of which leads to a fourth and circular inclosure. There are several other areas besides those now described. From this spot, two parallel walls extend a distance of thirty miles. No probable object, but some military one, can be ascribed to this extensive structure.

There is more of art discernible in the remains found near Marietta, and they are in a state of far better preservation, than any others which the traveller visited. On an elevated plain on the banks of the river Muskingum, and near the efflux of that stream into the Ohio, is seen a large quadrangle of forty acres, styled 'The City'; it is surrounded by walls ten feet in height, and from thirty to six-and-thirty feet in breadth at their base. This structure has twelve entrances, three on each side; and there are smaller works within its precincts. Near this immense quadrangle is a smaller one, in equally perfect preservation, besides other remains of buildings. There were discovered, outside of the principal edifice, a vast number of earthenware vessels, the exterior of which was striped, and the interior covered with a glaze. They appear to be household gear, which were intentionally thrown over the walls. No further discoveries have been made in this direction.

But none of these remains possess so much regularity in their construction as the two forts at Circleville, in the county of Pickaway, which lies six-and-twenty miles to the south-east of Columbus. These are situated upon high ground, on the eastern bank of the Scioto; one of them is a perfect circle, and the other a square. The former is encompassed by two high walls, separated by a ditch, and is now intersected by the road which runs between Columbus and Chillicothe. Its centre was formerly occupied by a hill, which has been razed, and the vacuum supplied by the new town of Circleville. The quadrangular fort, which is connected with the former by a passage, measures fifty-five square rods, and has entrances placed in the middle of each side, and at each corner. These entrances are defended by an equal number of mounds erected in front of them. The walls of these forts respectively face the four quarters of the heavens, and vary neither more nor less than is consistent with the known variations of the compass. From this circumstance it has been inferred that their builders were acquainted with the magnetic power of the needle; at all events, they must have been familiar with geometry, otherwise they could never have given those correct and faultless proportions to their work which no scientific eye can contemplate without mingled surprise and admiration. It is impossible to ascribe them to the ancestors of the present race of Indians; for they are utter strangers to any such attainments as this fact must imply. Besides this ground of inference, all the aboriginal skeletons which have been discovered differ widely from the conformation of the Indian of our days; they bespeak a race of men whose bones were short and thick, and their stature diminutive.

Though we could not attempt to describe it without the accompaniments of a graphical outline, we must not leave unnoticed the remarkable structure delineated in the eighth plate, and situated in the Miami, in the county of Warren. In reference to this ruin, we will only add, that no one can contemplate its form and arrangement without being impressed with a feeling nearly akin to conviction, that the builders, whoever they were, designed it as a model of the configuration of the whole American continent. It portrayed

it with all the freshness and distinctness of one of Arrowsmith's charts.

There can be no doubt, from the nature of the articles found on the spots where these antiquities exist, that they are not of European origin; for among those articles are plates of copper, ornaments, a quantity of talck for looking-glasses, and furniture of rich and elegant workmanship, much of which is of shapes that are strange to the eye of the most experienced connoisseur. One traveller particularly noticed a beautiful pipe-head, with a handsome female countenance, formed out of a substance resembling Chinese talck, and thrown up in excavating a ditch. Mummies are of frequent occurrence; and the description Mr. Assall gives of them corresponds with those given by former travellers.

In the observations he makes, in other parts of the work, on the supposed origin of a race, which is entirely extinct at the present hour, we have not met with any arguments of striking novelty; though he agrees with some preceding writers in assigning to them an Asiatic source, probably from China or Tartary. In alluding to what have been denominated 'written rocks,' on the score of which so much discussion has been raised in France and America, he is disposed to treat the subject very slightly. Those which fell under his own personal observation, so far from being hieroglyphics, appeared to him to be figures, cut into the rock by the point of some roving hunter's arrow, and furnished with fanciful addenda by European hands.

THE LIVING AND THE DEAD.

The Living and the Dead. Second Series. 12mo. pp. 328. Colburn. London, 1828.

We should be rather sorry to encounter the author of 'The Living and the Dead' in society. Not that the habit which he appears to have contracted of setting down on paper the most insignificant sayings and doings of the most insignificant persons he meets with, in order to introduce them at some future time into a book, would particularly alarm us, (for, unless when he writes the names at full length, we do not imagine it would be very easy for even intimate friends to identify the subjects of his sketches,) nor yet that we have any dislike in the abstract to country curates, among whom are to be found some of the most amiable and wisest of men. But this writer has no pretension to the name of a country curate. He is simply that most terrific of all beings, a man who bears about with him the one recollection of having spent four years at a university. This is the one glory of his life; this idea is the bright presence which accompanies him everywhere. He has lived in a country village, that spot in which a wise and benevolent man who will mix with his fellow-creatures, may find so much food for sweet and bitter fancies; and his only enduring recollection is, that he was a scholar of Trinity College, Cambridge: he has been administering the heavenly manna for six years; but his only thoughts are on the fleshpots of the University: he has been conversing with old and young, men and women, each of whom had an individual character more worthy of study than all the books in the Bodleian, and he talks only of preceptors and bull-dogs. A more damning proof of intellectual feebleness and moral perversity it is barely possible to produce. For a resident member of the University, (and it is not the resident members of the University who are in general most guilty of the enormity,) an occasional mixture of college subjects and college pedantry is pardonable and even becoming; for it is a greater affectation wholly to lay aside the costume which you are in the habit of wearing, than to retain it. But that a man who has left college several years, should find nothing in life so well worth thinking of as, not the progress his character made during the time he spent there—not the happy hours he has passed

there—but simply its vulgar, local peculiarities; would, we confess, surprise us—if any new proof of human imbecility could surprise us. We trust, the heads of the Church will take into their serious consideration, whether it will not be well to insist that every candidate for orders should bring certificates of having been at least one twelve month absent from the University, before he is permitted to enter upon his clerical duties. In that time he might acquire at least enough of that experience which is so abundantly necessary in a clergyman, to teach him that the University, though a type of the universe, is not the universe itself.

We could pardon this author more easily if he had exhibited this propensity only in his own person. But in a miserable attempt at a sketch of the greatest man whom the English Church has produced for many a long year, we are insulted by the following passage, which seems written with no other purpose than to degrade him in our estimation. Speaking of the 'Palestine,' he says,

"Yet the event which, to the happy few who could boast the poet's acquaintance, was matter of such just exultation—and from those who could claim the dearer tie of kindred, drew even tears of joy—appeared to make no kind of impression upon Heber himself. There was nothing of elation, far less of assumption, visible in his manner or conversation. The same mild, gentle demeanour—the same equable flow of spirits—the same kind and considerate disposition—the same cordial sincerity of manner, and the same subdued gravity of address, characterised the MEDALIST as they had formerly done the MAN. He was proof against the intoxication of success. Him fortune might exalt, but was unable to inebriate."—P. 317.

If there were an ecclesiastical attorney-general, the writer of this paragraph ought to be prosecuted for a wilful, deliberate intention to degrade the Church Establishment, by traducing the character of one of its noblest members.

The only occasion on which the author fairly forgets the university, is in telling a story of one Lord Llanberis. We extract it as the best thing in the book, though by no means remarkably good. We need not remark that Mr. Satterthwaite's character is the invention of an exceedingly ignorant and vulgar fancy:

"They tell me that I am better," said he, "but my own feelings assure me I shall be gone before midnight. I cannot bring myself to leave the world without disclosing what has long hung insupportably heavy on my conscience. Consent then to be the depositary of my secret; and, if after hearing the sad recital, you do not disdain such an office, my friend, my comforter!"

"You have heard, perhaps, my mother's history: the degradation to which, after her husband's death, his family would fain have reduced her; their efforts to blast her character, and leave her to beggary; how she met their machinations, and baffled them.

"My mother! oh, my mother! thou shouldst have survived thy son! The guilt and wretchedness which now overwhelm me would then, perhaps, have been averted! I should then have had no cause but to reverence and love thy memory; for how faulty soever thy conduct to others, to me thou wast ever the kindest, the tenderest, the most affectionate of parents!"

"It was not perhaps extraordinary, under the circumstances, that from my earliest youth the deepest and most undying hatred was instilled into my bosom towards all the Llanberis family. 'Thou art not my son, boy,' was my mother's oft-repeated exclamation, 'if thou hast not an implacable aversion to all who bear the name Des Vismes.' I well remember, (it was the only instance of anger towards me exhibited in her whole life,) when I ventured to urge in reply that they were all, without exception, in misfortune, had suffered, and were still suffering, deeply from their unprincipled line of conduct; she exclaimed—"Leave me, boy, or thy mother will curse the pangs which brought thee into the world!"

"By none was this unchristian feeling more carefully cherished than by him who, from my earliest years, was entrusted with the care of my education—the Rev. Silas Satterthwaite. He professed what are termed high principles. They appeared to me to be the maximum of religious profession with the minimum

of religious conduct. He styled himself an INDEPENDENT; others called him an ANTINOMIAN; but, be his creed what it might, his practice inspired me with the most unqualified abhorrence.

"It was often matter to me of the most painful surprise to observe the ascendancy he had acquired over my mother. She, whose impetuous spirit would from others brook no opposition, quailed under the glance of his eye. Nor can words do justice to my amazement when, on completing my education, she requested I would offer him a home at Ashbrook for the remainder of his days. I hesitated, and told her frankly there were parts of his conduct I could neither approve nor sanction.

"The late Lord Llanberis, Horace, died in his arms."

"True, mother, but I dislike the man—his maxims—his conduct altogether."

"I ask it of you, Horace, I ask it. Am I to receive a refusal to my first request?"

"I acquiesced. The proposition was reluctantly made; but, as I foresaw, instantly accepted.

"Years rolled on unmarked by any unusual event, till, after a long and severe struggle for existence, my mother was told that the resources of art were exhausted, and that a few hours would terminate her sufferings.

"I was with her when this announcement was made. She received it without the slightest change of feature. 'How many hours of intellect may I safely calculate on?'"

"Barely twenty."

"Leave me, then, for I have much to do."

"In about an hour and a half, she sent for me. I shall never forget the pang I felt at observing the rapid alteration which that short interval had produced. There was something unearthly in her appearance. Her eyes were fearfully bright. Her cheek was flushed with the deepest crimson. Beauty, it is true, still lingered; but it was the beauty of the grave.

"Horace, you see me on my death-bed; and in these awful circumstances I have one request to make to you. Promise me that you will be faithful to your mother's memory; that you will never ally yourself with, admit to your confidence, nor succour any of that detested race; that you will avoid, as you would the wiles of the arch enemy himself, any overtures which Des Vismes may make to you after the grave has closed upon me; and that but one feeling will actuate you through life towards the whole of his designing family—deep and implacable hatred."

"My heart recoiled from this horrible request, and my countenance expressed it.

"Horace," she continued in a voice hollow from approaching dissolution, "you hesitate! Refuse, and my dying curse shall track your footsteps;—refuse, and the blessings an expiring mother would invoke on her only child, shall be turned into maledictions which shall blast—"

"Mother, mother, I promise!"—was the assent her frenzy and her circumstances wrung from me.

"Swear it!" she added, with increasing vehemence.

"I do."

"And now, Horace, one word more—Mr Satterthwaite. I am unable, as you are aware, to make any provision for him. Promise me that you will do so—liberally—speedily. Pledge your word to me on this point; assure me, likewise, that his claim on Ashbrook as a home shall at all times be recognised, and I die content."

"My horror at the idea of having this man for a companion overcame every other consideration, and dictated a gentle but firm refusal. Again did my mother repeat her request, and again did I entreat her to abandon it.

"Don't exasperate me, Horace, don't exasperate me. From you I merit nothing but tenderness. You little know through what an ocean of guilt I have waded to place you where you are."

"I scarcely knew whether I heard aright. I fixed my eyes steadfastly on her flushed and agitated countenance, and endeavoured to persuade myself these were the ravings of delirium. My purpose, however, remained unchanged. I told my mother she herself should name the sum she wished to be settled on Mr. Satterthwaite, but entreated her to dispense with my consent to have him as my companion.

"Hear me, then, boy. YOU ARE NOT LORD LLANBERIS. Your obstinacy has wrung from me this horrid secret, which I intended should have gone

with me to the grave. I have loved you but too fondly. I have provided for your interests at the hazard of my soul. I repeat it, as a dying woman, you are not—raise me—raise me."

"She became convulsed; and, before I could ring for assistance, expired.

"I do not attempt to portray the misery this closing interview occasioned me. It is indescribable. It embittered every moment of my life. I was then an impostor. Those whom my mother had always pictured as the offending, were in reality the injured, party. Or was her declaration altogether the effect of delirium? I endeavoured to think so, but was wretched.

"Meanwhile, other sources of uneasiness were opened to me. Since the death of his patroness, Mr. Satterthwaite's conduct had been profligate in the extreme. He had always had a taste for low company, and a tendency towards intemperance. These my mother's presence and censures had repressed. Now he indulged both without restraint. I remonstrated. His refuge and support were his Antinomian principles.

"A little sin won't hurt me," he began. "I'm secure. I'm in a 'covenant state'; and the fluctuation of frames and feelings, of sins and frailties, however great, cannot counteract decrees which were settled from all eternity! 'It is impossible for those who were once enlightened and have tasted of the heavenly gift, if they shall fall away, to renew themselves unto repentance.' You have no insight into these matters at present. I much doubt whether you ever will. The doctrine of election is my comfort. 'Jacob have I loved, but Esau have I hated.' Sins! I rather rejoice in them. The best men of old were distinguished for their sins. The sinner is a *deared character*! These are the right sentiments. Those who do not hold them belong to the children of Esau, against whom the Almighty hath said, 'I will have indignation for ever!'"

"I turned away from the blasphemer with disgust.

"Meanwhile, complaints of him poured in from all quarters. To the servants he was at one time a tyrant, at another a spy. There was no end to the disagreeable interviews which his immoral and unregulated conduct entailed upon me. I was ruminating one evening upon the melancholy depravation of his principles, and the proper methods to be pursued for getting rid of him, when he was brought home from the village in a state of the most disgusting intoxication.

"I could not forbear expressing my distress at seeing a man of his religious professions so situated; and my surprise that he, who avowed he maintained principles far stricter and more scriptural than those held by the Establishment, should thus shame them by his private life.

"We cannot fall from grace!"—it was extraordinary that he always spoke on religious topics with the greatest fluency, and quoted scripture with the most singular perversion when thus unhappily situated:—"cataracts of sin cannot wash away my certainty of heaven. I will mention a text which shall tingle in your ears—'In thy book are all my members written.' This clearly proves the choice which God has made of his church from all eternity. You still cling to the rubbish of ordinances. Listen to the truths of Calvinism."

"I will not discuss with you now, or at any future time, Calvinism. I have long been persuaded that its tenets are hostile to morality; and I have a melancholy proof before me, how completely the highest professions can be reconciled with a most depraved course of life. But to-morrow, when you are able to talk rationally, I shall lay before you reasons which will require an entire reformation in your conduct, or an immediate change of residence."

"When they persecute you in one city," I heard him mutter as I left the room, "flee to another."

"Before, however, I had an opportunity of seeing him the next morning—for he generally rose late, and after one of these excesses always after twelve—Bradley, my land-steward, desired an audience; at which he told me that Mr. Satterthwaite, under pretence of converting his wife (to 'better principles,' had been endeavouring to corrupt his daughter; that her lover had heard of it, and vowed vengeance against him; that he felt it his duty to apprise me of all the circumstances, and to beg I would recommend Mr. Satterthwaite—for the present at all events—to quit Ashbrook. My resolution was taken. He was walking, I understood, in the park. I sought him; repeated the facts alleged against him, and inquired if they were true.

"Even so. Satan had the advantage of me. But what of that? David, you know—"

"I interrupted him at once. "Under these circumstances, the Hall can no longer be an asylum for you. I beg you will quit it without delay."

"Never. I have as great a right as you have to reside here; and I leave it not. Lord Llanberris, beware: you are at my mercy. I have nothing to fear from your resentment: you have every thing to dread from mine. Think you my paltry annuity of five hundred a year will impose on me perpetual silence? By no means. The moment I choose to open my mouth, I can prove your mother to have been an adulteress—yourself to be a—"

"I could contain myself no longer. Passion obtained the mastery. I struck him fiercely. He fell. These were his dying words—"Monster, you have murdered your FATHER!"

"I rushed from the spot in an agony of feeling which defies description. Hours I wandered I know not whither. All was true, then? My very worst fears were confirmed. My mother was an adulteress—myself an impostor: nay more, a parricide. O what would I have given to recall that one short hour! Labour—poverty—privation—all would have been warmly welcomed, could I have freed myself from that load of guilt and wretchedness which seemed to weigh down my soul. I prayed earnestly, fervently, that the boon of life might be at once withdrawn; or that I might have help and strength given me to face the future.

"It was nearly sunset when I heard my name called. My faithful Bradley accosted me. He came up calmly and slowly—his very manner seemed to inspire me with self-possession—and said, "My Lord, I beg to prepare you for a very painful occurrence: Mr. Satterthwaite has been found dead in the park of apoplexy." My conscience suggested to me he laid peculiar emphasis on the last two words; and I have often thought he rightly guessed how the deceased had met his end. But his manner then and always was that of an attached and affectionate servant towards a master whom he had nursed in infancy; and I owe him much. He continued, "I have undertaken, my Lord, the whole management of the matter. The coroner has been sent for, and an inquest will be held to-morrow. Your Lordship looks much shocked and distressed. I supposed you would. Perhaps, you will prefer returning to the house by the private path, and retiring to your own room."

"I followed his directions mechanically. His word had roused me to a sense of my danger. Yet I thought, but the reflection brought me no comfort, Satterthwaite and myself were alone. No one had witnessed the encounter, or seen the blow. But the agony, the wretchedness, the duration of that night, I thought it would never end!

"Morning came—bright sunny morning—the birds carolled sweetly; every breeze seemed fraught with perfume. I looked to heaven, it was calm and unclouded; on the sea it lay still as the repose of infancy before me; all seemed at peace without; 'twas only the tempest of remorse that raged impetuously within. I fell into an uneasy and feverish slumber; was awakened by the preparations for the inquest.

"Bradley was as good as his word. The coroner came, and the jury sat. Their deliberations were short: for dinner awaited their decision. The habits of the deceased were detailed; his state on the preceding evening was minutely described: a surgeon was present, who gave it as his opinion that the deceased's death was caused by apoplexy; and the jury returned a verdict, *Died by the visitation of God.*

"Bradley communicated the result to me in the fewest words: "I will not intrude farther on your lordship's privacy. You do not yet seem to have recovered the shock, and will do well to retire early to rest."

"Rest! I never knew it from that moment. Rest! it seemed to have fled my couch for ever. Rest! none ever came either to body or mind. The consciousness of secret guilt crushed me to the dust; and in the perpetual goadings of remorse, from which no effort could free me, I seemed to feel the first gnawings of that worm that never dies.

"I have envied the meanest hind on my estate. As I watched the villager in my walks, returning worn and weary after his hard day's toil to his rugged pallet and scanty fare, and witnessed the welcome which affection gave him, and saw the glow of honest satisfaction lighting up his sun-burnt face, I would have given worlds to exchange my lot for his. And at times,

when the recollections of my childhood rose before me—when I thought of those bygone days when mirth bubbled up free and joyous from the heart, and melody flowed unbidden from the voice—when the one was was never fevered, and the other never sad—the contrast would almost deprive me of intellect. With a cry I would rush into the woods, endeavour to escape from myself.

"Nor was this my only punishment. My—my father, the word will choke me, I cannot utter it, incessantly followed me. At home or abroad, go where I would, my victim stood beside me! That leaden eye, that lowering visage, that discoloured temple, I could never divest myself of his presence. My every action was marked by a witness from the grave. HE, into whose presence another hour will bring me, knows with what bitter contrition I have bewailed the past! HE knows what days of inexpressible agony and heartfelt humiliation that single act of my life has cost me! Again and again have I meditated to avow the infamy of my birth to Des Vismes, and then to resign myself to punishment. But my mother's fame, the disgrace, the dishonour that such a proceeding would entail upon our name, deterred me. The suffering it would occasion influenced me not. I have again and again endured in one hour torture, to which the mere agony of dying would be transport! Oh! "there is no killing like that which kills the heart!"

"One resolution I made and kept—I would never marry. My inheritance would then revert to its proper owner; and my feelings plainly and cheerfully told me I should not long usurp it. This was the only act of justice I could with security perform: It is true, I endeavoured to render my wretched existence beneficial to others, and to diffuse promptly and liberally among the needy and oppressed that wealth which was a curse to myself. But after all—

"The spirit of a man can sustain his infirmities, but a wounded spirit who can bear?"

"I do not ask you to comfort me, to console, or reassure me. Talk to me not of that place where the very air is music, and the universal accent praise; or of HIM whose name and whose nature is holy.

"For me, alas! what hope remains, whether I look backward on the past, or forward to the future? The past, a time of falsehood. The future, endless punishment. YET PRAY FOR ME. Pray—for my life is ebbing rapidly away. Pray—while this ear, already dulled by approaching death, can listen to your supplications. Pray—if at the eleventh hour there may be hopes of mercy. Pray—and his tone of entreaty changed into a shriek of woe which chilled my very heart's blood,—"Pray—for HE IS HERE."

"I turned: but no, no, it was the excitement of the moment—it was the horrid story I had been hearing—it was the stillness of the hour, and the peculiarity of my situation—it was the sight of the dying man's despair, and the responsibility which I felt attached to the interview—it was not, it could not, be real; but I saw, or seemed to see, a figure standing close to the bed, and gazing intently upon its writhing occupant. Over its features brooded that deep, mysterious, awful calm, which marks the aspect of the dead; a small, but discoloured spot appeared on the left temple, while from the lip there seemed to trickle a few drops of blood.

"I passed my hands hurriedly over my eyes, as if to exclude this horrid vision. A faint cry escaped the parricide's lips. I glanced for one instant at his countenance—the seal of death was upon it."—Pp. 41—58.

NEALE'S VIEWS.

Views of the Seats of Noblemen and Gentlemen, in England, Wales, Scotland, and Ireland. By J. P. Neale. Second Series, Vol. IV. 8vo.

THIS work does not need much recommendation from us, as it has been in progress for several years, and long ago obtained very extensive patronage. We may, nevertheless, be permitted briefly to point out some of its merits to such of our readers as are not already acquainted with it. Of late years, topography has been both abundantly and ably illustrated by the pencil, thereby acquiring additional interest; for without the aid of the graphic art we can no more form a tolerable idea of the aspect of either places or buildings, than we can of the situation and extent of countries without the assistance of maps. Although, therefore, this is but a subordinate

branch of art, we are so far from regretting that we rejoice to perceive it thus encouraged among us. We are not insensible to the charms of fictitious composition, whether the painter's imagination fills his canvas with ideal but well-conceived scenes drawn from history or mythology; or whether, selecting from the various beauties of inanimate nature, he re-combines them more happily, and presents us with landscapes of Arcadian loveliness, Alpine grandeur, or sequestered rusticity. In order to please, however, such productions must possess superior merit; for mediocrity is here quite as intolerable as in poetry. Portraiture, on the contrary, has, like history, a positive value; it is a record of something that either has existed, or does actually exist; nor is local portraiture the least interesting and instructive of this branch of pictorial description. It is not all who possess the opportunities of travelling, and of visiting spots celebrated for their beauty, or interesting on account of the historical associations connected with them.

The mansions of the nobility and opulent families of this and our sister island have long been acknowledged to constitute no small portion of their beauties. Although bearing less ostentatious titles, many of them are far superior to continental palaces, combining, with every charm of exterior prospect, the highest degree of splendour, luxury, and refinement within; while many of those which can lay no claim to such attractions, are, nevertheless, highly interesting, either as specimens of our ancient domestic architecture, or as having been the residences of personages whose names are more or less distinguished in our annals.

With regard to the present work, we consider it decidedly more valuable than any preceding collection of this kind; not only as comprising a far greater number of subjects, but as furnishing a great many very interesting particulars relative to the families to whom the respective residences belong. The insertion of the catalogues of the various collections of paintings, likewise renders the work both an appropriate guide to the tourist, and a useful manual for reference to the amateur; particularly to those who want to ascertain where the portrait of any particular individual is to be found. To all collectors of works on English topography, we consider this publication indispensable, since, independently of the views themselves, the letter-press contains much information not to be met with elsewhere. Being executed by different engravers, the plates do not possess uniform merit; yet all are very creditably done, and there are many of superior delicacy of finish and great brilliancy. Among the subjects in the present volume are two views of Kinfauns Castle; the first exhibiting the building and the truly magnificent scenery by which it is surrounded, the other a view of the gallery;—Penshott Place, the celebrated residence of the Sidneys; Battle Abbey, Charlton House, Holland House, and Arundel Castle, and the elegant modern structure, Hurlwood, which was erected in 1825, by Mr. Decimus Burton.

The King has been graciously pleased to nominate and appoint Samuel Prout, Esq., to be painter in water colours in ordinary to his Majesty.

He who is imbued with superstition can neither have a pleasing remembrance of the past, enjoy the present in peace, nor look forward with pleasure to the future.—*Cicero de Finibus.*

SPORTING REMINISCENCES.

No. III.—MY FIRST GROUSE.

(Concluded from page 28.)

FAIR reader, or rather readers,—for so engaging an old fellow as I have described myself must doubtless have many,—what a pity it is for thee that my day of poetry and romance has long since set in the night of sober reality.

Forty years ago, my brain was as full of

Cobwebs fit for scull
That's empty when the moon is full,
Such as take lodgings in a head
That's to be let unfurnished,

as I make no doubt thine is now—but alas! 'ces beaux jours sont passés!' My heart is now dead to passion, and mine eye to the picturesque. I prefer firesides to fountains—muffins to moonbeams—and would rather (proh pudor!) see one supper than ten sunsets; nay, still worse, 'change (in thine opinion) has come o'er the spirit of my dream'; for I have learned to like cards and loathe quadrilles.

Such is my state! and being, besides, as I have already (with the usual conceit and impertinence of contrite philosophers) hinted to thee, sour and crabbed, I feel the virtuous indignation of an old coquette against those follies in others which I have myself outlived.

Nought now pleases me but truth, plain and unvarnished—'naked and austere.'

To me no principle like practice
No poetry like matter of fact is.

This is to inform thee of what—if thou hast sufficient experience to know that whosoever talks about truth, is plotting deceit—thou hast already guessed—that I mean to disappoint, not to say cheat, thee of a certain glowing description, which I half premised in my last, and which I dare say thou hast been impatiently looking forward to ever since.

All that I choose to say is, that, on arriving at the top of the mountain, we found that the landscape on the other side was clear and sunshiny, whilst that we were leaving was cloudy and rainy; though, had I been able to embody my recollections of that scene in fitting language, thou shouldst have been treated to a description, at the sight of which all the poets in the universe would have burnt their pens and cut their throats: 'Thou shouldst have heard,' as Grunio says, (vide 'Taming the Shrew,') 'how that' the contrast of light and shade, which I have just mentioned, was 'as the brightness of a gas-light, on the one side, to the blackness of a wolf's mouth on the other,'—'how that,' the vale of Clyde, which lay beneath us, was 'stretched in the sunshine, sleeping in its loveliness, whilst the river itself (then dwindled to an insignificant streamlet, which, as it was perfectly unfit for either fly or minnow, deserved nought save silent contempt,) meandered through the verdant mead like a spangled silver thread through a green velvet garment.'

Thou shouldst have heard, I say, 'how that' the celebrated mountain —, which formed the foreground of the landscape, 'rose before us in all his sublimity of sweeping outline, standing apart in sullen majesty, and disdaining communion with the lesser hills,' by which the distance (which was, in fact, no way remarkable) should have been forthwith filled up, under the title of 'interminable ranges of mountains whose purple heads (not noses), high up-reared, vied with each other in offering a couch to the thunder-cloud.'

Then for the moral.—Thou shouldst have heard 'how that' the hereinbefore-twice-already-mentioned contrast of the vivid light before, with the murky darkness behind us, 'formed a sad yet apt illustration of the prospect and retrospect of human hopes and happiness; or, if I did not chance to be morally inclined, (as, indeed, seldom that I am,) I might rather have likened it to the flight of a demon from the face of a spirit of light, in furtherance of which a running bass

accompaniment of distant thunder which I should have composed expressly for the occasion, (appropriate sounds, such as distant bells, cattle lowing, shepherds' pipes, and the like, being, as I am told, indispensably requisite in the manufacture of improved landscapes,) might have been called either the swearing of the sulky fiend, or the snoring of the sleepy valley aforesaid, whichever might seem the more improbable.

All this thou shouldst have heard with many more things of worthy memory which (for the before-mentioned reasons, shall now die in oblivion, and thou return inexperienced to thy grave.'

I am sorry for thy disappointment, reader; which, nevertheless, I assure thee, is no way owing to my laziness, or indisposition to please thee on my part; for I protest unto thee, that, had I the pen of a Coleridge, or the pencil of a Martin, thou shouldst have the whole portrayed in a way none the less sublime, because perfectly unintelligible in the one case, and perfectly unnatural in both.

In the latter case, I should make short work, by spilling a bottle of red ink over the one half of my page, and a bottle of black ink over the other; having previously secured some one to write a poem (simultaneous, though not suggested*) explanatory of the painting, and illustrative of the wonderful effects to be produced by such purely natural causes.

In the former,† I cannot promise thee so easy an infliction. It is, indeed, possible that, as no expletives would be made use of to fill up [sense or show meaning, the whole description might be comprised in

'Fourteen short lines not over good,'

in the shape of a sonnet; but, unfortunately, the gentleman in question is not much in the habit of writing sonnets; so it is more likely that thou wouldst be visited with a long, straggling, unfinished batch of verses, of which the plot and the poetry, the beginning, middle, and end, would be all equally and utterly incomprehensible, and in which thou shouldst hear—mind, I do not say *understand*, for, as thine information would be conveyed in

'Mystical meanings that puzzle still,
Read as often as you will,'

I should be sorry to pledge myself so far,—but thou shouldst hear the heads of my tale, (then, alas! neither head nor tail,) so mixed, mauled, and chopped up, into a heterogeneous mass, with odds and ends of meaning sticking out here and there, like stepping-stones in a bog, or leaks in a Welchman's pottage, (leaving thee to guess at the component parts of the remainder,) that I warrant thee thy regret would be less that the poem was never finished, than that it was ever begun; and that thou wouldst learn by comparison to regret the loss of the simple and unaffected, though, perhaps, somewhat dry style, of thine old friend Christopher. But enough of episode; which, as it has become rather tiresome to me, may also, I begin to suspect, be both tiresome and impertinent from me.

I asked the gamekeeper, who was gazing earnestly at the huge mountain ‡ I have hypothetically mentioned above, whether he was admiring the prospect.

'Na, na,' said he, 'I'm no minding ony sic

* Vide Catalogue to 'Destruction of Nineveh.'

† It is a weakness in our venerable friend that he holds all poetry in contempt, except Pope's 'Homer' and Somerville's 'Chace.'—Ed.

‡ I use the word 'mountain' as being more consonant with southern ears and associations. In Scotland, as an unlimited number of little children is called a 'small family,' so every eminence, from five feet to five thousand, is called a 'hill,' or rather, as it is pronounced, 'hell' (perhaps, in allusion to the torment of climbing it.) I have forborne, however, to spell it in this way, as, however correct it might be, it could not fail to have an ugly look.

havers; I'm looking to see whether the tap o' yon hill is gaun to clear itself o' the mist, for the auld wives hereabouts have a saying, that amais aye comes true, that

"When the cairn * on auld — doth put on his cowl,
Ye may ken that the weather that day will be foul;"
and, praise be blest! yonder is the cairn; sae I think we may get to work without fear. Here, Port,' added he, calling to the dog so designated; 'hie awa', my bonny man.'

'What the devil is that bird, whistling away like a boatswain's pipe?' asked my uncle.

'Eh!' answered Will, 'it's ane o' they d——d whaups.† Now, Sir, ye maun try and shute it if possible, or it'll fash the dugs, may be, for the next hour or twa; sae get your gun ready while I whistle them in, and may be it'll come near aneuch to let ye get a shot at it.'

My uncle followed his advice, and fired at the bird, which had the good effect of driving it away, though too far to kill.

'Now,' said he, while reloading his piece, 'let's hold a council of war. Where should this wild covey of ours be, Will? Is it worth while following them?'

'Deed, Sir,' answered Will, 'I aye think it best to follow up the game ye ken o', till ye fa' in wi' mair: they canna be far off; they just gied a swirl round the tap o' the knaw, and I'm thinking we sall find them in yon bit o' benty heather.'

'Well then,' said my uncle, 'we'll let the dogs "run before the wind" till they're past the place, and then whistle them up, and so get the birds between them and us.'

This counsel being approved by all parties, was forthwith carried into effect. The dogs had hardly turned their noses towards us, before they began first to snuff in the air, then to draw on, and finally stopped dead. My uncle called to me to make haste up, as the birds might probably get up wild. I followed, panting and palpitating, not with fatigue but with fright. At last we got within a few yards of the dogs' heads, and were certain that the birds must be between us and them. 'Look out!' cried my uncle; and he had no sooner uttered the words than—whirr! up got her old ladyship and family with a noise that so startled me, as to put all offensive measures quite out of the question. The only way I can at all describe my feelings is by comparing them to those of a hapless and unsuspecting little innocent suddenly and treacherously 'unhoused, disappointed, unaneld,' (i. e. with eyes, mouth, and nose open,) submersed, (*backwards*), for the first time, by the barbarous hands of a blue-coated bathing woman.

On recovering somewhat, I found that my uncle had killed a brace, and I was obliged to undergo his derision for what he termed my 'lubberly' conduct: 'he supposed,' he said, 'that I had been accustomed to put salt on the birds' tails in England; but that in Scotland it was necessary to fire at them in order to stop them.'

The gamekeeper was more compassionate: he told my uncle that he was very wrong in putting me out of conceit with myself, and then, turning to me, he added, 'Never you mind, air, what your uncle says: a' young shots that try at birds on the wing, (and it's no mony o' them that do,) begin either by letting them flee awa' a' thegither without firing as you ha'e dune, or else by bleezing at them amais before they're aff the grund; and they that begin like you, aye turn out the best shots at last—tak my word for't.'

* On the top of almost every Scotch mountain of any note, there is a heap of stones, called a 'cairn,' some of them of an enormous size: their origin and use is unknown; some supposing them to mark the graves of ancient warriors, whilst others believe them to be the nett proceeds of a few centuries of monkish penance.

† Curlews,—which sometimes follow dogs for a length of time, to the great detriment of their travel and their master's temper.

'What the devil are you "spinning a yarn" about there, Will?' interrupted my uncle, 'instead of minding your business: there's Starboard's been busy challenging these ten minutes.' 'It'll just be the auld scunt,' answered Will, 'there'll be naething there.'

'Nothing!' exclaimed my uncle, 'you never saw the dog behave that way for nothing; why his tail's a regular dogvane: you may tell the strength of the scent by the degree of its stiffness, and look at it now.' 'Faith!' replied Will, 'I shouldna muckle wonder if it's the auld cock that got up first, as we were coming up the hill yonder. Noo, sir,' addressing me, 'haud your gun ready, and let's see ye wun back your character. I see warrant he'll ha'e rin down the side of the brae, into yon bit moss hay.' I cocked my gun accordingly, and kept up with the dog, who was now 'roading' steadily down the side of the hill, as well as my footing and feelings would allow, and, as Will had predicted, had no sooner shown my face over the top of the little gully, or 'ha'e' as he called it; than up banged the old cock right under my nose, and away he flew cackling across the glen to the opposite hill, and 'wabbling,' as my uncle afterwards expressed it, 'like a jolly-boat in a stiff breeze.'

Away he flew; but he flew not far. I raised my gun, scarce knowing what I was about, and fired, when I found, to my astonishment and delight, that I had actually—killed. The force with which the bird was going had sufficed to carry him clear off the side of the hill, which was nearly precipitous, and down he fell, twisting and twirling, a height of about twelve hundred feet, till at last he lighted plump in the bed of a little burn or streamlet in the glen below.

I threw down my gun, and, regardless of the remonstrances of the gamekeeper who called after me that we should pass by the place when we crossed to the opposite hill, I commenced the descent at a rate not much slower than that of the bird. However, between running, rolling and scrambling, (in the course of which I raised three coveys,) I at last reached the bottom in safety, and commenced a search after the object of my pursuit, which I soon found lying on his back in the water, from whence I as soon snatched him, and, all dripping as he was, gazed on him with an ecstasy of which that of a mother at the sight of her first-born would be but a feeble type; and immediately, like that mother, I decided that he was by far the largest, fattest, handsomest, and in every way finest grouse that ever was seen.

I once heard a gentleman state that, on seeing a bird fall which he had fired at, so far from participating in the feelings of exultation which I have just described, he felt nothing but grief and remorse for what he had done. This might be true, though, as he was a German philosopher, and was talking to a lady, it is by no means likely; and, if it was so, I can only pity the man for such mawkish sensibility. As for myself, I have no hesitation in saying that I can look back to few such moments of exquisite enjoyment in a long life as that which I experienced on killing my first grouse.

PROFESSOR MUHLENFELS' LECTURES.

Of all the introductory lectures which were read at the opening of the first session of the London University, there was none which appeared to us to hold out a better promise for the future than that of Professor Mühlentfels. It was characterised by extensive and original views, learning, and, the most important of all in a lecture, an earnest and vivacious style. Professor Mühlentfels has hitherto been employed in lecturing on the language of his country to two classes,—the junior class, consisting of those commencing the study, and the senior, of those who have made some proficiency in it; and last week he commenced a third course of lectures on German Literature. If we may form any judgment of the interest which this course is likely to possess, from the merit

of the two preliminary lectures, (and it is the lecturer who would have most right to complain of the unfairness of such a criterion,) we should make no scruple of assuring our readers that there are few places which they could frequent with greater certainty of instruction and entertainment than the German class-room of the London University. We do not say this, because there is any striking coincidence between the views of Professor Mühlentfels and ourselves—on the contrary, from many of the opinions broached in his opening lecture, we dissent widely—but because we discover in him great acuteness of mind, a high appreciation of the importance of the subject he has undertaken to discuss, accompanied with an anxiety to illustrate it from every collateral source, which destroys the danger of his making the one study too exclusively a favourite with his audience, and a disposition the reverse of what we fear is the prevalent one in our day—to regard the width of the foundation as of more importance than the height of the edifice. As we think the labours of Professor Mühlentfels—besides that they may be the means of counteracting some of the worst tendencies of the institution to which he belongs—are, in themselves, exceedingly valuable, we shall make no apology for presenting our readers with a sketch of his first lecture.

After a very modest preface respecting his own qualifications, Professor Mühlentfels proceeded to define the objects which he proposed to himself in the present course. Literature, he observed, in its most general acceptation, comprehends all the productions of the human intellect, imagination, fancy, and reason: in a more restricted sense, it embraces all these productions except the sciences. He did not propose, in his present course, to take a complete view of German literature even in this narrower sense. He proposed simply to trace the growth of German poetry.

Literature is the repository of the ideas of people. A history of the growth of a literature is, therefore, in some sort, the history of the people to which it belongs. In tracing its infancy, youth, manhood, maturity, and decay, you are tracing the most perfect outline that can be drawn of the same stages in the national mind.

But the history of any one people, especially where the word is used in this high sense, as conversant, not merely with outward events, but with the development of mind and character, is part of a much larger history; and we cannot understand the fragment aright without understanding its relation to the whole. We must see what is the position of any nation in the general history of mankind, before we can satisfactorily determine the position of the different parts of its own history with respect to one another. We must find its age in the world's register, before we look into its own register for the age of the different individuals whose names are inscribed there. To find the principle of any literature, we must see which part the people whose mind it expounds, fulfil in the great social harmony; and we must then safely trace the development of this principle through the different periods of that people's existence. For this reason, Professor Mühlentfels has thought it necessary to introduce his course with five preliminary lectures, in which he will give a rapid view of the different periods of history as they rise out of each other, and of the literature of the different nations which expressed the character of their periods respectively.

Professor Mühlentfels thinks with Müller, that the use of the phrases, childhood, boyhood, manhood, old age, in application to society, is not merely metaphorical, but, indicates real analogy between the life of individual man and the life of the organic whole we call mankind. A forest, he remarked, or a mass of trees, is subjected to the same influences as the single tree, and in like manner, it is no wild hypothesis, but rather, would be a departure from the general law, if it were not true—that each man may be taken as a summary and representative of the race—that there is

a strict correspondence between the different periods of their history—and that, as the end of the individual and of the society is the same—viz. perfection, so the processes by which divine Providence acts upon them to bring about the accomplishment of that end are strictly and literally analogous. Even the resistance of various nations to this benevolent agency—their neglect of the mild and correctional discipline by which God has vouchsafed to tutor them, and their consequent failure of the great purpose of their existence, is paralleled, he observes, and the argument which has been drawn from it against the tendency of mankind to perfection got rid of, by instances of similar perversity in individuals living in the midst of the obviously progressive communities.*

Acting upon this analogy, Professor Mühlentfels proceeded to distinguish the eastern nations as exhibiting the marks of the world's childhood. These marks he discovers especially among the Hindoos, who, he finely remarks, have existed for centuries in a sort of petrified infancy. 'As a child loves most to play with flowers,' he remarked, 'the poetry of the Hindoos is entirely the poetry of outward nature; the life of nature being the centre to which all their thoughts are turned.' In the images of this poetry, remarkable, as Mr. Southey has observed, for confounding bigness with sublimity, he traces the rudiments of an infantine fancy which strains after what is gigantic, but has no perception of harmony and proportion. The mild gentle character of these people is, also, he thinks a part of the analogy. Still in infancy, but at a more advanced stage of it, he ranks the Egyptian. The change which has taken place is in the greater definiteness of his contemplations, which in some degree approaches to reflection, and in the practical tendencies of his social life. The first difference is indicated by the need he feels of allegories as a medium of studying the Deity, whom the Hindoo had been content merely to fancy, without striving after any conception of his nature. The second difference is seen in the more formal as well as more useful style of their buildings, in the adaptation of castes to practical purposes, and in the application of stars to astrology. In their emblematic representations, he discovers a likeness to that delight which the rude fancy of a growing child takes in animal forms.

The boyhood of the human race is to be discovered, according to Professor Mühlentfels, in the history of the Children of Israel. The first development of conscience, or the law of right and wrong,—the struggles of this law with the growing sensuality of the boy,—his consequent waywardness and obstinacy:—all this is shadowed forth in the history of this ancient people; and to this state of being was the provision adapted of a written law revealed by the voice of God, and audible through the thunders of Sinai. The Hebrew poetry, grand, lyrical and passionate, expresses, Professor Mühlentfels thinks, another part of the analogy.

* We have omitted a very beautiful passage at this part of Professor Mühlentfels' lecture, which, even in our humble capacities of reporters, we are afraid to put upon paper. He spoke of those mythological fables which constitute an antehistorical fund in the life of nations as being analogous to the glimpses of an earlier world which hover over the awakening spirit in childhood. Professor Mühlentfels will not understand our tenor, for he does not yet understand England. He does not know that it is here thought a piece of horrible arrogance to acknowledge the existence of a feeling which every beef-eater is not conscious of possessing in an equal degree—he does not know that, if a man affirms that, by long course of reflection in his own mind, he has discovered something which those who boast of not having reflected for a single moment affirm they never found in their minds, he is forthwith branded as a fool and a knave, or what comprises both classes, a mystic—he does not know that, merely because it tended to a belief in the doctrine which he has so boldly preferred, the finest ode in our language was denounced by the Editor of the London University Journal, as a mass of senseless drivelling.

The age of dawning youth our professor discovers in Greece. Sensuality, but sensuality inspired and animated by a deep perception and love of the beautiful, and therefore not inconsistent with delicacy and modesty, a disposition to invest all those perceptions in forms, an intellect of extraordinary liveliness, but a spendthrift of its powers,—pure patriotism, patriotism for its own sake, not dictated by a love of power or a sense of duty, but the real unfeigned love of country,—a mind unfavourable to religion and its inward exercises, because tending to shrines and idols:—these were the characteristics of the Grecian mind, by these was its literature informed (though in poetry many of the coarse qualities of the mind which it represents, are exalted and purified,) and these are also the characteristics of that period in a richly cultivated mind which takes place between the rude shapeless ardency and perverseness of the boy and the systematic hardness of the man.

In Rome we observe the fifth period, the commencement of definite MANHOOD:—the imagination and fancy becoming less vivid and brilliant; the intellect growing into proud and exulting consciousness of its own powers; vanity, under the form of a love of rule, becoming the prevailing passion of the soul; love of one's country, as one's country, changed into a vain delight in the one country, (so that the word *Quirites* availed in Cæsar's mouth to repress a military insurrection, when *Cives* would have been insufficient,)—a clear perception of the ends of government, the principles of social organisation, the meaning of law,—these great characteristics which are shown forth in the events recorded in the Roman annals, in the cold formality of their poetry, in the wonderful excellence of their histories, in the strength and durability of their monuments: all betoken, likewise, that time of life in which the just-formed man estimates mere manliness of character at a price which lowers, in the comparison, all the other virtues.

Is it then the overthrow of this great empire, which typifies that new crisis in our lives, when our education ceases—when the power of habit ceases, and when habits become principles; in short, when we may be said to have finished girding on the armour with which we are to fight during the rest of our lives? Professor Muhlenfels thinks not. He dates it rather from the introduction of CHRISTIANITY. For he remarks that in individual life, and in its parallel the life of the species, the passage of one period into another does not take place suddenly or at once. It is gradual and imperceptible. There is a process of declension, the length of which is marked by the length of the process of perfectionment. Alexander and Napoleon rose to greatness at once, and fell at once. The Roman Empire was seven hundred years in attaining to its highest greatness: it was meet that its fall should be gradual likewise. And thus, therefore, it seems more natural, more rational, according to the order of analogy, to take the turning-point—the moment of passage from one age to another—at the moment when the principal characteristics of that age begin to grow dim and fade away; that is, in the present instance, to fix that grand crisis in the world's history which corresponds to the most remarkable crisis in the history of each of us,—at that point at which our moral feelings, our sense of the all-importance of the events to nations and individuals, would incline us to fix it—the introduction of Christianity. This was the end of the first lecture.

British Tyrants.—It was a current proverb in ancient times that Britain was the very hot-bed of tyranny:—“*Britannia fertilis provincia tyrannorum.*” (*Jerome.*) We have a notion, that a similar proverb either is or ought to be currently whispered about in Hindoostan; so low and cautiously, however, that not even one of the Company's crickets should hear it, so long at least as their power continues, ‘prankt in a little brief authority.’

GOVERNESSES

(From an Unpublished Novel.)

As the ingenuity of mankind has invented an immense variety of schemes for effecting the great end of education, the destruction of the character, and the perversion of the intellect, there are numerous diversities in the dispositions and qualifications of the persons who are consecrated to this honourable ministry. Of Governesses we may reckon up three classes, all distinguished by separate merits, but by no means resembling each other in their nature, or equaling each other in the extent of their endowments. The first class consists of those governesses who are described in the letters of recommendation they bring with them into the families to which they are destined as a visitation, as ladies possessing ‘great decision of character,’ ‘extraordinary authority over the minds of the children committed to their charge,’ and ‘a wonderful power of moulding their disposition and habits.’ Of all hand-writings on the wall to forewarn a parent of the future destiny of his child, these phrases are the most decisive and luminous. A governess thus described will, in very deed, mould the disposition and habits of a child. All the force of her own character will be thrown into the task of counteracting *tastes* planted in it for its happiness—of eradicating dispositions which were meant to grow and flourish for the good of its fellow-creatures—of turning awry all the currents of its feelings—of making it into something as nearly as possible the reverse of what its Creator in his wisdom designed it to be. Miraculous must be the interposition which saves a child from the consequences of such a resolute, consistent, indefatigable discipline as this. To come out of such a pressing-machine, with all its original life and energy, has never been the lot of any human creature. The happiest are those who, from being fortunately ungifted by nature with any extraordinary vigour and susceptibility of mind, succumb easily and tranquilly to this system, and are reduced by it into a state of quiet faultery; thereby escaping the more dreadful judgment appointed for those whose strength of spirit enables them to struggle long against the grinding tyranny, and at last crushed by a power to which they would not yield, end, not in unconscious idiocy, but in derangement and despair.

Far less able and vigilant, and therefore far less mischievous, are the second class of guardians who are appointed to see that the female mind takes no good. These are those ladies who, equally convinced with the one we have just described that it is their duty to force a certain quantity of tasks upon the memory, to make the understanding conversant with words, and to prevent the feelings from exerting themselves at all, nevertheless, either from indolence, or from feebleness, or from kind-heartedness, leave their pupil's mind in a very great degree to its own government. All that they impart is bad, of course; but then, they are not constantly imparting, or are providentially very unskilful in their mode of imparting; and consequently the human mind, in some instances, has elasticity enough to throw off all weights that have been cast upon it, and to recover in a great many a large portion of its native liberty. And, considering the incalculably small portion of the female community who are well educated, in any reasonable sense of that word, it is a totally safe presumption whenever we meet in society with a young lady capable of genuine not artificial liveliness of feeling, thinking, and acting, that she has been blessed with a weak-minded and inefficient governess.

But there is yet a third class of these ladies, which is generically distinguishable from both the former. To make up the child according to some notion which they had formed of what a child should be, was the object of both those whom we have been describing; and their slight success in this endeavour, as we have seen, is different, in

consequence of the difference of their powers; yet, in the circumstance of being absolutely indifferent to the circumstances of the child itself, they are precisely similar. In this point they are entirely different from that class of which Miss Corrie was a member. Her method of dealing with the faculties of her pupil did not proceed upon the principle that the indications of character and taste in the child were matters of no importance. On the contrary, she piqued herself upon being a very attentive and discriminating observer of all that was remarkable in the minds of her pupils. She was accustomed to boast, that she had no unvarying rules to which she compelled all the tendencies of the infant mind to bend,—that she did not endeavour to make the tree take a different direction from the sapling, (except when the growth of the latter was obviously tortuous and unnatural,)—that she, in short, founded all she did upon her knowledge of human nature. Was it wonderful that Mr. Mackinnon should imagine a governess so rational in her ideas was specially commissioned, by Ellen's good genius, to preside over the most dangerous and important years of her life? And yet, if there ever was a time when, to speak according to human ignorance, that good genius was sleeping, it was when this same Miss Corrie first set foot in the Melcove Parsonage. What might have been the effect upon Ellen's character, if it had been subjected to the control of either of the other sets of disciplinarians whom we have spoken of, it is impossible to say. But how nicely and delicately the system of her actual governess was adapted to produce the corruption of a mind of which it could not destroy the subtlety and the force, it will be no difficult matter to show.

Miss Corrie made it a rule, as we have said, to adapt her rules according to the character of her pupil; and a very admirable rule it was. But to the right application of this rule, there was one little qualification necessary: that small qualification is a power of understanding character. Now, Miss Corrie was, as our readers may have gathered from the last chapter, a very shrewd woman,—unusually shrewd. No one made livelier or more pointed observations; no one guessed more cleverly, or, as some people would express it, more happily. Is any thing more requisite in order to judge of character? A little more. It is necessary that, in addition to being able to guess, we should have thought; in addition to drawing clever inferences, we should be able to grasp facts—those most important facts, the facts of our own being: that, in addition to fancy, we should have knowledge. Now, unfortunately, Miss Corrie *knew* nothing. She observed upon the things around her, but she did not observe the things themselves: she talked about the mind within, but what that mind was, what her own thoughts were, what she herself was, she knew not. When, therefore, she attempted to judge of other people, she judged without rule or compass: she could not tell the indications of their feelings, for she had never felt. In this respect, she did not differ from nine-tenths of her sex and of ours. And, if she had only undertaken to teach with a view to learn, she might, by the study of her pupil's mind, have found out many secrets in her own. But, alas! she had no such humble views. She had been always complimented upon her knowledge of human nature: it was just the one part in her character she had always been most proud of; and the idea that she had not sounded the depths of a study when her present notions of it were sufficient foundation for aphorisms and systems, never entered her head. The consequence was, that in dealing with her pupils she had but two methods. She either fancied a character for them, worked herself into a belief that it was their actual character, and then proceeded to adopt the plan she thought most suitable for directing it; or else, she observed what motives, in a few moments' conversation, seemed

to produce most effect upon a child's mind, and drew her conclusions accordingly. The former course she generally adopted when she met with young ladies, who, by good previous discipline in the nursery and drawing-room, had been rendered perfectly artificial; and, when they had no character of their own, she fitted them out of the wardrobe of her own imaginations. With Ellen Mackinnon, who was as unaffected a little creature as ever had lived a few years in an affected world, she adopted the other scheme.

[May we request our fair friend, Mrs. L—, when she next sends us an extract from her novel, to select a passage somewhat more intelligible to male readers. We do not understand a single word of the foregoing article.—Ed.]

HUM CHI BUNG.

'Hum Chi Bung quæ ich-cr-ee co-enn pi quat-si ching dol. Gil Loll-le-pop, old-bags, &c. &c. &c. Pekin, Ton pi, 872. 344. 697.'

Practical Considerations on the Road Question; with a brief examination of the impolicy of endangering the vested interests of the numerous classes dependent on the maintenance of the ancient system, and an appeal to the wisdom of the Chinese people against the delusive speculations of rash and unprincipled Speculators. By Loll-le-pop, Mandarin of Three Tails, and Grandee of Five Rows of Buttons. Pekin; in the year of the world 872. 344. 697. (Chinese date)—i. e. A. D. 1828.

We take shame to ourselves for having allowed the press of other business, of far less importance, to prevent our laying before our readers an account of the great question, which has long agitated the Empire of China. To the discussion of the political disputes, which for the day agitate our own country, the columns of 'The Athenæum' have always been closed: the insertion would induce party-feelings and the payment of stamps; and they contribute less to the instruction than to the excitement of our readers. But the evils of political discussions diminish with the distance of the country in which they arise. Our sympathies are not liable to be violently excited by the remote pulsations of Chinese faction. Their politics are, in our eyes, merely a part of their literature and philosophy, and indeed a very important manifestation of the national mind of that people. Nor is it an uninteresting task for the psychologist to mark the resemblances and differences of mind in the Celestial and the British Empires; to observe, that against the same fatal love of innovation is the battle to be fought on the banks of the Hoan-ho and of the Thames and Seine: and that with the same weapons is that battle fought by the supporters of all that is holy and established. Nor might little instruction be derived by us all, nor little encouragement be communicated to the European opponents of change, by observing that they have caught so exactly the tone of a people famed beyond all others for a reverential adherence to the wisdom of their ancestors; and who bring to the regulation of their everyday business, the feelings, the information, and the logic of antediluvian philosophy.

The roads of the Chinese Empire have long been left in that state which the wisdom of past ages had established. Contented with the facilities of communication which they afforded them, the Chinese people waded with delight through sand and mud; and while they travelled at the rate of twelve hours a mile, they consoled the inevitable wearisomeness of the journey, by contemplating the glory, commerce, and civilisation of their native land. They left unimpaired the venerable structure which recorded the manners and thoughts of distant ages—they shrunk from polluting with the flints of the nineteenth century, the ruts and slush which had been handed down as an heir-loom from the past.

Unfortunately the Portuguese Constitution, the mysterious movements of which appear to have exercised an influence as extensive and as dangerous as that of the awful earthquake which,

while it buried their capital, shook the remotest Scotch,—found an inlet into China by means of the settlement at Macao. But the spirit of liberalism very easily perceived that the Portuguese authorities by no means approved of any change in the institutions of Macao, and that the Chinese were not at all ripe for the reception of the British Constitution; so it set to work on the roads, and prompted the Europeans to mend about a mile of the highway into the interior of the island. No sooner, however, was the first cart-load of stones flung over the worst part, than the Chinese mind took alarm. The people, headed by the bonzes, rose; county meetings were called from the Gulf of Tonquin to the Sea of Ochotsk; the men of Petch-e-lee leading the way with their usual heroism—the press teemed with pamphlets; in fact, there could be no doubt that the sense of the country was very decidedly against the proposed innovation. His Celestial Majesty's government, we think unwisely, adopted a neutral policy, and steered a middle course between the contending parties. The Premier marched 500,000 dragoons into Macao, and wrote a letter to the Portuguese Governor's cook, calculated to conciliate both sides.

Unfortunately, however, the present Chinese ministry was formed too much on the principle of conciliation: and the department of roads and justice had been entrusted to a gentleman who was deeply imbued with the falsely called liberal system. He actually maintained in the very cabinet that the roads really ought to be mended: in fact we need only add, that he supported his proposition, with the usual sophistical adage which passes current among the disciples of Free Trade in Europe. Too many of his colleagues were deceived by his bold assertions, but an equal number declared their determination to quit office rather than sacrifice the roads of their native land. The Premier, however, healed their dissensions; both parties conceded a little; and it was determined that, as the Macao roads were usually wide enough for only one carriage, one side of them should be Macadamised, and the other left as it had been for the last eight hundred millions of years.

The Chinese public, with an unaccountable infatuation, acquiesced for a while in this fatal decision: but the excellent pamphlet of Loll-le-pop first dispelled the delusion of security, and aroused them to a sense of their danger. Loll-le-pop is a Chinese gentleman, the head of a very old and powerful Manchoo family, which has long occupied the first station in the province of Yong-tee. The natural influence of his birth and fortune have been increased by the amenity of his manners; the varied acquirements of his mind; and the energy with which he has constantly devoted time to the promotion of his country's interest. A large portion of his property being vested in the inns, of which of course the Chinese rate of travelling demands a great number, and in the waggons calculated for the old system of roads, he may be considered as a good practical authority, worth a bushel of theorists; while at the same time his high rank and large fortune relieve him from any suspicion of being biassed by selfish motives.

After an explanation of the reasons which have compelled him to dilation with his pen, Loll-le-pop offers some forcible strictures on the indifference with which the gentlemen of China have looked on this question.

'As if this were the mere question of roads, important as that is. No. Our roads are but the first of our institutions which the enemy attacks. If the roads were made, for what would they be used? Could not people travel on them for bad purposes as well as for good? Who make the roads? Christians. And what do they want to convey along the roads? Of course Christianity. It is our Church then that is attacked. Our national religion is in danger. Our established atheism will be profaned, our laws and customs will be invaded. Our infanticide will be next subverted;

our commerce thrown open; our wives' feet left in a state of nature. The Europeans will take our tea, our silk, our porcelain. The laws of property will be dishonoured and violated: and our pure despotism itself will be buried in the ruins of our roads.'—p. 2.

Loll-le-pop shows, also, the extent to which road-making may, and probably will, be carried, if once permitted.

'I may be told that I am extravagant in my estimate of the probable mischief of road-making, that no such results can follow from making a mile or two of good road at Macao. To these short-sighted reasoners I would answer, How do they know where road-making will stop? If roads are made at Macao, why may they not be made at Pekin? What is there to prevent a road from beginning at Macao or Canton, and being continued to the Great Wall? Ay, or why should it stop there? Why not pass the Wall, (which, I suppose, will then be sacrificed, as a relic of the cowardice and stupidity of our ancestors,) and traverse our Tartarian Empire? Why should it rest there? Why not enter Asiatic Russia, and from thence pervade Russia in Europe; till, having passed through England and America, it shall return to us, *vid* Japan; and thus leave us every way exposed to the crafty barbarians of Europe? Nay, in ten years all China might be turned into roads, until there should be no room left for our harvests, and a strong people might awake from their delusion to perceive themselves a sacrifice to their mania for travelling. Let us resist the first step. Let us say, "No innovation—let well alone."—p. 76.

Loll-le-pop has evidently made himself thoroughly acquainted with the practical results of roads in Europe. We have derived some valuable information on the subject of road-making from the facts which he has collected:

'The Chinese road-maker could enter into no competition with the European. I know from good authority, that the roads in England are kept up by the receipts of turnpikes. I know that there is a turnpike on an average to about every five miles at the utmost. I know that the average payment at a turnpike is one shilling. Five miles of road made and kept up for one shilling; a hundred miles for one pound! This needs no comment.'—p. 138.

We should think that there must be some error, though we cannot exactly point it out, in Loll-le-pop's facts or reasoning on this point. There follows a most valuable list of the accidents that have happened, during the last century, on the roads in Europe; and the next ten chapters contain a clear demonstration that the Chinese can make roads much more cheaply than any other nation in the world.

We regret that want of room prevents us from entering more fully into the merits of this excellent pamphlet. We shall now make a last and copious extract from the close of the work:—

'It is under the much vilified system of our forefathers that China has become the greatest nation of the world. It is while our roads have been in the state which our modern sages affect to consider disgraceful, that our population has increased to 333 millions, and our cities of the first class to 1,000. The Ambassadors of England and Holland have travelled over these very roads to knock their heads on the floor of the Celestial presence. Was it not under the old roads that we invented gun-powder? Was it not under them that we gave to our new European teachers the art of printing? And if we show our base ingratitude for the many and great mercies which have been vouchsafed to us, can we hope for their continuance?

'I need not however trust to predictions. The miseries which have quickly followed the very first deviation from the wisdom of our ancestors, are but too sure a sign and sample of the woe which a perseverance in our folly will entail upon us. Is not the gold leaving the country? Have not the Hong merchants quarrelled with the Americans? Has not the rebel Tse-quong defeated the royal general Pe? Where is the busy industry that used to crowd our markets? Where our national greatness? Have not four houses fallen down in Nankin? Is there not a crack in the porcelain tower? Has not his Celestial Majesty been afflicted with chill-blains? They tell me too, that there is a blight over the tea-grounds of Twankey, and that our merchants already anticipate a deficient supply of souchong.

'From these miseries, and those that I even now see crowding on their heels in the dim distance of the

future, we might yet be saved by wisdom and firmness. But it is not to the accursed spirit of conciliation that we must trust for relief. The gentlemen of China must wake from their present apathy and rally round their ancient roads, round institutions that are expressible of the feelings of our country, that have grown with our growth, and strengthened with our strength. There is the breach in which the foe innovation must be conquered or must triumph. For me, my part is taken. I have been the first to sound the trumpet: I can expect no quarter. I am a plain Chinese gentleman, and I am proud of the order to which I belong. With that order will I stand or fall. It is the wish nearest my heart to see China,

Great, glorious, and free,

First flower of the Earth, and first gem of the Sea. But never will this be, unless the gentlemen of China stand forth in firm array against the cruel, wolfish, crafty, villainous barbarians of Christendom. In this, her hour of peril, China expects every man to do his duty, and to join in the patriotic cry,—‘Nolumus vias Chinæ mutari.’—P. 382 to end.

The same order of eloquence and reasoning abounds in other parts of the work: and the author by liberal quotations from the Latin poets, shows a thorough acquaintance with the writings of Mr. Macculloch. We take leave of him with unfeigned respect for his talents and patriotism. We hope, ere long, to see his work in an English garb. A translation of it would surely answer. At present it rests in the hands of the few students of Chinese literature, who thus possess a kind of manorial monopoly over these rich and rare waifs of the treasures of an unknown land.

THE BRITISH INSTITUTION.

We have been well pleased on returning to resume our observations in the British Gallery, to find our first impressions more than confirmed; and to feel satisfied that the humble tribute of applause paid by us to some of the most attractive productions in the Exhibition, had not proceeded from any momentary exaltation of feeling,—on the contrary, that the abhorrence of every appearance of affectation or false applause, had perhaps confined the expression of our commendation within limits too narrow. This more especially proved to be the case with two or three of the works in the North Room to which our animadversions were principally directed on our first visit, as much by the superior character of the subjects they treated, as by the situation they occupied in the gallery.

Strong as was the impression which the merit of Mr. Danby's two beautiful pictures had left on us, we felt bound to confess, on again visiting the Institution, that, considering either the poetry and sentiment of the design, or the power and skill with which the delightful imaginings of the poet's mind had been executed by the hand of the artist, our recollections had done but bare and scanty justice to the ‘Moonlight’ and ‘Sunset.’ The ease and elegance of position, the beauty of feature, the powerful expression of the ‘Native of Missolonghi,’ by Hollins, lost none of their effect by increased familiarity; while the harmony, brilliancy, and tone of the colouring presented themselves more forcibly than ever.

With Mr. Etty's ‘Subject from Ovid's Metamorphoses,’ our satisfaction, on a second visit, was not quite so perfect. The artist-like skill displayed in the general treatment, the chiaro-scuro, the rotundity and corporeal effect of the figures, are beyond all praise; but, on a second inspection, the absence of that refinement which alone reconciles a pure taste to the representation of subjects of this nature, however classical their source, is felt more forcibly than at first, when the mind is perhaps imposed on by the other merits of the picture. Mr. Etty does not appear sufficiently aware, that vulgarity renders voluptuousness loathsome; that subjects which depend on the latter character for their claims to admiration, require to be treated with the utmost delicacy; that the least tincture of coarseness renders

them revolting; and that they lose the charm which, when properly touched, they are capable of exercising over the most elevated tastes, in the degree in which regard to refinement is neglected. We do not object to the painter, that in the original fable he may not find an authority for even a greater degree of coarseness than he has thought proper to embody in the form of Salmacis; but we are quite sure that he would have had ample warrant in the mythological character of the Naiad, for employing, had he been so disposed, a much more delicate pencil. We are by no means equally certain, that the nudo of the same figure would not have been improved by a tone of colouring somewhat richer.

The *Satan* of Mr. Partridge, No. 472, to which we alluded in our last notice, represents the arch rebel at the period when, alighting on Mount Niphates, in the form of a beautiful angel, he betrays his true character on regarding the sun, and bursts out into the celebrated address to the glorious luminary.

The passage of the ‘Paradise Lost,’ inserted in the catalogue, as that which has inspired the pencil of Mr. Partridge, is the following—

‘Under a coronet his flowing hair
In curls on either cheek played; wings he wore
Of many a coloured plume, sprinkled with gold;
His habit fit for speed * * *

Thus while he spake each passion dimm'd his face;
Thrice changed with pale ire, envy and despair,
Which marr'd his borrow'd visage, and betray'd
Him counterfeitt.’

The form of *Satan* is beautiful in the extreme, grandly simple, of elegant proportions, and in elevated taste: the tone of colour is rich and mellow. In the head, the assumed beauty, of which the first four lines of the quotation form a part of the description, has not yet entirely disappeared: the evil passions depicted in the forcible lines of the sequel have only commenced their deforming effect.

Mr. Hayter's *Banditti of Kurdistan assisting Georgians in carrying off Circassian Women*, No. 507, is an unequal production. In parts it is grand and spirited, both in design and colour; while in others it is cold and tame. The ensemble is inharmonious, and wanting in general effect. Similar inequality is observable in the productions, taken separately, which Mr. Hayter has contributed to the present collection. We have before noticed *St. George and the Dragon* as a spirited performance, evincing considerable poetical feeling: the *St. John in the Island of Patmos*, No. 141, is dull, and at the same time harsh in colour and poor in expression: the *Kurdistan Chief*, No. 172, is deserving of more praise, as a fine and spirited figure.

We have now, we believe, disposed of the principal performances which aspire to be marked in the class of works of the highest walk of art. We turn, then, to the many clever productions which, albeit inferior in grade, in the degree of perfection in their kind are by no means secondary.

Foremost among them in merit as in situation, are the animal pieces of Mr. Edwin Landseer, of whose works it will be sufficient to say that they are his, and to mention the subjects they treat. It may be left, we know, to our readers to imagine the manner and perfection of their execution, in which are displayed all the powerful and skilful effects, the life and natural fidelity, the free handling and exquisite finish, for which the most extolled of his former works have been admired. Mr. Landseer's pictures are the following:—

No. 10, *Highlanders returning from Deer Stalking*. Two Highland figures, with their dogs and nags; the latter, the one an aged grey; the other a black and vigorous colt, laden with the game. *The Conversation*, No. 68, a group of terriers of various ages and colours in repose. No. 256, *The Poor Dog*, the faithful friend, over the grave of his master, as rich in interest as in animation and truth. No. 231, *Deer just shot*, is also by Mr. Landseer.

No. 2, *Beatrice in the Arbour*, H. Howard, R.A., is a very agreeable, but somewhat fantastical, illustration of a scene in ‘Much Ado about Nothing.’ The figures of Ursula and her companion are elegant; there is less extra refinement in that of Beatrice, who, besides being more natural, is quite as beautiful as either of her fair friends, and, with her greater simplicity, has more real character. The shadow in which her

figure is enveloped, produces a very happy effect. The flowering of the arbour is pretty and extremely gay.

The landscapes of Mr. P. Nasmyth are numerous; they are, as usual, pleasing, distinguished by their truth, and the absence of all attempt at effect, by minuteness in treatment, and close imitation of atmospheric coldness, more excusable by its truth, than agreeable as a quality in a picture, and certainly more constantly exhibited by our artist than is required. We could select one or two pictures by Mr. Nasmyth in this collection less liable than the rest to the objection we have stated. Such, if our memory betray us not, is No. 364, *A View of Sydenham, Surrey*.

No. 3, *The Prisoner*, and No. 4, *A Foraging Party Routed*, both by Mr. Thomas Webster, which are humorous representations of the pranks and disasters of village school-boys, as well as several other small pieces of the like kind and style by the same artist, are amusing and clever productions in their way. They seem to obtain purchasers readily. It is satisfactory, indeed, to observe the constant occupation of the zealous and active Secretary in affixing the welcome label ‘sold’ to the corners of the pictures consigned to his care. Sir T. Lawrence lost no time in making the acquisition of a very clever production of the lamented R. P. Bonington, No. 58, *A Turk*, a small picture treated with most artist-like effect, and replete with feeling.

No. 22, *Scene on the Coast of Kent*, W. Collins, R.A., is a very masterly coast scene, in the usual skilful manner of that much-admired artist.

The contributions made to this collection by Mr. D. Roberts, by no means derogate from his reputation. No. 30, *The Town-hall of Louvain*, and No. 355, *The Chapel of the Virgin, Church of St. Pierre, at Caen*, are both very clever productions. In the former, the chasteness, and abstinence from all false effect, too common in the treatment of subjects of this nature, while there is by no means a want of spirit and force, might serve as a wholesome lesson to many of our searchers after the picturesque. The chapel is a grander work, more varied in its effects, more brilliant in its colour, and powerful in light and shade.

Several of our painters of familiar scenes have simultaneously caught at a new subject in the burdy-gurdy boys and girls, whom, but for their Italian aspect, well-bred monkeys, and good-natured looks, we should wish abated as a nuisance. The representations of these are of course of various degrees of merit. Above the rest [we prefer No. 32, *Italian Boy and Monkey*, A. Morton, a very spirited, and animated, and clever painting.

No. 63, *A View of Paris from Montmartre*, G. Arnald, A.R.A., is a large and elaborate picture, and conveys an accurate idea of the details of that splendid prospect. A much more brilliant effect would have been compatible with the strictest adherence to truth.

(To be continued.)

MISCELLANEOUS NOTICES.

TRIUMPHAL ARCH AT MILAN.—This noble undertaking, which, as regards extent and splendour, will bear a comparison with the finest remains of antiquity, is fast advancing towards its completion. The first idea of it arose from a temporary arch of wood and linen, erected in the year 1806, to celebrate the entry of Eugene, the then Italian Viceroy, and his youthful consort, the Princess of Bavaria, into the capital of Lombardy. The elegance and masterly proportions which the Marquess Luigi Cagnola had bestowed on this frail structure, so completely riveted the admiration of the municipal council, that they determined to adopt it as the model of a more enduring memorial, in which there should be no other deviation than as regarded the decorative parts. The work was commenced in the autumn of 1807, and intended to immortalize the victories of the French armies; but it had not proceeded beyond the two minor side-arches in April 1814; though the preparations for completing the whole were at that time so far advanced, as to attract the approbation of the present Emperor of Austria, by whose orders the works were continued from the year 1816. It has, therefore, been converted into a triumphal arch, in commemoration of the general peace, as well as of one of its instruments, Francis I., the first sovereign of the Lombardo-Venetian kingdom. When it is recollected that it possesses

columns 49½ inches in diameter and 41½ feet in height, inclusive of the bases and capitals, and that these columns are worked out of single blocks of Crevola marble, whilst every the minutest, as well as the most considerable, features of this structure are distinguished by consummate delicacy and elegance of workmanship, the Lombardese may well pride themselves upon the creation of one of the most splendid efforts of modern art. Its breadth, in which it is exceeded by no other arch excepting that of Constantine, is 98 feet 2 inches, and its height is of the same dimension. A car, bearing the goddess of Peace, and drawn by six horses all of molten bronze, is intended to crown its summit, whilst its four corners will be adorned by as many equestrian statues of Victory, presenting her with wreaths of triumph.

DANTE.—After an interregnum of five years, M. Viviani has completed his valuable edition of 'La Divina Commedia di Dante Alighieri, giusta la lezione del Codice Bartoliniano.' (Udine. 3 vols. 1827, 1828.) The 'Parnasso Italiano' has already drawn the attention of literary men to the importance of the Bartolinian MS. as an invaluable guide towards correcting the text of former editions of this divine poet; and the present edition is rendered peculiarly interesting and valuable, not only by a comprehensive glossary and elaborate indexes, but by a 'Ragionamento sopra Dante' from the pen of Torti, and an historical commentary, entitled 'Il Secolo di Dante,' by Fred. Arrivabene.

THE COPERNICAN SYSTEM.—Copernicus published his immortal work, 'De Revolutionibus Orbium Cœlestium,' in the year 1543, and expired on the 24th of May of that year. Celio Calcagnini, whose death is generally held to have occurred in 1541, is said to have published, at an earlier date, the celebrated treatise in which he maintains that 'the heavens stand still, but the earth is in motion.' Out of this last circumstance has sprung an impression, that the Italian, and not the Prussian, was the actual reformer of the solar system. It is very possible that many of the contemporaries of Copernicus, equally with Pythagoras and other ancients, may have entertained correct but very undigested notions in regard to the planetary world. Even if this be admitted, the claims of Calcagnini must be at once set aside, if we show that his rival had fixed the positive bases of his theory long before the Ferrarese had brought his speculations before the public. For this purpose, it is only necessary to turn to that page of Copernicus's manly dedication of his work to the Roman Pontiff, Paul III., in which he says that he had entertained an intention of suppressing it entirely, but that several of his friends had conjured him earnestly to publish it. His own words are, 'Tidemannus Gisius, episcopus Culmiensis, sæpenumero me adhortatus est et convitiis interdum additis efflagitavit, ut librum hunc ederem, et in lucem tandem prodire sinnerem, qui apud me pressus, non in nonum annum solum, sed jam in quartum novennium latitasset.' If, therefore, we confine ourselves to the multiplying of three by nine, and reckon backwards seven-and-twenty years only, it is quite clear that Copernicus must have ascertained and established his reformed system as early as the year 1516—a date ten years antecedent to any which has been assigned to it by the most accurate of his biographers.

We do not pretend to deny Calcagnini's merits as an ingenious or erudite scholar; but we are anxious to show how unjustly they have been allowed to derogate from the claims of the great Northern astronomer.

DRAMATIC CENSORSHIP.—The freedom of the pen and press undergoes occasional amputations at the bidding of the dramatic licenser in France, as well as in Great Britain; and the heroes of the sock and buskin may well add to their 'vagabond glories,' the privilege of 'strutting in fetters.' Among the expurgations inflicted upon the popular vaudeville: 'L'Auberge du grand Frédéric,'

the censorial judges of the Parisian boards recently made an absconding exception to the following lines. The burgomaster, arresting Voltaire, exclaims in song,

'Au nom du Roi,
Mon cher Monsieur, je vous arrête!'

And Voltaire rejoins,

'Au nom du Roi,
Ce nom déjà sacré pour moi;
Mais en vérité je regrette,
Qu'il soit permis, d'être si bête
Au nom du Roi!'

GREECE.—In conformity with a decree issued by the President, Capo d'Istria, the United States of Independent Greece have been divided into Thirteen Departments; seven of which are continental, and six insular.

The Continental Departments are,

1. *Argolida*. Nauplia, (chief town,) Corinth, Argos, and Damala.

2. *Achaia*, consisting of the former districts of Voistitza, Dotschitché, Kalavrita, and Patras.—Kalavrita, (chief town,) Patras, Visiliko, Perinitza, Violitza, and Triti.

3. *Elida*, comprehending the districts of Lala, Pyrga, and Hulomidji.—Gastorini, (chief town,) Pyrgos, Lana, and Leena.

4. *Upper Messenia* includes the districts of Arcadia, Avarino or Navarino, Modon, and Coron.—Its towns are Navarino, Coron, and Modon.

5. *Lower Messenia*, comprising the districts of Androussa, Leonardi, Kalamatta, Boronia, and part of Caritena.—Kalamatta, (chief town,) Mavromathi, Maina, Androussa, and Boronia.

6. *Laconia* consists of the districts of Mistra, Monembasia, and Maina.—Its chief town, Mistra. It is thought, however, that the seat of provisional government will be hereafter transferred to the fortress of Monembasia, or Napoli di Malvasia. The other principal places are Kolokythia, Kolochina, Vordonia, Geronthra, Ericho, and Varoasi.

7. *Arcadia* includes the former districts of Tripolitza, Ajapetri or St. Peter's, Fivina, Fanari, and the greater part of Caritena.—Tripolitza, which was formerly the seat of the pashalik of the Morea, is its chief town: other towns are Caritena and Fanari.

These seven continental departments are 64,439 geographical square miles in superficial extent; but their present population does not exceed 300,000 souls: there can be little doubt, however, that, if the country be blessed with a settled Government and domestic tranquillity, its natural resources and immigration will raise these numbers, in two or three years, to more than double their actual amount. In the flourishing times of old, this tract of country was studded with 205 cities and towns, and its then population has been estimated at 2,200,000.

The Maritime Departments are six in number, and comprise such islands of the Archipelago as constitute the remaining portion of this little republican state.

1. The *Northern Sporades* include the isles of Skiato, Skopelo, Dromi, and Pelagnesi, Skiro, and Ipsara or Psyra; extent 72 square miles: population 6,600.

2. The *Eastern Sporades* contain Samos, Ikafia, Patmos, Kalymna, and Zero. Extent, 245 square miles; and population, 54,000.

3. The *Western Sporades* comprehend Hydra, Spezzia, Poro, Egina, and Salamis. Extent, 126 square miles; and population, 40,000; of which Hydra alone constitutes one half.

4. The *Northern Cyclades*, formed of the isles of Andros, Tine, Mycone, Syra, Thermia, Zea, and Serfo. Extent, 308 square miles; and population, 46,400.

5. The *Central Cyclades* consist of Naxos, Paros, Ios, Sikina, Polikandro, Milo, Kimdi, and Siphnos. Extent, 376 square miles; and population, 25,200.

6. The *Southern Cyclades* include Amorgo, Stampalie, Anaphi, Santerino, Karpatos, and Kasa. Extent, 212 square miles; and population, 19,900.

The present superficial extent of the Greek Republic is, therefore, confined to an area of 7,778 square geographical miles; whilst its population, 496,000 souls, is not much greater than that of the petty Grand Duchy of Parma.

LEGION OF HONOUR.—It appears from an accurate computation, made in the chancery of this institution, that it actually musters 33,400 members of all classes. Of this number, 4,200 are officers, 700 are commanders, 224 are great officers, and 52 are grand crosses. A number of foreigners figure on the list of great officers.

CLERICAL INCOME.—From Balb's 'Monarchie Française comparée aux principaux Etats du Globe,' recently published at Paris, we are enabled to lay before our readers the comparative statement he has brought under review of 'the Average Income of each Parochial Minister or Incumbent,' in the principal States of Europe:

	£.		£.
Ireland (Ang. Church)	790	Hungary	61
England (ditto)	420	Prussia (Cath. & Prot.)	60
Scotland (Presb.)	225	Spain (Catholic)	59
Portugal (Catholic)	120	Austria (Catholic)	52
Ireland (Dissenters)	120	France (ditto)	31
Scotland (Dissenters)	85	Russia in Eu. (Greek)	10
England (ditto)	65		

THE DRAMA.

Drury Lane.

ON Monday evening, 'Cymbeline' was revived at this theatre, for the purpose of presenting Miss Phillips to the public in the character of Imogen. The play thus revived is unquestionably as exquisite in its kind as any thing of Shakspeare's that remains to us, and, what probably weighed more with the mind of the manager, requires nothing but a few curtailments to be admirably adapted for the stage, as it is full of striking incident and various character. It has also this advantage, that, as regards mere stage-effect, it may be very tolerably represented by second-rate actors,—and *pace tanti viri*, Mr. Price has none but such on his tragic establishment. Actors we said, be it remembered; for of actresses, that is, of Miss Phillips, we must speak anon, and more at large. Mr. Cooper's Iachimo was very fair, and, to our taste, much better than Mr. Young's Posthumus; and for this plain reason, that Mr. Cooper throughout pretended to be nothing but Mr. Cooper. Mr. Young, on the other hand, evidently acted as if he thought himself—what a large part of the public think him—a great tragic performer. Now, he really seems to us, in any but the most ordinary characters, a mere trickster mountebank, dealing in a pre-established succession of inflections and gestures, which he uses in the like order in all his parts,—unable to be familiar without affectation, or emphatic without extravagance. Alas! how unlike, in every way, is such a loud, monotonous, ostentatious braggart, from the deep-hearted, impassioned, meditative Posthumus, who, as Imogen says of him—

'did incline to sadness; and oftentimes,

Not knowing why,—

who burst so fiercely from his shyness, when the Italian flung a doubt upon the purity of his mistress, and who could only satiate his abused and disappointed affection by a revenge so dreadful, and so secretly and cautiously devised. Mr. Young, however, fully appreciated the advantage of wearing a sword in one act, and a chain in another; and atoned for his neglect of Shakspeare, and his many meanings, by doing full justice to all the dramatic knowledge and poetic power conveyed in the wigs, mantles, and weapons of the property-man. We have no more leisure to bestow on him, and must turn to Imogen.

No one, as we are aware, has ever taken the trouble to point out what is required from the actress who shall attempt to personify Shakspeare's women. What a universe of passion, beauty, and variety is there in that simple phrase; and how seldom does it seem to be perceived that there is as much difference between Juliet, Miranda, Viola, Desdemona, and Imogen, (we do not mention others, because there is a common suspicion that Lady Macbeth is unlike Beatrice,) as between Hamlet, Macbeth, Shylock, and Brutus. Now, it is clear that, in general, these differences are not in any degree represented on the stage, because the

great mass of the public take their notions of Shakspeare entirely from what they see between the stage-lamps and the back-scene; and it is rare to meet with any one who has the slightest conception that Desdemona and Viola are not the same women in different stomachs and circumstances, but two individual women who are more similar to each other in their circumstances, (diverse as they are,) than in any thing else whatsoever. We want no other proof that Shakspeare's ladies never have been represented in theatres, and that the heroines who generally appear upon the boards, are rather resemblances of the common ball-room misses, among a thousand of whom there is less diversity of mind than between any two women in the infinite world of his creation.

We suspect that, if these considerations had occurred to Miss Phillips, her portraiture of Imogen would have been in some respects different from what it was. That we think it possible she ever could have thought about the essential distinctions of character,—that we speak for a moment of her portraiture of Imogen as resembling in the least that divine being, is an evidence of the respect and admiration which we really have for the talent and feeling displayed in her performance. But, though much more than a shadow of Imogen, she yet was not altogether the *substantial ideal* of that delicious lady.

The wife of Posthumus represents, perhaps, more completely than any one in Shakspeare, the beauty, and holiness, and strength of wedded love. Imogen, be it remembered, was born to be encircled with the hollow ceremonies and false courtesies of a palace, and had turned away to find a resting-place for her affections in Posthumus. Her's was not the eager and flashy passion of Juliet, bursting out when the maiden had scarcely become conscious of her own being; nor the strange fearful tenderness of Desdemona for the wild soldier, whom she caught and clung to in a moment's pause of his precipitous career; nor the delighted worship of Miranda, for the youth who first brought, amid that lone island, those grotesque monsters, and that dream-like existence,—the living realisation of all the beauty which had floated and glanced unprofitably through her mind, until the hour when she saw a 'spirit'—not, like Ariel, all a spirit, but also 'carrying a brave form.' The love of Imogen was the love of a princess, destined by her situation to look on marriage as an expediency, for one whom society and custom told her it was a crime to love, and her affection for whom could only be justified in her own eyes by a boldness, and a depth, and a permanency of faith, passing that of ordinary women. But it was, also, a love which had begun to grow and mould itself into shape, when she and Posthumus were playmates together, before she had time to learn that she was by station immeasurably above him; and her attachment had evidently afterwards prevented her from ever dreaming that she was honouring him in condescending to his lowliness. It is clear, that amid all the falsehoods and mockeries of a court in which she could find nothing real, stable, or satisfying, she had learned to repose upon her belief in the honour and fidelity of Posthumus as upon that which alone of all around her was genuine and trustworthy. Every thing that connects itself in her mind with him, acquires in some degree the same character of sincerity and faithfulness; and the sudden change in the scene where her virtue is assailed by Iachimo, from horror and disgust, to regard and confidence, when he has spoken of that excellence in her husband which to her was more real and certain than the sun, thus illustrates her tendency to confer upon all that reminded her of him a portion of the respect and faith which she habitually entertained for him who was her 'jewel,' and her 'supreme crown.' We might say much more on this matter; for when has Shakspeare written a page, much less delineated a character, the meanings of which are not inexhaustible. But we have neither time nor space, (which the Gods, with a paltry jealousy, are far less willing to annihilate for editors than for lovers,) to continue this ineffectual examination of the character of Imogen.

We doubt whether Miss Phillips has in her mind either this or any other very distinctive theory of the character she represented on Monday last. In her performance, there were, of course, abundant grace, delicacy, feeling, and spirit. These excellent qualities Miss Phillips could scarcely divest herself of if she would. But her performance was far too uniformly tearful, and of too sustained a melancholy; such as would better have become Helena, in 'All's well that ends well,' than the noble and energetic, though unhappy daughter of Cymbeline. In the great scene with Iachimo, indeed, she was compelled to strike another measure from the strings; and she did it in some re-

spects grandly. But we doubt whether she trusts so completely to her own fine impulses when she would be scornful and indignant at the overshadowing approach of dishonour, as when she would exhibit fear, love, sorrow, or despair. She seems to us to be thinking rather of the gods in the gallery, the men of the pit, the columns of the side-scenes, (very good gods, men, and columns in their way, but not much to the purpose,) of any thing rather than of the degradation urged upon her, the slander that accompanied it, and the honesty and love that broke from Imogen at the proposal. When she throws off the touch of Iachimo, which she does, indeed, as she should, with a thrilling and a lion-like decision, she remains for several seconds with uplifted hand and poised foot, a spectacle of fixed magnificence, (as if the merit of a tragic actress were like that of Harlequin, to stand as long as possible in a difficult position,) instead of exhibiting the agitated, bewildered, hurrying scorn and terror, natural to a young and virtuous lady in such a moment, and splendidly manifested in the speech assigned to her by Shakspeare. Yet we doubt not her performance of this difficult part will be (as it ought to be) very popular. Nor will it be the less liked on account of her appearance, as Fidele, in a page's garb, which, like all the dresses we have seen her in, shows (though by no means indecorously) a very elegant and striking person.

Mr. Buckingham's Lectures.—During the present week Mr. Buckingham (with whose name and character our readers are doubtless well acquainted) has been delivering a course of lectures on those countries of the East which he visited in the course of his extended travels; the object of which lectures was not merely to give a succinct and popular view of the geography, antiquities, climate, productions, population, government, and manners of each, but also to exhibit their immense commercial capabilities, and the prospect they offer of furnishing an extensive market for English manufactures, when a free and uninterrupted communication between this country and the Eastern parts of the world shall be attained by the removal of the absurd restrictions arising out of the monopoly of the East India Company.—*Manchester Guardian.*

LITERARY INTELLIGENCE.

We understand, that into the new Edition of his 'Medical Guide,' Dr. Reece has introduced all the late discoveries in medicine, and several chapters on diet, different temperaments and peculiarities of constitution and sympathies, and about two hundred prescriptions of the most eminent physicians of Europe and America.

LIST OF BOOKS PUBLISHED DURING THE WEEK.

Matthias Domestic Instruction, 2 vols., 18mo., 5s.
Reverend T. Huntingford's Testimonies, 1 vol., 8vo., 10s. 6d.
Duffin, on Deformity of the Spine in Females, 7s.
Fielding's Practical Perspective Plates, 18s.
London Pharmacopoeia, with Interlinear Translations, 6s. 8vo.
Morning and Evening Sacrifice, Sixth Edition, 12mo., 5s. 6d.
Gibbs's Defence of the Baptists, Second Edition, 8vo., 9s.
Greek Extracts used at Edinburgh Academy, 3s. 6d.
Carwithan's History of the English Church, 2 vols. 8vo., 1l. 6s.
Chitty's Collection of Statutes, 4to., 1l. 16s. 6d.
Spanheim's Ecclesiastical Annals, 8vo., with notes, 16s.
Parry's Voyages, pocket size, 4s.
Horae Phrenologicae, by John Epps, M.D., 12mo., 3s.
The Grammatical Reading Class Book, by Helen Hood, 12mo., 3s. 6d.
The Juvenile Speaker, Two Parts, 12mo.
The Opening of the Sixth Seal, Second Edition, 12mo., 5s. 6d.
Tooke's Letter to Lord Grenville, 8vo.
The Arcana of Science and Art, 1839, 5s.
Liefchild's Guide to Reading the Scriptures, 2s. 6d.

WEEKLY METEOROLOGICAL JOURNAL.

Nights and mornings generally moist and foggy.
Highest temperature at noon, 45°.

Astronomical Observations.

The Moon in Perigee on Wednesday.
Venus's geocentric longitude on Sunday, 14° 7' in Capri.
Jupiter's ditto ditto 11° 21' in Sagitt.
Saturn's ditto ditto 29° 36' in Cancer.
Sun's ditto ditto 19° 33' in Aquari.
Length of day on Sunday, 9 h. 34 min. Increased, 1 h. 50 m.
Sun's hor. motion on Sunday, 2' 31" plus. Logarithmic num. of distance, 9,99439.

COLOSSEUM.—Tickets for Parties, or Single Tickets at 5s., for admission to the Colosseum, prior to its final completion, to view the Interior of the Building—the Rooms preparing for the Annual Subscribers—and the Conservatories, may be had at the North Lodge of the Colosseum; Sams' Library, St. James's-street; Moon, Boys, and Graves, 6, Pall Mall; Ackerman's, Regent-street, and Strand; Taylor's Architectural Library, and Carpenter's Library, Hildborn; Harris's Juvenile Library, St. Paul's Church-yard; Pusey's bookseller, 17, Fleet-street; Richardson's, Royal Exchange; and at the Minerva Library, Leadenhall-street.
The Building will continue open Daily, from 10 to 4, during the next week.

COLONIAL COFFEE MART, WEST BRANCH,
15, Rathbone-place, Oxford-street.

NICOL and Co., in compliance with numerous solicitation from families of distinction in the western districts of London, have opened a Branch Establishment at 15, Rathbone-place, Oxford-street, where Coffees only of the finest qualities are kept, roasted on the premises every day, and sold at the same low scale of prices, which has gained such an extensive share of public patronage and support to the Original Warehouse, established by the West India Planters and Merchants, at 18, Fenchurch-street, City.

The Coffee I procure from Nicol and Co., possesses more of the real pungency and aromatic flavour of this valuable exotic in perfection, than I from experimental trial have got elsewhere.—*Vide Dr. Thornton's Botanical Lecture.*

REMOVED TO 43, NEW BOND-STREET.

MR. A. JONES, SURGEON-DENTIST, begs to acquaint the Nobility and Gentry, that from many years intense application, he has invented and brought to perfection a new system of Fixing Natural, Terro-Metallic, and Artificial Teeth, from one to a complete Set, which are so accurately fitted as not to be distinguished from the original, and answer all the purposes of mastication, articulation, &c.

Mr. A. JONES continues stopping Decayed Teeth with his unrivalled Anodyne Cement, which in one minute allays the most excruciating pain; and by this means Carious Teeth are wholly preserved and rendered useful, even if broken close to the gums. This being a metallic composition, it becomes hard as enamel in a few minutes, will not decompose with the heat of the stomach, and resists the effects of acids, atmospheric air, &c. Cleaning, and every operation incidental to Dental Surgery.

Just published, a New Edition, being the 15th, 12s. 6ds.

THE MEDICAL GUIDE, for the Use of the Heads of Families, Junior Practitioners, &c.—Independent of a Complete Modern Family Dispensary, and Practical Instructions for the prevention and Cure of the Diseases incident to the Human Race, this edition contains explicit directions for the management of all cases of emergency, and children, for diet, exercise, &c., remarks on peculiarities of constitutions, habits, clothing, &c.—By **RICHARD REECE**, M.D. Fellow of the Royal College of Surgeons, &c. &c. &c.

Dr. Reece's Medical Guide, whether considered as a practical or scientific performance, is by far the best work of the kind extant. Instead of the common-place and gratuitous observations usually abounding in popular productions, the Medical Guide does not falsify its nominal designation, but is truly a valuable director; containing a vast store of important facts and judicious remarks, serving as an able and useful Guide to Medical practice, whether domestic or professional. Its intrinsic worth is too evident not to be readily perceived, and its practical advantages cannot fail to be appreciated.—*Dr. Kinglake on Domestic Medicine*, 1828.

"The Medical Guide," by Dr. Reece, is, in fact, the only work that has appeared for domestic reference from a Physician of experience; and we boldly assert that, to the Profession as well as the general readers, it will prove a more useful and scientific practical guide than any system of medicine that has been published in Europe. We have thus candidly and freely expressed our opinion of this work, because attempts have lately been made to palm some miserable compilations on the public by friendly criticisms, clearly written by men ignorant of medicine.—*John Bull*, Dec. 21, 1838.

Printed for Longman and Co., Paternoster-row.

CLERICAL, MEDICAL, and GENERAL LIFE ASSURANCE SOCIETY.

DIRECTORS.

GEORGE PINCKARD, M.D., Chairman.
Rev. G. Beresford, M.A. T. Davis, Esq.
Rev. James Macdonald, M.A. Sir Charles des Vaux, Bart.
G. G. Babington, Esq. John Dixon, Esq.
W. Beatty, M.D. James Kibblewhite, Esq.
Robert Bree, M.D., F.R.S. Samuel Merriman, M.D.
James Carden, Esq. Samuel Mills, Esq.
Arthur Chichester, Esq., M.P. Sir George Pocock.
H. Jas. Cholmondeley, M.D. Ashby Smith, M.D.

THE FOLLOWING ARE AMONG THE DISTINGUISHED FEATURES OF THIS SOCIETY.

1. In addition to the ordinary Assurance on Healthy Lives, this Society is entitled to the distinction of having been the first to extend the benefit of Life Assurance to persons not in a sound state of Health, without excepting those afflicted with gout, asthma, rupture, liver complaints, vertigo, insanity, spitting of blood, and the other diseases generally specified.
2. Reduced Rates of Premium.
3. Accepting Premiums in a single payment, annually, for a limited term, or annually during life.
4. Granting Policies to Persons going to any part of the Globe.
5. Apportioning to the Assured the greatest part of the profits every five years, which, at their option, may be added to the Policies, or taken in reduction of the payment of premium.
6. Purchasing the Policies of the Assured, if required.
7. Advancing, by way of loan upon the policy, (in cases of exigency) any sum not exceeding two-thirds of the value thereof.
8. The Society will grant Annuities, Endowments for Children, and will purchase Annuities, &c.
9. Making no charge for entrance, nor fine for non-appearance.

Prospectuses and full information may be had at the Office or by letters addressed to the Secretary.

J. PINCKARD, Resident Secretary.

Office, No. 4, Southampton-street, Bloomsbury-square, London.

THE PASSES OF THE ALPS.

Just published, No. IX. of
By W. BROCKEDON.
Containing the Passes of the Bernardin and the Splügen. To be had of the Author, 39, Devonshire-street, Queen-square, Bloomsbury, and of the booksellers.

The preceding numbers to be had as above.
Just published, in a neat volume, fols. cap. 8vo., price 5s.,
POETICAL RECREATIONS, and Thoughts
in Rhyme, on Sacred and Miscellaneous Subjects. By
CHARLES AUGUSTUS HULBERT.

'Poets, in general, are light, girl-formed people; but here we have a muscular, athletic one. The following lines, full of Miltonic energy, occur in an address to Lucifer.'—*Gentleman's Magazine*.

Published by Longman and Co., London; and Charles Hulbert, Shrewsbury.

CARSTAIR'S LECTURES ON WRITING;
with a great number of Plates, is just published, the Sixth Edition, price 13s., by Simpkin and Marshall, Stationers-court; and may be had, by order, at all Booksellers, and at the Writing Establishment, 64, Lombard-street.

CARSTAIR'S DESIDERATUM is now publishing.

GLEANNINGS ON GARDENS; chiefly respecting those in the Ancient Style, in England. By the Author of 'On the Portraits of English Authors on Gardening.' Sold by Wilson, Cornhill; Onwyn, Catherine-street; and Goshing and Egley, New Bond-street.

TURNER'S ENGLAND AND WALES, No. V. VIEWS IN ENGLAND AND WALES, from Drawings. By J. M. W. TURNER, Esq., R.A. With Descriptive and Historical Illustrations, by H. E. LLOYD, Esq. The Subscribers to the above Works are respectfully informed, that No. V. will be published on this day, the 9th instant.

Royal 4to., 14s. each; imperial 4to., proofs, 11. 1s.; imperial 4to., proofs, on India paper, 11. 6s.; Colombar folio (limited to 25 copies), 21. 12s. 6d.
Robert Jennings, 3, Poultry.

Just Imported, in one large volume, med. 8vo., price 21s. in boards.

THE AMERICAN ANNUAL REGISTER
for 1826-7, or the Fifty-first Year of American Independence.

'The first work of its useful kind that has appeared in America.'—*Literary Gazette*.
New York, 1826: Published by E. and G. W. Blunt; and sold by Thomas Ward, 84, High Holborn, London; and all Booksellers.

This day is published, handsomely printed in Imperial 8vo., with large Additional, and Seven New Embellishments, price 21. 2s. in boards.

A SECOND EDITION OF PORTUGAL ILLUSTRATED. By the Rev. W. M. KINNEY, B.D., Fellow of Trinity College, Oxford, and Chaplain to the Right Honourable Lord Auckland. Engraved with 400 Plates of Coins, Vignettes, and various Engravings of Castles, Landscapes, Scenery, &c. Published for the Author, by Treuttel and Wirtz, Treuttel, jun., and Maister, Foreign Booksellers to the King, 30, Soho-square.

NEW WORKS.—In 3 vols. 16s.
CONVERSATIONS ON INTELLECTUAL PHILOSOPHY, or a Familiar Explanation of the Nature and Operations of the Human Mind.

THE MANUAL FOR INVALIDS. By a Physician. Price 9s.
THE TRIALS OF LIFE. By the Author of 'De Lile.' 3 vols. Second Edition, 21s. 6d.

'The Author of "De Lile" possesses profound powers of thought, with closeness and accuracy of observation of a very extraordinary kind. The present work consists of two Tales, both full of thought, and in the highest degree pathetic.'—*Times*.

THE ROMANCE OF HISTORY. Third Edition. Comprising Tales Illustrative of the Ecclesiastical Annals of England, arranged Chronologically. As Historical Summary of the leading Events of each Reign is prefixed to the Tales which refer to it.

'The plan of the work is excellent.'—*Literary Gazette*.

THE ADVENTURES OF A KING'S PAGE, 3 vols., is unavoidably postponed for some days. Feb. 6, 1829.
Edward Bull, New Public Subscription Library, 21, Holles-street, Cavendish-square.

A valuable Supply is just received by the Agents of
ROWLAND'S MACASSAR OIL, (the Original and Genuine) of vegetable ingredients, which preserves the Hair to the latest period of life; promotes a luxuriant growth; adds strength to the roots; produces lasting and beautiful Curle, which damp weather or exercise cannot affect; renders Hair that is harsh and dry soft, silky, glossy, elegant, and beautiful. This Oil is invaluable in the nursery; as a due attention to Children's Hair is of the greatest importance. 'Fixes a stamina for a beautiful Head of Hair. Produces Whiskers, Eyebrows, &c.'

Also, **ROWLAND'S KALYDOR.** Its soothing, cooling, and ameliorative properties, immediately allay the smarting irritability of the skin—assuages inflammation—heals harsh and rough skin—removes cutaneous eruptions, and produces a beautiful Complexion—affords soothing relief to Ladies nursing their Offspring; and to Gentlemen after Shaving, it allays the smarting pain, and renders the skin smooth and pleasant. Each Genuine Bottle has the name and address Engraved on the Government Stamp, which is pasted on the Bottle.—A. ROWLAND & SON, 20, Hatton Garden. Price 4s. 6d. and 8s. 6d. per Bottle.

'Ask for ROWLAND'S,' strictly noticing that each Genuine Bottle is sealed with Red Wax, with their Name and Address, and signed in Red.—A. ROWLAND & SON, 20, Hatton Garden. All others are gross impositions.

AT A PUBLIC MEETING of the MERCHANTS and other INHABITANTS of the TOWN of LIVERPOOL, held in the Court-Room, in the New Sessions-House, Chapel-street, on Wednesday, the 28th day of January, 1829, 'For the purpose of taking into consideration the best means of removing the Restrictions imposed upon Commerce by the present Charter of the East India Company, and of prevailing on the Legislature to secure to the Public all those benefits which a free commercial intercourse with India and China is capable of affording.'

The Worshipful the MAYOR, in the Chair;
On the motion of John Gladstone, Esq., seconded by William Rathbone, Esq., Resolved unanimously, 1st.—That the opening of a Free Trade to China, and the removal of the restrictions which impede the commerce between this country and India, would be productive of incalculable benefits, both to this Kingdom and to the British Territories in the East Indies. That the extent of these benefits may in some degree be estimated, though very imperfectly, from the fact that since 1814, the period when the present limited and partial intercourse with India was permitted, notwithstanding the vexatious restrictions by which the British Merchant has found himself impeded at every step, the commerce in many staple commodities has increased beyond the most sanguine expectation, while new sources of profitable interchange still offer themselves to British skill and enterprise.

On the motion of James Cropper, Esq., seconded by Henry Booth, Esq., Resolved unanimously, 2d.—That it appears from official returns, that, in the year 1814, there were exported to India 664,900 yards of printed calicoes, and 213,408 yards of plain calicoes; while, in 1827, the export of printed calicoes was 14,362,551 yards, and of plain, 19,933,500; the increase in the export of plain calicoes, the description commonly worn by the natives, being ninety-three-fold. That of cotton twist, so late as 1823, the export to India was only 121,600 lbs. weight; while, in 1827, the export was 8,663,096 lbs. weight, and has since been progressively increasing. That in metals, hardware, earthenware, and many other goods, an immense increase of our export has also taken place. That in the year 1819, the settlement of Singapore, at that time resorted to chiefly by pirates, was taken possession of by the British Government, and made a Free Port; and, in 1827, its import trade amounted to 13,877,186 Rioss rupees, with a corresponding export: thus showing the extensive benefits to be derived from a free commercial intercourse, and altogether affording a greatly increased and increasing field of employment for British shipping.

On the motion of John Ewart, Esq., seconded by William Wallace Currie, Esq., Resolved unanimously, 3d.—That, notwithstanding this great increase in the demand for British manufactures, the present circumstances of the trade show clearly, that a morbid and defective system of commercial policy alone prevents the further and rapid growth of the trade between this country and India; for, while gold and silver were formerly exported to purchase the products of the East, the demand for British manufactures, notwithstanding the gloomy predictions of the East India Company of the want of markets, has increased to such an extent as to be limited only by the insufficiency of the products of the country for the purpose of return; and an insufficiency which is caused by the levying of heavy transit duties on the intercourse with the interior, and by arbitrary restrictions on the settlement and residence of Englishmen, as well as on the employment of British capital on the fertile but neglected soils of Hindostan.

On the motion of J. T. Alston, Esq., seconded by O. Heyworth, Esq., Resolved unanimously, 4th.—That the cultivation of Indigo indirectly by Europeans (at present permitted on sufferance by the East India Company) has rapidly increased, till the produce now amounts in value to about two millions sterling per annum, affording the principal supply of every market of consumption in the world, and satisfactorily proving the vast capabilities of the soil, if allowed to be called forth by adequate capital, skill, and enterprise.

On the motion of Thomas Littledale, Esq., seconded by David Hodgson, Esq., Resolved unanimously, 5th.—That, while the exclusive privileges and arbitrary rule of the East India Company are thus injurious, as regards the commerce with India, the absolute prohibition enforced by the charter against British subjects trading with China—a trade at once varied, extensive, and lucrative, and which the inhabitants of all nations (Englishmen only excepted) are permitted to enjoy—is still more oppressive and unjust. That, although the opening of trade to China and the East may seem more immediately important to the mercantile and manufacturing interests, it would, nevertheless, be of extreme value to the agriculturist, the fundholder, and peasant; from the great amount of wealth it would bring into the country, and from the consequent increase of commercial revenue which would be available for the reduction of internal taxation.

On the motion of Robert Benson, Esq., seconded by Thomas Brocklebank, Esq., Resolved unanimously, 6th.—That the article of tea affords a prominent instance of the injurious effects of monopoly; the present price in London, free of duty, being more than 100 per cent. above the price in the neighbouring ports of Europe; thus imposing upon the people of this country a burthen of upwards of two millions and a half sterling per annum for the sole benefit of the East India Company, whilst the Legislature has declared its intention that Great Britain should be supplied with tea as cheaply as Continental Europe. That by the 18th Geo. II., cap. 36, sec. 11, a power was reserved to the Lords of the Treasury to grant permission to individuals to import tea from the Continent of Europe, in case the East India Company should neglect to supply the market with a sufficient quantity of that article, in order, as is expressly declared by the Legislature, to keep the price in this country upon an equality with the price in the neighbouring countries of Europe; and that so late as the year 1823, by 2d Geo. IV., cap. 43, sec. 21, this law of George II. is expressly recognized as existing unreppealed and unaltered. That in the year 1824, being the 6th George IV., an act, cap. 104, was passed for the purpose of repealing a great number of Acts of Parliament relative to the commerce of this country, in order to simplify the laws of the Customs, with the avowed declaration, as is stated in the preamble, that the purposes for which these acts had been from time to time made should be secured by new enactments, exhibiting their provisions

more perspicuously. That by the Act of the sixth of the present reign, the power for securing to the public a supply of tea, as cheap as it might be had in other neighbouring countries, was, it is presumed, unintentionally swept away from the statute book. That in the same Session of Parliament, and simultaneously therewith, another Act was passed, cap. 107; which, whilst it professes to secure, by re-enactment, the purposes for which the acts so repealed were made, not only omits to secure to the Lords of the Treasury the power which had been previously so wisely given, in respect to the supply of tea, but absolutely restricts the importation thereof from any place but that of its growth, and by the East India Company, and into the port of London. That thus that salutary and equitable provision, devised by the wisdom and justice of previous Parliaments, has been wholly abrogated; and, as no equivalent advantage was given to the public, it is considered clear that this provision has been inadvertently withdrawn, and that, consequently, it is not only competent to the Legislature, but incumbent upon it, to pass such enactments as will restore to the Lords of the Treasury the power so unaccountably revoked.

On the motion of Samuel Hope, Esq., seconded by Charles Tayleur, Esq., Resolved unanimously, 7th.—That independently of commercial considerations, this meeting contemplates with deep concern the state of mental debasement in which the mighty population of Hindostan has been hitherto doomed to remain; while it is evident, that a free and enlarged intercourse with the country, aided by a liberal and humane legislation, seems alone wanting to extend the benefit of civilization, to put an end (if the intervention of the Legislature should not sooner effect it) to the horrible custom of the burning of widows, together with other revolting superstitions, and to confer intelligence and happiness on millions of our fellow beings, possessing the strongest claims on our sympathy and protection.

On the motion of Adam Hodgson, Esq., seconded by George Grant, Esq., Resolved unanimously, 8th.—That this meeting, strongly impressed with the importance of a well-organised effort on the part of the British people to oppose and endeavour to prevent the renewal of the East India Company's monopoly, and destructive powers, earnestly exhorts the inhabitants of other towns to the calm but determined expression of the public sentiment against the further continuance of a system so partial and oppressive in its immediate operation, as well as so inimical to the best interests of this country and of mankind.

On the motion of John Bourne, Esq., seconded by Thomas Leatham, Esq., Resolved unanimously, 9th.—That in furtherance of the special objects stated in the 6th Resolution, with reference to the importation of Tea from the Continent, petitions, as now read, be presented to both Houses of Parliament in the ensuing session; and that the Earl of Derby and Lord Skelmersdale be requested to present and support the same in the House of Lords, and the Members for this borough in the House of Commons; and that the support of all Peers and Members of Parliament connected with the country be respectfully solicited.

On the motion of Thomas Thorneley, Esq., seconded by T. H. Barclay, Esq., Resolved unanimously, 10th.—That as the East India Company's Charter will expire by law in 1834, provided the Company shall have received three years' notice from the Legislature to that effect; and as the discussion of this great question before Parliament must consequently take place early in the year 1831; if not before, this Meeting is of opinion no time should be lost in awaking the country to a just sense of the merits and importance of the whole subject.—That a Committee, therefore, be now appointed, to aid in carrying into effect the purport of the foregoing resolutions, by requesting the co-operation and support of the Mayor and Common Council of Liverpool; by the collecting of evidences; by corresponding with similar committees in other towns; by being prepared, when the proper time shall arrive, with petitions to the Legislature; and, generally, by adopting such measures as they may deem advisable to forward the great object which this meeting has in view; and that the following Gentlemen be the Committee, with power to add to their numbers, and seven shall be competent to act:

The Mayor of Liverpool for the time being.

J. T. Alston	John Gladstone	Nicholas Robinson
John Bolton	George Grant	W. Rathbone
Robert Benson	John Garnett	Richard Radcliffe
John Bourne	Samuel Hope	W. Rotherham
James Bourne	Ormerod Heyworth	Edward Rushton
E. Baiges, jun.	Adam Hodgson	Edward Roscoe
Henry Booth	Charles Horsfall	John Smith
T. Brocklebank	Joseph Hornby	Charles Tayleur
T. B. Barclay	Thomas Littledale	Thomas Thorneley
James Cropper	Thomas Leatham	W. Ward
W. Wallace Currie	Joseph Leigh	Daniel Willink
John Ewart	W. Myers	Daniel Willis
W. Earle, jun.	A. Melly	Joseph E. Yates
Hardman Earle	Alexander Maxwell	John A. Yates.
Willis Earle, jun.	W. Potter	

Moved by John Gladstone, Esq., and seconded by James Cropper, Esq., Resolved unanimously, 11th.—That a Subscription be opened, and placed at the disposal of the Committee now appointed, for the purposes before stated; and that the Mayor be requested to transmit copies of the foregoing Resolutions and Petition to the Sheriffs of Counties and Chief Magistrates of the principal trading and manufacturing Towns in the United Kingdom, with a request that the important objects therein set forth may be brought under the consideration of the inhabitants—especially the question of the importation of Tea from the Continent, as explained in the Petition and 6th Resolution, which calls for the prompt and active interference of every town and village in the kingdom.

NICHOLAS ROBINSON, Mayor.

The Mayor having left the Chair, on the motion of William Myers, Esq., seconded by William Rathbone, Esq., the Thanks of the Meeting were unanimously voted to his Worship for calling the Meeting, and for his able conduct in the Chair.

AND

LITERARY CHRONICLE.

No. 70.

LONDON, WEDNESDAY, FEBRUARY 25, 1829.

Price 8d.

THE NEW EDITION OF THE WAVERLEY NOVELS.*

THE Proprietors of Sir Walter Scott's Novels have issued a short prospectus of a new edition of these celebrated works. These pages contain a 'Notice by the Publisher' and an 'Author's Advertisement,' taking which together, the object of the proposed publication may with tolerable certainty be collected:

1. The booksellers say that they intend to make an edition, the price of which will put it within reach of persons who could not afford to purchase copies of the previous editions. 2. The book will be elegantly printed, &c. 3. It will be ornamented with engravings. 4. The text of the novels will be throughout corrected. 5. There will be comments of various kinds, containing accounts of circumstances connected with the first publication of these fictions, and of the sources from which the author derived his incidents and descriptions.

1. The superior cheapness we take to be a bibliopolical fiction, though much less brilliant than the romantic fictions to which it relates. We believe the Waverley novels may now be obtained for at least as small a sum as that which they will cost in this edition.

2. To the elegance of the printing we have, of course, no objection. The hot-pressing we hold to be out of character. A rich rough aspect, with quaint wood-cuts and grotesque initials, would, to our taste, best become these pleasant books.

3. The whole series is to be ornamented with engravings from the designs of several very celebrated (and very justly celebrated) artists. Here we must take leave to pause, and say our critical say.

The abstract idea of a book-engraving is an invention of the devil; who, by the way, in all the illustrated copies we have seen of the Bible and 'Paradise Lost,' is amply punished for the device. The business of a book-engraving, in general, we take to be this: it is meant to serve the purpose of introducing a salutary fretfulness and disagreement into the intercourse of author and reader. If the reader of an 'illustrated' volume is so imprudent as to frame for himself, from the hints of the writer, a vivid picture of a man or an occurrence, let him but look to the frontispiece, and we will bet all Mr. Westall's designs† to the dulcet of Crutchbanks' scratchings, that he will cry to sleep again, he will find a London school-miss instead of Miranda, or a Prospero evidently imitated from that great conjuror, Mr. Cobbest. A book-engraving, above all other engines, is powerful to stuff out the insignificant, and degrade the lofty, to change what is universal, as containing more life than any thing else, into that which is common-place, as containing less. It renders the individual and peculiar, general and indiscriminate. It has the true art of mutations to change peasants into stage-players; and gentlemen into clowns. It makes Don Quixote what all his madness could not make him, vulgar and contemptible; it gives us, for the Duke and

Duchess, the Duke and Duchess of St. Albans, and plunders Sancho's face of all its proverb-honoured wisdom. How many a gay creature of the element has a book-engraving changed into a Caliban! How many a band of heroes hath it, like Comus, converted into swine! How many a fair lady of song hath it smitten, in the turning of a page, with leprosy, and deformed with affectation. The burin is the true Ithuriel's spear to give us fends for angels; it is the real sword of war, which desolates fair landscapes into wildernesses. At its touch the butterflies of poetry grow back to grubs. Egyptian-like, it seats its skeletons beside its gay and revelling thoughts, and mocks us with the contrast. It takes us from the pleasant gardens and the stately chambers of the fancy to a region of shadows and monsters; and a bookseller stands warder at the gate, and tells us, forsooth, that we must pay for admittance. Thank Heaven! there are cheap and unillustrated editions of Shakespeare. We are not always compelled to put up with a coal-heaver instead of Orlando, and be content to think Beatrice a hoyden; or, rather, those resplendent beings are not deemed to be all always followed by the grimaces and screamings of the apes and peacocks from the engraver's Tarskish. We are sometimes allowed to read Homer without being told that a facsimile of Thersites is a portrait of Achilles; and to see Nausicaa at the river in another likeness than that of a modern washer-woman. Praise be to the Bible Society, praise to the folks of our fathers, that there are Bibles without engravings; that we still think of Moses pointing to the brazen serpent, as somewhat different in look and bearing from a showman at the Tower; and that we yet conceive the form of Christ as rather that of a carpenter than a Saviour.

There are many persons, no doubt, who would derive no image whatever of an author's meaning from his writings; and for these we suppose it is that book-engravings are peculiarly intended. And in these cases, undoubtedly, they are generally such as exhibit a wise adaptation of means to ends. Minds that can make to themselves, by the aid of books, no notion of any thing that is in nature, are very fit to be entertained by sketches of what is completely unnatural. We would suggest, that even for such people it is needless to connect the picture with the book, as a volume is rather a clumsy frame for a copper-plate. But for this class of readers the greatest possible difference between the author's mind and the artist's is of no importance whatever. If, indeed, they could suspect for a moment that there is a similarity of intention between the author's mind and the artist's, the consequence would be a troublesome and futile attempt to trace out the connection, and a great deal of time would be vainly wasted in an enterprise which from the first would, for the greater part of the 'reading public,' be absolutely desperate. But there is in truth no such danger. And in this point of view we have always particularly admired 'Bogdell's Shakespeare Gallery,' which exhibits on a large scale the forms and gestures of certain fantastic beings as amusing as the fantoccini, or the dancing dogs, or learned cats; and whose identity with the 'fine spirits' of the poet will never for an instant be questioned by our unsuspicious public.

There are, undoubtedly, artists of powers equal to those of any writers whom they might think fit to illustrate. When Wilkie is in question, it may seem strange to say that we object to all

designs from passages in well-known books; yet we do dislike such attempts, even when made by men of genius, as we should dislike to see in a poem a stanza by a different hand from that of the author; and still more if the stanza were a paraphrase of something gone before, with all the diversity of conception and expression which it would necessarily derive from the genius of its maker. A man of genius cannot, by possibility reproduce, with a mere difference of form, the thoughts of another man, and will always either introduce some evidences of original thought, which will prevent the illustration from being what a book-illustration ought to be, or (if he be guided by some temporary and external consideration, instead of the inherent laws of his own genius) he will attend to nothing but the details, which he will very probably represent even more ineffectually than a meaner man, who could never look beyond them; and, when we are dealing in one page with a living being, we shall find in the next, as an 'illustration' to assist us in our conception of it, a ghastly and lifeless mummy.

This reasoning will probably be met with examples of cases in which books have been successfully illustrated by engravings. The most celebrated of our day are those of the designs by Retsch, Flaxman, and, perhaps, Pinelli. The works of the last, which are less known in this country than those of the two former, supply a good instance for our purpose. Let any one compare Pinelli's larger designs from some of the Italian poets with the very smallest and most careless of his drawings of peasants and handi-d, and he must at once see the difference in spirit, ease, expression, composition, even accuracy of drawing, between the scratchy span of paper on which a man of high talent has created for himself, and the more elaborate exhibitions of ill-made heroes and awkward heroines, into whom a copyist has attempted to transmute that spirit which cannot be imbibed from its living original by a dead imitation. It is useless to collect with so much care the bones and ashes. They are a poor consolation to the mourner for the life he loved. But how much vainer and more foolish is it, when we are walking in amaranthine gardens, among the disembodied essences of poetry, to mock us with the funeral urn, which is of the earth earthy, and contains only dust and relics.

Retsch and Flaxman are perhaps somewhat more difficult to dispose of than Pinelli. And here we must remark that, condemning, as we do, the practice of binding up engravings, and poems or novels, together; asserting, as we do, that the practice will almost always lead to the junction of the living with the dead body, or of the real man and his *wraith*, or of dissimilar men in a case in which no difference is endurable, and that the being of the poet will scarcely ever have a satisfactory double in the being of the artist, we are yet not called upon to show that subjects taken from fictitious compositions are not very proper for painting. It is the juxta-position which we chiefly complain of. When we read a fine poem, and afterwards see a fine painting of the same subject, each is to us a separate creation. Tie them together, and attempt to persuade us that they relate not only to people of the same names and in the same circumstances, but to the same individual men and women, and you are forced to abstract whatever is substantial and characteristic in the one work of art or the other, to consider it as a mere shadow of its prototype;

* Prospectus of a New Edition of the Waverley Novels, with the Author's Notes, and new Introduction.

† We have long wanted to get rid of them—they were given to us by our cousin, who has since married and produced these little 'illustrations' of wedlock.

the inhabitants of Syria and Egypt, and retain something of the good-natured disposition of the Bedouins, from whom they derive their origin. When they accost each other in the streets for the first time in the course of the day, the young man kisses the elder's hand, or the inferior that of his superior in rank, while the latter returns the salute by a kiss upon the forehead. Individuals of equal rank and age, not of the first class, mutually kiss each other's hands. They say to a stranger, "O faithful," or "brother;" and the saying of the prophet, "that all the faithful are brethren," is constantly upon their lips. "Welcome, a thousand welcome," says a shopkeeper to his foreign customer; "you are the stranger of God, the guest of the holy city; my whole property is at your disposal." When the service of any one is wanted, the applicant says, "Our whole subsistence, after God, is owing to you pilgrims; can we do less than be grateful?" If in the mosque a foreigner is exposed to the sun, the Mekki will make room for him in a shady place; if he passes a coffee-shop, he will hear voices calling him to enter and take a cup of coffee; if a Mekki takes a jar of drink from any public water-seller, he will offer it, before he sets it to his mouth, to any passenger; and upon the slightest acquaintance, he will say to his new friend, "When will you honour me at home, and take your supper with me?" When they quarrel among themselves, none of those scurrilous names of vile language is heard, so frequently used in Egypt and Syria; blows are only given on very extraordinary occasions, and the arrival of a respectable person puts an immediate stop to any dispute, on his recommending peace: "God has made us great sinners," they will then say, "but he has bestowed upon us, likewise, the virtue of easy repentance."

To these amiable qualities the Mekki adds another, for which they must also be commended: they are a proud race; and, though their pride is not founded upon innate worth, it is infinitely preferable to the cringing servility of the other Levantines, who redeem their slavish deference to superiors by the most overbearing haughtiness towards those below them. The Mekkis are proud of being natives of the holy city, of being the countrymen of their prophet; of having preserved, in some degree, his manners; of speaking his pure language; of enjoying, in expectation, all the honours in the next world, which are promised to the neighbours of the Kaaba; and of being much freer men than any of the foreigners whom they see crowding to their city. They exhibit this pride to their own superiors, whom they have taught to treat them with great forbearance and circumspection; and they look upon all other Mohammedan nations as people of an inferior order, to whom their kindness and politeness are the effect of their condescension. Many good consequences might result from this pride, without which a people cannot expect to sustain its rank among nations. It has prevented the people of Mekka from sinking so deep into slavery as some of their neighbours; but it excites them to nothing laudable, while its more immediate effects are seen in the contempt which they entertain for foreigners. This contempt, as I have already remarked, in speaking of Djidda, is chiefly displayed towards the Turks, whose ignorance of the Arabic language, whose dress and manners, the meanness of their conduct whenever they cannot talk as masters; their cowardice, exhibited whenever the Hadj has been assailed in its route across the Desert, and the little respect that was shown to them by the Governors of Mekka, as long as the Sherif's power was unbroken,—have lowered them so much in the estimation of the Arabians, that they are held in the Hedjaz as little better than infidels; and, although many of the Mekkis are of Turkish origin, they heartily join the rest of their townsmen in vilifying the stock from which they sprang. The word *Turky* has become a term of insult towards each other among the children. *Nasrani* (Christians), or *Yahoudy* (Jews), are often applied to the Turks by the people of Mekka; and their manners and language afford a perpetual source of ridicule or reproach. The Syrians and Egyptians experience similar effects from the pride of the people of the Hedjaz, but especially the former, as the Egyptians, of all foreigners, approach nearest to the people of Arabia in customs and language, and keep up the most intimate intercourse with them. But the haughty Syrian Muslim, who calls Aleppo or Damascus "Om el Donia," (the mother of the world,) and believes no race of men equal to his own, nor any language so pure as the Syrian, though it is undoubtedly the worst dialect of the Arabic next to the Moghrebyn,—is obliged to behave here with great modesty and circumspection,

he is reproached with dressing and living like a Turk; and to the epithet Shamy (Syrian) the idea is attached of a heavy, untattooed clown. If the Arabians were to see the Turks in the countries where they are masters, their dislike towards them would be still greater; for it must be said, that their behaviour in the holy city is, in general, much more decent and conformable to the precepts of their religion, than in the countries from which they come.

The Mekkis believe that their city, with all the inhabitants, is under the especial care of Providence, and that they are so far favoured above all other nations. "This is Mekka! this is the city of God!" they exclaim, when any surprise is expressed at the greater part of them having remained in town during the stagnation of trade and the absence of pilgrims: "None ever wants his daily bread here; none fears here the incursion of enemies. That Saoud saved the town from pillage; that no plundering took place when the Turkish cavalry, under Mostafa Bey, recaptured it from the Wahabys; that the capture of Sherif Ghaleb led to no massacres within the precincts of Mekka, are to them so many visible miracles of the Almighty, to prove the truth of that passage of the Koran, (chap. 106,) in which it is said, "Let them adore the God of the house, (the Kaaba,) who feeds them in hunger, and secures them from all fear." But they forgot to look back to their own history, which mentions many terrible famines and sanguinary battles that have happened in this sacred asylum. Indeed, the Hedjaz has suffered more from famine than, perhaps, any other Eastern country. The historians abound with descriptions of such lamentable events: I shall only mention one that happened in 1664, when, as Assamy relates, many people sold their own children at Mekka for a single measure of corn; and when, at Djidda, the populace fed publicly on human flesh.

A Mekki related to me, that, having once resolved to abandon the city, in consequence of the non-arrival of Turkish hadjys, who supplied his means of subsistence, an angel appeared to him in his sleep, on the night previous to his intended departure. The angel had a flaming sword in his hand, and stood upon the gate of Mekka, through which the dreamer was about to leave the town, and exclaimed, "Unbeliever, remain! the Mekkis shall eat honey, while all the other people of the earth shall be content with barley bread!" In consequence of this vision, he abandoned his project, and continued to live in the town.—Pp. 200—204.

Much has been said and unsaid about Mohammedan toleration. 'The Westminster Review,' which once published an article in defence of that religion, left the question in doubt; and where these doctors are silent, it does not become us, the unlearned, to offer an opinion. We may venture, however, to hint that Mohammedanism may possibly be different in intensity in different parts of the world, and that, when any religion is perfectly neglected, its votaries are not, generally, persecutors. Mr. Burckhardt's statements respecting the toleration of the Mekkites are as follows:

'In a place where there is no variety of creeds, persecution cannot show itself; but it is probable that the Mekkis might easily be incited to excesses against those whom they call infidels: for I have always remarked in the East, that the Muslims most negligent in performing the duties of their religion are the most violent in urging its precepts against unbelievers; and that the grossest superstition is generally found among those who trifle with their duties, or who, like many Osmanlys, even deride them, and lay claim to free-thinking. There is no class of Turks more inveterate in their hatred against Christians than those who, coming frequently into intercourse with them, find it convenient to throw off for a while the appearance of their prejudices. In all the European harbours of the Mediterranean, the Moghrebyns live like unbelievers: but, when at home, nothing but fear can induce them to set bounds to their fanaticism. It is the same with the Turks in the Archipelago, and I might adduce many examples from Syria and Egypt in corroboration of this assertion. If fanaticism has somewhat decreased within the last twenty years throughout the Turkish empire, the circumstance, I think, may be ascribed solely to the decreasing energy of the inhabitants, and the growing indifference for their own religion, and certainly not to a diffusion of more philanthropic or charitable principles. The text of the Mohammedan law is precise in inciting its followers to unceasing hatred and contempt of all those who profess a

animosity gives way to an exterior politeness, whenever the interest of the Mohammedan is concerned. The degree of toleration enjoyed by the Christians, depends upon the interest of the provisional Government under which they live; and, if they happen to be favoured by it, the Turkish subject bows to the Christian. In all the eastern countries which I have visited, more privileges are allowed to Christians in general than the Muslim code prescribes; but their condition depends upon the fiat of the governor of the town or district; as they experienced about seven years since at Damascus, under Youssef Pasha, when they were suddenly reduced to their former abject state. Twenty years ago, a Copt of Egypt was much in the same situation as Jew is now in Barbary; but at present, when the free-thinking, though certainly not liberal, Mohammed Aly finds it his interest to conciliate the Christians, a Greek beats a Turk without much fear of consequences from the mob; and I know an instance of an Armenian having murdered his own Muslim servant, and escaped punishment, on paying a fine to Government, although the fact was publicly known. Convinced as the Turks must now be, in many parts of the East, of the superiority of these Europeans, whom they cannot but consider as the brethren of their Christian subjects, their behaviour towards the latter will, nevertheless, be strictly regulated by the avowed sentiments of their governors; and it would be as easy for Mohammed Aly by a single word to degrade the Christians in Egypt, as he found it to raise them to their present consideration, superior, I believe, to what they enjoy in any other part of Turkey.

The hatred against Christians is nearly equal in every part of the Ottoman empire; and, if the Muslims sacrifice that feeling, it is not to the principles of charity or humanity, but to the frown of those who happen to be in power; and their baseness is such, that they will kiss to-day the hands of him whom they have trodden under foot yesterday. In examining into the fanatical riots, many of which are recorded in the chanceries of the European consuls in the Levant, it will generally be found that Government had a share in the affrays, and easily succeeded in quelling them. The late Sultan Selim, in his regenerating system, which led him to favour the Christians, found no opposition from the mass of his people, but from the jealous Janissaries; and, when the latter had prevailed, the demi-Gallicized grandees of Constantinople easily sunk again into *Sewazy*. Sometimes, indeed, a rash devotee, or mad Sheikh or Dervish, at the head of a few partisans, affords an exception to these general statements; and will insult a Christian placed in the highest favour with the public authorities, as happened at Damascus, in 1811, to the Greek Patriarch, after Youssef Pasha had been repulsed: but his countrymen, although cherishing the same principles, and full of the same uncharitableness, seldom have the courage to give vent to their feelings, and to follow the example of the Saint. None of those genuine popular commotions, which were once so frequent in Europe, when the members of the reigning church saw individuals of a rival persuasion extending their influence, are now witnessed in the East. Whatever may be thought of it in a moral point of view, we must respect the energy of a man who enters headlong into a contention, of at least uncertain issue, and generally detrimental to his own worldly interests, merely because he fancies or believes that his religious duty commands his exertions. The Muslim of the Turkish empire, as far as I have had an opportunity of remarking, easily suppresses his feelings, his passions, the dictates of his conscience, and what he supposes agreeable to the will of the Almighty, at the dictates of his interest, or according to the wish or example of the ruling power.—Pp. 205—207.

The learning of the Mekkites is thus spoken of: 'Whatever may be the indifference of the Mekkis for learning, the language of their city is still more pure and elegant, both in phraseology and pronunciation, than that of any other town where Arabic is spoken. It approaches more nearly than any other dialect to the old written Arabic, and is free from those affectations and perversions of the original sense, which abound in the other provinces. I do not consider the Arabic language as on the decline: it is true, there are no longer any poets who write like Motanabbi, Abol' Ola, or Ibn el Faredh; and a fine flowing prose the Arabs never possessed. The modern poets content themselves with imitating their ancient masters, humbly borrowing the sublime metaphors and exalted sentiments produced from nobler and sweeter breasts than those of the olemas of the present day. But even now, the language is deeply studied by all

he learned men; it is the only science with which the orthodox Moslem can beguile his leisure hours, after he has explored the labyrinth of the law; and every where in the East it is thought an indispensable requisite of a good education, not only to write the language with purity, but to have read and studied the classic poets, and to know their finest passages by heart. The admiration with which Arabic scholars regard their best writers, is the same as that esteem in which Europeans hold their own classics. The far greater part of the Eastern population, it is true, neither write nor read; but of those who have been instructed in letters, a much larger proportion write elegantly, and are well read in the native authors, than among the same class in Europe.—Pp. 214, 215.

The next passage contains an interesting account of the government of the Desert:

'To those who are unacquainted with the politics of the Desert, the government of Mekka will present some singularities; but every thing is easily explained, if the Sherif be considered as a Bedouin chief, whom wealth and power have led to assume arbitrary sway; who has adopted the exterior form of an Osmanly governor, but who strictly adheres to all the ancient usages of his nation. In former times, the heads of the Sherif families at Mekka exercised the same influence as the fathers of families in the Bedouin encampments; the authority of the great chief afterwards prevailed, and the others were obliged to submit; but they still retain, in many cases, the rights of their forefathers. The rest of the Mekkawys were considered by the contending parties, not as their equals, but as settlers under their domination; in the same way as Bedouin tribes fight for villages which pay to them certain assessments, and whose inhabitants are considered to be on a much lower level than themselves. The Mekkawys, however, were not to be dealt with like inhabitants of the towns in the northern provinces of Turkey; they took a part in the feuds of the Sherifs, and shared in the influence and power obtained by their respective patrons. When Serour and Ghaleb successively possessed themselves of a more uncontrolled authority than any of their predecessors had enjoyed, the remaining Sherifs united more closely with the Mekkawys, and, till the most recent period, formed with them a body respectable for its warlike character, as was evinced in frequent quarrels among themselves; and a resistance against the Government, when its measures affected their lives, although they were so far reduced as never to revolt when their purses only were assailed.

'The Sherifs, or descendants of Mohammed, resident at Mekka and in the neighbourhood, who delight in arms, and are so often engaged in civil broils, have a practice of sending every male child, eight days after its birth, to some tent of the neighbouring Bedouins, where it is brought up with the children of the tent, and educated like a true Bedouin for eight or ten years, or till the boy is able to mount a mare, when his father takes him back to his home. During the whole of the above period, the boy never visits his parents, nor enters the town, except when in his sixth month; his foster-mother then carries him on a short visit to his family, and immediately returns with him to her tribe. The child is, in no instance, left longer than thirty days after his birth in the hands of his mother; and his stay among the Bedouins is sometimes protracted till his thirteenth or fifteenth year. By this means, he becomes familiar with all the perils and vicissitudes of a Bedouin life; his body is inured to fatigue and privation; and he acquires a knowledge of the pure language of the Bedouins, and an influence among them that becomes afterwards of much importance to him. There is no sherif, from the chief down to the poorest among them, who has not been brought up among the Bedouins; and many of them are also married to Bedouin girls. The sons of the reigning Sherif family were usually educated among the tribe of Adouan, celebrated for the prowess and hospitality of its members; but it has been so much reduced by the intestine wars of the Sherifs, in which they always took part, and by the late invasion of Mohammed Aly, that they found it expedient to abandon the territory of the Hedjaz, and seek refuge in the encampments of the tribes of the Eastern plain. Othman el Medhayfe, the famous Wahaby chief, a principal instrument employed by Saoud in the subjugation of the Hedjaz, was himself a Sheikh of Adouan; and Sherif Ghaleb had married his sister. The other Sherifs sent their children to the encampments of Hodheyl, Thekyf, Beni Sad, and others; some few to the Koreyah, or Harb.

'The Bedouins in whose tent a Sherif has been educated, were ever after treated by him with the same

respect as his own parents and brethren; he called them respectively, father, mother, brother; and received from them corresponding appellations. Whenever they came to Mekka, they lodged at the house of their pupil, and never left it without receiving presents. During his pupillage, the Sherif gave the name of Erham to the more distant relatives of the Bedouin family, who were also entitled to his friendship and attention; and he considered himself, during his life, as belonging to the encampment in which he had passed his early years: he termed its inhabitants "our people," or, "our family;" took the liveliest interest in their various fortunes; and, when at leisure, often paid them a visit during the spring months, and sometimes accompanied them in their wanderings and their wars.—Pp. 228—230.

Our last extract shall be from the most interesting and striking chapter in the volume, which gives an account of the Hadj. The various groups of pilgrims in their various costumes, and with the insignia and characteristics of their several nations, are beautifully described; that is to say, they are described by a simple-minded man, who did not attempt to spoil the poetry of the scene by mixing any poetry of his own in the description of it.

'The preacher, or Khatyb, who is usually the Kadhys of Mekka, was mounted upon a finely-caparisoned camel, which had been led up the steps; it being traditionally said that Mohammed was always seated when he here addressed his followers, a practice in which he was imitated by all the Khalifes who came to the Hadj, and who from hence addressed their subjects in person. The Turkish gentleman of Constantinople, however, unused to camel-riding, could not keep his seat so well as the hardy Bedouin prophet; and, the camel becoming unruly, he was soon obliged to alight from it. He read his sermon from a book in Arabic, which he held in his hands. At intervals of every four or five minutes he paused, and stretched forth his arms to implore blessings from above; while the assembled multitudes around and before him, waved the skirts of their ihrams over their heads, and rent the air with shouts of "Lebeyk, Allahuma Lebeyk," (i. e. Here we are, at thy commands, O God!) During the wavings of the ihrams, the side of the mountain, thickly crowded as it was by the people in their white garments, had the appearance of a cataract of water; while the green umbrellas, with which several thousand hadjys, sitting on their camels below, were provided, bore some resemblance to a verdant plain.

'During his sermon, which lasted almost three hours, the Kadhys was seen constantly to wipe his eyes with a handkerchief; for the law enjoins the Khatyb or preacher to be moved with feeling and compunction; and adds that, whenever tears appear on his face, it is a sign that the Almighty enlightens him, and is ready to listen to his prayers. The pilgrims who stood near me, upon the large blocks of granite which cover the sides of Ararat, appeared under various aspects. Some of them, mostly foreigners, were crying loudly and weeping, beating their breasts, and denouncing themselves to be great sinners before the Lord; others (but by far the smallest number) stood in silent reflection and adoration, with tears in their eyes. Many natives of the Hedjaz, and many soldiers of the Turkish army, were meanwhile conversing and joking; and, whenever the others were waving the ihram, made violent gesticulations, as if to ridicule that ceremony. Behind, on the hill, I observed several parties of Arabs and soldiers, who were quietly smoking their nargyles; and in a cavern just by sat a common woman, who sold coffee, and whose visitors, by their loud laughter and riotous conduct, often interrupted the fervent devotions of the hadjys near them. Numbers of people were present in their ordinary clothes. Towards the conclusion of the sermon, the far greater part of the assembly seemed to be wearied, and many descended the mountain before the preacher had finished his discourse. It must be observed, however, that the crowds assembled on the mountain were, for the greater part, of the lower classes; the pilgrims of respectability being mounted upon their camels or horses in the plain.

'At length the sun began to descend behind the western mountains; upon which the Kadhys, having shut his book, received a last greeting of "Lebeyk;" and the crowds rushed down the mountain, in order to quit Ararat. It is thought meritorious to accelerate the pace on this occasion; and many persons make it a complete race, called by the Arabs, *Ad dafa min Ararat*.—Pp. 271—273.

THE LONDON REVIEW.

The London Review, No. I. Saunders and Otley. London, 1829.

It is probable that most of our readers have met with more or fewer individuals of a class which exerts, by its character and numbers, some inconsiderable influence on the public opinion, and of which the more remarkable characteristics are in a great degree peculiar to this country. Elevated above the vulgar level of society, though neither pointed out by their rank to the homage of servility nor by the renown of vast learning to that of ignorance, in station as in mind they offer nearly the best specimens of what the social state of England can achieve for its favourites, and may, perhaps, be selected as the fittest representatives of that middle class which here as elsewhere may be safely enough fixed upon as a standard whence to estimate a nation's intellectual and moral culture. In all that concerns the habits of society, or a general acquaintance with literature—nay, in almost all that concerns the practical means of social improvement, the furtherance of public spirited projects—the promotion of popular enlightenment—our countrymen will probably be found unsurpassed in any other nation of Europe. But in habits of thought, in the formation of opinions, in reflection and discussion, and those grand and leading principles by which our sentiments and much of our practice is supported, there is a certain timid indolence, a certain impatience of all sustained argument or explicit avowal, which is, at first sight, irreconcilable with the manliness and energy apparent in the rest of the character; and which, however it may be explained by the operation of several powerful influences in English society, is assuredly inconsistent with the perfect development of either individual or social capacities. Not that the dispositions, or indispositions, to which we have alluded, exhibit themselves in the exclusion of those all-important topics of which they lame and enervate the discussion. England has long been the classic land of moral and political debate; and the only marvel is, that where there seems so sensitive a dread in every Christian man conversing on such subjects of deviating one hair's-breadth to the right or to the left of the received and fashionable doctrine, it should be thought at all convenient to admit such serious questions into the precincts of polite conversation, or to give one-self any further trouble about them than that of merely ascertaining what is held by the authorities.

We have been thrown into this morose reflective mood upon the foibles of our educated countrymen, by some passages in the first article of the able journal before us. When we venture a prediction that 'The London Review' will owe some share of its immediate popularity to the patronage of that class on whom remembrance of good dinners must prevent us breathing aught of disrespect or harshness, we are far from meaning blame to either readers or writers; for, while we think the good graces of the former will be secured by the tone of anxious impartiality and moderation in the latter, we feel assured, from the promise of the pages before us, that the favour thus acquired will be employed for the noblest and most useful ends. With a few exceptions hereafter to be noticed, we applaud the following critical confession of faith:

'Having borne our testimony against the abuse of the facilities afforded by modern periodicals, which, we conceive, is not fairly chargeable on those who cater for them, we would only briefly remark, as touching ourselves, that our object will be to stimulate instead of palling curiosity,—instead of manufacturing thoughts for the reader, to induce him to think for himself; in a word, to lend him a helping hand up the tree of knowledge, not gather the fruit for him, express its juices, and concentrate them into an extract.

'Thus much as to the minor subjects which are shared in common with a large class of luminous and amusing periodicals of annual, quarterly, monthly, or weekly circulation. But as the peculiar province of a review con-

passionately lies in those graver subjects of discussion, which, coming home as they do to the business and bosoms of all thinking men, naturally engender party-spirit, we conclude, some avowal must be made of our intended line of conduct on this head also. Now, professions of impartiality, we are aware, are the cheap and decent salvo which it becomes a reviewer to make to his own conscience and that of the public. But feeling seriously, as we ought to do, that the only merit which can give permanent weight to a review, and entitle it to a parallel with the schools of ancient philosophy, is the encouragement of such sound and dispassionate judgments as men may not blush to have formed when age has moderated their passions, we trust our practice may be found consonant with our principles. In spite, indeed, of the excitement produced by one or two unfortunate questions, we conceive, that the temper of the general mass of society is becoming more moderate on political subjects, and more sceptical as to the motives of contending parties. Like the heavy ground swell which continues long after the storm has ceased to rage, the excitement produced by times of war and trouble is slowly but surely subsiding: and the pugnacious habits wearing out, which our gazettes communicated by sympathy to men of sedentary occupations. Inspired by the animated details of second editions, a reviewer formerly launched forth to "burn, sink, and destroy," as by the tenor of his self-created letter of marque, such vessels as did not answer his signal: but in the present day, an author may, in Sir Walter Scott's language,

"Strike his flag, and bind his skiff to land,"

in the assurance that such buccannering practices will be proscribed by the late merchants of civilised ports of literature. Thus, also, with regard to politics. In the present times, it is possible, that the language of Fox, Burke, or Chatham, would expose them to be called to order in the House, and injure their cause in the eyes of the moderate. A strong bias is necessary on either side to compel and control the great and decisive movements which are in agitation on the eve of a public crisis; but, when such occasions no longer exist, the *vis inertia* which consists in the calm sense of society, naturally predominates towards the centre: private individuals are shy of pledging themselves to any more specific party than their country and their common interests, and adopt no other rule of judgment than the merits of each individual case. The time is now come when the mass of men of sense and substance, who have little to gain and much to lose by party squabbles, may, like the stout Burgher of the Wynd, sturdily walk the crown of the causeway on their lawful business, neither heeding the war-cries of different aristocratic retainers, nor interposing in the broils of the mob more than is necessary to preserve public order. Of this independent class of men, any journal which, in a different state of things, should have committed itself to certain persons, cannot well profess to be the organ, without incurring the charge of tergiversation among its former supporters. But, feeling ourselves fettered by no such engagements, our highest ambition would be to stand well in the opinion of the important body whom we have described.

'We would not be understood as meaning to decry the legitimate uses of party spirit. A principle so interwoven with the nature of man, and so extensively pervading both public and private society, is obviously intended by nature to answer an important end, and, when tolerably honest and disinterested, becomes deservedly respectable. But its office is limited in the development of truth on those subjects of vital importance with which it is particularly conversant, and on which a Review, professing to speak at all, ought to be free from its influence. The peculiar duty of the latter, which, we conceive, has not as yet been accurately laid down, may be traced by a glance at the component parts of an English court of law. Here the rival advocates, we will not say influenced by the *argumentum ad hominem* of their retainers, but bound in honour to deserve the confidence reposed in them, and favourably disposed to the *esperte* statements of their clients, are sure to thresh out the facts which it is the business of the judge dispassionately to sift and submit to the jury. The parallel, we think, will hold. The jury, who are to decide on political matters, are the enlightened and moderate portion of society; the advocates, pamphleteers, and party men; while the office of a reviewer, if he be good for any thing, precisely corresponds with that of the judge. Unless he can resolve to consider the case in question strictly on the basis of its own merits, to expose fallacies however humorously couched, and however gratifying to his private partialities, to afford a clear and ungarbled

detail of the arguments on both sides, and especially to maintain the dignity of his court, and the purity of the memorable ninth injunction in the decalogue, by severely checking personal rancour or wilful misconstruction of motives, the sooner the common consent of the public deposes him from his self-constituted office, the better. The same feeling which improves the efficacy of an advocate, destroys that of a judge, and the wit and sarcasm which are the fair weapons of an opening speech, would be misplaced in summing up evidence. His private opinions are still his own, and not compromised by the exercise of his public duty; nor on lighter subjects is he more precluded from the indulgence of humour and fancy, than his legal prototype from laughing over a good story among a party of friends.

'This, it may be said by some, is ever to halt between two opinions, and hold none in good earnest. Nor, in fact, do we choose to acknowledge any more specific than a sincere attachment to Christianity, and a sincere desire for social improvement, with the least possible disturbance of established order. Those who feel not these motives are as much out of the pale of that society to which we would address ourselves, as the unfortunate persons whom the ancients were wont to drown in a sack with obscene animals; and those who do feel them, might, one would suppose, differ from each other without rancour, and alter their opinion without discredit. There are, however, several motives, distinct from self-interest or party-engagements, which tend to perpetuate a party-bias whence once acquired. In the first place, it is gratifying to the natural indolence of man, once for all, to construct or adopt a political creed, which may, like a house, serve him comfortably and permanently, without costing any future trouble: and, in obtaining this desired end, it is an easier process to discover arguments on one side, than to weigh both. Pride, too, is always ready to father the offspring of indolence; and, in stifling all misgivings as to a person's own opinion, precludes all indulgence to that of others: nor is it likely that the grown individual who can find hundreds to second him, should resign the virile privilege of obstinacy which he maintained at the risk of his skin when an urchin. The love of passive excitement, also, to which we have alluded, operates strongly in clenching a political creed. Without a good, undoubting belief, the longer loses much of the zest afforded by party wit and satire, and by the exercise of that excursive genius which produces the blue boars and red lions on sign-posts, and political likenesses in print. There is, also, a sort of interest allied to the pure spirit of gambling, which attaches to one or other of the parties whom a spectator sees contending, and which extends from a royal bull-fight down to a maggot race. Two dogs cannot worry one another in the streets without instantly forming each his party among the crowd; much more then does the principle apply to the contests of distinguished statesmen, even on subjects unconnected with the prosperity of the country.

'Notwithstanding the influence of these several motives in producing party spirit, it is obvious enough that they have no share in the decisions of men in matters more nearly affecting their own interest. In choosing and purchasing an estate, a survey of the soil and localities is rather more trusted to than an eloquent eulogium from Mr. Robins; and past opinions are considered as neither binding nor infallible, when compared with new facts. We conceive that the portion of society who choose to be equally free in the exercise of their political judgment, is increasing both in number and consideration: and that in compliment to their decency and good sense, party virulence is gradually retreating to the shelter of parish vestries. It is on our belief in the existence of this class that we found our hopes of that which has been considered as doubtful, that a Review can exist without espousing any ready-made political creed; and it is from such that we look for a fair trial.'

ITALIAN PRONUNCIATION.

Della Lingua Italiana in Inghilterra; vagliamento contenente la spiegazione de' Dialetti e la chiave della vera pronunzia, da F. C. Albites di Roma; Accademico Georgico, &c. Rolandi. Londra, 1829.

THE author of this pamphlet, not seeking in any remote and abstruse causes an excuse for the very partial knowledge of his mother-tongue in this country, has preferred to exercise his national courtesy by attributing the defect rather to the instructors than to the pupils,—to the Italians themselves, and not to the 'generous English'

amongst whom they are housed. However kind and flattering this may be, some traces of a motive not the most disinterested in the world will be seen throughout his Essay; and, having made this discovery, it is necessary to follow him with much circumspection. Yet the theme is neither hackneyed nor unamusing, and may afford good scope for a few passing comments.

In the compass of three-and-twenty short pages, Signor Albites professes to eulogise Great Britain, to explain the English love of travels, to analyze the dialects of his own language, to prove that these dialects are commonly taught in England, instead of the true *scelta Italiana*, to lay down a remedy, with much more of an incidental and collateral kind; 'which is impossible,' as say the geometricians. Now as to Britain, we all know that she is very great—as to the travelling mania, it does not require explanation—as to the dialects of Italian, the passage referring to them is the first that deserves translation.

'I say that they reckon six principal dialects in Italy, which should all be avoided. They are the Piedmontese, the Lombard, the Genoese, the Romagnole, the Venetian, and the Neapolitan.

'The Piedmontese is very nearly French spoken as it is written; and Turin is considered its headquarters.

'In Lombardy, the words almost always end in consonants, as also in Milan.

'In the Genoese, the syllable *ott* is predominant, and the *g* with a French pronunciation.

'The Romagnole is chiefly made up of words cut short, open and nasal as at Bologna.

'The Venetian is slow, and frequently agreeable; the *s* is very common, and nearly all the words seem to terminate with a grave accent.

'The Neapolitan is extremely broad and varying, and full of diminutive endings in *illo* and *ullo*. These dialects may be distinguished into the Northern and Southern, calling by the former title the Piedmontese, the Lombard, and the Genoese.

'It will do for a rule to any one who is in search of a good and genuine Italian pronunciation, that in our Northern provincialisms, (if for no other reason than the neighbourhood of the Alps,) there is prevalent the thin *u* of the French; the double consonants are never considered; and, besides this, the Piedmontese, Milanese, and Genoese say, *torcaneggiando*, such words as *signora*, *enure*, *padruna*, *cuginal*, instead of *signora*, *onore*, &c.; *belleza* instead of *bellezza* *altesza*: and, at Venice, *siabolo*, *sioco*, are used for *sciabola*, *sciocco*; *elgi*, *figlio*, for *egli*, *figlio*, and so on. On the other hand, the Neapolitan and most Southern districts have the vowels as broad as possible, &c.

From this he proceeds to illustrate the old maxim, '*Lingua Toscana in bocca Romana*,' by analogies upon the phrases of the one and the accent of the other; which naturally lead him to an explanation of the peculiarities of true pronunciation, an examination of the vowel sounds, the effect of the double consonants, &c. If what he says be correct, it is, nevertheless, far from being enough for his purpose. A great deal would be required to cure the lazy English habit of slurring over the vowels of other languages nearly as they would those of their own, and still more to instruct them in the rhythm of Italian words—that syllabic cadence which chiefly characterises the language, and invests it with a musical propriety, which is, perhaps, a bar to other and higher uses. It is in this respect that our pronunciation is generally defective. We amble over a sentence, pausing neither here nor there, but getting to the end of it with one measured, uniform step. The surface of the real language is all broken into inequalities, soft and easy; or the speakers are like certain animals with feet of different lengths, so that they fall heavily on one part, and lightly and trippingly on the next. In most of the Italian words, one syllable only is accented; and not merely accented, but marked with the whole stress of the voice. Take care of that syllable, the rest will take care of themselves; finding shelter under its breadth of tone, or hurrying along after it, like loiterers trying to overtake it. If any number of words is examined, this will be found almost

versally the case; but it must be confessed, that we fail to nearly an equal degree in the mere naked sounds of the vowels in their different positions. The *e* is generally thought an exact representation of the premier of our alphabet. The *o* has none of the roundness and fullness like the tones of musical glasses, which belong so exclusively to the Italian language. The exceptions to the open sound of these vowels are very few. In the long penultima of the infinitive in *ere*, and the imperfect tenses of verbs in *ere*, the penultima of words ending in *one*, *oso*, *ore*, *orno*, or when followed by a double consonant, these vowels are pronounced with the *chinois* tone. Half-a-dozen other cases of single syllables may be mentioned; and, besides these, we shall find no variation from the open, drawing tone, which the English do not acquire very readily. Signor Albini attributes this defect to their habit of speaking with a contracted mouth, and recommends keeping it unclosed by some artificial means, to facilitate the free articulation of these sounds.

Thinking that he has not urged sufficiently the importance of his own rules, and the extent of our countrymen's transgressions of them, it seems also to us, that he has insisted too much on the subsequent portion of his treatise in which the tribe of Italian teachers is attacked without mercy, as being incapable of infusing the true principles of pronunciation. If the charge had been against their systems of instruction—the irrational and awkward processes employed to give a smattering knowledge of the language, our acquiescence in it might have been most cordial. But as to pronunciation, all men of any education would be free from the provincialisms to which he has referred; and, though they might retain something of the district to which they happened to belong, yet we cannot think this small aberration from the true standard an evil in any degree comparable to their other unfitness for their vocation.

As to the notion of *licensing* Italian teachers, and excluding from the worshipful brotherhood of pedagogues all such as could not obtain a certificate of qualification from a Board of Superintendants, to be appointed for the purpose, we cannot imagine any thing more impracticable or foolish. And, having said this, we will quote from the pamphlet two or three lines of advice to our excellent friends the tyros in pronunciation, hoping sincerely that they may set to work many a sweet lip in the successful practice of Italian euphony:

'Open your mouth to the vowel sounds, except in those few cases which have been mentioned; articulate with a leisurely and soft precision, even to affectation, the final syllables of every word—with no fear of its appearing unnatural; throw a strong emphasis on the double consonants, lengthen the accented syllable to the utmost, and your pronunciation will soon be good.'

BRITISH PHYSIOGNOMY.

An Essay on the Physiognomy and Physiology of the present Inhabitants of Britain; with References to their Origin as Goths and Celts. Together with Remarks upon the Physiognomical Characteristics of Ireland and of some of the neighbouring Continental Nations. By the Rev. T. Price. 8vo. pp. 121. Rodwell. London, 1829.

THIS is a very well-meant book, on a very important subject. It is Mr. Price's object to prove that all the differences between the races of mankind are produced by variation of climate and circumstances, and are original distinctions. Mr. Price thinks that the contrary doctrine to his is opposed to the statements in the Mosaic history. But, though he is unquestionably altogether in the right in attempting to maintain by argument the authority of the Scriptures, we confess that we do not think that authority at all so explicit on the matter as Mr. Price seems to suppose; for many of the wisest and many of the best men, who have thought about religion, have been con-

tent to see in Adam only a type of the human race.

The writer proves very clearly (what no one ever doubted) that climate can work very striking changes in the physical characteristics of a nation; but he has totally failed in showing that there are not some characteristics which no circumstances can affect. Besides the instances to the former effect, mentioned by this writer, there was, if we remember, a tribe of Huns, called the White Huns, in consequence of their change of complexion. Of examples of the other kind of change, we recollect none at all decisive; and the nearest approach to the required proof is little more than a vague account, by Dr. Dwight, (see his 'Travels in New England,') of certain negroes growing white. We quote the following from a chapter which is remarkable for its amusing extravagance:

'Having seen how the physiognomy of nations is affected by change of climate, it may next be asked how we are to account for the difference, which exists in the same climate; in the island of Britain, for instance, between the xanthous and melanic temperaments, or between the blue-eyed and dark-eyed races, which has been the subject of so much discussion and unfounded statement, and which has given rise to the system of Gothic and Celtic distinctions. Here, then, we come to the principal object of this Essay; which is to show that, even within our own island, there exists a cause sufficient to produce this variety; and whose existence has hitherto not been even suspected by Physiologists.

'And while these learned men have gone roving about through Germany and Scandinavia (in imagination, at least; for some of them appear to have seen but little of the nations they describe), in search of the grand features of the blue-eyed Goths; and amidst Hyperborean twilight for the dark-eyed Celts; the actual cause of this physiological distinction was lying, all the while, close to them,—nay, even under their very feet. For it is a remarkable fact, and no less so, as having remained so long unnoticed, that in Britain the dark-coloured eye is always found to prevail in the neighbourhood of COAL MINES; and where COAL is used as the general fuel; while, on the other hand, the light or blue eye belongs to those districts, in which that mineral is not used; and notwithstanding the numbers of persons continually pouring into the coal districts, from other parts of the country, in consequence of the demand for labour, yet the prevalence, in the former, of the dark eye, especially among the children, is so evident, that whoever will take the trouble to make the observation will most assuredly acknowledge the accuracy of this statement. In what way the sulphurated hydrogen, &c., occasioned by the coal fires, affects the pigment of the iris, it is not now my intention to inquire. I consider it sufficient, for my present purpose, to establish the connection between the use of coal, and the dark colour of the eye: though, from repeated observations, I feel assured, that there are more curious facts connected with the subject than have yet come under the notice of physiologists; and which, when properly developed, will considerably alter the bearing of many opinions, hitherto entertained.

'But, as a system so new and unlooked for cannot be expected to be received without proof, I shall state such facts as, I trust, will be sufficient to place the matter beyond all reasonable doubt. And as the Principality of Wales affords a great variety of the different characters alluded to, I shall, therefore, commence with that portion of the island. And, though writers upon this subject have generally referred to the colour of the hair, yet I must state my opinion, that it is by no means so steady and decided a characteristic as that of the eye. The hair is continually changing its hue, even in individuals; for what in the child is yellow, becomes in a few years brown, and, at maturity, not unfrequently black; but the colour of the eye is much more fixed, and unchangeable; usually assuming its character of hue, at a very early period of infancy, and retaining it, without any great variation, to advanced age. Besides, the light eye is accompanied by every shade of hair, whether red, yellow, or black. And the colour of the eye is apparently less influenced by those external causes, which sooner or later must succeed in changing the general physiological character. And, while I am describing the several districts upon which I have made observation, I must state, that in grown-up persons I have generally found the hair to have more or less a shade of brown; and, though black is

not uncommon, and is sometimes seen, yet the people of Britain are, in the aggregate, a brown-haired race.

'But, to proceed with this physiognomical survey:—Almost the whole of North Wales, and a considerable portion of South Wales, is occupied by a light or blue-eyed people. This feature is so obvious, that Dr. Macculloch attributes it decidedly to a Belgic extraction, and says: "No other supposition will explain the Gothic race, or blue eye of North Wales." This temperament is observable in Anglesea, Caernarvonshire, Merionethshire, and the adjoining districts, in which the people generally use peat or wood fires, until we come to the south of Breconshire, and approach the great coal basin of South Wales, and then an almost sudden change is observed. The light eye ceases to be general, and the dark prevails, and continues to do so, through a great portion of the counties of Glamorgan and Monmouth; so much so that, in the vale of Neath, the coal-black eye is very generally seen; and, even in Merthyr Tydvil, notwithstanding the continued influx of strangers, this feature is very distinguishable, especially among the children of those who have been some time settled there. On coming from the districts of the peat and wood fires into this part of the Principality, this change in the colour of the eye is singularly striking and observable. And it is a remarkable coincidence that this is the very country of the ancient Silurians whom Tacitus describes as possessing characteristics which might have attended this feature and temperament, and which induced him to suppose they might be a colony from Spain. The ancient castle of Dineorwen in Glamorganshire is said to have been one of the strong holds of Caractacus.

'But, though the black eye still remains, I have not been able to ascertain that the hair of the present Silurians has a greater tendency to curl than that of their neighbours; nor is their complexion darker than that which in Britain naturally accompanies the melanic temperament.

'Whether the ancient Silurians derived their dark complexion from the use of coal, or whether they were really a colony from Spain, as Tacitus is inclined to suppose, I cannot undertake to say; but it appears certain, that they were acquainted with the use of coal, which is found in such abundance in their country; as Pennant informs us, that an ancient flint axe was actually discovered in one of the coal veins of Monmouthshire.

'As we return from South Wales, the change becomes visible, in the course of a few miles; for, as we quit the vicinity of the coal fires, the light eye resumes its prevalence, until we approach the coal of North Wales, in the neighbourhood of Rhosabon and Oswestry, where the dark eye again appears; notwithstanding the smallness of the coal basin, and the number of strangers employed in working it.

'But, though the people of North Wales are generally a blue-eyed race, as Dr. Macculloch has justly observed, yet that colour assumes various shades; and from Conway to Holywell the iris has an extraordinary uniform leaden hue, the dark shade, as I apprehend, being thrown in, by the small supply of coal along that coast.'—Pp. 35—40.

HISTORICAL CARDS.

Historical Game of England. J. Betts. London, 1829.

WE do not commonly approve of the modern fashion of chopping up knowledge into games and catechisms, as we are of opinion that the ordinary effect that such contrivances have upon history, is the same as that proposed by Sner in his plan for dramatising the Penal Code; namely, the sending it into disuse. We must, however, in justice to the game under our notice, allow that, if it may not perhaps be altogether free from the objections which usually apply to such productions, it is at least by far the best thing of the kind we have ever yet seen; and, if judiciously used, we have no doubt it may be made an aid, instead of being, as such things usually are, a hindrance to education. The game consists of one hundred and forty-four small cards; on each of which is printed some question in history: these are to be divided equally among the players, each of whom, in turn, is to play his or her card, and give the answer to it, which, if correct, entitles the player to the receipt of a counter from the bank; if wrong, subjects him to a fine to the same

extent. There is, of course, a key, containing the answers, and which sets forth that one of the children may read them for the benefit of the rest: this we object to, because the children, if allowed to study the key, will immediately turn the game into a mere catechism of question and answer, and will thus be led to consider that as *knowledge* which should *only* be the *test* of it; or, in other words, will be satisfied with the meagre account of historical facts contained in such answers, rather than take the trouble to seek for them in the more orthodox channels of history, and will thus reduce the game to nearly the same worthless state as that of other games of the kind, where the only historical lesson to be learnt consists in the payment of a certain number of counters at such events as the execution of Charles I., and the receipt of a certain number at such as the Restoration, and frequently spoiling even the lesson to be so learnt by inverting the order of payments and receipts.

We do not criticise the game in an historical point of view, because the author states in the key that he lays claim to no historical merit, having compiled it principally from Goldsmith; but we must observe that, in calling Dryden, the poet, *par excellence*, of Charles II.'s reign, the name of Milton should not have been wholly omitted.

There is a chronological table or stream of time, given in the key, which, as it is far past the comprehension of children, can be no excuse for showing them the key itself; and, while we are on the subject of chronology, we must say that we think the questions concerning the dates of kings' reigns, with the births, deaths, and successions of their lines, had better have been left out, as they are of no possible use, and only tend to give the game that character which we so strongly object to.

SOUTH AMERICAN POETS.

Poetas de J. Fernandez Madrid. 12mo. London, 1828.

M. MADRID, the present Ambassador of the Colombian Republic at this Court, belongs to the small number of American writers who, though formed after the same taste and principles, and by the same influences, as the modern Spanish school, are at the head of the founders and supporters of the infant literature of the Transatlantic States. The talents of these writers, mingled with the maxims, and lighted at the torch of liberalism and of the love of that independence which they have in a great measure acquired by their own efforts as public functionaries, very naturally adapt themselves to the new class of ideas and sentiments among their compatriots; and, while they address them in the same language and the same forms used by the Muses who present their offerings either to the despotism or the prejudices of Old Spain, they at the same time let them hear the voice of liberty, and continually communicate fresh principles which are common to the liberalism of both hemispheres,—thus forming of themselves alone the literary corps of the rising states of South America, until the development of their own elements shall occasion the formation of a national and characteristic literature. It is remarkable that among American writers poets are almost the only class who have made themselves known during this early period; not that there are wanting individuals—themselves, by the bye, for the most part poets—who have successfully cultivated, and published works of considerable merit on, the most important departments of science and subjects of more immediate utility; but, if we run over the names of those most distinguished by their intellectual eminence, we shall find them all crowned with the laurel of Apollo, more or less verdant, and more or less deserved. M. Olmedo, late Ambassador from Peru to London, has already merited applause among the judges of Spanish literature: in this

metropolis for his excellent poem 'The Victory of Junin,' and for a translation into Castilian verse of Pope's 'Essay on Man.' M. Bello, also, Secretary to the Colombian Embassy, has enriched the 'Repertorio Americano,' published quarterly in London, with his beautiful compositions; and his superior, M. Madrid, who holds a high situation on the American Parnassus, has just published a collection of poems under the title at the head of this article. These compositions are various: the patriotic ode and song, the philosophical dithyramb, the playful or simple terzillo, love verses, satire, epigram, and sonnet. M. Madrid celebrates liberty and the glory of high deeds wherever he meets with them. With equal enthusiasm he exalts Bolivar, praises Riego, sheds bitter but noble and manly tears over Europe as she was fettered, in 1824, after the invasion of the two peninsulas, evokes the shades of Lacy and Portier in behalf of Spanish liberties, and rejoices in the triumph of the Cortes in 1820. In such poems, as indeed in every part of the volume, he shows himself to be a ready versifier, an experienced master of the fine language in which he writes, and not unfrequently he displays fire, strength, and irresistibility; but these are not his forte. His philosophical reveries when contemplating the moon on a fine night, or fathoming mysteries and forming high thoughts on the soul's immortality, attach the mind and induce reflection rather than move the heart or warm the imagination, without often participating either of that stiffness which is the effect of research, or of that poetic jargon which springs from an overweening love of harmony, which are the two reigning vices of the Coryphæi of modern Spanish poetry. But neither does the peculiar talent of M. Madrid show itself in compositions of this class. It is in the tender and delicate affections of the friend, the husband, and the father, that he is at home; and there he expresses himself with all the felicity belonging to the sentiments which he conceives. It is in his descriptive love-poems, as, for instance, the small collection he has given us under the title of 'The Roses,' and in those especially in which he abandons himself to the simple sportiveness of the domestic affections, and to the unstudied transports of conjugal and paternal love,—it is here that M. Madrid amuses, interests, pleases, and even melts. In short, all his compositions prove him to be a poet exempt from the defects of false pretensions; and, if any of them betray signs of feebleness, it is because he sins on the side of simplicity rather than on that of bombast, and restricts himself to the natural and true, instead of resorting to the borrowed enthusiasm and weak conventionalities which we find used in the composition of a great number of the poetical productions of Spain in every age.

NEW MUSIC.

Fantaisie Brillante pour le Piano-Forte, sur des Thèmes de l'Opera Semiramide de Rossini, composée et dédiée à Mademoiselle M. E. Williams, par François Hüntén, op 29. Cocks and Co.

THIS publication presents a brilliant, clever, and well imagined fantasia, upon a few of the most admired airs in 'Semiramide,' particularly the andantino of the overture, part of the beautiful duet, 'Il madre rea,' and the very pleasing air, 'Ese ancor libero.' The ingenious author (who seems to be rising into general notice) has evinced considerable fancy, taste, and judgment, in his selection and general arrangement.

Overture to the popular drama, Monsieur Mallet, or my Daughter's Letter, as performed at the Adelphi Theatre, composed and selected by John Barnett. Barnett, Moncrieff, and Co.

THEATRICAL overtures (at least in this country) must be always written under such peculiar limitations, to catch the ear of the multitude, that a composer has but little scope afforded him for either indulging his fancy or exhibiting his science. Barnett has done as much as could be expected under these circumstances,

and the overture to 'Monsieur Mallet,' may be rendered a very acceptable and pleasing lesson for the piano-forte. The *Marabillas Hymn*, and the very popular air from 'Le Petit Chaperon Rouge,' 'Dis moi pourquoi,' are ingeniously introduced, and the whole is presented in rather an easy and familiar manner.

'Oh come with me, I'll row thee o'er,' sung by Mr. Sinclair, in the opera of 'The Earthquake, or Phantom of the Nile,' and composed by himself. Dale.

A SIMPLE, pleasing, allegretto Grazioso in A, 6-8 time, quite in Sinclair's style, and well adapted as a ballad for general performance; thus, we presume, it is likely to be favoured with an extensive circulation.

Echoes of the Alps. A Fantaisie for the Piano-Forte, in which are introduced the popular Swiss airs, 'The Pastor of the Alps,' 'The Goatherd's Boy,' and 'The Swiss Drover Boy of Appenzell,' with the most admired embellishments, as sung by Madame Stockhausen, composed and inscribed to Mrs. N. M. de Rothschild, by Moscheles. Mori and Lavenu.

THE above explanatory and rather lengthy title, perhaps, sufficiently describes all that may be necessary: we can therefore only add, that the piece is in Moscheles' best manner, and will form an excellent companion to his two former productions, 'Gems à la Sontag,' and 'Gems à la Pasta,' which have met with extraordinary and deserved success, and are to be found in the musical library of every person of good taste and abilities. The melodies chosen are those most admired in Madame Stockhausen's performances, and which she sings with excellent characteristic purity and pleasing effect, particularly 'The Swiss Drover Boy.'

Historical Painting.—Ministers who have spent so much money, some well, and some very ill, in the collection which forms the National Gallery, might annually devote 4,000*l.* or 5,000*l.* to be given as premiums for two or three historical pictures, celebrating at once the progress of the arts, and the memorable events of the country. This reward to be open to all English artists, whose works should be submitted to certain competent persons of independent character, to be judged of by their merits, and the palm to be awarded accordingly. It would be consistent, and good policy, not to withhold an inferior stake from the second in the race.—*Morning Chronicle.*

On and Upon.—We have two words which we use indifferently; on and upon. It appears to me that those who study elegance, by which I always mean precision and correctness, may show it here. I would say upon a tower; on the same principle, I would say on a marsh. There would, indeed, be no harm in saying on a tower; but there would be an impropriety in saying upon a marsh: for up, whether we are attentive or inattentive, whether we have been a thousand times wrong, or never, means somewhat high, somewhat to which we ascend. I should speak correctly if I said 'Dr. Johnson flew upon me,' incorrectly, if I said 'he fell upon me.' Custom is a rule for every thing but contradiction.

Learning raises up against us many enemies among the low, and more among the powerful, yet does it invest us with grand and glorious privileges, and confers on us largeness of beatitude. We venture on our studies, and enjoy a society which we alone can bring together. We raise no jealousy by conversing with one in preference to another: we give no offence to the most illustrious by questioning him as long as we will, and leaving him as abruptly. Diversity of opinion raises no tumult in our presence: each interlocutor stands before us, speaks, or is silent, and we adjourn or decide the business at our leisure. Nothing is past which we desire to be present; and we enjoy by anticipation somewhat like the power which I imagine we shall possess hereafter, of sailing on a wish from world to world.—*Lander.*

A STORY WITHOUT A NAME.

CHAP. I.—THE COUNTRY CLERGYMAN.

I SHALL not trouble my readers with a minute description of the village of Melcove. Those of them who have never visited the south coast of Devon, on which they will learn from the map that it is situated, may consult the fashionable novels for village scenery, which will suit mine or any other in the United Kingdom. Those who have enjoyed that singular advantage, will easily construct it for themselves. They will immediately picture to themselves a shingly beach terminated on each side by rocks, consequentially protruding themselves into the sea, and forming it at that point into a semicircular bay. They will conclude that the entire village is enclosed by hills, which render it inaccessible to the carriage of any gentleman who has not instructed his horses in the practice, familiar to the Bucephalus of the country, of approaching it on their knees. Further, that the *soi-disant* village is divided into three parts, the first, the old fishing street, newly embellished with brick houses, the upper apartments appropriated to lodgings for genteel families, the lower to the shops of butter-merchants and tallow-chandlers,—the second consisting of rows of houses which have been built close to the sea by enterprising individuals, who have generously ruined themselves that they might afford invalids the convenience of being broiled by a burning sun in summer and washed out of their cabins in winter—and the last, which, receding further from the sea than either of these former and forming a variegated back-ground to the prospect from the water, consists of the villas of resident gentlemen: that these are formed upon the classical models of the towns round the metropolis, that they are generally embosomed in a shrubbery of green treellings, one of which, in shape and stature proudly eminent, eclipses all its brethren by attaining the gigantic height of six feet, and that the interior of them is sacred to Tory politics, short whisk, and ennui.

The only additional requisites which they will probably deem quite indispensable, will be an old broken-backed individual, whose memory has failed in every other point, but who remembers perfectly the time when not a single house was to be seen for three miles round—a church, and a parsonage-house. The last of these buildings was occupied, when I knew Melcove, by the Rev. Mr. M'Kinnon. By an accident very uncommon in Devonshire, the tithes of the living of Melcove were not in the hands of a lay impropriator, and the right of presentation belonged to the College of —, Oxford. Mr. M'Kinnon was a fellow of that ancient and religious foundation, and his history very much resembled that of all members of all ancient and religious foundations.

In early life, he had probably the same feelings—the same passions—the same anxieties, and the same hopes as belong to the rest of his species. But extravagance made it convenient, and his interest (it was many years before the Coplestonian dynasty began) made it easy to acquire a fellowship. When he gained it, he had no thought of residing at the University. He had even taken a curacy—preached his first sermon—was commencing a life of activity—and very nearly escaped turning out a useful member of society. But the curacy was one of that dangerous kind which are advertised in Mr. Parker's shop, as being within a convenient ride of Oxford. He felt the attraction of the Combination-room more and more powerful. He fancied that the people of the village were not sufficiently literary in their tastes, though he had very patiently endured, for three years, the company of men whose love of letters had never carried them beyond the University Calendar on one side, and the Racing Calendar on the other. Every day he was becoming more anxious for the literary ease, as it is facetiously called, of a college life, when

an event occurred which would have roused the energies of most men, but which only fixed the determination of M'Kinnon to bury himself in his quadrangle at Oriel. On a visit to a friend, he fell in love with a pretty girl of nineteen, who had not the slightest objection to his addresses, nor a single sou in the world to make them reasonable. As they were sufficiently persuaded that under these circumstances the union must be deferred, M'Kinnon found no difficulty in persuading himself that he should be constantly at Oxford, in order to watch the devolution of college livings. Once established there, the usual consequences followed. Except the distinguishing circumstance of his writing a letter once a week to his mistress, a practice which he commenced the first year from love, and continued throughout the rest from habit—his pursuits in a very short time were exactly like those of all other fellows in all other universities. He took the regular rides, looked regularly at the paper, walked regularly in the Christ Church Gardens, went regularly into the Combination-room, sported regularly one joke a day, slept regularly three hours in an evening. His love had no other effect than to relieve the natural heavy inactivity of the college countenance, with a look of maudlin sentimentalism. Time rolled on, and every year he became more intensely a monk, and every year his innamorata sighed more deeply over the longevity of incumbents. At length, when twelve years had elapsed since their engagement, the vicarage of Melcove became vacant, and the parties with the susceptibility of their feelings quenched, their affection worn down into a custom, plighted their melancholy vows to each other. It would have been difficult for any person except one who had changed as much himself in the interval, to believe that the sorrowful, wasted-looking creature on whose cheeks hope deferred and sickness had left such deep traces, was the same identical being with her whom he had first met in the animation and loveliness of nineteen. But M'Kinnon had proofs within, how entirely a being may be transformed by time and circumstances. His own life was gone into the sear and yellow leaf; and it was far better that his partner should exhibit a corresponding decline, than that she should increase, by the pre-eminence of her charms, the consciousness of his own decay. In some respects, M'Kinnon's new situation was well adapted to him. In leaving the regulated Madeira temperature of a college life, he had not been thrown, as is sometimes the case, with persons in his situation, into the roughest airs, and most trying vicissitudes of the world's climate. There were still about him many things which reminded him of old times. It was true that the horses which did duty upon the Devonshire hills did not very forcibly remind him of those which he had been used to mount in his solitary rides to Woodstock. The circulating library recently established on the beach did not associate itself very strongly with his recollections of the Bodleian, nor had he very often occasion to inflict upon the squires around him the salt and water penalty for Latin quotations. Still there was much that was very classical and Oxonian in the village of Melcove. There were the evening parties of Dowagers—a little less affected perhaps, but quite as fat, and quite as foolish, as those who used to smirk and bridle at the Isiac coteries. Then again, if the entire enjoyment of the dinner-table was something disturbed by female presences, there were the consolatory three hours after their departure, when he shone forth in all his lustre, convinced every unflinching Tory while he yet saw single, that the Constitution was in imminent danger from the saints and the Jacobins, established the connection between the principles of John Wesley and Mirabeau before the two-bottle men began to stagger, and pledged his auditors to stand and fall with the Church and Constitution, as they one by one sank under the table. And then, best of all,

there was the pleasing excitement of the evening rubber, which was not at all less pleasing to M'Kinnon, because his company were not quite so well read in Hoyle as the veteran players at the University.

In due time, however, the establishment of a Methodist meeting and a gaming-table in his parish convinced the Rev. Mr. M'Kinnon that it was necessary to attend rather more diligently, than was consistent with all these agreeable occupations, to some of the more active duties of his station. He had always preserved a strict and dignified manner; but from this time the clergyman began to appear much more prominently in his department. He preached on alternate Sundays against the sin of schism and that of gambling; and, though I cannot take upon me to say that he entirely eradicated either of these crimes out of his neighbourhood, yet I have been informed upon good authority, that his sermons against the latter were duly attended by many who had been suspected of a leaning to nonconformity, and that from that time forth, not one of these persons was ever seen at the Rouge and Noir table, whilst not a few young rakes acknowledged themselves so deeply impressed by the preacher's arguments against Dissent, that they fully abstained ever after from frequenting a Methodist Chapel.

In addition to these labours, it having been suggested to him that one way to keep the poor from revolution was to give them food, Mr. M'Kinnon administered soups, made after a receipt similar to that in the 'Rejected Addresses,' every day to a host of old women, whose husbands, I am grieved to say, exhibited so much ingratitude for his kindness that they even declined walking to Exeter in order to vote for their minister's favourite candidate. Mr. M'Kinnon thought it his duty, in consequence of this obstinacy, to preach several sermons on the duty of the poor to the rich, which were attended with his usual success, and which brought over all the rich people in the parish to his way of thinking.

But M'Kinnon had better qualities than these, which secured him the admiration of the worthy inhabitants of Melcove. He was a man of singularly kind dispositions, though in no part of his life had he enjoyed the opportunity of indulging them. He had no strength of character, none of the power which a great mind possesses of controlling circumstances. Yet circumstances had not entirely destroyed his original self. The awkwardness of a recluse which he brought with him from College, made him unfit for easy conversation with the rich, the haughtiness of a scholar for any communion with the poor. Still there were relations of life which were destined to call forth the kinder and happier affections of his nature. Conscious of his own deficiencies, he had earnestly hoped that matrimony would open all those sluices of feeling which in his convent had been closed but not dried up.

This hope had not been fully realised. His affection for his wife, though real and even deep, had been so worked upon during their long courtship, that scarcely enough remained to be the foundation for a very strong sympathy between them. M'Kinnon knew this; and, as he secretly wished that it was otherwise, though he felt that every effort on either side to renew the warmth of their early love would be unsuccessful, he looked forward with anxiety to the time when she should present him with some pledge of affection, which would, he thought, by furnishing them with a new and common object of attachment, recreate all their former feelings towards each other. For many years the gratification of this wish was delayed; at length the consummation of it approached, and M'Kinnon's heart palpitated with expectation and delight. He felt himself another man. Old monastic habits began to lose their hold upon him: pleasures in which he had till then taken delight, seemed

stale, flat, and unprofitable: the feelings of his youth returned to him, with a host of others which he had never known before: he became animated, enthusiastic, hopeful: all his past life, since the day he first became engaged to Ellen Mortimer, seemed a blank—a catalepsy, from which he was now awaking with recruited strength and energy. His very sermons lost something of their scholastic rigidity. The anticipated feelings of a father seemed to have inspired him with a new notion of his pastoral vocation,—to have made him regard his employments less as a duty, and more as a pleasure. These changes came over him so unawares that he merely felt an increased lightness and joy, without being conscious that the change was visible to others.

At length the moment arrived when his expectation was to be realised. He had laid a thousand plans for the future welfare of the infant; but he had not yet made up his mind to which sex it should belong. It would be delightful certainly to have a boy, a resemblance of himself, in whom he could live over again all the best of his days, the only days in which he had been really happy till then. Ah, there was the rub! That little being would have to pass through all the scenes which he had passed through: he must suffer the cruel insolence of school-boys and school-masters; he must be turned into a beast by college intemperance, or into a vegetable by college reading; he must have his passions unnaturally excited, only to be more unnaturally depressed; he must meet with friends who will teach him to scoff, and friends who will scoff at him; he will learn to despise himself: no, it must be a daughter—she need not suffer the horrors of school—she may be well educated at home—and, if she have miseries to undergo, at least her father will not have the misery of knowing what they are, without being able to remedy them. The—a messenger interrupted these reflections, to inform him that he was the father of a girl, and that its mother had died in giving it birth.

THE MODE OF INSTRUCTION IN ITALY.

In the beginning of this year I was at Salmons, famous for having given birth to Ovid, and for the best sweetmeats in Italy. As I am accustomed to tarry several successive days in the places I visit, that I may have time to see and examine every thing, I remained for a whole week in this town. I shall not say a word about the aqueduct, which, though built while Italy was the world's mistress, is in good preservation, nor about several other ancient monuments—for these have already been sufficiently discussed; but I shall confine my observations to a very interesting subject—public instruction. Among other establishments for this purpose, I visited one where the Director, throwing off the trammels of antiquated rules and prejudices, had the courage to teach according to reason, and pursue the method pointed out by experience as the best. I was surprised to hear the pupils speaking with an ease very rare even in the first colleges, the languages of Cicero and Demosthenes,—albeit the study of those languages was but a secondary thing. The professors being fundamentally acquainted with them, and accustomed both to speak and write in them, teach them absolutely as living languages. They use no other medium in conducting the business of their classes, conversing in Italian only with beginners; and even then they uniformly repeat in Latin or Greek, the phrases which they may have used in Italian. I had the curiosity to attend the classes. After having pronounced the customary prayer in Latin, the Professor read over the corrected copy of one of the themes, and one of the versions, which had been given out the day before, and had all been handed in to him two hours previous to the lesson, that he might have time to correct them before meeting the class. Those which he reads are usually

such as contain the greatest number of errors, that he may have a wider field for making observations and putting questions: for he does not say what corrections it is necessary to make, till he has asked some of the pupils; and I remarked with astonishment, that he seldom had any thing to add to their replies. The scholars were exceedingly attentive, and consequently understood and remembered what was said; for that which is acquired by attention is generally retained with ease. This practice gives rise to quotation and repetition, and to the application of most of the principal rules of grammar, which are not learned by heart,—the Professors being persuaded that the time spent in acquiring a mere rote knowledge of the grammar is almost entirely lost, and the labour a useless fatigue. The lecture on the themes and versions being terminated, the Professor reads a passage in Latin from an Italian book, followed by the pupils. When he changes the construction, he assigns a reason for it, and cites in his justification one or two ancient authors; and when any word occurs allusive to a peculiar custom or fact, he makes an observation to that effect: all which furnishes him with frequent opportunities of saying, and making others say, many things which are necessary to the complete study of languages. Two or three pupils then perform the same office. When they get wrong, the Professor sets their fellow-pupils to put them right, and never does it himself till he has seen that no one else is able. Afterwards, he makes the most proficient pupils translate an Italian author into Latin. The class concludes with the reading of a Latin author, translated by three or four pupils into Italian from the open book. The Professor then gives out the theme and version for the next day, and pronounces the usual prayer. The lessons learned by heart are repeated previous to the meeting of the class to a person appointed to hear them, and consist of a verb, a dialogue, and a passage in prose or in verse, which the pupils are expected to deliver in both languages. The facility with which the Professors spoke the languages they were teaching, was a very great advantage to the pupils; for we may safely place the inability of most masters to converse freely in the learned languages, among the other causes which make the English almost exclusively consume eight or nine years in obtaining, after all, but an imperfect knowledge of the Greek and Latin.

I have said that the study of the ancient languages is but secondary in the establishment of which I speak: the principal studies are Italian, mathematics, and the natural sciences. All the pupils study Italian grammar and rhetoric. They have a book entitled 'Italian Rhetoric,' perfectly well written, and full of examples, selected with much taste and judgment from the numerous works that enrich Italian literature. Arithmetic, algebra, geometry, trigonometry, the application of algebra to geometry, the infinite series, and mechanics, are taught in so many different classes. In the arithmetic class, two lessons a-week are devoted to the theory, and three to the practice, (Friday being the Italian holiday.) In the algebra, geometry, and trigonometry classes, three lessons are devoted to the theory, and two to the practice; and on holidays, when time permits, the pupils are exercised in the art of drawing plans, which they consider as a diversion, and do voluntarily, and consequently well. The Director has all the instruments necessary for this purpose. In the mechanics class, the Professor makes continual references to the arts, so that this study is not one of mere curiosity, but is rendered of very great utility,—an end which the Directors propose in every branch of their establishment. The courses of physics and chemistry are attended by all the pupils. Those who are advanced in mathematics, form a distinct class for the study of the theory of physics. For experimental physics there is but one class. Chemistry is particularly applied to the arts;

the laboratory is a very fine one and well furnished. All the students also practise the art of design, the Director being of opinion that it should be taught to all children, like the art of writing: some, he observes, are better writers than others; but the art is useful to all, and the same may be said of drawing. The drawing-master likewise gives lessons in perspective and descriptive geometry. I observed that they did not follow the method usually adopted, of first making copies of the different parts of the figure, and then of the head; but that they began by drawing geometrical figures, then the components of landscape, and last of all the individual human or other form. Experience is in favour of this method, though there be masters who do not approve of it. Nor is architectural drawing neglected; two days a week are especially devoted to it, when the principles of architecture and the cutting of stones are explained to the pupils.

The site of this institution is remarkably adapted to its object. There is a spacious court surrounded by a double row of trees, which afford in summer an agreeable shade from the hot sun of Italy.

The Director of this establishment is a man of extensive knowledge in almost all the arts and sciences that are taught, joined with a degree of urbanity, which, at first sight, might make you take him for a man of the world. He treats his coadjutors with all the respect and courtesy due to learned men; and the Professors are not, as in most private establishments for education, the slaves of their head and the servants of the scholars, to the great detriment of all. Morals, and religion its proper basis, so far from being neglected, form a principal object of attention to the Director, who is well persuaded that to make a man accomplished, it is not merely necessary that he should be learned, but, above all, that he should be good.

POETRY.

A MAN of blanched and fearful old
As human eye hath e'er beheld,
Amid the August sunset's light
Stood upon a pastoral height.

Sheep beside in still disorder
Cropped the grass and eyed their warder,
Who, within the unfinished fold,
Paused to look on one so old.

That aged traveller was bent
Like a yew-stump bare and rent,
Dreary as a fragment lone
Of a monumental stone.

And a look was in his face
That showed he was intent to trace
With a dim but earnest thought,
Deeds in perished ages wrought.

The traveller sat upon the turf,
And propped his bowed frame with his hands,
Like sailor flung from out the surf,
And laid, a wreck, on desert sands.

And each glance of falling vision
Appeared to have an eager mission,
As if in veins so cold and arid,
Life with all its keenness tarried.

Across the yellow-lighted dell
The old man's bridge-like shadow fell,
A vague and unsubstantial road,
And by a thousand fathoms trod,—

So lengthened out, so greyly drawn
O'er hedge and crag, o'er stream and lawn,—
A type before his feet 'twas cast
Of all his change-enwoven past,—

For his existence 'tangled skein
A thread to gird the world had been;
And he was now, that faded thing,
The last worn knot of all the string.

Forth the unnumbered shape was stretched
Like a thought from dream-land fetched,
Till its glimmer reached a hollow,—
Farther than his eye could follow.

A little nook amid the valley,
Bounded by scattered stones and trees,
Where twilight fancies well might rally,
Chased from those bright and airy leas.

The old man rose, and stood upright,
As if from out a funeral urn
The ashes should disclose their sprite,
And standing forth to scare the light,
Death 'mid the living should return.

To reach that nook amid the dale
Slowly he bent his way;
A lovelier evening never fell
Round one more worn and gray.

So wasted, tremulous, and slow,
He crept towards that nook below;
He seemed a patch of darker air
Amid the kindred shadows there.

Before the sun's last gem was gone
He found the broken boundary stone,
The weed, and ruin, thorn, and fern,
That made the grave-yard sad and stern;

He stopped, and lifted to his brow
That hand, so like a winter-bough;
And from his torpid heart a gasp,
To cheeks as hard and many-lined
As is the hollow oak-tree's rind,
Sent up a momentary flush.

But soon he turned his head to hear
The laughing notes of childhood's cheer,
That seemed, with a triumphant shock,
Him and those lonely graves to mock.

To him, that merry cowering child
Was not less marvellous and wild
Than if a night-cloud caught from far,
The singing of the morning star.

The children twain, who scared his ears,
He found amid a bushy power;
It was as if, with all its years,
The past beheld the present stour.

A four-year's life one shout had been
For that delighted boy;
The other was a fairy queen,
A wild-rose blossom of thirteen,
Who watched and impeded his joy.

With wonder he, and she with awe,
That ancient wanderer's presence saw,
And heedful, e'en in her alarms,
Around the boy she threw her arms.

'Twas thus the nymph, to whom was given
The infant Jove, the child of heaven,
Her cave when eldest Saturn sought,
The baby to her bosom caught.

'Say whose were these, the slab and mound?'
That old man said, each word a groan,
'This grave, with fern and hemlock round,
So green, and unapproached, and lone?'

The maiden closer clasped her brother,
And said, 'there lies my grandam's mother,'
They say that she was loved, and left,
And from that hour her soul was cleft;

She wedded in her wretchedness
With one who loved her not the less;
But after her betrothed departed,
Her days were few and broken-hearted.

She whispered, on her death-bed lying,
'Tell him I thought of him in dying,'
And say, no peace his soul shall have
'Till he hath prayed upon my grave;
And though a hundred years go by,
'Till there he kneels he cannot die.'

No dry leaf trembles more than he,
When on the bare bough shaking;
His limbs might well more steady be,
If the fixed world were quaking.

And have ye seen in ancient hall
A rusty armour on the wall,
Gush out with sudden gouties of blood?
So in his eye the tear-drop stood.

And for those children twain to see,
It was a fearful sight,
That old man sinking silently
As silence o'er earth's night.

There was a darkness on his brow,
The shadow of the coming blow,
When down upon his knees he sank
And that small world of feelings quaked.

The boy and she, the lovely, gazed,
Stricken, affrighted, and amazed:
That look was strange to her and him
As lava to the fountain's brim.

It seemed not that old age had laid
A kindly burthen on his head,
Or that his many years had been
Soft as the shower that wets the green;

Or as the weight of leaves that strews
The earth with rich decaying hues;
Or as the veils a mother lays
O'er her nursed babe in wistful days.

Not gently thus to him had come
The influence of time;
Remorse and shame had learnt to roam
With him from clime to clime.

Around him still their presence wrought,
And gnawed the kernel of his frame;
Till he, the withered wretch, was taught
To start at his own name.

And now with words subdued, yet wild,
Before the maiden and the child
He spoke; ye might have seemed to hear
The accents of an elder sphere.

O! God, thou heard'st a voice that cried
Against my soul from out the dust;
A fearful voice that never died,
Vengeance on me was in its trust.

It gathered serpents o'er my way,
And rent with scathing gulphs the flood;
And never, never let decay
The tingling torture in my blood.

I heard it in the night, its jars
Shattered the morning's time to pain;
And from amid thy quiet stars,
It echoed through my brain.

Now from the grave whose cry has given
My madness and despair;
O! God, let thrill to thee through heaven
My broken spirit's prayer!

More lowly still he sank and bowed,
Upon that lettered stone;
And from the spot there burst aloud
A single stifling groan.

A moment shook that aged form,
'Twas the last whirl-gust of the storm;
And senseless now that weary head,
More than the weeds around it dead.

POPE LEO XII.

THE interest excited in our days by the death of a Pope, is much of the same kind as that with which we regard an event connected with the antiquities of the venerable city over which his Holiness presides. The head of the Catholic Church occupies the Vatican Palace, and performs the lofty functions of the papal office, rather as a show than as a real part—as the representative of by-gone times rather than as a participator in actual affairs. In this light, whether near or at a distance, we have ever regarded the occupier, for the time being, of the chair of St. Peter in the nineteenth century. We have looked upon him as the actor of a part in an historical drama, and in that view we find, in our reflections, the materials of the following sketch. Leo XII. was made a Cardinal by Pius VI., and affected much more the lofty hierarchical demeanor of his patron and benefactor, than the simple and humble bearing of his immediate predecessor. Della Genga, however, had more sincerity than Braschi; the consequence partly of his natural temperament, partly of the times in which he had lived, and of the disasters which the Church to which he was attached had endured, and which gave a more than ordinary degree of seriousness to his religious feelings.

No Pope had ever performed with more brilliant success the outward and ostentatious functions of the viceregent of Christ than Braschi. He was fully conscious of the advantages with which nature had endowed him, and of the aptitude of his fine and portly person for the performance of the important character with which he was invested. His vanity, therefore, con-

curred with his ideas of the dignity of his sacred office to prompt him to make the most of the gorgeous ceremonies in which he was required to act the principal part, to do grace and honour to the one, and to display the other. Accordingly, the air of pomp and dignity with which from the grand balcony* he dispensed the benediction of the Holy Church on the assembled throngs below, is described as most imposing. How different the manner of his benevolent successor! In figure bent double with age, the traces of suffering and anxiety still marking his handsome features, the paleness of his placid countenance contrasting with the black though spare locks that, preserving their hue to the last, were scattered over his venerable forehead, he seemed to be giving the blessing, not of an ostentatious Church, but of one of the beloved of Heaven, the best and kindest of mortals. Braschi imposed on the senses; Chiamonti touched the heart. Della Genga affected to follow Braschi; but he acted his part better than his model, because he felt it more, and more completely sunk the ambitious individual in the devout Pope. Braschi was the Kemble of the Papal stage, Della Genga the Kean. In dispensing the benediction, he surrounded himself as Leo XII., with all the imposing formalities and circumstance which could add to the situation and uphold the splendour and dignity of the Church; he spread his arms abroad with an effect equally pompous but with fourfold fervour. He was a high churchman, and had exalted ideas of the office of the holder of the keys of Heaven; but he was moreover a devotee, and crowned with the tiara, backed by the most glorious temple of Christendom, with St. Peter's Place thronged with 50,000 of the devout awaiting the holy dispensation at his feet, when the clamour of the assembled multitude was hushed, when the bands ceased their music, and all was dead and solemn silence for a moment, ere the air again resounded with discharges of artillery and the shouts of the collected thousands, he gathered himself and rose, and with a religious sentiment, more effective than his pomp, spread his arms over the people, as if he felt that he was actually dispensing the blessing of the Almighty Creator. But to have viewed Leo in the full glory of his character, he should have been beheld during the ceremonies of the feast of the *corpus domini*, when, robed in white, but bare-headed, on his knees, and bearing the Eucharist in his bosom, he is carried on a platform up the nave of St. Peter's Church. A more complete spectacle of abstraction and absorption, whether real or feigned, than he presented on those occasions, is inconceivable. It may be, that the weakness of his health, and the lassitude of his frame, evident in his countenance, increased the effect. However produced, it was perfect. For the rest, the countenance of Leo did not favour exhibitions of this kind, it was mean and sour; but in other respects his person was well adapted for them: he was tall, or at least appeared so when robed, and was dignified in his carriage. He entered on his government with a disposition to enforce the ancient usages of the Church; but he had evidently mistaken the character of the times in which he lived. No clearer proof of this will be required than his conduct towards the Brigands, who, as soon as they found the vigour of Government relaxed after Consalvi had ceased to direct it, broke out into the most frightful excesses. Leo XII. removed the only restraints left to repress their enormities, by withdrawing the military quartered in the neighbourhood of the districts which fostered the lawless bands. He issued a proclamation, asserting the dignity of the Church, and breathing ill-tempered confidence, that the sacred word of the Viceregent of Christ, and the authority of the Virgin, were more efficacious than soldiers to reclaim the most obdurate. The presence of a Cardinal, it was deemed, would add weight and reality to the words of the proclamation, and

one was accordingly sent to publish it; but, instead of submission and respect, he met with nothing but insult; the mayor of a town was massacred under his very nose, and he returned to the capital after a few months spent among the mountains, leaving the disturbed district in a more disobedient and wretched state than ever, and with a purse emptied of the 200,000 crowns with which it had been furnished. The foreign political acts of Leo have been of the same character: he has shown a desire to assert the high dignity and office of the Holy See; but, even among those most willing to acknowledge his supremacy, has he found none credulous enough to give practical proofs of their concurrence in his views or of their devotion to the Church. In the Irish alone, perhaps, as his predecessor once observed, did he find hearts thoroughly imbued with proper ideas of the sanctity of his character and functions; but with the Irish thus to regard him, it has hitherto been a point of honour rather than of superstition. We shall see how the successor of Della Genga will find them.

ROYAL ACADEMY LECTURES.

Mr. Phillips on Painting.

IN heading the following article with this title we do not profess to be the reporters of a brilliant lecture which occupied upwards of an hour in delivery. But the pleasure we experienced on hearing Mr. Phillips, suggested the idea that such a summary of the history of the revival of the interesting art, the subject of his discourse, as could be comprised in a few columns of our journal, might be agreeable to many of our readers; and this we have endeavoured to furnish in the best manner in which an imperfect memory, and the want of the habit of reporting, and of time and opportunity for personal research, have permitted. We regret that so much should be lost by the absence of the warm and artistlike feeling, and of the often eloquent language, the natural offspring of that feeling, which were conspicuous both in the matter and enunciation of Mr. Phillips' address. Our article, we are aware, moreover, may contain some propositions for which the lecturer is not and would not desire to be responsible. Whatever there may be of erroneous, therefore, either in fact or style, we beg may be placed to our account. Had we enjoyed the power of reporting, with any degree of accuracy, the lecture as it was delivered, we should have abstained from the liberties, into the taking of which we have been, perhaps, unfortunately betrayed.

Intimately as the arts of painting and sculpture are allied, the sources whence the history of the excellence to which each has attained is to be drawn, are widely separated. While, as regards sculpture, the materials for such a history are to be sought in the works of the Greeks of the fifth and fourth centuries before the birth of Christ, we must look to the fifteenth and sixteenth of our own era, and to the productions of the great masters of that age, for the memoirs of the sister art. As no specimens of painting of the epoch when the arts of design were at their highest point of prosperity among the heathens have survived the Paganism which they graced, and to which they were probably indebted for their flourishing condition; so, although from a different cause, as it may be safely averred, the existing works of merit in sculpture, executed since the revival of the arts, are almost equally rare. On the other hand, the models of ancient Greek sculpture which have escaped the ravages of time, the violence of fanaticism, and the wantonness and ignorance of barbarism, are of a degree of excellence to which the imagination is incapable of conceiving any thing superior; while the productions in painting of the great masters of the modern schools, in their approach to perfection, are but little, if at all, behind the sculpture of the ancients, by the study of which they had so largely profited.

Whether the scarcity of ancient examples of an excellence in painting correspondent with the success with which, as we know from actual proof, the art of sculpture was practised, be the consequence of the more perishable nature of the productions themselves, or of an absolute deficiency in the number or quality of such productions, is a question, the discussion of which would require far more time and space than the present occasion would admit of our allotting to it. In justice, however, to the painters of antiquity, it must be borne in mind, that, if the few observations respecting their works which are to be found in extant authors, to whom we are indebted for all that is known concerning them, tend but little to convey an exalted idea of their merit, we must take into consideration the ignorance in matters of this description of the writers themselves, and their self-convicted incompetency to give an account at all to be confided in even of the objects of their admiration and applause. It is quite clear, from the terms in which remarkable monuments of art are extolled in the pages which often constitute the only record we possess of their existence, that the authors by whom their memory has been preserved, were too insufficiently versed in art to portray, with fidelity, their true lineaments and character, and that their real excellence has passed unappreciated. Were our notions of the sculpture or architecture of the ancients dependent, as are our ideas of their painting, on the imperfect descriptions contained in the Greek and Latin classics, how far, very far indeed, should we be from picturing to ourselves the state of perfection at which, from actual observation of existing monuments, we know that they had arrived! Is a group of sculpture formed from a single block of material?—does the bronze statue of a ram, when fanned by Notus or by Auster, emit a sound, which, however accidental the effect, the imagination of a credulous vulgar has interpreted into bleating and attributed to intention?—has a sacred edifice some remarkable peculiarity distinguishing it from other erections of the same kind, a peculiarity which would have been acknowledged by the very artist who designed it as a defect adopted by him with reluctance, and only under some local disadvantage and necessity?—are there extant tales of birds being deluded by painted fruit, of painters themselves being deceived by the execution of a curtain, taking the representation for reality?—prodigies and miracles such as these, the objects of the gaping wonderment of the vulgar, are sure to be the points on which we find the greatest stress laid in ancient writings, whenever celebrated works of art are noticed; while the true grounds on which their claims to admiration rest, if they be not entirely overlooked, are mentioned but casually, and in a manner that shows them to have been unfelt and inadequately estimated.

We should pause then before we form a conclusive opinion on the state of painting among the ancients from the accounts transmitted to us by their writers. If these, in their incapacity to discover the real beauties of a work, and in a spirit truly un-artistlike, have enlarged on effects only calculated to captivate vulgar minds, and have lent themselves to the propagation of idle traditions and improbable fables instead of attempting to understand for themselves, and to record for the benefit of posterity, the true excellencies of a performance, by no means must it be inferred that such excellence was wanting.

Of the state of painting at other periods of antiquity, far less eminent however than the Pærican age, we have the good fortune to possess actual specimens which form a more fair criterion. Even these, however, furnish the materials for a partial judgment only, since they are affected by circumstances which disqualify them for serving as standards by which the progress which the art has made can be satisfactorily measured. It would be superfluous to enumerate reasons for passing by the remains of painting which the soil

of Egypt has contributed, in confirmation of the preconceived opinions of the limited progress of the arts of design in general among that singular people, or with which it is still capable of rewarding the researches of the curious. Obvious considerations forbid our looking for excellence from that quarter. We proceed, therefore, to the notice of other productions miraculously preserved through a long lapse of ages, and not less miraculously recovered. These belong, unfortunately, we should say, could we, in our thankfulness for a boon so precious, find heart to complain at all, to a nation which affected rather than possessed a taste for the fine arts; and the epoch in which their execution is to be dated was one, moreover, in which civilisation itself had reached, if it had not passed, its climax, and in which literature and the arts were already on the decline. The specimens we allude to, we need scarcely add, are those furnished by the Baths of Titus, and other subterranean constructions at Rome of the time of that Emperor or of a subsequent date, and, in a greater abundance and of higher interest, by the buried cities of Herculaneum and Pompeii. On a comparison of the examples of ancient painting thus happily restored to the light of day with the works of the great Italian masters of the 16th century, there cannot be a moment's hesitation in pronouncing the advantage to be immensely on the side of the latter. These are in themselves performances altogether of a higher class and order, they are on a grander scale, more elevated style, and are generally superior both in science and execution. On the other hand, if we would do justice to the progress of the art among the ancients, let us take the specimens still existing as a foundation for an imaginary superstructure, in the erection of which let us be mindful of the age of decline in which those examples were produced. Let us reflect that these were not, could not, have been the most important works, even of their own day of corruption already commenced; let us give credit for the probability,—the certainty we had well nigh said, nor could we have greatly erred,—that the painters of antiquity were not less masters of the pencil than were the sculptors of the chisel; and we cannot be very far wrong in supposing that, in the famous representation of the exploits of the Trojan War, by Polygnotus, the porticos of Athens might boast of a work capable of competing with, eclipsing we dare not say, the 'Last Judgment' in the Sistine Chapel, or the Papal exploits, the school of Athens itself, which adorn the Vatican Chambers. Be it remembered, moreover, that, if truth and equal justice prevent our placing the painted stuccoes, and the elegant, though grotesque, vagaries of the Roman vaults, or of the halls buried by Vesuvius, in comparison with the works of the great masters of modern times,—they likewise forbid our treating those ancient examples with contempt. These are, indeed, by no means to be despised. They all possess merit, in various degrees, and of different kinds; and they have, moreover, qualities in common, which would honour any age or country. Some are remarkable for a purity of composition worthy of the applause of observers of the most refined taste; and others are distinguished by a display of grace and fancy in which they have not been surpassed by the master of grace, Raphael himself. He indeed, captivated by their effect, has been induced to imitate them, and led into a transgression,—if any thing so delightful, as the *Loggie* of the Vatican can be considered a transgression,—which is pardoned or applauded, in consideration (it is the privilege of genius only to be so considered!) of the splendour and grace of his sinning, and of the gratification derived from his errors. The quality most in common with the ancient specimens is simplicity of form and drapery.

Still, however, as has already been stated, it is not in the ancient specimens of the art of painting that the history of its excellence is to be

sought. For this we must look to the Christian era, as we seek that of sculpture in the ages of Paganism.

We will not discuss the question whether painting ever ceased to be followed as an art. It will be sufficient to state, that, if its practice cannot be traced *seriatim*, and century by century, through the dark ages which followed the fall of the Roman Empire, a very small interval is left between the specimens known to belong to a late period of the ancient era and a very early epoch of the era of revival. The probability, moreover, almost amounts to a certainty that it never was entirely discontinued, rude as may have been the productions of the artists of the barbarous ages. The very Catacombs in which the Christians are said to have taken refuge from the persecutions of their enemies, and to have exercised the functions of their prohibited religion clandestinely, contain vestiges of painting, which may be considered as the latest efforts of the ancient era, and as the connecting link between that era and its successor.

The proofs still extant of the practice of the art of painting during the ages of obscurity which followed the removal of the seat of Government of the Roman Empire, consist in works in Mosaic, in illustrations of missals, and in Greek paintings, to individual specimens of which last it is vain to attempt to assign a date. The ground of gold which characterises the first and third of these classes of works suggests the idea that an intimate connection existed between them, and seems to form another thread by which the Gothic specimens of the early periods of the revival are united to the floors of the Baths of Caracalla and other Mosaic works of the decaying empire. The design, however, of these two classes, the Christian Mosaics and the Greek tablets, presents a wide difference. In the former, though there is a certain degree of rudeness and stiffness, there is a grandeur which sometimes approaches the sublime. The figures of the Greek specimens, with a greater apparent affectation of art, are poor, meagre, and awkward in the extreme, and generally entirely devoid of expression. Both are confined to religious subjects: in the latter, the Madonna and Child, and single figures of saints, are the most frequent. The former are more varied in composition, covering the vaults and walls of temples with scenes and portions of sacred history, as well from the old as the new dispensation. Sometimes a single half-figure of the Almighty or of the Saviour, of rude but sublime grandeur and of gigantic dimensions, occupies the whole vaulting of the grand niche terminating the nave of the church. The illustrations of the missals are miniature figures and compositions connected with religion or the history of the Church, most of them elaborately executed, frequently abounding in expression, especially in the heads, and very richly coloured. Those most deserving of admiration must be assigned, however, to a comparatively advanced period.

We pass over the works of the painters, and they are numerous, in the van of the revival of the arts. They seem to have abounded, more than in any other part even of Italy, in Sienna, where an extensive and curious collection of their productions has been formed, to the exclusion almost of performances of greater merit; for Sienna by no means preserved her pre-eminence in this respect in after-times; although she may count on one or two names which rank in a superior class. We come then to Cimabue, and his disciple Giotto, to whom the credit of what is called the revival of the arts is generally and justly attributed. These two masters flourished in Florence, in the early part of the fourteenth century. Cimabue was the first to abandon the beaten track until his time trodden by artists, and, instead of servilely following the examples and adopting the manner of those who had preceded him, ventured to resort to natural models. Hence, his works, although disfigured

by the imperfections of the gothic age in which he lived, have a variety in outline and composition, and breathe a life and nature, until then unknown. Giotto, we are told, was a peasant boy, who, by the marvellous natural turn for drawing with which he was endowed, had attracted the attention of Cimabue who accidentally observed the skill, extraordinary in one of such an age and occupation, with which he had represented the goats and sheep he was employed in tending. He became the disciple of Cimabue, and soon surpassed his master. His works are abundant, but many to which his name is given are the productions of inferior hands. The frescoes in the ancient church of Assisi, dedicated to St. Francis, are, however, incontrovertible monuments of his genius. These are distinguished by a remarkable correspondence in principle with good Greek art, by a nice regard to consistency in adapting the disposition of the figures to their character and occupation, and, above all, by a perfect mastery of drapery. In minor points his works are not without their defects; even he had not effectually cast off the gothic trammels by which the art had so long been bound. Giotto practised with success, for his day, a sister art. The beautiful tower adjacent to the church of Santa Maria de' Fiori, the cathedral of Florence, is of his design; and, whatever objections may be made to the use of various-coloured marbles of which it is composed, there cannot be two opinions as to the beauty and elegance of the proportions and general design, respects in which it is one of the most perfect edifices in Europe.

The art had by this time fallen into a train of gradual improvement; it had been launched on the tide which flowed onward to perfection ere it was doomed to ebb; and, among the many names of artists who contributed to its amelioration there is none so conspicuous as that of the Florentine Masaccio. This artist, while he had adopted the improvements which had accrued in the practice of the art in its progress until his day, had retained all the simplicity which characterises the works of Giotto; and, discarding all extraneous matter, he exercises in a wonderful degree the art of keeping the mind of his spectator to the subject represented. Like Giotto, too, he was master of drapery, while in his heads, by means of delineation the most simple, he has invested them with an expression which far more elaborate works would fail to accomplish. In the person of Ghirlandajo, who had the honour of inculcating the rudiments of painting on that giant in art, the suitor of each of the three sisters, Michael Angelo, the revival of the art is united with its state of perfection.

To the reputation of his illustrious scholar more than to his own actual merit as an artist, Ghirlandajo is indebted for the respect paid to his name, and the curiosity with which his works are sought after. His fame would probably be greater were these entirely extinct, since the imagination could scarcely fail to impute to the master of Buonarroti much greater approach to perfection than is displayed in his performances. These, indeed, show how very slight were the obligations which his pupil owed to his tuition, since they are inferior to the works of his predecessors, in the very qualities for which Michael Angelo became especially distinguished. They may display a more studied and varied composition, more fancy and more technical skill than the paintings left by Masaccio; but they have less breadth than these, and are much inferior to them in force and elevated imagination.

The age in which Ghirlandajo lived, was that of the Medici, in which such a memorable impulse was received by civilisation in general, from the patronage and encouragement of that powerful and enlightened family. The arts felt the influence strongly, and advanced by rapid strides; they derived much improvement from the increased attention which was now given to anatomy, but found sources still more rich in

beneficial effects in the study of the antique, and in the discovery, the fruit of that study, of ideal excellence.

Although, as respects mere chronological order, there remain no interval to be filled between Ghirlandajo and Michael Angelo, it would be unjust to pass unnoticed some very worthy contemporaries both of master and pupil, who contributed in a greater or less degree to the progress towards the glorious triumph which modern art was about to achieve. The length to which this article has already run, however, constrains us to be content with the mere enumeration of the names of Signorelli, Fra Bartolomeo di San Marco, and the great Leonardo da Vinci, whose example in the application of chiaro scuro, independent of his other transcendent merits, of his success in composition, his suavity, and his fulness of expression, has conferred on painting a benefit which alone would have entitled him to an immortal name.

The advantages of such contemporaries as these, added to that of possessing, in the great Raphael, a rival every way worthy of exciting his emulation, cannot fail to have had their effect on Michael Angelo. That effect, however, must not be too highly rated; for his genius was original and creative, capable, without aid and under any circumstances, of chalking out a course of its own. However the case may be in this respect, whether profiting in a degree by the example of others, or following solely his own inspirations, the result is the same; and it cannot be denied that to the powerful genius of this great man is the art of design indebted for the perfection to which it attained in the sixteenth century. Not that this perfection is to be found unalloyed in his own works. The genius that inspired him was too mettlesome to arrest its course at the goal which it had been the first to reach; the courage and inward impulse which bore him onward in his career, were not to be controlled; and, although foremost in arriving where competition was to cease, the race had been already lost by his unruly aberrations. On this account, Michael Angelo himself, the greatest of artists, as the founder of a school has proved the most unfortunate of masters. His errors have been mistaken for beauties by followers who, themselves devoid of genius, so far from being capable of accompanying him in his aspiring flights, were unable even to view him distinctly from the distance at which he had left them, or to discern between his upward soaring and the evolutions into which the unspent vigour of his wing had caused him to deviate. Hence, if the arts of design in general be indebted to Michael Angelo for their arrival at the summit of perfection, to him also, through the blindness and incapacity of his disciples in aping instead of following him, in adopting his blemishes while they were unable to see, or to imitate had they seen, his beauties, do they owe the corruption in which they have since languished. His merit, however, should be estimated, not by the blunders of scholars unworthy of the lessons and examples of such a master, but by his own immortal works, those of the Sistine Chapel more especially, in which the sublime conception, the power of mind, the life and sentiment, the boldness, force, and accuracy of the drawing and anatomical science, (and by these all deformities are effectually veiled,) form a whole, exceeding whatever is known of great, and grand, and powerful in art.

The praise, however, of achieving the perfection of painting, appertains, after all, to Raphael rather than to Michael Angelo. The latter, it is true, had stormed the breach; but his impetuosity had misled him, when he was thus far advanced, while his comrade, who, with almost equal daring, had followed close on the heels of his precursor, had seen where to plant his standard, and had kept possession of the fortress. Michael Angelo, in fact, was, it cannot be denied, the mightier genius; he drew more from the resources of his own mind, he had more hardihood, and what he

expected was the work of his own sole unaided power. Raphael drew profit and improvement from others; but, in turning his observations to account, he also displayed the operations of a genius of no ordinary quality. The art is indebted to him, above all its other professors, for the extension of picturesque historical representation, in which he stands altogether alone and unrivalled. He added grace and the purity of the antique to its elevation and grandeur of style; and in truth and feeling he is not surpassed. The partisans of Michael Angelo have studied to depreciate the merit of Raphael by urging the improvement he derived from the example of his rival. That he did profit by the hint derived from an inspection of the 'Last Judgment' of Michael Angelo, while in its progress, as he had before profited by observing the practice of Fra Bartolomeo, may be conceded by his warmest admirers, the character of the two masters, and the history of the advance made by Raphael, as developed in the different style of his productions, taken individually, seem to attest that such was the case. In so doing, however, he did not act as a grovelling imitator, but in the manner in which an artist of real genius should avail himself of every source whence it is possible to draw improvement. He discerned, and, as far as his nature, which was of a different stamp, permitted, adopted what was good: what was faulty, he rejected; and hence, judgment, coming to the aid of his other excellencies, set on his works the seal of perfection, wanting to those of Michael Angelo. Comparing the works of the two masters as they exist at present, those of Michael Angelo have the sublimer character; and they are more calculated to excite astonishment and to elevate the imagination. Those of Raphael are more agreeable, they appeal more sensibly to the heart, and leave the judgment fully satisfied. In the highest, the intellectual, attributes of painting, nothing executed since their day has arrived at the eminence to which either of them attained.

ON THE CONDUCT TO BE ADOPTED BY THE LADIES OF ENGLAND IN THE PRESENT AWFUL CRISIS.

To the Editor of the Athenæum.

SIR,—I was extremely shocked at the levity displayed by Mr. Otway Cave, in the House of Commons, on the evening of Friday last. In the midst of a whole host of petitions from the alarmed Protestants of this now highly nervous country, what could induce the Hon. Gentleman to present one from the inhabitants of Castle Donnell, 'to prevent Hindoo women from burning themselves.' Gracious heavens! Is this a time to think of the burning of a few silly black uneducated women, when we, the wives and mothers of free-born Englishmen, live in trembling dread of the fatal day, when the fires of Smithfield will be again lit, and when, instead of the honour of burning for our husbands, we can only look forward to the melancholy satisfaction of burning with them. I know not where Castle Donnell is, but conclude from the name that it is Irish: if Irish, the petitioners probably are Catholics, and then, the motives for this petition are clear and obvious. Such is the hatred of your true Catholics to freedom of any kind, that the moment burning is discovered to be a treat to any particular set of persons, that moment they set themselves violently against it. It is evident they wish the art of roasting to be confined entirely to their own cooks. However, I have no doubt that the general principle of the meetness of burning our fellow-creatures, will induce the Papists, when in power, to extend the theory and practice of combustion to our Indian possessions. If once the Papists begin their burning tricks, how do we know where they will stop? It is of no use appealing to the good sense of the Hindoos, for unfortunately they have none; but still I think it might be made evident to them, that, if they will only abstain for a short time from burning them-

selves, they may rest assured that it will not be very long before they will have as many opportunities as they can possibly desire of indulging in that agreeable recreation. The progress of Catholic bon-fires will undoubtedly be as rapid as that of the belief in transubstantiation; and, after all the wood is exhausted in England, nothing is more probable than that the illuminati of the day will make an excursion into our Indian possessions, and, then, instead of mere solitary Suttees, the Hindoo ladies might reasonably look forward to *auto-da-fés* on a grand and magnificent scale. Long practice would undoubtedly enable them to display as much fortitude on these occasions as was shown by the most determined martyrs of old; and I should not wonder if many of them experienced a spiteful pleasure in having the company of their living husbands, instead of burning with their dead ones, as has hitherto been the fashion.

De Gustibus non est disputandum. The difference of men's tastes in different countries, and under different circumstances, has always been a matter of curious speculation to the wise and inquisitive. It is very oddly exemplified at the present moment. The Hindoos are furious at any attempt being made to prevent them from burning themselves: the people of England, nearly frantic at the possibility (some hundred years hence) of being burnt by others.

I am not a Hindoo; I have a thorough English dislike to being roasted, and I do hope and trust that on this momentous occasion, the voice of the women of Great Britain will make itself heard. I do really think, Sir, it would be irresistible. If the voice of one single woman is sometimes so overpowering, what would be the effect of all the Protestant women in England, Scotland, and Ireland joined in one simultaneous cry against Emancipation and compulsory burning. But, if you think this would be an unfair way of carrying the point, is there any objection to our petitioning? Have we a right to petition, or are we reckoned as nothing? or when they talk of the voice of the people do they include our voices? Pray, Sir, explain this, and tell us what you would advise us to do (for we cannot bear to be idle) in this awful conjuncture of affairs.

ANY THING BUT A FIRE-WORSHIPPER.

[We are truly happy to inform our Correspondent that the right of the fair population of England to rise, as one woman, in the cause of anti-combustion, is now ascertained beyond a dispute. The question was canvassed in the House of Lords, a few nights ago, on a petition being presented from some elderly ladies; on which occasion, we understand, the Duke of Newcastle, Lord Kenyon, and about fifty other noblemen, rose from their seats, and laying their hands upon their hearts, declared, that, so help them God, they believed the right of the petitioners rested upon precisely the same grounds as their own to sit in that House. Further controversy was, of course, useless.—Ed.]

MISCELLANEOUS NOTICES.

THE RUSSIAN GUARDS.—The Imperial Guard alone consists of nearly one hundred thousand men; nor can any spectacle be more imposing than when a review of this superb corps takes place. The Emperor and his brothers have bestowed uncommon pains upon its formation. The infantry is subjected to a more rigid discipline than any other European troops: the recruit is first drilled without any clothes on his back, in order that the regularity of his motions may be perfectly ascertained, and I have seen him exercised with a tumbler of water on his head for the purpose of accustoming him to an erect and firm posture. The soldiers are tall, muscular men. Their clothing has been divested of whatever might prove an incumbrance, and the present Emperor has supplied them with every article that can facilitate their movements in the field, without detracting from their splendid appearance. The mechanical parts of their exercise are performed

like clock-work, and they are perfectly so in general manoeuvres: for this they are indebted to their being daily exercised in military evolutions and sham-fights. The most distinguished regiments of this corps are those of Ismailofsky, Semenovskii, Pawlofski, Finland, and Moscov, the grenadiers, yagers, and marine corps; of one of which regiments, members of the Imperial family, even Princesses, are invariably the Colonels. Many of them date from the time of Peter the Great, and have rendered themselves notorious as hotbeds of political conspiracies.

Those who are personally unacquainted with Russia, cannot form the most distant idea of the splendour of the cavalry of the Guard. The men are generally experienced soldiers, selected for their handsome stature and military endowments, and the horses are picked with so much caution, that the copious studs in the South of Russia are scarcely adequate to supply the mounts. The expense attendant upon the purchase of these horses greatly exceeding the funds supplied by the Government, an indirect means of providing for the re-mounts has been adopted, by throwing this task on none but officers of large property. It is, therefore, become a point of honour with these juvenile aspirants to supply horses, which may enhance the fame of their respective regiments; and with this view, they double or treble the sum which is allowed for the purchase of each animal. The regimental chief considers that he makes them abundant amends by honouring them with a written testimonial of his approbation, upon their return to quarters. The leading corps of the cavalry of the Guard are the cuirassiers, the horse-guards (also armed with cuirasses), hussars, yagers, the Emperor's and Empress's cuirassiers, and the cossacks of the Don and Euxine. Each of them has always been fifteen hundred strong; the whole are commanded by the Archduke Constantine, and constantly maintained at their full war establishment. The horse-artillery is equal, if not superior, to any in Europe, for celerity of movement; and I have frequently known their horses to cost above seventy pounds each, a sum which, in a country where horse-flesh is so common and so cheap, is considered enormous. The various equipments and appendages of their field-pieces are points of equal care and expense. The service of the train is not performed by a distinct corps, but by the artillery-men themselves in regular rotation.

In none of its equipments is the foot-artillery one iota inferior to the horse; in truth, it is the finest corps of the dismounted portion of the Guard: its whole composition and outfit are as admirable as the minute attention which is bestowed upon its interior economy and training. It is commanded by the Grand-duke Michael, who leaves no stone unturned to raise its character and qualities. In a theoretical point of view it may admit of improvement; but in a practical one, few equal it, if incessant exercise can give practical perfection. A squadron of 'pontoniers' are also attached to the Guard; their arms are of a light description, and their horses carry the rider's tools. The pontoons are drawn by six horses, and are almost entirely made of copper; yet, notwithstanding the mechanical skill of the Russians, they are far behind the excellence of the French pontoons. The Engineer corps is still far from being perfectly organized in a general sense; the improvement of its pupils does not correspond with the pains taken to instruct them. It is, in fact, a branch of the general staff rather than the Guard, and its best officers are Frenchmen.—*St. Petersburg, 1828.*

MARCH OF LIBERALISM.—In consequence of the representations made by the last Hungarian Diet, the Emperor of Austria has granted permission to his Hungarian subjects of the *Protestant* persuasion to frequent foreign universities; and a considerable number have, therefore, taken their departure for Jena, Halle, Leipzig, and Göttingen, where they are partly supported by

bursaries which were founded for their benefit in former ages. Permission has also been granted to the children of the Roman Catholic faith to frequent the universities of Italy.

GEORGIAN PERIODICAL.—The Russian Emperor has signified his approval of the specific appointment of a committee for the purpose of publishing a periodical work at Tiflis, in Georgia, to be intitled, 'The Tiflis Journal.' It will be written in the Russian language.

UNIVERSITY OF BERLIN.—From a register which has been published of the students frequenting this university during the summer session of 1828, it appears that their number then amounted to 1631, whereas, in the same session of 1827, it was 1594. Of the former, 549 entered as students of Theology, 563 of Jurisprudence, 306 of Medicine, and 213 of Philosophy. Four hundred and thirty of them were foreigners.

THE DRAMA.

King's Theatre.

To us there is nothing more disgusting than the general outcry which the musical critics of this musical country have taken it into their heads to raise against the merits of Rossini as a composer.

'Mongrel puppy, whelp and hound,
And our of low degree,'

are all joining in the chorus; and the sound of his own swan-like minstrelsy is likely to be overwhelmed by the barking of these furious little animals. It must be some strange sympathy that unites in a common cause a house so constantly divided against itself, as that of our musicians. But it would not be so difficult to find as to solicit causes for this new wonder. Many, very many of those low and disgraceful motives which should be feeble were they not marked by silliness and prejudice, may be here found lurking; and it would be soiling our page were we to sketch our catalogue of them, without, perhaps, effecting any other end than to heighten and make more discordant their exclamations of spleen. One thing pleases us. The malcontents try to assume a plausible excuse for themselves. Rossini, they say, has no learning, is no musician, titillates the ears, and leaves no impression, &c. The poor subtlety of this might go down anywhere but in our own country. What right have we to be surprised in such a case? What national science can we produce? Why, then, do this faction exalt the learning against the inspiration of the art, and support the German school against the Italian? Simply because the one appears to be more within their grasp and according to the nature of their own exertions, while the other is removed almost from their imitation. The want of learning is a standing charge against every contemporary,

'qui prognavat artes
ligna se poetas.'

It nearly cheated Shakspeare of his immortality; but that was two hundred years ago, and the world should have grown wiser. Poor Rossini! The noise of these worthies from their attics will doubtless extend, fatally for your fame, to all the distant corners which have hitherto rung so loudly with your applause.—Naples, Venice, Milan, Berlin, Petersburg, Madrid, Lisbon, the Greek Isles, the Americans! And it will be no argument in your behalf, that people of such different climates and tempers, each, too, masters of a store of national music differently characterised according to those climates and tempers, should, for the first time in the history of the science, join in one universal consent of admiration and enjoyment of your compositions!

This theme is naturally suggested by the flippant remarks of some of the Journals upon the Opera of 'L'italiana in Algieri,' just produced, and 'Il Conte d'Orl,' about to be produced, at the King's Theatre. Of the former, we will say no more than that it is not fairly represented by the existing *corps dramatique*. In the first place, the successor of Ambrogetti, in the buffo part of Taddeo, is a subordinate bass, of the name of De Angeli. We remember a genuine Neapolitan, twelve years ago, one Vinco, a fellow of exquisite humour, who, on a small, ignoble stage, two thousand miles from the King's Theatre, performed the same part two thousand times better. Madame Castelli, generally ill-treated by the critics, sustains the difficulties of her part with more fortitude than could be expected from a *Donna* so completely *seconda*, though, on Thursday night, her voice was in arrears of the accompaniment, as the opening scene, by six bars at

least. Madame Pisoni may deserve commiseration for the hardship of being placed amongst Mustapha's beauties; but, as the standard of taste in some parts of the Northern African Coast has not yet been ascertained, we must show our nationality by hooting at Mustapha for his present exhibition of *gusto*. We wish it were possible to diagnose the fact, that much of this lady's fine voice is—sound, but not music. We wish most heartily that some half-dozen mountain-bred country cousins of ours were compelled to transfer to her certain portions and qualities of their own voices, now mere lumber; but the dexterity and feeling which are displayed, even with some defects of organ, make her performances, on that account, more remarkable; and we will wish no more than that all the duellists on the subject of Catholic Relief may have their fury assuaged by hearing her sing, 'Caro per te quest' anima,' which might utterly dissolve the faintest of Mr. Peel's foes. As for Donzelli, he is nearly, very nearly, perfect. We long to see him in some of Mozart's characters. The *portamento* of his voice is its grandest quality; but we are almost offending ourselves in saying so, for we consider him all-accomplished; and his 'Languir per una bella' inclines us to set his taste and expression above his other attributes as a singer.

Drury-Lane and Covent-Garden.

THE next best thing to accomplishing the ends of an establishment for instruction or amusement is, that the patentees of any such institution should exert themselves to testify their utter incapacity for such ends; and, though we will not say which side of this alternative is most usually adopted by the despots of our drama, yet we will say, without feeling ourselves culpable of any very singular rashness, that, if the conduct of the few last nights were taken as a specimen of our managers' proficiency in the art of sinking, it might be difficult to award the palm to either worthy candidate. And yet there may be somewhat of ill-humour in our present mood of viewing their achievements; for certainly there cannot be any very good reason why the breadth of grins around us, which spoke plainly that the 'play' was matter of novelty and amusement to many, should have been twitted into similitude with the critical grimace which, exhausted by the emulous repetition of the same pride, pomp, and circumstance of royalty and heroism, we muttered inwardly, 'A plague of both your houses,' and cursed heartily the desolating ambition which has urged the Swedish madman's march at once across the boards of Drury-Lane and Covent-Garden, and has prompted his great spirit's transmigration successively through the mortal frames of Farren, Cooper, and Kemble.

To give a conqueror his due honour, Peter the Great, as personified by Young at Drury Lane, appeared a prince of more predominant qualities, as well as more enlightened opinions, than his rival at the sister theatre. In the latter, an extremely disproportioned degree of prominence is given to the vanquished Charles XII; and, to humour his ferocious tastes, much din of drums and trumpets is inflicted on the ears of the audience, with importunate explosions of ill-savoured combustibles, which, although at the other house old Swartz, (Farren,) calls it coxcombry *not* to prefer by far to roses and violets, yet Mr. Price has very considerably allowed for the conceivable existence of such coxcombs among the audience, thereby sparing his ammunition and our eyes, ears, and noses; and entitling him to our thanks for his good taste, in not coveting for the temples of our 'national drama' the gunpowder attractions of Astley's. A less furious relaxation of theatrical dignity was apparently well relished by the audience; this was a jolly drinking song by Young, in his disguise of a triller, with a chorus of Swedish soldiers, which was received with a vociferous encore, and which with Liston's state of droll mystification, on being ousted of his mill, his wife, his mother, and his brandy bottle, by the mysterious and successful intruder, formed, undoubtedly, the happiest hit and crisis in the destiny of 'Peter the Great.'

The character of Charles XII., by C. Kemble, was a new manifestation of those versatile talents which establish him at home in so many fields of performance; and little Keeley was to Covent Garden's 'Historical Drama,' what Liston was to its rival's 'Musical Play.'

Great Men.—Dyers and tailors, carvers and gilders, grooms and trumpeters, make greater men than God makes; but God's last longer, throw them where you will.

The Bible.—A book which, to say nothing of its holiness or authority, contains more specimens of genius and taste, than any other volume in existence.

Fortune and Genius.—The measure of fortune are so like those of genius, as to be mistaken by almost all the world.

A myriad of kings and conquerors is not worth the myriadth part of a wise and virtuous man.

Royal Asiatic Society.—A branch of this society has been introduced at Madras. The venerable Archdeacon Robinson has been chosen president, and a son of Mr. Leashington, secretary. This Institution is quite distinct from the Madras Literary Society, though composed of many of its members.

Fine Arts.—Knight has sold 'Auld Robin Gray,' now exhibiting at the British Institution, for seventy guineas; and the Duke of Bedford is understood to have given Lance four hundred guineas for his two fruit pieces in the same exhibition. Mr. Heath has purchased a small painting by Webster, which he calls 'The Favourite,' and which will be engraved in the next volume of 'The Keepsake.'

LITERARY INTELLIGENCE.

A Practical Treatise on the superior Efficacy of the Round Leaf Cornel, in cases of primary or secondary debility of the digestive organs, and for general weakness attendant on age, or from the enervating effects of the too free use of vicious or spirituous liquors, savory dishes, or a Tropical climate, with remarks on diet and wines; to which are added, instructions for the use of the Lobelia Inflata in cases of Asthma and chronic cough. By J. H. Robinson, M.D., of St. Croix.

Mr. Mills's Analysis of the Phenomena of the Human Mind, a work which he has had in hand for a number of years, is now ready for the press, and will appear in the course of the present season. Mr. Mills considers his present performance as the ground-work of three practical treatises, intended to succeed: 1. The Book of Logic, or system of rules for conducting the human mind in the investigation of truth; 2. The Book of Ethics, or system of rules for so regulating the actions of the individual as to render them most conducive to the well-being of himself and others; 3. The Book of Education, or system of rules for training the individual to the highest perfection of his nature, that is, the highest state of efficiency as the cause of happiness to himself and to his species.

The Village Patriarch, a Poem, will be published on the 5th of March.

A work of a very unusual nature is about to appear. Its title is 'The Sectarian,' and its design is to unfold the secret practices of more than one class of Dissenters.

In the Press, and speedily will be Published, in 1 volume, 12mo., 'The Protestant's Companion, being a choice collection of Preservatives against Popery.'

We understand that the Rev. Dr. Wait, of Cambridge, is about to commence a Repertorium Theologicum; or, Critical Record of Theological Literature; in which, Dissertations on Theological Antiquities, the state of the Text, and other subjects of necessary Inquiry, will be contained; in which, also, Foreign Works on Divinity will be condensed, so as to form a complete work of reference to the Biblical scholar.

'He is Risen; an Easter Ode, inscribed to the Governors and Masters of Christ's Hospital; is in the press. Also, The Votive Wreath and other Poems. By Samuel Walter Burgess.

The Study of Medicine. Third Edition. By John Mason Good, M.D., F.R.S., F.R.S.L., containing all the Author's final Corrections and Improvements; together with much additional Information on Physiology, Practice, Pathology, and the Nature of Diseases in General. By Samuel Cooper, Surgeon to the King's Bench and Fleet Prisons; Surgeon to the Forces; Author of the Dictionary of Practical Surgery, &c. is preparing for publication.

EGARTE.—The system of gaming in the French capital, which has occasioned the ruin of so many English gentlemen, is, we understand, about to be unveiled, in a novel announced under the above title. The scenes which the writer intends to disclose are almost incredible; and it will be seen that French ladies of rank and beauty, are prominent agents in the scenes prepared for the English in those brilliant scenes of dissipation, the Parisian Salons.

THE NAVAL OFFICER.—The novel announced under this name, is written, we understand, by a post-captain, who has lately distinguished himself in India, and whose life in the service has been unusually active and successful. Report speaks highly of the power and originality of the writer, and of the extraordinary nature of the scenes and characters depicted by him.

WEEKLY METEOROLOGICAL JOURNAL.

 Sir Edward Coke

CUCUMBER COFFEE MART, 18, Fenchurch-street, City; and WEST BRANCH, 15, Rathbone-place, Oxford-street.

NICOL and Co., in compliance with numerous solicitations from families of distinction in the western districts of London, have opened a Branch Establishment at 15, Rathbone-place, for the sale of superior flavoured Coffees of the finest qualities, roasted on the premises every day, and sold at the same low scale of prices, which has gained such an extensive share of public patronage and support to the Original Warehouse, established by the West India Planters and Merchants, at 18, Fenchurch-street.
 'The Coffee I procure from Nicol and Co., possesses more of thermal pungency and aromatic flavour of this valuable exotic is perfection, than I find from experimental trial have got elsewhere.'—Wm. Dr. Thornton's Botanical Lecture.

TO SOLICITORS, BANKERS, MERCHANTS, AND OTHER CONSUMERS OF WRITING-PAPERS.

JOHN KENDALL, Stationer, 47, Holborn-hill, (opposite Hatton-garden,) respectfully offers to their notice the following list of prices of Extra Superior, Draft, and Post Paper; the surface of which affords the utmost facility to the pen; which it preserves unimpaired, and is completely free from that greasiness so objected to in all hot-pressed papers:

Extra Superior Draft	12s.	15s.	14s.	per Ream.
ditto ditto Brief	30s.	32s.	34s.	ditto.
ditto Lined ditto	34s.	36s.	38s.	ditto.
Extra Fine Post	12s.	15s.	14s.	ditto.
Bath Post	9s.	10s.	11s.	ditto.
Postcard	15s.	18s.	20s.	ditto.
Superfine Thick Post, Laid and Wove, 17s.	18s.	19s.	20s.	ditto.
Best Demy Bookbinding, 21s.	22s.	24s.	White, 26s.	ditto.
Extra Superior Bookbinding, 4s. 6d.	5s.	6s.	per lb.	
Pens and Quills, 4s. 6d.	5s.	6s.	per hundred.	

THE PRINCESS VICTORIA.

Just published by R. Ackermann, 93, Strand.
A HIGHLY-FINISHED PORTRAIT of Her Royal Highness, engraved by T. Woolnot, by special permission of H. R. H. the Duchess of Kent, from a Picture by ANTHONY STUART. Price, Prints, 5s.; Proofs on India paper, 7s. 6d.; a few select ditto, 10s. 6d.

This day, price 6s.

THE LONDON REVIEW.

No. 1.

Edited by the Rev. BLANCO WHITE.

Printed for Saunders and Otley, Conduit-street.

This day are published, in one vol. 8vo. price 10s. 6d. bds.

SERMONS on various Important Subjects.

By the late Rev. ARCH. GRACIE.

Adam Black, J. Ireland, jun., and J. M. Shiels, Edinburgh; and Longman, Rees, Orme, Brown, and Green, London.

This day is published, in 8vo., price 8s.

HISTOIRE DE RUSSIE et de PIERRE le GRAND, par M. le Général COMTE DE SÉGUR, Auteur de l'Histoire de Napoléon et de la Grande Armée, pendant l'année 1812.

Paris, chez Baudouin; Londres, chez Treuttel et Co., 30, Soho-square.

The English Translation will appear in a few days.

Just published, handsomely printed in 4 vols. 8vo., with Maps, 2l. 8s. boards.

ORIGINES; or, Remarks on the Origin of several Empires, States, and Cities.

By the late Right Hon. Sir WILLIAM DAUMON.

Printed by A. J. Valpy; and sold by Baldwin and Co., and all other Booksellers.

With a great number of Plates, is just published, the Sixth Edition, price 12s., by Simpkin and Marshall, Stationers'-court; and may be had, by order, at all Booksellers, and at the Writing Establishment, 84, Lombard-street.

CARSTAIR'S DESIDERATUM is now publishing.

In a few days, in 3 vols. post 8vo.

THE NAVAL OFFICER; or, Scenes and Adventures in the Life of FRANK MILDWAY.

'My muse by no means deals in fiction:
 She gathers a repository of facts,
 Of course with some reserve and slight restriction,
 But mostly treats of human things and acts.
 'Love-war—a tempest—surely there's variety;
 Also a seasoning slight of inculcation:
 A bird's eye view, too, of that wild society—
 A slight glance thrown on men of every station.'

Don Juan.

Printed for Henry Colburn, 9, New Burlington-street.

Just published, price 3s. 6d., illustrated with Plates.

A LECTURE on the STUDY of ANCIENT COINS in connection with History, as delivered at the Royal Institution, Feb. 6th, 1839.

By BENJAMIN RICHARD GRASSER. Published by the Author, 8, South Crescent, Bedford-square, and sold by all Booksellers.

THE NUMISMATIC ATLAS, or CHART, will be published on the 1st of March.—Names of Subscribers (to be printed in the review) received up to the 2nd instant.

Just published, price 6d., with Six Engravings.

NO. I., containing NATURAL THEOLOGY.

Part I., of THE LIBRARY of RELIGIOUS KNOWLEDGE, consisting of a Series of Original Treatises, written in a popular and familiar style, on the most important Subjects relating to the History, Prophecies, Doctrines, and Duties of Revealed Religion. The whole to be conducted by Clergymen of the Church of England.

Printed for J. A. Hessey, 93, Fleet-street; and sold by J. Hatchard and Son, Piccadilly; L. B. Seeley and Sons, Fleet-street; and J. Nisbet, Berners-street.

No. II. will be published on the 28th instant.

With Thirty Engravings, price 5s.

THE ARCANES OF SCIENCE AND ART

for 1839, was published on the 24th inst., containing all the Popular Discoveries and Improvements of the past Year, in Mechanical and Chemical Science, Natural History, Rural and Domestic Economy, the Useful and Fine Arts, and a Miscellaneous Register.

THE ARCANES OF SCIENCE AND ART for 1838, price 4s. 6d. PLUTARCH'S LIVES, with 50 Portraits, 2 vols., price 10s. 6d. boards.

THE ARABIAN NIGHTS' ENTERTAINMENTS, with 120 Engravings, 6s. 6d. boards, half-bound, 8s.

J. Limbird, 143, Strand, London, and all Booksellers.

NEW WORKS.—In 3 vols. 16s.

CONVERSATIONS on INTELLECTUAL PHILOSOPHY, or a Familiar Explanation of the Nature and Operations of the Human Mind.

THE MANUAL for INVALIDS. By a Physician. Price 6s.

THE TRIALS of LIFE. By the Author of 'De Lila.' 3 vols. Second Edition, 31s. 6d.

'The Author of "De Lila" possesses profound powers of thought, with clearness and accuracy of observation of a very extraordinary kind. The present work consists of two Tales, both full of thought, and in the highest degree pathetic.'—Times.

THE ROMANCE of HISTORY. Third Edition. Comprising Tales illustrative of the Romantic Annals of England, arranged Chronologically. An Historical Summary of the leading Events of each Reign is prefixed to the Tales which refer to it.

'The plan of the work is excellent.'—Literary Gazette.

The publication of

THE ADVENTURES of a KING'S PAGE, 3 vols., is unavoidably postponed for some days. Feb. 8, 1839.

Edward Bell, New Public Subscription Library, 21, Holborn-street, Cavendish-square.

EAST INDIA AND CHINA MONOPOLY.

MR. BUCKINGHAM takes the present mode of announcing to the Country generally, that in consequence of the powerful impression already made on the public mind by his Lectures recently delivered at Liverpool and Manchester, the cordial reception he has since experienced at Birmingham and Leeds, and the invitations he is now constantly receiving from other parts of the country, he is confirmed in his original intention of extending his Tour through all the mercantile and manufacturing districts of Great Britain and Ireland.

In the meantime he begs to state, that full and faithful Reports of all the Public Proceedings on this subject will be found in 'THE ORIENTAL HERALD,' a Work uniformly devoted to a continued exposure of the innumerable evils inflicted upon all classes of people in this community by the MONOPOLY of the EAST INDIA COMPANY; and, on that ground, claiming the support of every individual who wishes to see a Free Trade to India and China speedily opened for the relief of our unemployed Shipping and over-stocked Manufactures.

As the most effectual means of preparing the inhabitants of the different places he intends to visit, and of informing even those which he may not be able to include in his Tour, by showing them the nature, plan, and object of these Lectures, Mr. Buckingham has condensed into a small Pamphlet the Heads of the whole Course, preceded by a Sketch of his Life, Travels, and Writings, price 1s.: 'THE ORIENTAL HERALD' will be found to add to these the same ample details, as a Number of this Work appears on the 1st of every month, price 5s., forming an octavo of 204 pages, and containing more matter than either of the Quarterly Reviews. Each of these may be obtained through any Bookseller; and it is believed that, at the present important crisis, there is no Work which has stronger claims than this upon general attention, or which would furnish more beneficial information to every Member of the Legislature, every Merchant, every Shipowner, and every Manufacturer in the Kingdom.

Copies of Provincial Papers, containing any Articles on the East India Company's Monopoly, or private communications addressed to Mr. Buckingham, at his Town Residence, 22, Tavistock-square, London, will be forwarded to him from thence without delay, and will always receive his best attention.

YELVA; or, THE ORPHAN OF RUSSIA.

The following Songs, &c., in the new Musical Drama of 'Yelva, or the Orphan of Russia,' composed by Henry R. Bishop, are published:—

'The peasant from her cheerful home' Sung by Miss Gowan.
 'Oft at day-break the Storm.' Mr. Wood.
 'I have wandered the world over.' Miss Gowan.
 'Poor Love would have built.' Miss Gowan.
 'Yea, Memory o'er these halls.' Miss Gowan.
 'When doomed to part, I sing, &c.' Miss Gowan.
 'Though from our cheerful home.' Miss Gowan.
 The rest of the Music is in the press, and will be published immediately.

Goulding and Dalmaine, 20, Soho-square.

ON HEALTH AND LONGEVITY.

Just published in 12mo., third edition, enlarged, price 1s.

SURE METHODS OF IMPROVING HEALTH and Prolonging LIFE, by regulating the Diet and Regimen; embracing all the most approved Principles of Health and Longevity, and exhibiting the valuable power of proper Food, Wine, Air, Exercise, &c., in the Cure of obstinate Chronic Diseases, as well as in promoting Health and Long Life.

To which are added, an Account of the art and excellent Effects of Training for Health, Rules for increasing Corpulence, and Maxims for the Bilious and Nervous, the Consumptive, &c. Illustrated by Cases. By A. PIERCE.

'We are disposed to think it the most useful and rational work of the kind we have met with. It is altogether an admirable Code of Health.'—Atlas.

'We warmly recommend it.'—New Literary Gazette.

'It is written by one gifted with good sense, as well as right feeling, and guided, as we conceive, by enlightened views and liberal sentiments.'—Scottman.

'That this work has been the result of mature study and protracted experience, we fully believe; and that upon all habits will derive information from it, calculated to increase their comfort and extend their days, is a steady conviction.'—Edinburgh Observer.

Published by Simpkin and Marshall, Stationers' Court, London; sold by Thacker and Co., Calcutta; and by all Booksellers in England.

This Day is published, handsomely printed in One Vol. Imp. 8vo., price Two Guineas, boards, a Second Edition, with large additional matter, of

PORTUGAL ILLUSTRATED; by the Rev. W. M. KINSEY, B.D., Fellow of Trinity College, Oxford, and Chaplain to the Right Hon. Lord Auckland.

Embellished with a Map, Plates of Coins, Vignettes, and various Engravings of Costumes, Landscape Scenery, &c. Binding in the whole, a Series of more than 50 Engravings, Illustrations of the manners and general aspect of the Country.

This second edition, besides undergoing a second revision, includes additional specimens of the national music of Portugal, and the following new Illustrations, executed by the first Artists in the most finished style:—1. Palace of the Kings at Tagus; 2. The Aqueduct and City of Lisbon; 3. The Moorish Palace at Otrava; 4. The Cork Convent, Santa Barbara; 5. The Fortifications of Alentejo, on the Tagus; 6. Portraits of Camoens and of Ignaz de Castro; 7. Various Vignettes by Messrs. Brooks and Harvey. The second matter, extending to 100 pages, comprises a full and complete Review of the State of Literature, Arts, and Sciences in Portugal, from the earliest period to the present time.

A few copies have imp. impressions of the Plates on India paper, price 2l. 10s. in boards.

Published for the Author, by Trevellick and Weller, Trevellick, jun., and Richter, Foreign Booksellers to the Admiralty, 20, Soho-square.

London: Printed and Published every Wednesday, by WILLIAM LUNN, at the Office, No. 4, Wellington-street, Strand.

MODERN ENGLISH WIT.

No. II.

THE ENGLISH BAR AND PERIODICAL WRITERS.

In a former article we divided modern wits into three classes—the Diners-out, the Gentlemen of the English Bar, and the Writers in Reviews and Magazines. The claims of the first of these orders having been discussed, we proceed to the other two: and first of the English Bar.

The differences between the humourists of the dining-room and of the forum are marked and manifold, and may be all referred to the difference of the objects which they are obliged to keep in view. The Diner-out, as has been already explained, is expected to provide seasoning and sauces to whatever meats may chance to be found at the table for which he is engaged. Now, as the science of cookery is one that has never been stationary since its first establishment, and as the changes which it has undergone of late years, in consequence of the discovery of new phenomena, have been vast beyond calculation, it is obvious that the punster can derive exceedingly little assistance from the labours of his predecessors. Of what avail, in the nineteenth century, could be the sayings with which Rochester or Killigrew were wont

'To point a fillet or adorn a loin,'

in days when cookery was emerging from the night of the dark ages, and when it bore about it all the signs of infancy and barbarism? The notion is absurd. Such sauces must be totally inapplicable in the present stage of gastronomic progress; and the consequence is, that a constant succession of new jokes must be provided to keep pace with it. With the Bar, the case is entirely different. Those circumstances of society which fall under the cognizance of courts and juries, do not materially alter in the course of a few centuries. Libel and sedition were in vogue many ages previous to the birth of Lord Winchelsea and 'The Morning Journal'; Crim. Con. was not absolutely unknown even as far back as the reign of Charles II.; and even in Ireland, where one does meet occasionally with varieties both in civil disputes and also in crime—even in Ireland,

'Vixere fortes ante Agamemnona'

there were forty-shilling freeholders before the time of Daniel O'Connell.

It would be exceedingly ill-accordant with this monotony in the state of legal affairs, that the jokes should possess an air of freshness. In general, there ought to be the same character of permanence stamped upon them which belongs to the subjects upon which they are exercised. Centuries should roll on and exhibit no more change in the fashion of legal jokes than of legal procedure. And this is very certainly the case. The first edition of the digest of Joseph Miller is still the leading authority in the Courts. *Stare super antiquas facietias*, is the lesson which is impressed upon every young barrister before he quits the special pleader's chambers; and the more he adheres to the rule, and the less he ventures out of the track of precedents, the better. Why should he? Has not the experience of older and wiser practitioners than he proved to a demonstration, that, without departing from the most ancient and approved witticisms, it is not only possible but easy to accomplish all the ends of a cross-examination, to frighten honest men into lies, draw tears

from modest girls, convert justice into confusion, truth into falsehood, and every thing into brutality.

But we are doing this enlightened class of the community injustice: we are judging them merely by their public exhibitions; and it is not, we understand, in court that the art on which they pique themselves is developed to most advantage. There are occasions, we have heard, on which, no longer embarrassed by those official restraints which dam up the free current of the soul, the sluices of a rich and variegated humour are let loose; and the English Bar rivals, in at least one of their most conspicuous qualities, the Swifts, Starnes, and Williamases of a former age, and the Colmans of the present. We learn, too, that in these festive moments, these *notes canaque deorum*, the habits which have been acquired in their forensic practice, though not operating directly, exerts, nevertheless, a most desirable secondary influence, enabling them to embody their free conceptions in such brief and convenient formulae, that they are saved from the necessity of tasking their minds for those varieties of expression in which their ill-instructed predecessors were vain enough to think that half the merit of the art consisted.

Well, indeed, may we pardon Sir James Scarlett for husbanding his ample stores of humour in those Courts where they could only be consecrated to the amusement of vulgar juries and the service of vulgar clients, when we know that they are employed in augmenting the entertainment of his own liberal profession, and when we have his own assurance that they are devoted to the high end of improving the morality of the age, and promoting its reverence for the female sex.

There was once a large class of readers who entertained a very high notion of the ordinary wit of our ENGLISH PERIODICALS. Half the youthful population of Edinburgh were wont, in their sober Scotch way, to expire over Mr. Jeffrey's jokes upon the Lakers: Mr. Gifford's articles on America, and Mr. Croker's on Lady Morgan, were, in like manner, positively too much for some weak-livered ladies and gentlemen on this side of the Tweed; and we once heard a person of unquestionable veracity declare that he had suffered greatly from a paper in 'The Westminster,'—an assertion which had all the effect of the most irresistible humour upon ourselves. But these delusions are past away; and he must be a person of uncommon hardihood who would venture, in the present day, to confess that any one of that vulgarest and clumsiest class of writings, called, in slang language, 'a cuttingup review,' had set in motion a single muscle of his face. One exception, however, must be made, and for the sake of that exception, we have noticed the class.

It is impossible to deny that the Rev. Sidney Smith is something more than a merely jocose person, that he has subduced under his authority a large part of that debatable land which separates facetiousness from wit, and that in this territory his lordship is still paramount and undisputed. The question is, Has he ever past the barriers? Has he ever made incursions into the land which is haunted, not by the fidgetty restless sprites that once danced in the bodies of the Critics and the Old bachelors, but by the mighty ghosts of the Gullivers and the Shandys? Does Yorick own him for a brother? Would South

recognise in him one of his own cloth and kind? Or will his good things bear to have that gauge applied to them, by which a greater than Yorick, or than South, tried the excellence of his own? Are they generative as well as living,—wit themselves, and the cause of wit in others? We fear not; and yet we allow, with the greatest willingness, that, for feats of cleverness and ingenuity, there is not, and has scarcely been, an Englishman, even in that profession which has produced some of our very wittiest men, who can bear comparison with the Rev. Sydney Smith. Wherein, then, in our opinion, does he differ from the men with whom we have deigned his right to associate? We will endeavour to explain, and we will do so by an instance.

Reader! have you ever been at Astley's Amphitheatre? We know that you have, and that you have seen the not-to-be-slightly-spoken-of Mr. Ducrow. You well remember, better than we can describe them, the various exhibitions by which that remarkable individual extracted from yourself, from your amiable partner, from your accomplished maiden aunt, from every member of your large, thriving, and healthy family; and last, but certainly not least, from the two chubby, and, we understand, very clever children, whose visit was the principal cause of your abandoning so far your usual quiet habits as to venture to a place of public amusement,—cheers and laughter, as loud as ever convulsed the House of Commons, when Mr. Martin, Sir J. Yorke, or Col. Wilson, have been addressing it, each in the tongue wherein he was born! Now, as you look back upon this scene, to which distance lends enchantment,—as you call to mind the thousand curvettings and starts of the three steeds on which he rode, and his mode of passing from one to the other, just at the time when the gallop was the most vehement, and his start the most alarming,—you will, perhaps, be loth to believe that any thing in the compass of human ability, or, at any rate, of human horsemanship, is impossible to Mr. Ducrow. It is our duty to undeceive you.

It is a fine fresh morning, the east blowing rather keenly, and a misty December sun, new risen, is dallying with the frostwork that has shaped itself into so many quaint and beautiful forms, which half console the old trees they hang upon for the loss of the green children that spring bore to them. Yesterday was Christmas day. It was hoar and frosty as Christmas day should be, else who would care sufficiently for the hearth and the yule log? But the Fates have remembered the Protomartyr; and in the night there was a gentle thaw, and the ground is loose and tender. We are in Leicestershire, and need I tell you that the pack is to be out? I will not describe to you the gallant array of English chivalry which are now mounted, nor will I describe what perhaps is a worthier subject still, the names and characters of the horses. If I remember right, Mr. Lester has dedicated one book of his epic, called 'Herbert Lacy,' to this description; and, though I am not sure that he has equalled the catalogue of the ships in 'The Iliad,' or of the devils in 'Paradise Lost,' I nevertheless have no wish to enter into competition with him. My whole attention is riveted upon an individual in the group: it is Mr. Ducrow; he is mounted upon a splendid old hunter, yet I know not why he scarcely seems comfortable.

The stirrups are decidedly too long; he sits his horse with much less than his usual ease, and we

am afraid that he finds the air too cold for him. However, this may be all fancy. But what is it that interrupts the progress of the illustrious man of the Amphitheatre? Ha! ha! ha! He is troubled with notions about the *meum* and *tuum*; and, though the gate is wide open, he seems inclined to ride round for fear of hurting the ploughed field. That scruple I am glad to see is at last satisfied; for the old farmer himself, out of a delicate respect to whose feelings he is pausing, is at the gate, ready to die with laughter at the poor man's metropolitan conscience. Alas! but there is a gate at the other end of the field, which is not open. Two-thirds of the hunt have already cleared it; one is lying at the foot of it, one is at this moment earning a smother; but where, oh, where, is Mr. Ducrow? I blush for the honour of Astley when I say it—he is sneaking through a hole in the hedge. However, he has grounds for his hope that no one saw him except myself. Ten minutes more have elapsed, and the hounds have reached a mill-dam. The foremost man, and that is Sir Francis Burdett, holds his breath, for a moment, at the sight; but it is only twenty-one feet, and what is that to an English sportsman? So he is over, and close behind him, (for this is no party question, *agitur de cauda et sanguine vulpis*, and all minor considerations are forgotten,)—close behind him, we say, comes his great Tory opponent, and he, too, has crossed the dam. But; oh! which of the goddesses or the caricaturists will describe to us the face of Mr. Ducrow, when he only looks at the horrible gulph which others have passed? And who will tell to us the burning words by which he forswears, then and thereafter, all communion with the race of English Nimrods? And who shall tell us in what language he made intelligible to the manager, that riding three horses in a circus at Astley's is another thing altogether from riding one at a fox-chase in Leicestershire?

Now, what Mr. Ducrow is to an old English fox-hunter, such, it seems to us, is Mr. Sidney Smith to an old English wit. True, he can play all kinds of horsemanship antics, of which they were utterly ignorant; but can he ride right forwards, as they did, over fence, ditch, and brake, conscious of a strength and a bravery which no difficulty can weaken, no terrors appal? Oh no! he is a safe rider; he is conscious at every moment of what he is about; he never stirs a step further than he can see his way. If cleverness and agility constitute a wit, he is one; but, if there is needed besides, strength and power and freedom of soul, we must look, not to Scotch reviews, or Courts, or dining-tables, but to another age,—an age, when, besides wit, we had other good things that have deserted us—thought, and feeling, and genius. From them wit proceeded; it was one of their myriad voices, and it uttered a music fit for the feasts of the Gods. It has since become the monotonous jingling of a cap and bells.

LORD REDESDALE'S PAMPHLETS.

Nine Letters to Lord Colchester on the Catholic Question. Ridgway. London, 1829.

We should be wanting in the respect which is due to the legal and general reputation of Lord Redesdale, if we passed over without notice the series of pamphlets which he has transmitted to us. We shall, however, merely notice them; for it is a conviction which recent events have impressed most deeply upon our minds, that those consult very ill the dignity of literature, who allow it in any wise to take part in the broils of the passing hour. He who divides literature and political science, must be an enemy to one or the other: an enemy to literature, if he would take away from it history, which is one of the brightest jewels in its crown; an enemy to political science, if he would place it upon any other foundation than a study of history. But what fellowship is there between the science of politics and the controversies which are at present agitating this

country? Important they are, doubtless, in their consequences, and interesting in themselves, so far as they supply illustrations of national feelings. The time, however, for describing these feelings, and calculating the influences which affect them, is not yet come, and will not come till the tumults which furnish us with the data are passed away. And, as for the results of this wild warfare, all we can do is 'to hope that the Providence which shapes our ends' will bring some good out of it in spite of the rough hewing of the politicians of all sects and parties. At present, there is but one very evident lesson which has been taught by these occurrences, and that is the need—the absolute need—of safer and firmer principles, not only in the rulers of the land, but in all that write and think upon political questions.

How is it that, within the last few weeks, we have seen the advocates of all the parties in the state—Whigs, Tories, and Radicals—interchanging all their old promises with each other; and yet, because they hold fast by the conclusions of which these premises are the professed foundations, vaunting of their unshaken consistency? How is it, but because names and badges are the things which pass among us for principles; because adherence to these things, which are in their nature transitory, is the compensation with us for the want of that which is in its nature permanent? And why is it, that, when a statesman does shift his colours, he is denounced by three fourths of the country as an apostate, and that even good and wise men are doubtful whether they ought not to ratify the decision? Why is it, but because the country feels, because good and wise men feel, that the statesmen of our day have none of that sound principle within, which can prescribe to them when the opinions which were the outward and temporary expression of it have, by change of circumstances, become inapplicable; because they know that the character of these statesmen has been always pinned to the blue or green cockade which they have been in the habit of wearing, and that it will not come off when expedience demands that they should throw that cockade away. The sad truth, we fear, is, that our politics are all empirical. The great business being to advance in the world, and the short roads to knowledge being, of course, universally preferred, young men prepare themselves for public life, not by general reading, not by studying the relation in which an age stands to past times, not by investigating the diversities of national character, and the peculiarities of our own, as denoted especially by our institutions, not by studying what modification that character has undergone, and from all these data inferring what it is expedient to retain and what to amend, in the state which they are to administer,—no, but getting up by just the three or four leading questions of the day, thus fetching their political knowledge from the very points which should be tried by it. And what is the consequence? The young statesman comes into Parliament, makes a speech, in which, if the conclusions be right, the arguments in most cases are quite untenable, is loudly applauded, (for what signify principles, provided the results suit the taste of his party?) and is numbered among the rising men of his side. In a few sessions, perhaps, he falls into company with a cleverer man than himself, is upset by an argument sufficiently common-place, but which he had never considered, comes down to Parliament, recants in a speech probably containing as many groundless assertions and fallacious reasons as the former, is applauded to the echo by the other side of the House, and becomes one of its rising men; or else, being extremely flattered by his own party, he cleaves to the opinion of his boyhood, binds himself to it for older, for younger, for better, for worse,—becomes an idol and a leading Minister—finds that the opinion does not suit his new circumstances, and abandons it.*

* Unless Sir Robert Inglis's return for Oxford interferes, as we have no reason to suppose it will, with

And is it not an act of duty in a statesman to abandon an opinion which is no longer tenable? Certainly; but the misfortune is that the empiricism of modern politicians, leaving them no principles to fall back upon when their creed is found to be erroneous, gives to what would be virtue in other cases, the effect of crime. Their own image and superscription is stamped upon the most worthless coin in their possession; and, when they fling that coin into the devil's treasury, they are casting in of their penury all that they have.

We trust, for the sake of the morality of the leaders in Parliament, which, from the causes we have mentioned, has suffered most grievously during the long discussion of the Catholic Claims, and still more for the sake of the lower classes, whose morality seems likely to suffer worse from the appeals which have been addressed to their worst passions, that the promised settlement of the Question will not be delayed by any unforeseen accident.

When it has become, as we trust it soon will, a matter of history, and when it will, by consequence, have lost its interest for the scribes of party, it will begin to acquire an interest, which at present it does not possess, for the political student. We shall then think that it falls within the limits of our province to examine its bearings very attentively. We shall then endeavour to show that by far the larger part of the arguments which have been urged on both sides of the question, and which, in the eagerness of controversy, have been laid hold of without the least ceremony, will not bear the slightest examination. We shall discuss the claim of abstract right in the Catholics to be relieved from their disabilities, and, under the same head, shall endeavour to show to what degree a real distinction does exist between persecution and exclusion from political power. We shall then consider whether the principle of the Romish Church is or is not unfriendly to civil government; and on this point we shall probably assign our reason for acquiescing in what is sometimes stigmatised as the vulgar opinion. We shall then consider whether the opinion which some of our contemporaries have expressed, that the controversy was, in any view of the case, a trifling one,—'a mere big-and-little Indian dispute,' be or be not founded in reason, and shall strive to convince our readers that scorn for vulgar opinions has led the advocates of liberal opinions, as scorn always does lead those who indulge it, into an absurdity, seeing that, if the fears of the enemies of Emancipation respecting the consequences to the principle of the Constitution of admitting Catholics into the Legislature are well founded, it would be no less weak an answer to say, that the number likely to be admitted does not exceed ten or fifteen, than it would be to tell a man who believed that the wheel of his carriage would drop off, from the loss of the linch-pin that it did not exceed two inches in diameter. We shall, hence, be led to consider whether these arguments of danger are well founded or not. And, having first removed, as false, mischievous, and blasphemous, the assertion in the Duke of Newcastle's letter, that religion, as such, is endangered by concessions, and endeavoured to show that the clergy, who must, therefore, be acquitted of all interested motives in their opposition to the claims, have never urged that the

success of the promised Bill of Emancipation, we should certainly rejoice in that event. In the first place, we think it would have been scarcely creditable to the University to have exhibited the very sudden change of opinion which the election of Mr. Peel would have indicated; in the second, we think it was due to its character, as a religious body, not to be influenced by the vulgar attempts of the papers to decry Sir Robert Inglis, because he was more religious than his neighbours; and lastly, we think every one who has read any of Sir Robert Inglis's and Mr. Peel's speeches must be convinced that the former, however misapprehending in one point, is a man who has both read and thought more generally than his opponent.

Establishment is the part of the Constitution that will be affected by these concessions; we shall proceed to discuss the more plausible assertion that the principle of the Constitution will be overturned by it. We shall maintain the opinion established by Lord Plunkett, a few nights ago, that the first principle of the Constitution is, that a certain position in property and intelligence shall be the only requisites for admission into the Legislature, and that the principle of excluding the Catholics was a necessary departure from the primary principle. We shall, then, lastly argue that the whole question resolves itself into this, does the danger to the Constitution which must be occasioned by a persevering departure from its fundamental axiom,—a danger increasing every hour, as the departure becomes wider, in consequence of the accumulation of property in the hands of the Catholics—exceed or fall short of the dangers (we admit them to be real,) which must be apprehended from the hostility of the Popish faith to civil government; when, against these dangers, are to be set off the fact, that this hostility is apparently as active as it ever can become, that there is no power of quelling it by any means except concession, and that there is a chance, at least, of its being quelled by that. These arguments have been often urged before, but it is now needful to separate the chaff from the wheat. The performance of this duty we shall esteem, as we have said before, for the time when it shall have ceased to be a practical subject of debate, and when it will be of high consequence to see that the temporary agitation of it has not been left any permanent errors in our minds.

RELIGION AND MORALS OF THE FIFTEENTH CENTURY.

Geiler von Kaisersberg's Leben, &c.—The Life, Doctrines, and Discoveries of Geiler of Kaisersberg. By F. W. P. Von Ammon. 8vo. Erlangen: Palm and Haake. 1828.

WHEN the bones of Wicliffe were taken out of their grave, forty years after his decease, and then burned, and their ashes committed to the waters of the Swift, it was conceived by his enemies that this public desecration of his remains would consign his name and doctrines to contempt and general abhorrence. But a far contrary effect arose out of this act of posthumous vengeance: it roused the minds of many to deeper inquiry, it awakened a more indignant and steadfast feeling of attachment to the memory of the Lollard leader on the part of his immediate followers; and it drew upon his opinions the eyes of the nation at large, at a time when they were beginning to penetrate the mist of guile and error, to which the Roman hierarchy owed its dominion over men's consciences and estates. No exposition of the consequences of this deed can rival the pithy and felicitous comment which it has received from the pen of the amiable Fuller: 'This brook, (the Swift,) says he, conveyed his ashes into Avon, Avon into Severn, Severn into the narrow seas; they into the main ocean; and thus the ashes of Wicliffe are the emblem of his doctrine, which is now dispersed all the world over.'

This was the stream from which Cobham and Peacocke imbibed a spirit urging them to an exposure of ecclesiastical abuses and corruptions: but, happier than either in the personal result of their temporal warfare, though akin to both in the bold discernment with which they conducted their spiritual assaults, were their contemporaries, the illustrious Erasmus, and that less known opponent of papal misrule to whose opinions we are indebted for inviting the attention of our readers. If political convulsion be the effect of a series of gradually accumulated causes, it will be acknowledged that the work of the Reformation was not the issue of a sudden, but of a progressive amelioration and enlightenment of the popular mind on the most important questions which could agitate it,—liberty of conscience, purity of faith, and just views of the Gospel Revelation. The theolo-

gical portions of the work before us afford, in this respect, an unequivocal evidence that the Reformation was more than partially preached before its thunders shook the Vatican, whilst they enable us to discern the source whence the lower Rhine became affected in the first hour, with the 'taint of its damnable illuminations.'

Geiler von Kaisersberg was born at Schaffhausen, in the year 1446, and educated by his grandfather in the town, from which his surname of Kaisersberg is derived: he took his degree as Doctor of Theology at Basle, in 1472, and acquired so much celebrity by his eloquence in the pulpit, that the municipal council at Strasburg, (where he died in the year 1510,) made an addition to the number of its preachers, for the special purpose of securing the benefit of his ministry to their fellow-citizens. His mind, indeed, was early convinced of the superior importance of the duty of the preacher, as compared with that of the mere prælector of the mass; and, if we leave out of view those few points in which it was scarcely to be expected that he should not have been influenced by the manners, usages, and prejudices of his times, and content ourselves with contemplating him in the full richness of his own great and independent mind, he will appear before us as one of those master-spirits in whom great depth of intellect is blended with considerable originality and an unwonted power of imagination. And more than this: he felt at all times a fervent sense of the awful responsibility of his calling, and applied himself with a most sincere zeal, to manifest his feeling by activity in well-doing, no less as an individual than as a minister of religion.

The peculiar quality of his eloquence is an exhaustless fund of wit, from which he derived a singular love of allegory and comparison: when, for instance, he is laying down rules for the guidance of a pilgrim, he is not forgetful of the faithful dog who becomes the wayfarer's sentinel and companion. Neither is he blind to the beam in his own eye, where he says,

'We, preachers, doom all mankind to penalty and punishment; but, if a solitary syllable be breathed against our own persons, our stomach refuses to digest it.'

And he styles those ministers 'the preachers of Satan, who, instead of speaking the truth, confine themselves to what tickles the ear, and become toad-eaters to their auditors.'

From other passages, we may gather no imperfect idea of the manners and social order of things towards the close of the fifteenth century. He gives the higher classes to understand, that

'It is foolishness to carry their heads high because of their noble blood: for it is like a nest of wasps that falls from a good tree; there grow many similar nuts on an apple-tree. In our days nothing is left of nobility but the name; nothing but the shell without the kernel, and that kernel is full of worms. There is neither virtue nor discretion, nor sense of honour or gentleness, nor love for inferiors, extant among the nobles. They are all boastful of the name, but unmindful of the deed.'

To the magistrate he says,

'It is the way of the world that men should no longer fear or abhor to do wrong; but those who suffer, and speak the truth, these are they who tremble, and live in fear of punishment for their offence.'

No wonder that our worthy monitor lived and died in the solitudinarity of single-blessedness; when even the fair became the frailer sex beneath his uncompromising integrity.

'It is a great thing,' says he, 'when a woman is honest for aye and always, and rare as great. This is to be accounted for, inasmuch as she is in her nature less perfect than man. He that would have a fair one for his friend, let him but assail her with his praise, and he shall be sure of obtaining whatever he shall desire. In the matter of apparel, all distinction has been banished between a good woman and a naughty one. Go we to a marriage-feast, does the honourable woman enjoy the advantage in any one mentionable particular? Nay, the dishonest one is the object of the greater homage. * * * Among the thousand fashions

of female dress, are trains which gather up the fleas, and throw up great dust. Our women have a custom also of wearing yellow veils, which are washed every week, and dyed of the same hue again. From this arises the dearthness of saffron. Now, yellow is undoubtedly a colour displeasing to the Deity, whether in men, women, or angels. The body of our Saviour was not wrapt in a yellow but a white cloth. From foul meat comes yellow gravy. Old women in yellow veils look like a piece of smoked meat floating in yellow sauce.'

He deals towards his own sex an equally unsparing measure of censure; and there is many a one amongst ourselves to whom the *spirit* of the following comment might point a moral:

'Some wear beards and, forsooth, can give no reason why they wear them. There are those who mount a beard as a mere plaything for their fingers, or to put them in mind that they are men; others there are who wear it out of wanton vanity, that men may point at them with their fingers. Such as these are egregious fools; they abound with as many empty conceits as there are hairs about their muzzles; and, having no merit of their own whereby they may climb into note, they trust to their beards for notoriety, being determined to bear some distinguishing mark or other about their persons.'

The reader must not conclude that our reformer was a social separatist, looking at mundane circumstances with a jaundiced eye, or lashing them with the rod of religious spleen. His was a glad-some, not a morose and gloomy, Christianity. He would take a glass with a friend, and enjoy it, when rational mirth sat upon its brim. Gambling was a monster he abhorred; innocent sport and recreation he recommended as not only lawful, but salutary:

'It is not every one who dances that is a fool; beware only that ye dance with a modest bearing. Howbeit, it is worse than folly, to dance at improper seasons, or intemperately, or from a vicious propensity, in sacred places, or with immodesty. It is a pastime, moreover, unbefitting the sacred character.'

Geiler's '*Discoveries*' are sufficiently remarkable as evidences of an honest and fearless anxiety to correct the vices and follies of his brethren; but they acquire a higher interest when we come to consider them as the depositary of his religious opinions and philosophical views. Let the votaries of 'Reason' learn from his code how little they understand the right use of her gifts, in this vaunted 'age of intellect!'

'I hold reason,' he observes, 'to be the mistress in the soul's mansion; when she is present and upon the watch, all other senses are bridled, and each plays a befitting part. But no sooner does she forget her own dignity, than the human frame becomes a chaos, where every faculty is in its wrong position. Wherefore, it behoves a man to practise the art of keeping his sensual appetites under subjection to his reason, whereby he may maintain a perpetual mastery over them. How happy is he who obeys the counsels of such a mistress, and suffers her to sway the sceptre of his mind, as the ruler and governess of his throng of menials!'

As to the religious perfectibility of human nature, he observes,

'The more ye think of God, and speak of him, and walk with him, the more closely ye draw near to him. Ye partake of the Divine essence through love; and the greater is your love towards God, the nearer do ye approach unto him, and assimilate your being with his. Some have imagined that a man may become so perfect on earth, and imbued with so abundant a measure of the Divine love, as to partake of his nature; precisely as if one were to let a drop of water fall into a cask of wine. The drop is deprived of its nature, and is turned into wine. I hold, however, that a man, who loves God above every other earthly object, does not thereby become of God, but receives God's impress and likeness. In a red-hot bar of iron we see nothing but fire; yet it does not part with its substance and essence, but remains iron still. Thus is it with a man who loves God, and keeps his statutes: he becomes like unto God, just as the other is like unto fire, but remains of human essence still.'

'Thou askest,' says he, in another place, 'why God created man? I reply, out of his great goodness only, and with a view to man's welfare, that he might make him a participator of his great goodness. Man, in the

state of nature, was at unity with himself, like a new cask; for original justice kept him whole and perfect. But, so soon as Adam had offended his Maker, God withdrew this gift from him, and the human nature fell to pieces, like a cask without its bands; one member warred against another, one power against another; the soul against the body, and the body and the senses against the spirit.

Again

'Our heart is like a mill, constantly revolving, never at rest, but unceasingly busy in grinding whatever is cast into it. So is the mill of thy heart perpetually at work in reducing whatever thou castest into it, whether it be good or whether it be evil. Choose thou, which of the twain thou wouldst! It rests with thyself, by the help of God, to choose none but the good, and to cast from thee thy wicked imaginations and evil thoughts.'

At the present day, we do not stand in need of miracles to establish our faith; that faith received abundant witness in the days of Christ. When thou first insertest a bunch of rosemary into the ground, thou art required to water it morning and evening for the ensuing three or four weeks; but, when it is strong and hearty, thy pains are no longer called for. Thus it is with the beginnings of faith; when it was first planted, it required to be strengthened by the aid of miracles: but, now it is grown up, their attestation is no longer needed.

We observed in a preceding page, that 'the Reformation was more than partially preached before its thunders shook the Vatican;' and we will now exhibit Geiler to the reader as one who, having drunk at the pure well-spring of Christian doctrine, was gifted with penetration to detect, and courage to expose, the blasphemous pretensions of 'the triple-crowned Roman.'

'When,' says he, 'St. Paul saw that St. Peter and the rest wandered from the straight path and the truth of the Gospel, he chastened him. (Galat. c. 2.) From this it is assumed, that a subject is not only authorised, but bound, to withstand his superior when he commands unlawful things, and that resistance may be offered even to the Pope when he does violence to the faith. Truly, it becometh neither Emperor nor Pope to lay down laws which are opposed to the divine statutes. When he does this, he does an unjust thing; and it is not only lawful for us, but our bounden duty, to refrain from compliance. The dispensation of the Pope is nothing worth, unless it be derived from reasonable causes; but, if it emanate from a superior, or even the pontiff himself, without legitimate motives and reasonable cause, it is nothing better than a prompt despatch to hell.'

But our limits warn us that we must bid farewell to an interesting companion, though not without gathering one gem more into the garner of metaphorical piety.

'The first vessel of innocence was wrecked in Adam; the second, of regeneration, has been stranded by our corrupted reason; hence, the only alternative that remains to us is to embark our fortunes in the vessel of repentance which the Saviour has constructed with the planks of grief and abhorrence for the sins of commission, and with the timber which has been felled by the axe of the fear of God. Satan seeks to hinder us from embarking, but angels hold the ladders. The helmsman is, well-directed reason; faith, the compass; the sacrament is bread to the crew, and the heart its magazine; the holy commandments are its oars; its mast is the cross of Christ; free-will is its shrouds; fair breezes are wafted by our goodly dispositions, virtuous habits, and the grace of the Spirit; foul winds are the creatures of temptation; hope is our anchor, and sins are sea-monsters; our lusts are the songs of syrens, and the cup of Circe is avarice; pride is the great leviathan, and Mary is the life-boat. As those stepping on shore, after a long voyage, are welcomed by the eager salutations of friends, so shall the spirits of men made perfect hail our coming, and bear us to the mansions of never-ending bliss.'

The interest excited among the public by the single volume to which the preceding remarks have been devoted, has, we find, induced Dr. Weick to undertake a much more detailed biography of this enlightened herald of the Reformation, and to accompany it by copious selections from his writings; the whole will be comprised in three volumes, of which the first only has yet been published.

KINSEY'S PORTUGAL.

Portugal Illustrated in a Series of Letters. By the Rev. W. M. Kinsey, B. D., &c. &c. Second Edition. London, 1829.

As we bestowed a very ample notice upon this work when it first appeared, we should not have referred to the present edition unless it had contained some highly important additions and improvements. The most valuable of them is a letter upon the rise and progress of Portuguese Literature. This rapid sketch certainly will not satisfy any Portuguese scholar, or even any determined student. For, Heaven be thanked! there is no literature in the world of which even a tolerably perfect view can be given in the space of fifty pages. But to many English readers who wish to pick up some general information on the subject, or who, having thoughts of studying the language, want the stimulus of an assurance from a competent authority that it contains something worth studying,—this 'Catalogue Raisonné' of Lusitanian authors will be interesting and useful.

Mr. Kinsey commences by disdaining, on the part of the Portuguese language, the charge of a Castilian derivation, and by maintaining for it an equal antiquity with its neighbour dialect. There can be no doubt, we imagine, that he is right in this opinion; indeed, we were not aware that there were any persons who held the other heresy. Whether he is equally right in assigning the origin of both Spanish and Portuguese to the Roman invaders of the Peninsula, Latin in the former case being modified by a mixture with the dialects of the Visigoths, and subsequently by Arabic, and the latter by a mixture with the idioms of the Suevi, may admit of more question; and to this subject, as well as to the more interesting question relating to the literature, we shall return in a future article. By giving Mr. Kinsey's views first, and our own when they are more matured, we shall be doing justice to the first, and increasing the chance of the latter being worthy of our readers' consideration. That inquiry, so little pursued in proportion to its importance, into the earliest literature of countries, would redound greatly to the honour of the one under our consideration. The following is Mr. Kinsey's view of this period of Portuguese literature:

'No language, perhaps, in Europe can trace to an earlier date vestiges of its poetry and general literature, than the Portuguese. Fragments of lyric poems, coeval with the infancy of the monarchy and of still remoter date, are preserved, and regarded with peculiar interest. Such, for instance, are those by Egas Moniz, the companion and friend of Alphonso I.; and the song preserved by the celebrated chronicler, Fr. Bernardo de Brito, the date of which may be referred to the times of the first Kings of Oviedo, some centuries previous to the establishment of Portuguese independence. In addition to these interesting monuments of antiquity, there are others handed down by tradition only, and which claim to be of a period equally remote. We allude to the popular song or romances, which from time immemorial have been current among the lower orders of the people, the language of which, though corrupted, and even the romantic ballads themselves much mutilated by barbarism and ignorance, evince clearly their high antiquity; of which it would be difficult, if not impossible, to fix the exact date. One of these interesting romances, known to the common people of Portugal under the fantastic appellation of *chacras*, has been restored by the Chevalier de Almeida Garret, and has been recently published by him in the introduction to his elegant poem of 'Adozinda.' This traditional romance is entitled 'Bernal and Violante,' and possessing, as it does, all the peculiar features which distinguish the poetical effusions of the troubadours and feudal minstrels, would certainly meet with a favourable reception in England, were it versified by some magic hand, like that of Sir Walter Scott.

Nearly all the primitive monuments of Portuguese literature, "as the foreign reviewer states," consist of love-songs and ballads in the Galician dialect. The troubadours of Provence cannot boast of greater antiquity; nor are there to be found in their collections romances of equal beauty and simplicity with the *chacras*, or *xacras*, of the Portuguese. With the exception of the traditional songs of the north, and the spirit-

stirring effusions of the Scalds, we know of no other poetical pieces which might dispute priority of date with those of the ancient minstrels of Portugal, save, perhaps, some of the Welsh poems, and some early fragments of Irish poetry.

Though but as yet little moulded into form, the Portuguese language nevertheless commenced, even in the first ages of the monarchy, to assume a vigour of character, and to give early evidence of its future capabilities. La Harpe, in his "Cours de Littérature," affirms, that the first chivalrous romance which was ever published in any of the living languages of Europe, is decidedly of Portuguese origin, namely, that of the celebrated Amadis de Gaul, by Vasco de Lobeira, which has been translated in every country of Europe, and lately into English by Mr. Southey. Under the fostering care of the sovereigns of Portugal, the language now made rapid strides to perfection; already enumerating its minstrels, its chroniclers, and writers of romance, until at length, in the fifteenth century, during the reign of Emmanuel, it possessed its regular historians and poets, and, what is more, its dramatic poets. Gomes d'Azuara, Fernam Lopes, Rezende, and afterwards Barros, surnamed the Livy of Portugal, and who wrote the history of the Portuguese conquest in the East, successively challenged public attention. About the same time also many other historical and poetical writers flourished, of whom it will be sufficient to mention the most remarkable. Azurara was employed by Alphonso V., who was the first to ordain a history of Portugal in Latin, in collecting materials in Africa for perfecting its chronicles; Lopes, whose writings are exact and philosophical, often, too, appealing to the heart, is considered the father of Portuguese history. Rezende and Barros have both their own peculiar merits.

Bernardim Ribeiro, who wrote towards the end of the fifteenth century, in addition to his romance, entitled "Menina e Moço," or the Young and Youthful, published idyls and pastoral pieces, distinguished for their beauty and simplicity. About the same time, Gil Vicente composed for the court of Emmanuel some dramatic pieces, in which, though, to say the truth, the ancient and classic forms of the drama are not followed, nor are the energetic and manly beauty of the Greek dramatists, nor the richness and variety of our own Shakspeare to be found, yet are they to be considered as marvellous productions for the period at which they were written. This same author gave the world comedies, likewise *autoes*, mysteries, or representations of scriptural subjects, and also some farces. Copies of this author's works are extremely scarce. The late King of Portugal is said to have possessed one. Considering the great importance of his writings, and particularly to the history of the Portuguese and Spanish stage, it is to be hoped that a new edition of Gil Vicente will be undertaken by some one competent to the task.—Pp. 527—530.

There are many writers nearly contemporary with Camoens, whose poems abound with beauties which deserve the attention of persons of taste, and which indeed deservedly occupy a prominent station in the history of modern literature. Portugal boasts not only of having been the birth-place and cradle of romance, and the fountain-head of the epic poetry of the moderns, but justly claims likewise the invention of modern tragedy,—a pretension, however, rejected by some writers. The Sophonisba of Trissina, and the Castro of Antonio Ferreira, appeared nearly at the same time; and one thing may be fairly asserted, that the Portuguese tragedy of Ferreira is as superior to the Italian Trissina, as the Lusian is to his poem of 'Italia Liberata.' There are certainly many defects to be discovered in the tragedy of Castro, but there are likewise beauties in sufficient number, and of character, to excite the interest of the English literati, who, less selfish and vain than the French critics, delight in the discovery as in the applause of merit, wherever it occurs. Leaving to the Portuguese and to the Italians the task of deciding the question of priority between these two tragedies, we will venture to affirm that there can be no question as to their comparative beauties. The Castro of Ferreira partakes of the ancient tragedy of the Greeks in all its purity and simplicity, almost certainly in all its defects. The choruses, however, possess an elegance and a charm which cannot be equalled, perhaps even in those celebrated lines in the 'Athalie' of Racine. An English translation of this tragedy, with a memoir of its excellent and worthy author was published in 1825, by Mr. Musgrave.—Pp. 532, 533.

Nearly one-third of the eighteenth century had already passed away, when Joseph I. mounted the throne of Portugal, reposing all his confidence in the

Marquess of Pombal. Then it was that the nation beheld the Jesuits crushed by the enlightened minister, the authority of the Inquisition restrained, the power of the papal chair menaced, and, as the necessary consequences of these important events, the arts, the sciences, the belles lettres, agriculture, manufactures, and commerce, flourishing with renewed vigour. Then appeared the philologist Freire, who, under the assumed name of "Candido Lusitano," published at the time several works eminently distinguished by their good taste, the purity of their style, and an extensive knowledge of ancient and modern literature. The life of the Infante D. Henriquez, the celebrated Prince and mathematician, to whose enterprising genius Europe is indebted for the discoveries made by his navigators in the Atlantic sea, the passage to the eastern peninsula by the Cape of Good Hope, and, in short, for all improvements in modern navigation, and for the extension of modern commerce, is one of the most interesting and best written pieces of biographical history in the language. Father Antonio Pereira also then completed his translation of the Bible, which is much esteemed for its fidelity and classical elegance. This illustrious champion of the Portuguese Church vigorously assailed in several publications the papal predominance in his country. His work, entitled "Tentativa Theologica," which was translated into Latin, Spanish, and Italian, nearly excited a revolution at Rome. The Pope and the Cardinals were thrown into a state of the utmost consternation; and the consequence was, that they conferred the honour of excommunication upon the Portuguese theologian, which contributed to his fame quite as much as it showed to the world the folly and the impotence of papal indignation.—Pp. 543, 544.

The most distinguished author, however, known at present in Portugal, is, without doubt, the celebrated Abbé Correa da Serra, distinguished not less for his profound knowledge as a botanist, and his general literary acquirements, than for the zeal of his patriotism. Like all the other great men of his country who have desired the national renovation, he has been persecuted with the most inveterate cruelty. The various works published by the Royal Society of Lisbon are filled with the result of his labours. Taking refuge in France, he soon became a writer in the celebrated review, entitled, "The Literary Archives of Europe." The Institute of France, of whose distinguishing justice and eminent liberality of feeling our own celebrated chymist, Mr. Faraday, can speak, received the Abbé as a brother, and instantly enrolled him a Member of their illustrious Academy. Many of his works, written during his sojourn in Paris, were published in the French language. Desirous of extending the sphere of his knowledge, the Abbé visited America, and passed several years of his life in the United States. He has published a work on botany in the English language, with which he was quite familiar. After having made his name long known to the literati of Europe, the Government of Portugal began to blush for its ingratitude and neglect of so illustrious a man; and, accordingly, a decree of Don John VI., who was then with his Court at Rio Janeiro, appointed him the Portuguese Chargé d'Affaires at Washington, where he continued to reside for some years. The revolution which occurred in Portugal in the year 1820, was the means of recalling the illustrious and learned patriot to his own country. The city of Lisbon was forward to recognise his talents and his virtues, and chose him for her representative in the newly-constituted Cortes; and, although nearly borne down with age and infirmities, he performed the duties of Deputy with distinction and honour. He was not destined long to survive the ephemeral liberty of his country, for he died at Caldas da Rainha in the year 1823. Like those of the immortal Camoens, the perishable remains of the Abbé Correa da Serra were deposited in the public burial-ground, without any funeral honours; and, as the illustrious author of "The Lusiad" found but one friend in his extremity, whose name deserves to live with that of his master, the faithful Malay, Antonio, just so our unfortunate Abbé was destitute of friends in his last moments; nor had he one other mourner to accompany his remains to the tomb, save the humble sacristan of his parish church, whose affection and admiration had been won by the greatness of his talents. A cross, rudely formed of wood, with the simple inscription on it, "Correa da Serra," (*verbum est amplius*), is the only monument which attests to the world the glory of him who bore that name. It was the last effort of the poor sacristan to rescue that name from oblivion; and, simple and affecting as it is, it will speak to all posterity, and, wherever Correa da Serra is revered, there will this genuine tribute of homage

to a being of superior order be mentioned with applause.—Pp. 555—556.

About this time we find the poet Garção, considered as the Horace of the Portuguese, in the hands of every body. The purity, the classic elegance of his ode, is not even surpassed by those of Horace, whom he chose as his model. The "Cantata of Dido," the "Ode to Virtue," and that on the "Suicide," are characterised by a beauty of style, which is, at the same time, so sublime and so true to nature, that it would be difficult to discover any worthy to be put into competition with them. The poetry of the Portuguese owes its renovation greatly to the influence and example of Garção, and to the literary society which he established under the name of Arcadia. It is to this society, also, that Portugal is indebted for the powers of Antonio Dinis, who was the author of the Pindaric Odes, in which the lyric style of Pindar was, for the first time, successfully employed in the dress of a modern language. Dinis alleviated the duties of the magistracy, in which he was distinguished for talent and probity, by composing a great number of pastoral poems, sonnets, and Anacreontic pieces; but his principal work, and that which has entitled him to take a high rank not only in the Portuguese school of literature, but in that of Europe generally, is his heroi-comic poem, entitled, "O Hysope," in which he contests the pre-eminence with the authors of "The Lutrin," "The Dunciad," and the "Secchia Rapita." This illustrious society produced, likewise, the two Gomes; the one a dramatic poet, who has left us a collection of pieces in twelve volumes, which, if they cannot lay claim to individual perfection, contain, at least, some comedies of a very original character, and in which the manners and habits of the Portuguese are admirably portrayed; and, in addition to these, some tragedies, the force and spirit of which are excellent. In short, with the exception of a correct style, harmonious metre, and those exterior forms of the drama, which he held in too great contempt, he shines pre-eminently in this walk of literature. But the consequence of this peculiarity in his writings is, that his pieces are seldom brought forward on the stage, and are but little read. Still he may be fairly regarded as having laid the foundation of a good national theatre in Portugal, though he was not destined to raise the superstructure. The other Gomes, more the literary character generally than the poet, composed some criticisms on good Portuguese writers, which are much esteemed. Passing over Quiza, who wrote some tragedies of little reputation, a pastoral poem, in the style of the "Pastor Fido," and which certainly is very superior to the Italian dramatic piece, and some idyls likewise possessing all the beauty, simplicity, and grace which characterise the compositions of Gesner of the same kind;—we will briefly notice Gonzaga, the Brazilian author of the "Marilyn de Dirceu," a little collection of elegiac pieces, which has been recently translated into French, and published at Paris.—Pp. 544—546.

THE COLLEGIANS.

The Collegians. 3 vols. post 8vo., Saunders and Otley. London, 1829.

In one sense, every novel must be a national novel. The very notion of a tale-writer attempting to present the bare trunk of human nature, stripped of all the varieties of foliage which are produced by the soil and climate in which it has grown up, is an absurdity. Writers on government and legislation may, if they please, make the attempt to divide the universal man from all the circumstances which give him a specific or an individual character; and, though all their opinions will probably be false, in consequence of this division, they have a chance of enlisting a certain number of disciples. But it is only in works professing to be scientific that this is possible. In studying things, it has been always the tendency of mankind to theorise rather than to observe. In studying persons and characters, the tendency has always been to observe rather than to theorise. There is no likelihood, therefore, of a novel finding readers which leaves out of calculation those obvious and prominent characteristics which men derive from associating with each other in particular communities, for the purpose of dwelling upon those less superficial qualities which all men have in common.

The danger is on the other side, that novels should be too national, that they should lose sight of that which constitutes humanity in every part of the globe, and should be occupied solely with those picturesque diversities of costume and manner which indicate points of difference between nations that are real and essential, but still, in comparison with the points of resemblance, few and unimportant.

Above all, an author is liable to fall into this error, who lays his scenes in countries (and these certainly furnish the most tempting materials to a story-teller) where society exists in an irregular and disorganised state. While all is quiet, and legal, and monotonous in a nation, the national feelings in men's minds do not awake, though they may emit, during their slumber, an occasional snore. But one hour of strife and fury is sufficient, not only to rouse them, but to give them such a strength and predominance, that whatever is common and universal sinks almost out of observation in the struggle.

To this cause we attribute the extraordinary nationality of nearly the whole class of IRISH NOVELS. They are, in general, emphatically Irish novels; not in the sense in which Fielding's may be called English novels, because they exhibit modifications of character that exist nowhere in England; but Irish, because they leave out of view all that there is of human nature in Ireland, and offer a picture of Hibernian nature simply. Of these writers, beyond all comparison, the man of the greatest power and genius is Mr. Banim. Yet, amidst all his wonderfully vigorous, masterly, and true sketches, we cannot recollect one of which we could say, 'This is the portraiture of a man, altered, doubtless, by the habits of the country in which he lives, but still a man more than an Irishman.' He places us in the midst of factions and proscriptions; he portrays with wonderful vividness the bright and dark rays of Irish feelings, as they are drawn down and concentrated by these burning-glasses; he leaves out no illustrations which can assist us in comprehending that which is special and idiosyncrasy in the character; but he never, that we recollect, takes us home into the cabins of his countrymen, at a time when their fierce passions are, for a season, hushed and quieted, and thus enables us to see all that machinery at work, the operations of which are hidden, though not suspended, amidst these violent motions and excitements. The author of 'To-day in Ireland' is far below Mr. Banim in some of the higher powers of a novelist, and in all the lower as much his superior. He has no creative powers; but his style and manner possess great ease and gracefulness. But on this point we need not enlarge, as we shall soon have the opportunity of discussing his merits when the new novel, called 'Yesterday in Ireland,' comes under our view. At present, we will only remark, that for a different reason he falls into nearly the same error with Mr. Banim. The latter has either actually transfused his own mind into that of his heroes by the force of his imagination, or had a previous sympathy with them: the former, who is a satirist, has found that outward peculiarities are a more convenient aim for satire than broad human characteristics, and both, therefore, have given a completely Irish character to their figures.

The author before us, though eminently inferior in power to Mr. Banim, and in language to the writer of 'To-day in Ireland,' is superior to them both in this particular. He has not exclusively confined himself to Irishmen in a state of drunken fury and excitement: he has introduced us to them likewise in their sober moods, by the solitary fire-side, or amidst social groups, not merely to break each other's heads. And the consequence is, that, though his portraits are far less glowing than those of his competitors, yet he has given us some characters in which manhood is almost as conspicuous as Irishhood; and for this we feel deeply obliged to him. We say

simply from a recollection of his former tale, for the present has reached us too late to allow us to read it throughout. We select the following extract, and shall return to the book next week :

"But what pen less gifted than his of Chios, or his of Avon, the delineator of Vulcan or of Grumlo, can suffice to convey to the reader any idea of the mental and bodily proportions of this new comer, who thrust his small and shining head in upon the family party, to awaken their curiosity, and to rob Mr. Daly of so many attentive listeners as he numbered around him at this moment !

"The person who opened the door acted as a kind of herdsman or out-door servant to the family, and was a man of rather singular appearance. The nether parts of his frame were of a size considerably out of proportion with the trunk and head which they supported. His feet were broad and flat like those of a duck ; his legs long and clumsy, with knees and ankles like the knobs on one of those grotesque walking-sticks, which were in fashion among the fine gentlemen of our own day, some time since ; his joints hung loosely, like those of a paste-board merry-andrew ; his body was very small ; his chest narrow ; and his head so diminutive, as to be even too little for his herring shoulders. It seemed as if nature, like an extravagant projector, had laid the foundation of a giant ; but, running short of material, as the structure proceeded, had been compelled to terminate her undertaking within the dimensions of a dwarf. So far was this economy pursued, that the head, small as it was, was very scantily furnished with hair ; and the nose, with which the face was garnished, might be compared for its flatness to that of a young kid. "It looked," as the owner of this mournful piece of journeywork himself facetiously observed, "as if his head were not thought worth a roof, nor his countenance worth a handle." His hands and arms were likewise of a smallness that was much to be admired, when contrasted with the hugeness of the lower members, and brought to mind the fore-paws of a Kangaroo, or the fins of a seal, the latter similitude prevailing when the body was put in motion, on which occasion they dabbled about in a very extraordinary manner. But there was one feature in which a corresponding prodigality had been manifested, namely, the ears, which were as long as those of Riquet with the Tuft, or of any ass in the Barony.

"The costume which enveloped this singular frame, was no less anomalous than was the nature of its own construction. A huge riding-coat of grey frieze hung lazily from his shoulders, and gave to view in front a waistcoat of calf-skin with the hairy side outwards ; a shirt, of a texture almost as coarse as sail-cloth, made from the refuse of flax ; and a pair of corduroy nether garments, with two bright new patches upon the knees. Grey worsted stockings, with dog-skin brogues, well paved in the sole, and greased until they shone again, completed the personal adornment of this unassuming personage. On the whole, his appearance might have brought to the recollection of a modern beholder one of those architectural edifices, so fashionable in our time, in which the artist, with an admirable ambition, seeks to unite all that is excellent in the Tuscan, Doric, Corinthian, and Ionic order, in one *coup d'œil*.

"The expression of the figure, though it varied with circumstances, was, for the most part, thoughtful and deliberative ; the effect, in a great measure, of habitual penury and dependence. At the time of Lord Halifax's administration, Lowry Looby, then a very young man, held a *spot of ground* in the neighbourhood of Limerick, and was *well to do* in the world, but the scarcity which prevailed in England at the time, and which occasioned a sudden rise in the price of beef, butter, and other produce of grazing land in Ireland, threw all the agriculturists out of their little holdings, and occasioned a general destitution, similar to that produced by the anti-cottier system in the present day. Lowry was among the sufferers. He was saved, however, from the necessity of adopting one of the three ultimates of Irish misery, begging, listing, or emigrating, by the kindness of Mr. Daly, who took him into his service as a kind of runner between his farms, an office for which Lowry, by his long and muscular legs, and the lightness of the body that encumbered them, was qualified in an eminent degree. His excellent honesty, one of the characteristics of his country, which he was known to possess, rendered him a still more valuable acquisition to the family than had been first anticipated. He had moreover the national talent for adroit flattery, a quality which made him more acceptable to his patron than the latter would willingly ad-

mit, and every emulsion of this kind was applied under the disguise of a simpleness, which gave it a wonderful efficacy.

"Ha ! Lowry—" said Mr. Daly, "Well, have you made your fortune since you have agreed with the post-master ?"

Lowry put his hands behind his back, looked successively at the four corners of the room, then round the cornice, then cast his eyes down at his feet, turned up the soles a little, and finally straightening his person, and gazing on his master, replied, "To lose it I did, Sir, for a place."

"To lose what ?"

"The place as postman, Sir, through the country westwards. Sure there, I was a gentleman for life if it was n't my luck."

"I do not understand you, Lowry."

"I'll tell you how it was, masther. Afther the last postman died, Sir, I took your recommendation to the Post-masther, an' axed him for the place. 'I'm used to travellin', sir,' says I, 'for Mither Daly, over, and—' 'Aye,' says he, 'takin' me up short, 'an' you have a good long pair o' legs I see.' 'Midling, Sir,' says I ; (he's a very pleasant gentleman ; 'its equal to me any day, winther or summer, whether I go ten miles or twenty, so as I have the nourishment.' 'T'would be hard if you didn't get that any way,' says he. 'Well, I think I may as well give you the place, for I do'n't know any gentleman that I'd sooner take his recommendation than Mither Daly's, or one that I'd sooner pay him a compliment, if I could.'

"Well, and what was your agreement ?"

"Ten pounds a year, Sir," answered Lowry, opening his eyes, as if he announced something of wonderful importance, and speaking in a loud voice, to suit the magnitude of the sum,—"besides my clothing and shoes throughout the year."

"'Twas very handsome, Lowry."

"Handsome, masther ? 'Twas wages for a prince, Sir. Sure there I was a made gentleman all my days, if it was n't my luck, as I said before."

"Well, and how did you lose it ?"

"I'll tell you, Sir," answered Lowry. "I was going over to the Post-masther yesterday, to get the Thralse mail from him, and to start off with myself, on my first journey. Well an' good, of all the world, who should I meet, above upon the road, just at the turn down to the Post-office, but that red-headed woman that sells the free-stone in the streets ? So I turned back."

"Turned back, for what ?"

"Sure the world knows, masther, that it is n't lucky to meet a red-haired woman an' you going of a journey."

"And you never went for the mail-bags !"

"Faiks, I'm sure I didn't that day."

"Well, and the next morning ?"

"The next morning, that's this morning, when I went, I found they had engaged another boy in my place."

"And you lost the situation !"

"For this turn, Sir, any way. 'Tis luck that does it all. Sure I thought I was cock-sure of it, an' I having the Post-masther's word. But, indeed, if I meet that free-stone crathur again, I'll knock her red head against the wall."

"Well, Lowry, this ought to show you the folly of your superstition. If you had not minded that woman when you met her, you might have had your situation now."

"'Twas she was in fault still, begging your pardon, Sir," said Lowry, "for sure if I didn't meet her at all this would'n't have happened me."

"Oh," said Mr. Daly, laughing, "I see that you are well provided against all argument. I have no more to say, Lowry."

"The man now walked slowly towards Kyrle, and bending down with a look of solemn importance, as if he had some weighty intelligence to communicate, he said—"The horse, Sir, is ready, this way, at the doore abroad."

"Very well, Lowry. I shall set out this instant."

Lowry raised himself erect again, turned slowly round and walked to the door with his eyes on the ground, and his hand raised to his temple, as if endeavouring to recollect something farther which he had intended to say.

"Lowry !" said Mr. Daly, as the handle of the door was turned a second time. Lowry looked round.

"Lowry," tell me—did you see Eily O'Connor,

the rope-maker's daughter, at the fair of Garryowen yesterday ?"

"Ah, you're welcome to your game, masther."

"Pon my word, then, Eily is a very pretty girl, Lowry, and I'm told the old father can give her something besides her pretty face."

Lowry opened his huge mouth, (we forgot to mention that it was a huge one,) and gave vent to a few explosions of laughter, which much more nearly resembled the braying of an ass. "You are welcome to your game, masther," he repeated ;—"long life to your honour."

"But is it true, Lowry, as I have heard it insinuated, that old Mihil O'Connor used, and still does, twist ropes for the use of the county gaol ?"

Lowry closed his lips hard, while the blood rushed into his face at this unworthy allegation. Treating it, however, as a new piece of "the masther's game," he laughed and tossed his head.

"Folly on—sir—folly on."

"Because, if that were the case, Lowry, I should expect to find you a fellow of too much spirit to become connected, even by affinity, with such a calling. A rope-maker !—a manufacturer of rogue's last neck-cloths—an understrapper to the gallows—a species of collateral hangman !"

"A' then, Missiz, do you hear this ? And all rising out of a little ould fable of a story that happened as good as five year ago, because Moriarty the crooked hangman, (the thief !) stepped into Mihil's little place of a night, [and nobody known of him, an' bought a couple o' pen'orth o' whip-cord for some vagary or other of his own. And there's all the call Mihil O'Connor had ever to gallowses or hangmen in his life. That's the whole tote o' their *instiwaytions*."

"Never mind your masther, Lowry," said Mrs. Daly, "he is only amusing himself with you."

"Oh, ha ! I'm sure I know it ma'am ; long life to him, and 'tis he that's welcome to his joke."

"But, Lowry—"

"A' heavens bless you, now masther, an' let me alone. I'll say nothing to you."

"Nay, nay, I only wanted to ask you what sort of a fair it was at Garryowen yesterday."

"Middling, Sir, like the small *platees*, they tell me," said Lowry, suddenly changing his manner to an appearance of serious occupation ; "but 'tis hard to make out what sort a fair is when one has nothing to sell himself. I met a huxter, an' she told me 'twas a bad fair because she could not sell her piggins ; an' I met a pig-jobber, an' he told me 'twas a dear fair, pork ran so high ; an' I met another little meagre creatur, a neighbour that has a cabin on the road above, and he said 'twas the best fair that ever come out o' the sky, because he got a power for his pig. But Mr. Hardress Cregan was there, and if he didn't make it a dear fair to some of 'em, you may call me an honest man."

"A very notable undertaking that would be, Lowry. But how was it ?"

"Some o' them boys, them Garryowen lads, Sir, to get about Danny Mann, the Lord, Mr. Hardress's boatman, as he was comen down from Mihil's with a new rope for some part o' the boat, and to begin reflecting on him in regard o' the hump on his back, poor creatur ! Well, if they did, Masther Hardress heard 'em, and he having a stout blackthorn in his hand, this way, and he made up to the foremost of 'em, 'What's that you're saying, you scoundrel ?' says he, 'What would you give to know ?' says the other, mighty impudent. Masther Hardress made no more, only up with the stick, and without saying this or that, or by your leave, or how do you do, he stretched him. Well, such a scuffle as began among 'em was never seen. They all fell upon Mr. Hardress, but fair they had only the half of it, for he made his way through the thick of 'em without as much as a mark. Aw, indeed, it is n't a goose or a duck they had to do with when they came across Mr. Cregan, for all."

"And where were you all this while, Lowry ?"

"Above, in Mihil's doore, standen and looken about the fair for myself."

"And Eily ?"

"Ah, hear to this again, now ! I'll run away out o' the place entirely from you, masther, that's what I'll do." And, suiting the action to the phrase, exit Lowry Looby.

"Well, Kyrle," said Mr. Daly, as the latter rose and laid aside his chair, "I suppose we are not to expect you back to night ?"

"Likely not, Sir. If I have any good news to tell,

I shall send an answers by Lowry, who goes with me; and if—” something seemed to stick in his throat, and he tried to laugh it out—“If I should be unsuccessful, I will ride on to the dairy-farm at Gurtenspigg, where Hardress Cregan promised to meet me.”

Mr. Daly wished him better fortune than he seemed to hope for, and repeated an old proverb about a faint heart and a fair lady. The affectionate mother, who felt the feverishness of the young lover's hand as he placed it in her's, and probably in secret participated in his apprehensions, followed him to the steps of the hall-door. He was already on horseback.

“Kyrle,” said Mrs. Daly smiling while she looked up in his face and shaded her own with her hand, “Remember, Kyrle, if Anne Chute should play the tyrant with you, that there is many a prettier girl in Munster.”

Kyrle seemed about to reply, but his young horse became restive, and as the gentleman felt rather at a loss, he made the impatience of the animal an apology for his silence. He waved his hand to the kind old lady, and rode away.

“And if she should play the tyrant with you, Kyrle,” Mrs. Daly continued in soliloquy, while she saw his handsome and graceful figure diminish in the distance, “Anne Chute is not of my mind.”

So said the mother as she returned to the parlour, and so would many younger ladies have said, had they known Kyrle Daly as well as she did.—Pp. 60, 76.

CRICHTON'S EUROPEAN REVOLUTIONS.

History of the Revolutions in Europe, from the Subversion of the Roman Empire in the West, till the Abdication of Buonaparte. From the French of C. W. Koch, by Andrew Crichton. Vol. III. 18mo. pp. 342. Constable and Co., Edinburgh, 1829.

We had occasion, some time ago, to speak of the miserable pseudo-histories which are now issuing in cheap, and, therefore, most dangerous forms, from the Edinburgh press. In Mr. Chambers's History of the ‘Scotch Rebellions’ we pointed out passages in which the most atrocious crimes were defended upon the plea of political expedience; and we showed that throughout that work a miserable wish was evident to gain the reputation for philosophy by trampling upon all the ordinary principles of morality. In that article we could not avoid expressing our opinion that there was something in the political circumstances of Scotland, which, by creating an indifference to political virtue, must for ever disqualify the inhabitants of that country from producing an honest and an earnest history. The present volume does not shake our conviction on this head. It is less positively vicious than its predecessor; but, so far as diligence in the collection of facts, and a determination to state them in that way in which they will produce the truest impression, are parts of the moral duty of every historian, its deficiencies are scarcely less enormous.

The more the events of the French Revolution are understood, the more care is used to clear the narrative of them from all false and party statements, the more fully it is admitted, that a long course of previous misgovernment made the Revolution inevitable,—the more clearly we are sure, will the great moral of the Revolution reveal itself, that liberty is the inseparable companion of order, the more shall we be convinced that the views of the first founders of that Revolution, in confounding moral and political truths, were false and mischievous, the more shall we see that the true foundations of government can only be understood in a country in which the true foundations of morality have been understood previously. But this is not our author's process for arriving at these truths; nor, indeed, are these the truths what he cares most to arrive at. To give the most superficial and careless representation of the events of the Revolution, to take any causes which happen to lie in his way, to avail himself of any court or aristocratical lies,—this is his theory of writing a history. The difference of the means corresponds to the difference of the objects, which he and we should propose to ourselves. It is not because the seizure of church property, the abolition of tithes, the

establishment of a regime, founded on first principles instead of experience, were an invasion of order, that he objects to them, but simply and solely because the aristocracy and the monarchy were sufferers by these crimes. It is this which constitutes all the difference between a party man and a philosopher,—between such men as the author before us, who sees nothing flagrant in violations of order, except when they proceed from a certain quarter, and such men as Burke, who denounced, with equal severity, the aggression of a mother country upon its colonies, and of a mob upon their rulers; and this it is which explains the phenomenon we see in our day of the extreme of Toryism becoming connected with the extremes of violence and sedition.

The following are specimens of the Admirable Crichton's sagacity. Any thing much more vulgar, or much more false, than the following preliminary view of the Revolution, we never recollect to have read:

‘The French Revolution forms one of the most extraordinary events recorded in the annals of Europe. A variety of causes, both moral and political, combined to produce this anomaly in the history of nations,—the principal of which must be attributed to a set of opinions, whose speculative delusions, recommended by a powerful and seductive eloquence, unsettled the minds of the restless multitude, and prepared the way for the general subversion of public order. The career of this pretended philosophy ended in nothing but convulsions, wars, and assassinations. Such was the natural result of those doctrines whose main object was to sap the foundations of all duty, by making a jest of religion; and next, to overturn the fabric of society, by letting loose the passions of the ignorant, and casting down the barriers of established forms,—those safeguards which wisdom and experience have reared against the licentiousness of innovation.

‘The period on which we are entering does not comprehend more than twenty-five years; but that short space contains more lessons of important instruction than the two centuries which preceded it. In the course of that time, the condition of Europe was entirely changed. The political system which it had cost the combined labour of three hundred years to rear, was overturned from its basis, burying kingdoms and whole nations in the ruins. A people, the most refined and ingenious in the world, who had formerly set others an example of loyalty and unbounded attachment to their sovereigns, were now seen giving way to the delusions of a blind fanaticism; pulling down those venerable institutions which the wisdom of their ancestors had built; trampling religion and morality under foot; laying prostrate both the throne and the altar; and staining their hands in the innocent blood of their ancient kings. Vice was now seen honoured and exalted in the place of virtue. Anarchy and despotism were substituted for regular government and rational liberty.

‘This same nation, torn by the fury of contending democrats, was seen labouring to impose on her neighbours the galling chains of her own thralldom; and spreading war and desolation over the earth, as if to wipe out the reproach of her past crimes. Finding no remedy in the midst of universal confusion from the evils she had inflicted on herself, she abandoned the phantom of liberty, which was become but another name for oppression, and transferred her homage to the shrine of despotism. The grasping ambition and insatiable power of the usurper whom she chose for her master, and the weakness of the states which opposed him, contributed to the formation of an imperial dominion, such as had not existed in Europe since the time of Charlemagne.

‘This memorable era was fertile in examples both of virtues and vices. It displayed the extremes of suffering and violence, of meanness and magnanimity. Kingdoms rose and disappeared by turns. New principles in morals and in politics flourished for a day, and were quickly superseded by others. Europe was subdued and enslaved, first in the name of liberty and equality, and afterwards to gratify the ambition of a tyrant. At length an end was put to this reign of despotism; and the nations of the Continent were delivered from a usurpation which they had too long supported with patience. The countries of the North, which had participated in this general convulsion, laying aside the jealousies and projects of ambition, united their forces to overthrow the dominion of injustice and oppression. A new order of things seemed to revive; sounder maxims began to prevail; and the nations of Europe, made

wise by experience, appeared ready to abandon the chimerical doctrines of that false liberty which had led them astray, and which, after five-and-twenty years of war and desolation, seemed to have wrought its own antidote, and brought in a new era of peace and prosperity.—Pp. 40—43.

Mr. Crichton's opinion of Mirabeau:

‘The prime agent in this revolution was Mirabeau, a man of an ambitious and turbulent spirit, who inflamed the Assembly by his violent harangues. A demagogue from interest, and of good abilities, though immoral in his character, he was resolved to build his fortune on the public troubles, and to prevent, by all means in his power, the first symptoms of a return to subordination and tranquillity. The Duke of Orleans supplied money to corrupt the troops, and excite insurrections over all parts of France.—P. 50.

The treachery of Dumouriez is spoken of in the following gentle and appropriate terms:

‘Dumouriez undertook the conquest of Holland, and penetrated as far as Moerdyk; but he was obliged to abandon his object in consequence of the defeat of Miranda, who had laid siege to Maestricht, by the Austrian army under the command of the Duke of Saxe-Coburg. Dumouriez was himself defeated at Nerwinden (March 18), after which he retired towards the frontier of France. Being determined to put an end to the tyranny of the Convention, and to re-establish the constitution of 1791, he concluded an armistice with the Austrians, and delivered up to them the commissioners which the Convention had sent to deprive him of his office; but, his army having refused to obey him, he was obliged to seek for safety, by escaping to Tournay, where General Clairfait then was. The young Duke of Chartres accompanied him in his flight.—P. 67.

Verges is described as a new man in 1798!

We will give but one specimen more from a much more advanced part of the book. It describes the return of Ferdinand to his country in 1814:

‘Ferdinand VII. sent his minister, the Duke of San Carlos, to Madrid, for the ostensible purpose of communicating that treaty to the Regency, but in reality to take cognizance of the state of affairs. The Regency refused to acknowledge the treaty of Valencay, because the King was not at liberty, Buonaparte being apprised of this difficulty, immediately released Ferdinand (March 7, 1814). He set out on his return to his dominions, but performed his journey slowly, that he might have leisure to obtain personal information as to the spirit which reigned among the Spaniards. He was soon convinced, that the people, attached to their religion, and to the family of their lawful Prince, were very indifferent about the Constitution of the Cortes, and that that assembly enjoyed very little influence or authority. Sixty members of the Cortes had even protested against an Act which, by degrading the Royal dignity, was preparing the way for establishing a democracy. On his arrival at Valencia, Ferdinand abrogated the Constitution of 1812, and directed his course towards Madrid, which he entered on the 17th May. The people every where expressed their attachment to a Prince whose arrival they hailed as the return of justice and order; though it is foreign to our purpose to narrate why that hope has not been realized.—P. 298.

Ohe! jam satis.

INTELLECTUAL PHILOSOPHY.

Conversations on Intellectual Philosophy; or, a Familiar Explanation of the Nature and Operations of the Human Mind. 2 vols. 12mo. Bull. London, 1829.

THE world in general, that is to say, the young ladies at boarding-schools, old gentlemen at boarding-houses, divines, politicians, milliners, bankers-clerks, and cabinet ministers, who are in the daily, or at least weekly, habit of delighting in ‘The Athenæum,’ sometimes complain, as we are told, (for such blasphemies are whispered much too timidly to reach our philosophical ears,) that a somewhat too metaphysical cast or obliquity of mental vision has been now and then detected in the style of our articles. With shame it is and grief that we confess ourselves unable to make any excuse completely satisfactory to the fair or fat, right honourable or reverend, complainants whose displeasure we are

anxious to deprecate. For, though we do not very often indulge such abstract speculations as their complaints might be supposed to point to, yet we acknowledge that we find it extremely difficult to tread even the common paths of popular literature, without occasionally digressing into trains of reflection which such acute critics will brand at once with the title of metaphysics. And we do most earnestly beg that they will either treat with lenity our apparent aberrations in this kind, or instruct us (we assure them they will find us apt scholars) how we shall treat of those productions which arise from, and address themselves to, the most complex powers and feelings of the human mind, without ever alluding, even incidentally, to the nature of those faculties, which, in their manifold operation, form at once the organ by which the sense of the true and of the beautiful is impressed and received; by which the creations of imaginative art are called into being, and by which alone, existing in the spirit which contemplates them, these masterworks can find appreciation.

The book before us is an attempt to teach the science of metaphysics, according to Dr. Thomas Brown, to a family of children. The author of the work is a very clever man, and his views on education are some of them striking, and even profound. Yet, strange as it may seem to those who are in the habit of charging us with being metaphysical, we do most decidedly object to the principles on which the book is written. And, what may seem more strange still, we object to it, not from any aversion to the particular scheme of metaphysics inculcated by the author, but because we think that the study of any system of metaphysics whatever will be mischievous to all children, and to very many grown-up people. This opinion we have adopted after some consideration; the reasons of it, we may expound hereafter. At present we will merely say, that those who do approve of teaching boys intellectual philosophy, will probably find this work a suitable manual for that purpose.

THE FOREIGN QUARTERLY REVIEW.

The Foreign Quarterly Review, January, 1829. Treuttel, Würtz, and Co. London.

WE have so lately expressed our opinions in an article of considerable length on the merits of this periodical generally, that we have no excuse for descanting on that subject again. The opinion we then expressed that it was decidedly the best edited and one of the best written reviews in this country, has not been changed by a perusal of the present Number. Judged of merely by the titles of its articles, it perhaps has less attractions than some of its predecessors; but this is a most unfair way of determining the merit of a periodical: first, because it is a point of general experience that a writer is generally more entertaining when he has nothing to depend upon but the excellence of his matter; and, secondly, because the merit of such a work does not consist only in making the contents of each number various, but in making one number differ from another. This last end is certainly well compassed by the present *livraison* of 'The Foreign Quarterly,' which is quite unlike, in topics, any that have gone before it; and the first has not been neglected, as our readers will perceive when we have enumerated the articles.

No. I. is a particularly valuable and comprehensive article on the arts and manufactures in France. We have not time to follow the writer through the various heads of his long and able discussion; but we will extract an important and interesting passage relative to French agriculture.

'It is the result of the observations of Mr. Jacob, in his Report published in April last, that the agriculture of France occupies one of the lowest ranks of any of the northern states of Europe, being inferior to that of the Netherlands, Hanover, Prussia, Saxony, Denmark, Poland, and even Austria. Although about

two-thirds of the population, or twenty-one out of her thirty-two millions of inhabitants, are employed in the cultivation of the soil, the old system of farming has been hitherto but little departed from, and the scientific principles that guide the English agriculturists, though beginning to make their way, are yet, by no means, in general practice. The average fertility of the soil has led many of its proprietors to rely too much on their natural advantages, and too little on the assistance of art. The protecting duties, which, like those of England, exclude the competition of foreign corn, have likewise, it is to be feared, tended to check the exertions they were designed to stimulate. But the backwardness of agriculture is mainly attributable to the very partial spread of education in the rural districts, there being, out of 40,000 communes, according to M. Dupin, 15,000 destitute of teachers; and out of twenty-five millions of inhabitants who have reached a teachable age, ten millions only able to read. Now, as the small independent proprietors of land amount to four millions, and their families to twelve or fourteen millions more, it is obvious that this state of ignorance must, under such circumstances, be attended with far more prejudicial effects upon production than if it existed in England, where the labourers are under the orders of about thirty-two thousand large proprietors, and the success of cultivation, consequently, does not mainly depend upon the general diffusion of knowledge. It is gratifying to find, however, that the large proprietors in France are universally desirous for the instruction of the rest, and that societies, rural schools, and model-farms, have been established under very favourable auspices. The agricultural society of the Seine et Oise, which comprises many extensive landed proprietors, bestows, annually, medals and prizes on the small cultivators, who turn their hereditary estates to the most profit, and upon the hired labourers and servants employed in large farms, who perform their work with the greatest intelligence and fidelity. A model-farm has been lately established at Roville, in the valley of the Meurthe, about six leagues from Nancy, by M. de Dombasle, a skilful practical agriculturist, with the assistance, and under the patronage, of the Dauphin. It comprises land of three different sorts—clay, sand, and gravel, and the proper modes of culture are applied to each. By the improvements in ploughs and instruments of husbandry, five horses and nine oxen now accomplish at Roville more work than thirty-five beasts of burthen used to do on the same ground. With the aid of the Scotch threshing machine, M. de Dombasle beats out, with three horses, three hectolitres and a half (upwards of an imperial quarter) of wheat, and other grain in proportion. Potatoes are cultivated with attention, and a distillery has been established for extracting their spirit. M. de Dombasle has proved what will, we think, excite some surprise—that land of a middling quality, planted with potatoes for fattening beasts, will be more productive than the richest meadow. No stronger encomium can be made on the skill of M. de Dombasle, than the fact, that he has more than doubled the produce of the land,—the average annual return of Roville being fifty-nine francs per hectare (of two and a half acres), while that of the rest of the department of the Meurthe is but twenty-eight and a half francs per hectare. At Moncey, in the department of the Moselle, the model-farm of M. Bouchotte is famous for its breed of horses. The agricultural society of Strasbourg has just commenced an experimental plantation of fruit and forest trees in Alsace—a want observable, not merely in that department, but throughout the whole country, except perhaps Normandy and parts of Brittany. In Franche Comté and the department of Doubs, the Government has taken the breeding of cattle under its peculiar care, and established annual exhibitions and prizes. In these parts, as also in Montbéliard, the useless practice of feeding off the land is beginning to be discontinued, it being ascertained that a hectare of inclosed ground produces one-third more if not subjected to this ceremony. The arrondissement of Montbéliard has abandoned the system of fallows in use in the rest of the department, and cultivates with success both flax and the turnip. In Franche Comté the very beggars are becoming industrious; they go about collecting manure till they have accumulated a certain quantity, when they take it to a proprietor, who allows them in return to plant on his soil, and receive the crop of a proportionate number of potatoes. In Picardy the increase of the sheep flocks, and the improved system of manuring, have added to the fertility of the soil. At Nouvion, in the department of the Aisne, the farms have been ornamented by hedges and plantations, in imitation of the adjoining country of Hainault. It is here that the

making of *sabots*, and wooden utensils called *bois-jolis*, is chiefly carried on; the supply sent to Paris annually is valued at 17,000*l*. At Origny, in the neighbourhood of Vervins, the children of the husbandmen are employed in fan-making, baskets, &c. of willow, to the value of 40,000*l*. per annum. In Champagne the example of M. Richardot, a small proprietor, has given an impulse to planting, and to a systematic irrigation of the land.'

The breed of French pigs, we are glad to assure our readers, on the authority of the reviewer, is decidedly improving.

The subject of the best article is 'Humboldt's Statistical and Political Account of Cuba.' It is a valuable paper on many accounts, from the importance of the island it treats of, from the interest attaching to the name of the traveller, and from the collateral information which it has accumulated respecting our own colonies. The following short extract confirms an assertion which has often been contradicted:

'The general results of all that has been most laboriously collected are: that the whites increase more in the country than in towns; that the free coloured race, who generally prefer mechanical trades to agriculture, augment with greater rapidity than the other castes; and that the negro slaves, among whom there is not one-third of the number of females requisite for that of the males, diminish at the rate of 8 per cent. per annum.'

Of the next article, on M. Meyer's 'Judicial Institutions of Europe,' we cannot speak in such high terms. It is commonplace, indistinct, and dogmatical. The author has not struck out a single new notion on the subject, or brought a single new argument in confirmation of the old opinion; and yet he has the assurance to speak with contempt of Mr. Parke's Book of Codification, which is evidently the result of long and patient thinking and well-used experience, of an original and powerful mind. We are sorry the editor of 'The Foreign Quarterly Review' should have allowed such a writer a place in his pages. The other articles are new, and they have all their separate merits.

CATALOGUE RAISONNÉ

The Law Magazine, No. 3.

THE present Number of this useful periodical is a decided improvement upon the last, as that was upon its predecessor. It contains a mixture of legal learning, general information, and entertainment, which we could hardly have expected in a technical work. It is entitled to all support both from the profession and the public.

Bowring's German Anthology.

THIS useful and meritorious little work has been so long neglected on our shelves, that we are almost ashamed to notice it. It supplies a chasm that has been hitherto left unfilled in German education, and we trust will meet with all the encouragement to which the skill displayed in its compilation entitles it.

Naval Science.—Arrangements have been made in that part of the Royal Naval College in Portsmouth Dock-yard, hitherto exclusively appropriated to the students in naval architecture, for affording the means of instruction on scientific subjects, connected with the naval service, to twenty-four commissioned officers of the navy. These studies will be directed by the able professor, Dr. Inman. The Admiralty holds out no inducement for officers to enter on this course of instruction, save that of affording them gratuitously the means of acquiring scientific knowledge.

A STORY WITHOUT A NAME.

CHAP. II.—EDUCATION.

It was not, on the whole, an unhappy circumstance for M'Kinnon that the news of his loss found him in so excited a state of feeling. If it were possible that the idea of a deep and dreadful calamity could enter the mind while it is drunk with expectation and hope, if even the consciousness of the exhilaration could co-exist with the consciousness of present suffering,—the agony of a sudden reverse would be insupportable. But it has been kindly ordained otherwise. For the first few moments, persons in a state of great excitement have no intelligible feelings of what the woe is which is come upon them in the hour of festivity and rejoicing. The hand-writing on the wall may be visible; but its characters are dim, indefinite, and inexplicable. If they weep at first, it is because they see others weep; but the sorrow does not enter their mind, till the mind is prepared to receive it, till the last of its former train of happy associations has departed, and their place is filled with gloomy ideas such as well harmonise with their new companions. It is when a great grief overtakes us in a state of calm repose, of lethargic happiness, that we wake up most suddenly to a comprehension of its nature, and feel the change with the most intense and unspeakable bitterness.

In M'Kinnon's case there was also a further alleviation:—his character, since he had the prospect of becoming a father, had acquired a strength which, for the time, was almost sublime. The additional intensity with which this alteration enabled him to feel the shock, was nothing compared with the increased energy by which he was inspired to withstand it. It was true, that his love for his wife had formerly been of a cold and customary character, and that it had lately become strong and passionate. Still, if he could have chosen, he would rather have lost her now, when the recollection of that love was fresh upon him, when he had not the painful feeling of being half a hypocrite in deploring her,—than when grief for her would have been a duty, and the remembrance of her scarcely a pleasure. His tears might flow faster—but, at least, they flowed without an effort. As usual, however, the most successful assuager of his grief was that which was, at first, its greatest aggravation, the infant. For the first few weeks of her life, he watched, with deep interest, that little casket which contained all that he valued on earth. Gradually, the apprehensions for her safety, which had divided his mind with sorrow, yielded to feelings with which sorrow could hardly dwell. The first indications of perception, the first tokens that the little philosopher was beginning to exchange some of the glimpses of the pre-existent world for a consciousness of what is passing in our own, the first development of expression in its countenance, the first rude attempt at articulation—all filled Mr. M'Kinnon with a delight which increased till it filled up every part of his mind, and left him no space for sad retrospection.

The care of the infant was committed to better hands than it is often the lot of children of her age to fall into: she had a nurse-maid without knowledge, without superstition, and without a lover. The first saved Ellen from being taught indifferently at a time when the best teaching of things would have done her harm, the second from having her nerves made prematurely susceptible, and the last from innumerable perils by field and flood. The nurse-maid had besides a good temper and not an unintelligent countenance. She was fond of her charge; and, though she did not educate it as a child of that age should and may be educated, she at least allowed it to follow out its own impressions, without any interruption or perversion on her part. Accordingly, between her nurse-maid and her father, (neither of whom had much knowledge of the way of developing a child's faculties,

ness and affection, kept her free from those impediments of fear and passion, which more than any thing else prevent nature from performing its work upon the faculties,) Ellen M'Kinnon, at the age of four years, was an exceedingly promising little girl. She was not precisely cultivated: she could not probably give a reason for what she wanted, as a child who is properly instructed at that age, ought to be able to do; but she was sprightly and energetic; she had a quick spirit of observation, and exhibited that sensibility to resemblances and differences which, if it exists in childhood, is almost sure to be followed by an acute sense of the ridiculous in after-life. At six years, her progress was such as might have been expected from such beginnings. She exhibited, precisely that kind of character which would have warranted a person in predicting that she would never by any process of education be reduced to a state of perfect fatuity, though her abilities might, with due diligence, be either a blessing or a curse to their possessor.

At this time, it occurred to Mr. M'Kinnon, that his daughter was of a full age to reap all the advantages of a more systematic education than she could obtain from the joint labours of himself and his servant. Before her birth, he had finally resolved that she should not approach the precincts of a boarding-school; not that he had any special objection to the general system of female establishments, in respect to the nature of things taught or the mode of teaching. Of these he knew little, and, had he known, could not, from his acquaintance with female character, have formed any opinion about their fitness. His notions of females were in a great measure scholastic, and of course sufficiently simple. The awe with which they inspired him while he continued a monk had been partially dissipated; and the conceptions of them which remained were, that they were a race of soft, delicate, fragile creatures, whose training consisted chiefly in preventing the winds of heaven from visiting their faces too roughly. Further than this his knowledge did not go; but this was enough, combined with his recollections of his own school sufferings, to make him consider it the greatest privilege of women that they were not necessarily subjected to the horrible discipline from which boys, he thought, could not fairly plead exemption. A governess, therefore, was to be sought for.

The inhabitants of Melcove never thought any subject unfit for their attention which concerned the general interests of humanity; and of course the great question about the best mode of instructing young ladies was frequently debated among them. Accordingly, the announcement that it was their rector's intention to commence the education of his daughter in good earnest, awakened the most intense and benevolent interest among his parishioners. One of the most sagacious of them, my old friend Mrs. Mindigate, had learnt Mr. M'Kinnon's intention to look out for a governess, through certain channels, many months before he had been apprised of it himself. The very night that her lady's-maid carried her the news, she called upon Lady Salkeld; and those two venerable females, after much discourse, unanimously came to these resolutions,—1st, That it was a very happy thing that the spiteful report which had been circulated (they knew very well by whom) of their Rector's having exhibited some symptoms of tenderness towards Ellen's nurse-maid, nay, of having once asked her to take the head of his table, had turned out, as they always said it would, false and frivolous. 2dly, That it would be a sad blow to poor Juliana Somerville, when she heard of the decided step Mr. M'Kinnon was going to take, as she certainly had calculated (even that stone-blind creature Sir John Morrison had observed it) upon succeeding to a situation at the parsonage, which would have made a governess unnecessary; and that the said poor Miss Juliana's mal-organ-

could not, at the lowest reckoning, which was only adding eight years to her own computation, be under thirty-five,—made it very unlikely that she should have any other offers; and that it would be highly proper to condole with the poor thing upon this sad disappointment of her hopes. And, 3dly, That it was a duty they owed to the cause of religion and morality, which must always be injured by the misbehaviour of clerical persons, as, for instance, the reverend gentleman of the parish: (that was a sad business, though, after all that was said, it might only be the report of cast-off servants: though, certainly, appearances were against him;) to see that Mr. M'Kinnon took proper pains to select a person of a decent behaviour, decent age, and decent ugliness, for the management of his child.

Owing to the kind exertions of these two ladies, who, in addition to advertising for governesses in their own district, had written letters to friends at a distance to inquire whether Miss S. was disengaged, whether Miss L. had gone after she had left Dr. M.'s, and whether they knew of a lady who spoke Latin like a native, as that would be an accomplishment which would have great weight with a scholar like Mr. M'Kinnon—owing, we say, to their benevolent labours, our good friend had received, before he came fully to the resolution of taking a governess, not less than twelve applications from different females ambitious of filling that office. At length, weary of their importunities, and finding that not one of them could be persuaded that her services would not be immensely valuable to him, he informed them that he had written to a sister in London, whose search had already been successful, and that he expected to see the lady of her choice in the course of a week.

This announcement occasioned much astonishment amongst the ladies of Melcove. It was seldom that Mr. M'Kinnon had ventured to take a step so suddenly without consulting his parishioners; and it was even doubtful whether, upon strict principles, he was justified in doing so. Were they not his regularly appointed cabinet ministers,—persons in some measure responsible for their pastor's actions, who would be taken to task by the neighbouring villages if he conducted himself in an unbecoming manner? And, if it was so in other things, the choice of a governess, a concern for which he must necessarily be unfit, and for which their advice must be so valuable—could any thing be more outrageous than to have provided one on his own individual judgment? And then to have brought a woman from London! It would be fine to hear him talking again about the sin of bringing over French gloves, and wearing Leghorn bonnets, when he was taking such a sure way of bringing the home manufacture of governesses into disrepute. These were heavy grounds of complaint, and deeply did they rankle in the bosoms of the fair inhabitants of Melcove. With all this, however, their pastor was too good a man to be given up. To be sure he was rather obstinate and self-willed now and then, but he might still be reclaimable; it was at least their duty to save Ellen from the consequences of his indiscretion.

About the mode of saving this latter little person, there were several differences of opinion: indeed, the number of theories on the subject were so numerous, that after repeated discussions it was finally agreed, that the parties would only defeat each other's objects by coalescing, and that the only reasonable mode would be for each to defend her system against Mr. M'Kinnon in single combat. Severe penalties were inflicted on any one who should go to the parsonage to argue out of her turn. No argument was to be protracted beyond three hours; and Mr. M'Kinnon should be requested to make a declaration of the effect which their several speeches had produced upon his mind, at a meeting of all the confederates. Finally, each lady resolved that, as a sure

take with her that best practical illustration of the superiority of her system of all others—her own daughter.

(To be continued.)

ROYAL ACADEMY LECTURES.

ELGIN COLLECTION—SELINUNTINE METOPES.

We do not—we never did—purpose to follow the lecturers on Sculpture and Painting at the Royal Academy through their respective series of lessons. The details with which their discourses are necessarily occupied, prevent our engaging in any such undertaking; and, highly interesting as those details may be, and many of them are of scarcely less interest to the amateur than to the professional student, they do not admit of a summary capable of being rendered in any wise satisfactory either to the professor or reporter, or at all useful to the reader. We have contented ourselves, therefore, with giving a notice of the introductory lecture on each art, and return now to the subject, merely, in the execution of our design to notice, from time to time, any novelty in fact or proposition which, being out of the general routine of matters touched on in these lectures, might seem worthy of especial mention. An occasion of this kind we found in the lecture, the third of the course, delivered by Mr. Westmacott on Monday evening. The general object of that discourse was the elucidation of the Elgin collection in the British Museum; and of these he explained the history, destination, character, and excellence, with a discrimination, perspicuity, and feeling, to have been looked for from one who has himself so successfully followed the art, the rules of which he had undertaken to inculcate. A catalogue raisonné of the marbles of the Parthenon is here, however, out of the question; and we shall confine ourselves to an antiquarian point, on which we are desirous of saying a word or two.

The very mention of specimens of *Carthaginian* sculpture could not, and will not, fail to excite attention. The existence of any such monuments would, indeed, be of the highest interest in the almost total absence of relics of that renowned nation; but we fear that Mr. Westmacott propounded the question rather as a random suggestion than as an advised opinion. In either case, as connected with the history of the art on which he was lecturing, the subject merits a little examination. The monuments alluded to were the Metopes of the temple of Selinus, in Sicily, discovered, a few years since, by our countrymen, Harris and Angell, and of which casts are to be seen in the Gallery of Antiquities at the British Museum. Of these Metopes, before proceeding to animadvert on those of the Parthenon, Mr. Westmacott said it was a question for the antiquary whether they were not *Carthaginian*. Were they so, their interest and value, it is obvious, would be great,—greater, perhaps, than if they were Greek; but, we apprehend, there are no solid grounds on which such an opinion can be founded. We have ourselves had occasion to investigate the history of these fragments with some attention; as mere observers, we confess, and not with the eye either of an antiquary or a sculptor, but certainly devoid of any prejudice or attachment to system on the subject; we have not, however, been able to come to the conclusion hinted at by Mr. Westmacott.

The style of the Selinuntine sculptures, so different from all existing specimens of Greek art, and the fact of the conquest of the city by the Carthaginians, naturally suggest, *prima facie*, the idea that these works might be of *Carthaginian* origin. A little reflection, however, will show the improbability of their being the production of the conquerors of Selinus. The Carthaginians sacked and destroyed that flourishing colony, the third in importance of the Greek settlements in Sicily, about the ninety-

second Olympiad, while the Peloponnesian War was yet raging. In Greece, at that period, the art had attained Phidian perfection; and we know that the colonies, the Sicilian colonies more especially, were little, if at all, behind the mother-country. The Carthaginians, it is true, were barbarians; that is to say, they were not Greeks; but it would be an opinion not at all warranted by history to suppose, that enterprising, commercial, opulent, and luxurious to excess, as they are described, the fine arts among them were in a state of rudeness. In the mechanical arts, their warlike engines prove that they were not inferior to any nation. Admitting, however, that the native Africans were not disposed to cultivate the arts themselves, can it be doubted, that, with their powers and wealth, commercial intercourse, and experience of the practices of other countries, they would have availed themselves, in the erection of their public edifices, of the superior taste and skill of foreigners? If it seem not reasonable, then, to suppose that the arts were in a barbarous condition in Carthage itself at that period, far less is it probable, that on the conquest of a country more advanced in civilisation than their own, they would prefer the rude workmanship of their own artisans to the more accomplished labours of the artists to be found among their new subjects. The supposition is contradicted by the universal practice, in such circumstances, as testified in the history of every age and nation. The affirmative to the question put by Mr. Westmacott would, moreover, suppose that, in the edifices themselves, as well as in their enrichments, the Carthaginians in Sicily had neglected the improvements that had been made by the Greeks, since the temples to which the Metopes in question appertain, as compared with other examples on the spot, correspond in rudeness and early character with the fragments of sculpture.

The Selinuntine Metopes, it should be observed, are of two most distinct epochs. That the fragments of more perfect design and execution are Greek, we imagine will not be controverted. These, in point of style, are a near approach to the *Egina* marbles. Are the specimens of a ruder character of a later date? We think not; and we are confirmed in our opinion by observing the gradual state of improvement in the six temples of which the ruins of the ancient Selinus consist.

These present examples of the progressive amelioration of the Doric order, until it arrives at Attic elegance and perfection. To reconcile us to date the rudest of these temples after the most elegant, we require stronger proofs than any which history is now capable of affording. Nor can we divide the epoch of the embellishments of the temple from that of the temple itself. If the earlier specimens of the Selinuntine sculptures be not Greek, which we incline to think they are, we should consider them *Phœnician*, and of an age anterior to the settlement of the Greeks at Selinus. In this case, as indeed under any of the three suppositions, they are highly interesting: if *Phœnician* or *Carthaginian*, as sole existing monuments of art of the one or other nation; if Greek, as elucidating the history of the progress of the art, and as forming a link in the connection between Egyptian examples, and the specimens of the *Egina* school discovered by Cokerell and Forster. In the last case, they are further curious as the earliest known instance of the application of sculpture to Metopes, and as still retaining vestiges of various-coloured pigment. The originals are preserved, we believe, in the museum at Palermo: but casts from them have been brought to this country, and are deposited in the British Museum. A description of them with plates and plans and elevations of the temples was published about two years ago by Mr. Angell, since his return to England. The work was calculated for a limited number only of subscribers: it had a rapid sale, and is already out of print.

TWO VISITS TO A GRAVE.

I stood by the grave of one beloved,
On a chill and a windless night,
When not a blade of grass was moved
In its garb of virgin white.

The starry armament looked down
From their glassy waste the while:
Perchance they could not seem to frown,
But they did not seem to smile.

Long time had passed since they laid him there,
But I heeded not of time;
I knew the stone, though blank and bare,
Unmarked by line or rhyme.

Madly I wept that I had been
Over the wrinkled sea,
When he had found in this last sad scene
A home and a privacy.

The gloomy stillness of the hour
Came coldly o'er my heart;
And Faith and Hope forgot their power
To calm the sinner's smart.

I almost cursed the good great God,
And vowed that I would be,
Even as he beneath the sod,
Though I had not lived as he.

I left the tomb, I ceased to weep;
But mocking forms of pain
Came thronging from the fields of sleep,
And forced me back again.

That morn the loan-frost still was there,
In place of balmy dew,
Unshaken was the silvered hair
Of the old church-yard yew.

I heard a company of birds
Their grateful carol troll:
And a sense of prayer, too full for words,
Arose within my soul.

The web of morning mist was gone,
Fresh wove in nature's loom,
And the sun, like a bold free spirit, shone
Clear on my father's tomb.

I worshipped, as the gold flood poured
On the scene before so dim,
And, when the beautiful I adored,
I was forced to think of him.

I thought, I prayed, and thus became
More full of sweet content;
As the frost's foes, the sun-beams, frame
The earth to merriment.

I was not happy, but I prayed
At heart that I might not be
As he who in that grave was laid,
Till I had lived as he.

R. M. M.

MISCELLANEOUS NOTICES.

ARCHITECTURE.—In the year 1826, C. F. Von Wiebeking of Munich, who had previously visited the most civilized countries in Europe, completed the publication of the German edition of his '*Civil Architecture*,' which contains the designs of seven hundred and thirty-nine edifices, and is composed of four quarto volumes, and one hundred and sixty-nine plates. Since that period, he has been employed in arranging and publishing a French edition of the same work, which is to extend to six, or at the most, seven volumes; and, with its additional matter, probably forms the most comprehensive as well as colossal undertaking which has ever been attempted in this branch of the fine arts. It would be unjust towards the author, no less than to the reader, to withhold a brief account of so important a work.

'Civil architecture, its theory and practice, enriched with a descriptive account of the most considerable edifices of ancient and modern times, together with their designs,' comprises not only a most ample view of civil architecture, its science, monuments, &c., but presents a distinct descriptive treatise, as well as the plans, façades, sections, and several parts, of nearly every subsisting monument of antiquity. To these are added, the designs of three hundred and thirty-

three churches in France, Italy, Portugal, Great Britain, the Netherlands, Denmark, Sweden, Russia, Poland, Switzerland, and Germany, accompanied, in many instances, by their façades and sections. The same particulars are also given of civic structures, villas, schools, parish churches, farms, breweries, country-seats, &c. And then follow designs for churches, palaces, dwellings, and other public edifices. The plates, which are one hundred and eighty-three in number at least, contain representations of one hundred and twenty-two capitals of ancient monuments, the architraves of all the most celebrated of them, and eighty cornices for façades, windows, and doors; and they are all given on a large scale. The author has also added drawings of machines, bridges, and useful instruments; designs for the construction of scaffolds, walls, vaults, and foundations. His work may, therefore, justly claim to be considered as the most perfect and comprehensive school of architecture, which has ever yet been brought before the public.

MEDICINE.—Many of our medical readers will probably be acquainted with Jourdan's 'Pharmacopée Universelle,' a much more perfect and elaborate work is, as we are informed, about to be published by Dr. A. Braune of Leipzig, under the title of 'Corpus Pharmacopœarum Europæarum.' It will include, in distinct portions, the several codices of northern Germany; southern Germany and Switzerland; France and Holland; Italy; Spain and Portugal; Great Britain and Ireland; the United States; Denmark, Norway, and Sweden; Russia and Poland; and, by way of appendix, the East and West Indies.

STATISTICS OF PARIS.—The yearly consumption of this capital, as stated in a report from the prefecture of the department, is as follows:

English Gallons.	English Gallons.
Of Wine..... 25,678,860	Of Hogs and boars 90,830
—Beer..... 4,425,036	lbs.
—Brandy..... 835,856	—Dry cheese 3,125,135
—Cyder and	<i>st.</i> sterling.
Perry..... 304,418	—Sea-fish (sold
—Vinegar..... 565,170	at market)
English lbs.	value..... 185,614
—Grapes.... 1,740,630	—River and
—Butcher's	pond fish 25,630
meat.... 4,880,527	—Oysters.... 38,450
—Sausages,	—Poultry and
hams, &c. 1,561,947	game.... 382,483
—Offal and	—Butter.... 398,460
pieces.... 1,777,884	—Eggs..... 199,000
No.	Trusses.
—Bullocks.... 81,432	—Hay..... 9,367,442
—Cows..... 13,238	—Straw..... 15,316,216
—Calves.... 74,430	English Quarters.
—Sheep..... 403,583	—Oats..... 408,613

Grain and flour are not mentioned in this list, because the sale on the Corn Exchange would not show the actual consumption: it is estimated at 1500 sacks of 159 chiliogr. each per diem (526,690 lbs. English weight) in common times; but, when bread is dearer out of Paris than within its walls, and wheat and flour are exported, the daily consumption is estimated at 1700 sacks or more.

The preceding statements are founded on the returns of the year 1826, when the total population of Paris was considered to be 890,000.

POPULATION.—Bergius, in his 'Essay on the population of the Globe in 1828,' has acquitted himself of his task with a degree of talent and industry which have evidently enabled him to make the most of a subject in which he could only hope to approximate to accuracy of results. Of these we have not space to give more than his summary of the total numbers of the human race, which he estimates at 893,348,580, and thus subdivides:

Europe . 222,696,038	Africa . 106,778,210
Asia . 529,366,150	America 40,505,782

TASSO AND BYRON.—Nothing can be more characteristic of the intense feeling of admiration with which our noble countryman idolized the memory of the divine Tasso, than the following anecdote as related by Madame G. C. Fachini.—

'Michael Piovani, the porter of the hospital of Saint Charles and Anna, acquainted me, that, when Lord Byron was on his way through Ferrara, he insisted upon being shut up in Tasso's prison, and he (Piovani) yielded to his importunities: the latter, not a little curious to ascertain what sort of amusement the traveller could find within its precincts, took the liberty of privily spying his motions from time to time: at one moment he perceived him striding violently backwards and forwards, his hair dishevelled, and striking his hand against his forehead; and at another he saw him standing motionless, his head sunk against his breast, his arms hanging down, and his whole attitude that of a man absorbed by the gloomiest meditations. After a lapse of two hours, Piovani opened the door and roused him from his trance. As soon as the noble Lord had crossed the threshold, he turned round to the porter and observed,—"I thank you, my honest fellow. Tasso's imaginings are now all graven in my mind and heart." With this he made him a pecuniary remuneration, and took his departure, after writing the following French distich on one of the window-panes of the lodge. I have transcribed it literally as I found it, without venturing to alter it in the slightest particular.

*"La le Tasse brù d'un flame fatal,
Expiant dans les fers sa gloire et son amour,
Quand il va recevoir la palm triomfal
Descend au noyr Seyur."*—Byron.

The "Lament of Tasso" was the result of the noble lord's visit to Ferrara.

MONUMENT TO ALBERT DÜRER.—This celebrated painter and engraver has belied the saying, 'that no man is a prophet in his own country;' in his life time, he was patronised by the great, and enjoyed a pension from the German Emperor; and three centuries and more have revolved without abstracting one ray from the lustre of his posthumous fame. He has deserved this fate, as much by the purity and excellence of his private character as by the splendour of his plastic talents. A fresh tribute is about to be rendered to his memory: the Magistracy of Nuremberg, his native town, have set on foot a subscription for erecting a monument to their illustrious fellow-citizen, and already collected above 12,000 florins, or 1,000*l.*, towards effecting their object. Of this sum 2,000 florins have been contributed by the Corporation, and 2,585 florins by the citizens, of that city. The Grand Duchess Helena of Russia is among the list of subscribers for 100 florins, and the Society of Friends of the Arts in Prussia for 539 florins 24 kr.

THE JESUITS.

'HEAVEN be praised,' says a recent letter from Paris, 'an extinguisher has been put on the Jesuits' schools; and the University and its subsidiary institutions have filled up the vacuum. The defeated party, being unable to attack the latter on the score either of their general spirit or literary capabilities, have recourse to innuendoes against their worldly-mindedness. They upbraid the learned professor with the sins of marriage, going into society, frequenting the ball-room, riding about in cabriolets, and similar atrocities! But these votaries of Loyola forget that they were themselves guilty of certain peccadilloes, not far removed from laical offences, even in their own academies. A short time back, I paid a visit to Saint Acheul, and was gratified with the sight of the luxuriously-ordered establishment, well-ventilated passages and dormitories, excellent apartments for washing, noble halls for the classes, and a handsome chapel. Their pupils were in full flesh and kept under wholesome discipline. They were not overwhelmed with tasks, as M. Lorient himself acknowledged; though they were taught the living languages, mathematics, dancing, music, fencing, and other modern acquirements and requirements. Every thing connected with this seminary wore a worldly

garb, excepting the clerical paraphernalia of the professors. Far be it from me to raise my finger against them for these doings. If, in 1828, they were not what they were in the seventeenth and eighteenth centuries, it is simply because education itself has assumed a more popular form, and they have dropped down with the tide, which has stripped learning and pedagogy of its ecclesiastical accoutrements. The theologian is no longer the exclusive setter-up and expounder of human obligations: ever since the times of Petrarch and Montaigne, mankind have gradually been growing bolder in fixing their own estimate of social right and wrong, and less dependent on canonical postulate. Other virtues than those of the cloister, and other rules of life than the prescriptions of the casuist, have started into vogue. When Descartes appeared, he found philosophy in the arms of theology, and restored her to an independent existence. And what were the elder professors of the Parisian University but ecclesiastical monopolists? There was a time when the Universities themselves constituted one of the four clerical orders; to wit, the episcopacy, the secular priesthood, the monastic order, and the universities. The latter set the example of dissolving the co-partnership and became cosmopolites. So it was with the arts and sciences too; the narrow precincts of the cloister and the abbey were their cradle and asylum; but, when academies and learned societies became their suitors, they burst their imprisonment, and went forth with 'blessing and healing on their wing.' To return from this digression: I maintain, that the Jesuits ought to be the last party in the world to set their faces against the 'things of the world;' for what other sect can compare with them in taste, feeling, talent, skill, and suppleness, where mere mundane affairs are in question? Their political sway, it will be admitted, savoured rather pungently of worldly-mindedness: for their wonted penetration had not failed to tell them, that mankind were no longer in the mood to be governed by the cowl and the crossier. They boldly bade farewell to their prison walls, entered into all the bustle and vortex of secular affairs, crept upwards into temporal influence, and became the veriest of men of the world. In former times, they were a religious sect; in later, they have possessed all the characteristics of a political faction: at a former period, they were blasted by Jansenism and irreligion; but, in the present age, they are fugitives, shrinking before the bright glories of intellectual light, and succumbing to the master-spirit of rational liberty.

Their recent fall does not seem to have opened their eyes to the signs of the times; and in their utter destitution of legitimate grounds of impeachment, they amuse themselves with squibs and libels on the University system, styling it 'The Eldest Daughter of the Revolution,' and loading it with the ordure of invective and abuse. Will it be credited, that they denounce the shades in which the genius of a Royer-Collard, a Cousin, a Villemain, and a Guizot, have been reared into moral and intellectual maturity, and the elevated arena from whence their upright and gifted minds diffuse both life and light over the regions of science and literature, as '*le Moloch universitaire, qui plus cruel mille fois que l'idole des Ammorites, détruit les âmes et soécille les corps*?' There are grounds for congratulation, however, discernible through the mist of this vituperation; the Jesuit of the olden times was too astute and sapient a being to surrender himself to the impetuous turbulence of disappointment and defeat; he would have pointed his shaft towards the vulnerable quarter of the citadel, and, instead of directing it against the adversary, whose virtues and talents are as a coat of impenetrable mail, he would have sped it, and sped it effectually, against the immorality and dissoluteness of the Parisian student. It is not by such weapons as his descendants are now employing, that they can succeed in expunging the decree of the six-

teenth of June from the file of 'ordonnances,' or arrest the social irrigation which is gently measuring the mental energies and resources of this flourishing soil.

The antiquated walls of the Sorbonne have not for many a year looked down upon so attractive an intellectual banquet as that recently presented by Villemain, Guizot, and Cousin, in their respective courses of literature, history, and philosophy. Though I might be inclined to enter the lists against many of their inferences and reasonings, and otherwise complain that on many occasions they were wanting in the depth of research befitting their subjects, I must do them the justice to say that they have rightfully earned the meed of public applause. None, indeed, can object that Guizot's pen wants coolness and solidity in his treatment of history; or that Villemain is deficient in critical acumen and taste; or Cousin destitute of that warm love of his theme, without which the philosopher can never wind his way to the hearts of his hearers.

PHILHARMONIC SOCIETY.

THE first Concert of this celebrated and excellent Society took place on Monday, February 23d, and we can unequivocally assert, (having witnessed every trial, rehearsal, and performance for sixteen years,) that a better selection, or a superior Concert (taken altogether) has never been listened to. The veteran brothers, John and François Cramer, were conductor and leader, which circumstance alone might be considered as auspicious of a successful performance.

The Concert commenced with Beethoven's magnificent Sinfonia in C, which was performed at the third Concert last year, (see Athenæum, Number 19, page 297,) and on that account, perhaps, it would have been better to have deferred a repetition until another season.

No. 2. Aria, Signor Donzelli, 'Ah! si, per voi,' from Rossini's *Otello*. This debut was, without exception, the most successful we have ever witnessed. Donzelli exhibited a beautiful specimen of tone, execution, taste, judgment, and talent, surpassing all the tenor singers we have ever heard: his voice is the nearest approximation to our own English Incledon, and in his singing, he reminds one occasionally of all the peculiarities, as well as excellencies, of Garcia, Curioni, Braham, and Sapio. In person and manner, he more nearly resembles Zuchelli, and might well pass for his younger brother. His fine falsetto up to the note D, above the two ledger lines over the stave, was clear and beautiful in the extreme, and his whole performance of Rossini's martial and noisy (though clever) song, drew down immense and deserved applause.

No. 3. Double Quartetto, four Violins, two Violas, and two Violoncellos: Messrs. Weichsel, Watts, Moralt, and Lindley; with Messrs. Oury, A. Griesbach, Lyon, and W. Lindley, (never before performed at these Concerts,) composed by Sphor. A beautiful specimen of classical writing, very successfully performed: the first movement in D minor, reminded an experienced auditor exceedingly of Mozart, particularly in the numerous transitions from the major to the minor mode upon the same chord; and even the theme, with all its workings, might have been easily mistaken for a piece of that great master. At the same time, so far from being considered a plagiarism, it may be said that its resemblance was a proof of its excellence. The conversational passages (in canone) between the principal first Violin, and principal first Violoncello (Weichsel and Lindley) were extremely ingenious and effective. And the andante in B flat 2-4 time, presented a beautiful specimen of simple melody, a quiet descending passage of five notes, of as familiar a character as the principal leading feature of the air, known as 'Home, sweet home,' being continually echoed and re-echoed by all the eight instruments.

Last season, some insinuations were invidiously thrown out, that perhaps Weichsel had better not have placed himself again in immediate comparison with the host of fine violinists (Frenchmen, &c.) that have of late years made so many successful appearances; but we bear testimony with a satisfaction participated in by all the candid part of the auditors, that his tone, fire, and precision, remain as admirable as at any former period; and we hope and trust it may be very long ere they fail or forsake him.

No. 4. Duetto, Madame Stockhausen and Signor Donzelli, 'Fuggi crudele,' from Mozart's 'Il Don Giovanni.' This unrivalled composition produced, as usual, a beautiful effect, but also, as usual, was accompanied by too few stringed instruments, a species of neglect we have before had reason to deprecate. To connoisseurs it must be generally known, that the accompaniment to the introductory recitative is to be led off loudly by the tenors; and, although eight chosen performers are employed at these Concerts, only two were engaged in this task, in consequence of there being but one copy instead of four. It need not be added, that the intended effect was considerably deteriorated.

Madame Stockhausen's voice seemed rather too shrill and thin to produce the sensation generally experienced from this magnificent composition, more especially, perhaps, in consequence of its being placed in juxtaposition with Donzelli's very round, mellow, and sonorous tones; but both performers sang exceedingly well, giving universal satisfaction.

No. 5. concluded the act, being the new Overture 'Le Colporteur,' composed by the elegant writer Onslow, who is deservedly and rapidly rising in the estimation of all good musicians: we refer our readers to the remarks upon this in 'The Athenæum' of February 4, (No. 67, p. 76.)

The second act commenced with Haydn's ninth Sinfonia, (letter T,*) in E flat; and perhaps the most pleasing and perfect specimen of Haydn's taste and genius is exhibited in the trio which follows the minuetto. This charming bassoon solo has been considered a choice morceau, most admired by all professors for more than a quarter of a century, and has been exceedingly well performed by Mackintosh for full that period.

No. 7. Cantata, Madame Stockhausen, 'Non temer, a mato,' piano-forte obligato, Mr. Cramer, composed by Mozart.—This was precisely the species of vocal music most peculiarly fitted for these Concerts, as not being a piece selected from any well-known opera, but a detached composition of the very highest class; and it may be quite unnecessary to add, that it was beautifully performed. Several passages being too low for Madame Stockhausen to give them effect, she sang them an octave higher, or made other alterations suitable to her voice; but the whole were effected with considerable judgment: and Cramer's accompaniment was as perfect as possible; the style of writing was admirably adapted for his delightful expression; and his varied embellishments were improvements upon Mozart!

No. 8. Concerto, Violin, Mr. Tolbecq, composed by Kreutzer and himself. This is a young Frenchman, brought here by Laporte for the Opera; and he appears a promising, talented, and modest person. His concerto was very well played, and in the movement written by himself, (an old French air, with variations,) he executed some considerable difficulties with great skill. We have, however, heard such excellent performances by Kiesewetter, Mori, De Beriot, &c., that Tol-

becq's concert produced no very particular sensation.

No. 9. Terzetto, 'Trémate empj Trémate,' Madame Stockhausen, Signor Donzelli, and Mr. Phillips, written by the great Beethoven. This was also a performance worthy of the Philharmonic Concerts, and went off well.

No. 10. Winter's very romantic and interesting Overture to 'Calypso' concluded one of the most successful Concerts since the first establishment of this excellent Society, which certainly has done more in the improvement of the English orchestra than could have been originally contemplated or expected.

The choice of authors all classical, and pieces all interesting, which formed this the first Concert in 1829, do infinite credit to the following seven Directors for the present season: viz. Bishop, J. Cramer, T. Cooke, Dance, Dizi, Latour, and Weichsel.

POPULAR SCIENCE.

'How charming is divine philosophy! Not harsh and crabbed as dull fools suppose, But musical as is Apollo's lute.'—*Comus*.

I.—ANIMATED NATURE.

'And God said, let them have dominion over the fish of the sea, and over the fowl of the air, and over the cattle; and over all the earth, and over every creeping thing.'—*Genesis*.

1.—ANIMAL MECHANICS.

The Stone Lily.—In some limestone rocks are found a very great number of the remains of an extinct species of animal, which has been called the *eucremiste* or stone-lily, from its singular form. These remains are thus described in the 'Conversations on Geology':

'When found perfect, (which is not common,) their upper part resembles a closed lily, with its stalk. The number of bones, or shell-joints, in these animals almost exceeds belief. In each of its ten arms are sixty bones, making, for the arms, above six hundred bones; and, in the fingers, there are eighteen hundred more. This is not all; little claws proceed from the fingers, whose bones amount to no fewer than twenty-four thousand. The whole number of bones in one of these extraordinary animals is twenty-six thousand six hundred and eighty, though the animals themselves seem to have been scarcely so large as a man's hand. Rosinus discovered in each of these numerous bones, holes for the passage of nerves and blood-vessels, and parts for the attachment of muscles.

2.—ANIMAL GASTROLOGY.

Insect-Eaters in France.—In the introduction to the curious work of M. Brez, entitled 'La Flore des Insectophiles,' we have met with the following singular notice among those communicated to the author by M. Quatremaire D'Ileval, of the Royal Academy of Sciences at Paris. These are his words:—'I must inform you,' addressing one of his friends, 'in the first place, if it be not already known to you, that one of our mutual friends is an eater of spiders; and, as that is not the only insect upon which his epicurism is regaled, I must give you some account of what taste they are. M. de la Land, the celebrated astronomer, who, during the last years of my residence in France, came every Saturday to sup at my house, and on other occasions as he left the Academy, found nothing more agreeable to his palate, whilst the repast was getting ready, than eating caterpillars, if the season was favourable for them. As my apartment opened upon a very fine garden, it was an easy matter to hunt out food to appease his hunger; but, as Madame D'Ileval loved to have her hands full of business, she would set to work every Saturday, after dinner, and collect a number of them, and have them served up to him immediately after his arrival. As I always left him my share of this ragout, I can only tell you by hearsay, what difference there was between the flavour of the spider and the caterpillar. The first, said our astronomer, tastes very much like a nut, and the second tastes exactly like a kernel.'—'La première a un excellent goût de noisette, et la seconde un véritable goût de fruit à noyan.'

3.—ZOOPLANTOLOGY.

Sea Anemones.—The close resemblance which Actinia bear to a swimming flower tinged with the most lively colours, has obtained for them the name of Sea-Anemones. They vary in form according to their contraction or expansion, and present numberless differences. Their expansion is an indication of fine weather, and is oftentimes more to be depended upon than

* The publisher of all Haydn's large collection of sinfonias, written previously to his last twelve grand, found it necessary to distinguish them by letters instead of numbers, the more particularly to identify them from the various numbers used in the many German and French editions.

the barometer; unfortunately, the marine tribe can only be made use of during the summer, and on the sea coasts. The winter drives them from the banks, and forces them to seek shelter in deep waters, where there is a more equal and milder temperature. When they are desirous of a change of habitation, some suffer themselves to be carried away at the mercy of the waves, others creep along their base, or make use of their tentacles as so many feet. When they have found a spot suitable to them, they remain there, and attach themselves to it so strongly that they are often pulled to pieces before they can be severed from it. Diquemare and other naturalists supposed that this power of adhesion, existing after the decease of the animal, might be nothing more than the effect of a viscid humour which it can secrete at pleasure; but others imagine, and Boac is of the number, that it is by motion, and the production of a vacuum, that this adhesive quality is produced. We subscribe to the latter opinion, which is more conformable than the former to the observations which have been made relative to it. A very strong light is troublesome to Actiniae—noise alarms them—odours affect them—and fresh water causes their death. These sensations are owing to their extreme irritability, which seems to increase in proportion to any pain they may endure.

4.—CONCHOLGY.

Travelling of Muscle-shells.—The valves of the Mytili close and open according to the inclination, or necessity of the inhabitant; and this movement is effected by means of a fleshy protuberance of a reddish colour. It is divided into two lobes, which answer the purpose of feet. Thus, when a river muscle is inclined to leave its station, the shell is gradually opened by the help of this protuberance, which, assuming a new form, pushes forward, and makes a furrow in the sand, into which the shell is drawn in a vertical position. From this position it almost immediately changes into its former horizontal one; the tentacula shovelling back the sand, and lengthening the furrow, while the animal journeys on its way, with a motion resembling a continual topsy-turvy. These tracks, most probably formed by the muscle in quest of food, may be readily discerned in shallow clear streams, and resemble small furrows upon the sandy bottom; they are seldom straight, but deviate into traverses and triangles, like the course of a vessel contending with adverse winds.

Muscles found in the salt springs of Nubia emigrate during the rainy season to a considerable distance of abode, and sometimes wander so far, that, when the rains abate, they have neither strength nor sufficient moisture left to enable them to return to their companions.

Marine muscles are, also, furnished with the means of progressive motion; they can open and shut their shells at pleasure, remove to a considerable distance, fasten themselves to the rocks with threads similar to those of the silk-worm, respire water like their funny neighbours, and even sport upon the surface of the billows.

5.—ENTOMOLOGY.

Multiplication of Insects.—The following experiment was made by the celebrated Lyonnet upon the eggs of the lime-tree tussock moth, (*Bombyx antiaqua*). 'About 350 eggs,' he says, 'which were laid by a female moth of this species, produced as many small caterpillars. As it would have been too troublesome to me to rear so great a number, I only selected eighty of them, which I brought up. All of them passed through their changes under my care, and arrived at a state of perfection, with the exception of five, which died before that time. Among so many moths I had, however, not more than fifteen females. It may be, nevertheless, either that the males in this species are naturally more numerous, or that this circumstance was merely casual. But let us suppose, for an instant, that this is always the case, I shall reason in this manner: if eighty eggs have produced fifteen females, capable of multiplying the whole number, 350, would have produced at least sixty-five. These sixty-five females, supposing them to prove as fruitful as the first, would for the second generation have given birth to 22,750 caterpillars; among which there would have been at least 4,265 females, which would have produced 1,492,750 caterpillars for the third generation. But the caterpillar of which I am speaking is not by far of the most fertile species. There are some which are as productive again. And what is it in comparison with certain viviparous flies, which, at one time, give birth to 20,000; consequently, a single fly, supposing the males and females equally numerous, would create, in the third generation, a posterity of two thousand millions. Let us then, if it be possible, form an idea

of the prodigious number of flies, which, at the end of several years, one single animal would produce, if Providence did not prescribe limits to a fertility so great. We are lost when we reflect that God has created in the first of these animals a principle sufficing to supply a production for several thousand generations of this nature, which will continue to succeed each other unto the end of the world, and when we consider that each particular female appears to possess the faculty of multiplying according to such an enormous geometrical proportion.

6.—ICHTHYOLOGY.

Swimming of Fishes.—The tail, with its peculiar fin more or less plaited, is the principal organ used by fishes for swimming; it serves also as an oar for the management of the body. A long and broad tail, and large fins, are favourable for acting upon the resistance of water, and also for swimming. Among fishes, the bulk of the body increases from the tail to the head; while the extent of surface, on the contrary, follows an opposite principle; for the tail, in consequence of its least thickness, the greatness of its fin, and its auxiliaries, the fins of the back and anus, has more surface, in proportion to its bulk, than the body. It is owing to the difference of bulk, which exists between the body and the tail, comprehending the fins of the latter, and to the extent of surface which the tail and its fins present, that fishes find a point of support to direct all the strength, and yield a necessary mobility to the anterior parts of their bodies.

The progress which is made by the anterior part of the body, by the spreading out (*deplacement*) of the tail may be, to a certain point, independent of the will; as the outstretched limb of a man, who is standing up, will involuntarily incline to the ground. Let us, suppose that a bow, the extremities of which are of unequal thickness and proportions, be bent and unstrung in the water; the water will have more influence upon the extremity, which has more surface in proportion to its bulk, than upon that whose mass is more considerable, and the bow will be displaced, and carried farther on the heaviest side.

Thus, water resisting to the quick operation of the tail behind, it follows that the extension of the curvatures of the body, comprehending those of the tail, put it almost entirely in motion, beginning with the anterior portion of each curvature, which, having more weight and proportionately less surface, than the posterior portion, turns round the point of support furnished by this last portion.

7.—MAZOLOGY.

Baboons.—The dog-headed baboon (*Simia cynocephalus*, or *Cercopithecus Ursinus*) appears to be a very harmless and inoffensive creature, making allowance for a natural propensity, which he has in common with roguish schoolboys, to rob gardens, orchards, &c., when he can contrive to get at them. There is a story told at the Cape, and said to be quite authentic, of a party of these cynocephali carrying off an infant from the vicinity of Wynberg, (about five miles from Cape Town), and only resigning it after being hunted for a whole day by a numerous party of men and dogs, over the tremendous precipices of the Wynberg Mountains. The child, however, when recovered, was found perfectly uninjured! and, perhaps, this extraordinary abduction (the only instance related in the colony) may have sprung rather from the erratic affection of some mother bereaved of her offspring, than from any ferocious or mischievous propensity of this species of animals.

These creatures have a very strong affection for their young, and, when driven by the inhabitants from their gardens, and pursued even to the mountains, the females have been known to return through the very midst of their mortal enemies, to look for the young ones they had lost.

II.—NON-ANIMATED NATURE.

'The meanest flow'ret of the vale,
The simplest sound that swells the gale,
The common sun—the air—the skies—
To him are opening Paradise.'

GRAY.

1.—VEGETABLE CHEMISTRY.

Green Colour of Vegetables.—Humboldt found in a dark vault, so filled with hydrogen as to extinguish flame, a very green lichen; and he reared, in the same circumstances, crocuses perfectly well coloured. He infers, that hydrogen without light, and a small quantity of oxygen, is sufficient for vegetation. The geranium odoratissimum, and the barbula ruralis and neikera viticulosa, (mosses,) of Hedwig, in the same circumstances, remained green and vegetated.

2.—VEGETABLE MECHANICS.

Mosses.—It was an observation of the celebrated

Pascal, that man is placed in the middle between two extremes, the infinitely great and the infinitely little, both of which are equally incomprehensible to him. It is often useful to recall our attention to the latter, the infinitely little,—as the former compels our notice, while the latter may escape observation. Among the infinitely small in the works of God we may reckon mosses, which are now beginning to put on their fullest verdure, and many of them advanced to fructification. Mosses, small as they are, and insignificant as they may seem, abound everywhere, even in cultivated fields and gardens; the rare little moss, gymnostomum conicum, is found in gardens, and many of the phasca and tortula. They flourish chiefly in winter, and seem destined by Providence to keep fresh the verdure of the earth, when other plants are withered and dead, and to protect the roots of these withered plants from the vicissitudes of the season, a provision which gardeners find it useful to imitate. In woods that are densely shaded, also, there is a great profusion of mosses, chiefly of the sort called hypna, which cover the soil where none of the larger plants could grow for want of air and light. When mosses grow in water, as do all the sphagna, and many others, they have a strong tendency to convert it into firm land, by forming accumulating soil, while they effect the purification of the water in which they grow, by absorbing the putrescent substances with which it may be corrupted, and by exhaling oxygen in exchange. With the exception of polytrichum commune, bryum ligulatum, Hypnum dendroide, and H. alopecurum, few mosses send roots into the soil beyond a few lines, and cannot, therefore, impoverish it so much as has been supposed. Mosses, indeed, seem, like the air plant of India, to derive their chief nourishment from moist air, a circumstance which may account for their growing on trees, walls, and bare rocks, where there is little, if any, soil to support vegetation.

THE DRAMA.

King's Theatre.

WE can say with perfect security, that the three hours of the performance of 'Il Conte Ori,' on Saturday night, were distinguished by more villainous singing than the most speculative man could have supposed practicable in so short a space of time. The characters were thus cast:—The Count, a dissolute dog, who scares the whole tribe of woman from their homes, and at this juncture particularly devises ruin to the amiable Countess de Fourmontiers, is represented by Curioni, as chief tenor. His Tutor, a supplemental character, by Vincenzo Galli, as bass. Isolero, a page, in love with the Countess his cousin, by Signora Specchi, who now exhibited, as they say, for the first time on any stage, as handsome a face, and as profligate a pair of legs, as may be found in any one woman out of a thousand. De Angeli and Deville, 'Arcades ambo,' were in reality 'blackguards both,' as being the bosom friends and followers of Count Ori. The Countess was committed to Signora Monticelli, our *prima donna*—hem!—the portress of her castle looked well in the fair lineaments of Signora Castelli, and Alice, a peasant girl,—the fattest, and heaviest, and most Boetian of all the peasant girls in Touraine, had the distinguished advantage of being personated by a lady indifferently called Miss Neville, Signora Nevilli, or more sweetly still Signorina Neuvelii.—Is not the world wonderstruck at the amazing efforts of the King's Theatre, on this review? Now for the actual performance.

As Monticelli had prepared the audience, by handbills circulated in the Theatre, for some degree of failure in consequence of indisposition, it was by a comparatively easy transition they came to the discovery, that she had utterly lost her voice. All criticism then, upon her, upon her singing, or upon the music she had to sing, must be vague and conjectural. This is a pity; for, from the glimpses given, it might be readily believed that the chief beauties of the opera reside in her part; we hope to ascertain this under more favourable auspices hereafter. Taking no note of her inexplicable dumb show, let us see how the rest of the performance was conducted. After a prelude, not at all in Rossini's style, but so far characteristic that it is an ingenious substitute for an overture, the curtain rises, and discovers a group of villagers chattering upon the virtues of the hermit, who has lately come amongst them; this same gentleman being the identical Count disguised for the sake of circumventing the Countess, whose illegitimate lord, accompanied by the spouses of the other females then introduced, is fighting against Heathenry in one of the Crusades. There is nothing very peculiar in this chorus; it is gay, flow-

ing, and loud, as indeed the whole opera is à l'outrance. The pseudo-hermit then appears, and his first song, 'Per voi serena splenda,' we hold to be very good on the score of expression; it has a kind of fettered nonchalance about it that seems extremely characteristic of the saintly *roué*. A very lively medley follows, in which the different rustics are supposed to state their wants to their common benefactor; but the spirit of it was quite lost in the pervading dullness of the night; and a passage that might have come from Cimarosa was distorted into a resemblance to the merriest of Irish jigs. Signora Specchi, who next appears as Isolero, and Galli as the Tutor, hold together a short discourse, which ends in the aria, 'Mai di sollievo,' for which his voice was neither sufficiently comprehensive nor ductile. The duet between Isolero and the Count, which follows soon afterwards, beginning with the words, 'D'almi pregi, o ciel, ripiena,' is both clever and elegant; and the young page showed great correctness of ear, and a judgment quite unexpected, in supporting the rather complicated harmony, without suffering the balance and evenness of the two voices to be at all disturbed. As the burden of the next scene falls upon the Countess, it is impossible to say what the music of it might be like if better executed, that is to say, if executed at all. It seems animated, though rather noisy; but on this point it is presumptuous to speak, for the disproportion between the orchestral and the vocal strength may give the effect of too much tumult throughout; and Rossini may thus be made unjustly to bear the blame which should fall on Laporte's *corps dramatique*. In this finale the hermit is detected, and he cunningly resolves on another plan; viz., that of entering the castle as a female pilgrim, seeking shelter from that abandoned sinner, the Count Ori; whereupon the second act opens with a view of the Countess's boudoir, and a number of maidens working tapestry, &c., around their mistress. The scenery, and the grouping, and the music, are here entirely picturesque and good.

'In questo loco tranquillo intorno
L'ore innocenti vegliam passar.'

Is as happy a composition as can be conceived, to illustrate the situation and thoughts of the characters. Indeed, there is considerable beauty throughout the first portion of the act, and perhaps still further; but the Fates ordained that it should waste its sweetness. The song of the female pilgrim and her companions at the gate is now heard—would it were not so—completely out of tune. They are admitted, and provided with food. Being left alone, they disclose the cloven foot, and begin their carousals over the bottle to some of the most bacchanal and appropriate music ever composed. The burden of it, 'Oh! qual bella follia,' was encored; and had the *personaggi* been able to do justice to it, the introduced chaunt, 'Oh! tu cui rivolti,' would have claimed the same honour. It is a very plausible and reasonable piece of harmony, and helps to reconcile the suspicious serving woman to her mistress's guests. Beyond this, all was 'darkness visible.' A lengthy trio between the Countess, who had lost her voice, Signora Specchi, who had not gained hers, and Curioni, who had set his ajar, by great exertions during the drinking-scene, the elision of some parts, the undue prolongation of others, the imperfections of all, were sore trials of critical forbearance. It was a lame and impotent conclusion; and, having drawn this moral, we will return to our first assertion, that no opera in our memory has been so unfairly dealt with. Monticelli as a *prima*! Curioni in the place of Donzelli! Vincenzo Galli for a bass! What infatuation to try it at all with such poor vocal support! What madness to dream of it, when the most important of these three had become almost a cypher through ill health!

But, though it is reasonable to wish ourselves a happier opportunity of estimating its merits, it does not seem likely that we shall ever be inclined to add 'Il Conte Ori' to the muster-roll of Rossini's durable monuments. In the first place, it is a daring and acknowledged compilation; in the second place, it seems pregnant with the master's most besetting sins, orchestral preponderance and mannerism. Scribe furnished the hist of the fable, and a rural opera by the Maestro himself, 'Le Voyage à Rheims,' which found equivocal favour with the Parisians, is said to be the ground-work of this *risfacciamento*. It should be added, that the *peSSI concertati* are generally ingenious, and always spirited, especially the choruses, which, in this play, beyond all others, are stamped with the impress of Rossini's constitutional vivacity. We hope to hear it again under better circumstances; but its management is rather languid. Pasta is not to visit us this year, and her substitutes—she needs

many—are to be Sontag and Malibran. Would they were here! But Madame Blasis is engaged, and appeared last night in 'La Donna del Lago,' *vice* Signora Monticelli, on the sick list.

Drury Lane.

On Monday, 'Measure for Measure' was revived at this Theatre. To those who have been wont to fancy that of all the plays of Shakspeare this is the one which it would be the least possible to fashion in conformity with modern squeamishness, it must have been matter of some surprise that the omissions and alterations which were introduced into it by the Drury Lane reformer were comparatively so few, and that they left the drama so perfectly free from the slightest taint of impropriety. But it is thus with every one of these glorious compositions. There is no part of them which ever offends the essential morality of any mind. But since, from habit, the conventional rules of morality in particular ages become blended with the deeper and more permanent parts of our nature, it is necessary to be careful that we do not violate the one, lest we injure the other. And how gracefully does Shakspeare submit to the operation of this severe rule! With what humility he allows passages to be removed which are likely to offend weak brethren of the nineteenth century, though he is aware all the while, not only that there was nothing really wrong in them, but that they had a real fitness and propriety, that they contribute to make his plays more perfect as works of art! But he knows that the foundations of his writings, which are laid in the eternal principles of morality, will remain after every alteration; and, therefore, he graciously permits us, here and there, with cautious and reluctant hands, to remove a stone or two out of the splendid superstructure.

The character of Isabella was undertaken by Miss Phillips. Of this character we could talk for hours, but to what end? Only, we fear, to weaken and sully our readers' own conception of it, only to give a dry, dead view of a being who now is, in their minds, a living reality. If we did venture upon any remarks on the subject, our chief labour would be to avoid framing to ourselves, or exhibiting to our readers, too abstract a notion of this exquisite creature. True, the idea of chastity is fulfilled in her as it never was in any other poetical creature; true, so perfect a vestal never haunted the dream of the most rapt and ethereal of human beings. But, though a nun, she is not all a nun: she is not merely this one perfection embodied; she has all the other feelings of human nature, though this overtops and governs them all; she is not fit

'For transient pleasures, simple wiles,
Praise, blame, love, kisses, tears, and smiles.'

but, though the angel exceeds, the woman is there too. She is flesh and blood still, though flesh and blood informed, exalted, spiritualised, by the divinity within.

We have made these remarks because we think many persons have an impression that Isabella belongs to another school of art from our own; that she is somewhat statue-like and Grecian, and rather claims kindred with the Electras and the Antigones than with the Mirandas and the Violas. This opinion is removed by a more diligent study of the character, and we at last become fully persuaded that she too (enviable and glorious distinction!) is 'one of Shakspeare's women.'

From Miss Phillips's personation of this wonderful part, we derived, on the whole, very great delight, greater than from her previous appearances in the characters of Juliet and Imogen. The severe critics of this young lady contend, that, if she had possessed the genius which her friends attribute to her, she must at once have been transcendently successful in parts in which extreme youth seems to them rather an advantage than the reverse. But this is unfounded as well as unkind criticism. To represent a being whose whole soul is centered in another, whether through ardent passion like Juliet's, or meek confidence like Imogen's, requires a power of abandonment which, instead of being the first acquisition of unripe genius, is almost its last and crowning effort. It may seem strange, but it is undoubtedly true, that a stern self-relying character like Isabella is one far less difficult to the shrinking modesty of youth than one which exhibits more resignation and dependence. We should, upon general principles, have urged this fact against Miss Phillips's detractors, even if she had not furnished us with a fresh argument of its truth.

The first scene with Angelo was decidedly good. The dislike of the cause she has to plead, which, for a moment, almost over-mastered her sisterly affection, was extremely well expressed by the mixture of stiffness and modesty with which she commenced her

address. Her manner throughout the whole scene continued as, we are convinced, Shakspeare intended it to be, rhetorical; but the gradations of earnestness were well marked, and the change, after Lucio's admonition, into a more strained and impassioned style, was excellent. Once, and only once, she seemed to mistake her part, by using greater vehemence of tone and gesture than it was possible for Isabella, whose conventual habits had not yet been broken through by a mightier power, even if she had wished it, to assume. The next meeting was nearly, but, perhaps, not quite, as good. Her terror at the first announcement of his proposal, before she could fully realise its meaning, showed that she felt the extreme beauty of that part of the scene; but it was too melo-dramatically expressed.

The scene with Claudio was very spirited and powerful. If there was any fault, it might be that there was too little difference between the contempt with which she treated the counsel of her brother and that which she had previously shown for the iniquity of the deputy. The last scene also raised Miss Phillips in our estimation; for she evidently felt, what experience proves to be a rare feeling, that a character may alter during the course of a play even more than in the course of a scene. Our actresses are fond of changing from grief to joy, from rage to love, and so forth, upon any sudden occasion; but they very seldom represent the changes which may be produced by a series of occasions. This Miss Phillips expressed when she appeared as the suppliant before the Duke. In that scene, she was no longer the nun and the rhetorician, but the eloquent woman,—her vehemence chastened only by that dignified severity of character which circumstances had not given her, and which they could not take away.

We have dwelt so long upon the actress, that we have no time for the actors. They do not need it. Two lines are sufficient to explain that Mr. Young acted the Duke-friar well, without interfering with our recollections of Shakspeare's Duke-friar; that Cooper acted the Deputy without committing any offence beyond what was set down for him in his part; and that Mr. Jones's Lucio would have been not a very vulgar member of the Jockey Club.

Covent Garden.

The performance of the tragedy of 'Virginia,' on Monday night, was signalled by a decidedly successful *coup d'esai* of a new candidate for celebrity on the boards of the Metropolis. The first impression made by Mr. Pemberton's entrance was certainly unfavourable; a rugged physiognomy, a harsh and, as it seemed at first, unmanageable voice, and a figure very short of tragic dignity, were disadvantages which no trivial manifestation of power could balance, and which, in saying that Mr. Pemberton most completely overcame, we consider ourselves as making him no every-day compliment. In his earlier scenes, before he got well 'warm in the harness,' there was an evident want of that reciprocal confidence between actor and audience so indispensable to draw out the whole capabilities of the former; and to challenge and anticipate which, freely and fearlessly, through all obstacles of rising discontent and murmur, is the inseparable prerogative and test of talent. When opportunity, in the course of his part, was afforded for those expressions of deep half-stifled feeling in which the strength of the new actor seemed especially to lie, the doubt or indifference of his audience melted away before the effects of strong and true delineation of nature; and, before the close of the tragedy, all indications of disfavour had been drowned in almost unanimous applause. The struggles of fatherly tenderness were admirably given, and the reality of the scene was well assisted by the chaste and natural acting of Miss Jarman.

The play was not announced for repetition, owing to the clamour which assailed poor Numetoria on his epilogistic advance before the curtain; who, the gallery gods, presuming on their omnipotence, expected, it would seem, to bring before them poor Virginia, whom, not a minute before, they had seen expire in his arms. Mr. Pemberton, however, very properly declined to obey this noisy summons from his peaceful grave.

Lycens.

Mademoiselle Jenny Colon, or Madame Jenny Colon Lafont, as it appears by the bills that she has become, took her farewell of an English audience on Wednesday last, on which occasion she appeared in three places. Her acting, from its naïveté and simplicity, had produced an impression which will not soon be effaced, and which leads us to hope that she will ere long be induced to repeat her visit.

The first of the three pieces, 'La mere au bal et la fille a la maison'—a vaudeville in two acts, in which she played the part of La Fille, is a piece of little intrinsic merit, and owed its interest almost entirely to the excellence of her acting, and to the able manner in which she was supported, not only by M. Lafont, but, with few exceptions, by all the other performers.

In the second piece, 'Le Mariage Impossible,' she had the advantage of a better part, of which she made full use,—the character, that of an artless, though somewhat petulant, rustic belle, was given with a degree of truth and nature which we have seldom seen equalled—in the scene, particularly, where she vainly endeavours to pacify the ill-humour of her supposed husband, and ends by exclaiming, 'Mon dieu! est ce que tous les maris sont comme ça!' she received and deserved loud and continued applause.

The last piece, a vaudeville in one act, entitled 'Les Premières Amours ou les Souvenirs d'enfance,' is remarkable for nothing save a few pretty airs, which are introduced in it, one or two of which, (as was also the case in the former pieces,) and particularly a duet with her husband, were encores. We had also the pleasure in this piece, of seeing our old friend Laporte, who infused into the little part allotted to him his usual air of rich comic humour. We are sorry that our press of dramatic matter prevent us from taking due notice of this gentleman's benefit, which took place on Friday before a very full house; and also that the same reason compels us to postpone our notice of M. Perlet's return until his next performance and our next publication.

MEDICO-BOTANICAL SOCIETY.

A MEETING of this Society was held on Tuesday evening, the 24th of March, the Right Hon. Philip Henry, Earl Stanhope, F.R.S., President, in the Chair.

The minutes of the last Meeting having been read and signed, the following plants were announced as having been presented from the Oxford Botanic Garden, by Dr. George Williams: *Euphorbia officinarum*, *Euphorbia pentagona*, *Aloe Barbadosensis*, *Laurus nobilis*, *Asarum Europaeum*, *Piper blandum* et *pulchellum*, *Phormium terrex* (New Zealand flax,) &c.

His Majesty Francis the First, King of the Two Sicilies, and his Royal Highness, Frederick William, Prince Royal of Prussia, were unanimously elected Honorary Fellows.

His Grace Henry, Duke of Northumberland, K.G., Lord Lieutenant of Ireland, was proposed, and being balloted for, elected a Fellow.

Sir John Webb, M.D., Director-General of the Ordnance Medical Department, A.S. Dowling, Esq.; James Buchan, M.D., of Edinburgh; John Taberger, M.D., of Hanover; George Spratt, Esq., and Edward Browne, Esq., F.R.S., were also elected Fellows.

Theobald R. G. Bourke, Esq., Secretary to the Danish Legation, was admitted a Foreign Member.

Jacob Adolphus, M.D., Inspector of Hospitals, was admitted a Fellow.

Mr. Richard Cunningham, of the Royal Gardens at Kew, was admitted an Associate.

A paper was read, entitled 'Observations on some of the medicinal plants of the Canaries, by Sabino Berthelot, Corresponding Member.'

These plants are the *Forakolea angustifolia*, used in Tenerife as a substitute for sarsaparilla in gonorrhoea. The author relates, and transmitted specimens showing, that this plant, when growing in certain positions on the coast of Tenerife, becomes perfectly woody, though in others it is naturally herbaceous,—the *Cucurum pulverulentum*, which an eminent botanist (Brownsonet) administered with great success in lieu of Peruvian bark, and his experience has since been confirmed by that of Dr. Savillon; a new species of *Tescrum*, termed *moschatum* by Mr. Berthelot from its very strong musklike odor. This herb is employed by the peasant girls of Tenerife as a stimulant to abortion; and the *Echium giganteum*, a highly ornamental shrub, a decoction of which is used in the dispersion of purulent tumors.

A paper was also read relative to the esculent nature of the root of *Stachys palustris*, by Joseph Houlton, Esq., F.R.S., Associate. It was accompanied by specimens of the root preserved in acetic acid, and which had been grown by Mr. Houlton in his garden at Lisson Grove. He suggests the propriety of deriving the specific name of the plant from the root, (*atuber*), and hence *tuberosa*, instead of its locality.

Mr. Frost then gave a short account of a numerous collection of rare medicinal plants exhibited to the meeting by W. T. Acton, Esq. Among them were, the

black pepper, (*Piper nigrum*), the bastard cinnamon, or winter's bark-tree, (*Canella alba*), the *Melaleuca Cajuputi*, *Amyris maritima velsylvatica*, *Amyris polygama*, *Brucea antidiya Senterica*, (once supposed to yield the Angostura bark,) *Carica Papaya*, (papaw tree,) *Smilax Sarsaparilla*, *Tamarindus Indica*, *Bubon Galbanum*, *Geoffroya inermis*, &c. &c.

Amongst the members and visitors present, were, his Excellency Count Ludolf, the Neapolitan Minister, Dr. Donald M'Kinnon, Dr. John Miller, Dr. Edmund Clarke, Dr. A. B. Chisholm, &c.

VARIETIES.

Turnerelli has been much occupied with his busts of the little Queen and the great Agitator. The latter is now exhibited at the residence of the sculptor, and is said to be executed with fidelity and spirit.

The Earl of Egremont has purchased two of the landscapes which Mr. Turner brought with him from Italy, and intends them for the gallery at Petworth. The whole of the works on which this accomplished artist has employed himself whilst abroad, exhibit, it is said, the most decided proofs of matured ability.

In the third portion of Lord Guildford's library, there occur two extraordinary Greek manuscripts, one of the eleventh, and the other of the thirteenth century, both containing the four Evangelists. They are illustrated with miniatures by Greek artists. In the painting of the visit of the two Marys to the Sepulchre, an Angel is seen to guard the tomb, which bears some resemblance to an Egyptian mummy.

Grain Magazine of the Tanager.—The summer red-bird, or Tanager, which inhabits the woods on the Mississippi, sings agreeably; and, what is somewhat uncommon in the feathered tribes, it collects against winter a vast magazine of maize, which it carefully conceals, with dry leaves, leaving only the hole by way of entrance; and it is so jealous of it as never to quit its neighbourhood except to drink.

Sir Hudson Lowe's Library.—This library, which is understood to be extensive, and to contain several specimens of printing in the fifteenth and sixteenth centuries, has, during the present week, come under the hammer of Wheatley and Adlard. Some of the works relating to Napoleon have been curiously annotated.

Newton.—There is in the records of Newton a sentence in the spirit of Shakespeare: 'I don't know what I may seem to the world; but, as to myself, I seem to have been only like a boy playing on the sea-shore, and diverting himself in now and then finding a smoother pebble or a prettier shell than ordinary, whilst the great Ocean of Truth lay all undiscovered before me.'

New Discoveries.—Almost every scientific journal announces the discovery of new minerals; but we are usually very sceptical as to the genuineness of novelties so frequently thrust on our notice; for we can often perceive a greater anxiety to make out a discovery to be new, than to identify the examined mineral with species already known. We are told, for example, (Ann. Phil. ii. 236.) that Mr. J. Deuchar has found a new mineral substance, and is now engaged with its analysis. It would, we think, have been time enough to call it new after the analysis.

The late Earl of Bridgewater.—This most estimable character, whose ridiculous whims afforded so much amusement to the Parisians, has, according to report, left a large portion of his disposable property to the British Museum, for a comparatively futile and useless purpose—viz. the formation and conservation of a collection of autographs, amongst which his own sign-manual and manuscripts would of course occupy a conspicuous place; for the deceased seemed to have formed a most exaggerated idea of his own importance, either as a benefactor or an ornament of society, or was actuated by an inordinate passion for posthumous fame. In order that some remotely future age should at least have a chance of knowing that a man called Francis Earl of Egerton existed in the 19th century, he caused an immense number of medals, with his bust on one side, and his name, title, &c. on the other, to be enclosed in thick glass or crystal, and hermetically sealed. Numbers of these were sent to England, America, and various parts of the Continent, to be deposited in the foundations of public buildings, under the piers of bridges, and thrown into fountains, lakes, and rivers. One of the last drives he took in and about Paris was for the purpose of flinging, or rather of having flung in his presence, a number of these enshrined medals into various parts of the Seine.

LITERARY INTELLIGENCE.

A small volume of sacred poems by Mary Ann Browne, author of 'Mont Blanc,' 'Ada,' and other poems, dedicated to the Rev. H. H. Milman, Professor of Poetry at the University of Oxford, will be published very shortly.

A Novel of the 'De Vere' class will shortly, we understand, appear, entitled 'D'Erbine; or, the Cynic,' and which is likely to excite great interest in the fashionable and literary world. The scene of one of the volumes is, we are informed, entirely laid in Italy; and the vivid but natural descriptions of that beautiful and interesting country and of Italian society which it contains, combine to render it a work of unusual interest. The feelings of a misanthrope are also portrayed in that superior style of argumentative conversation which has obtained so much celebrity for the author of 'De Vere' and 'Tremaine.'

The author of 'The Gentleman Clt,' a Comedy from the French of Molière, has in the press a reprint of his Tragedy of 'Sylla,' to be published in aid of the funds for the benefit of the Spanish and Italian Refugees.

On the 21st of March, will be published the First Number of The Manual of Science and Literature, and Weekly Register of the London Mechanical Institution.

LIST OF BOOKS PUBLISHED DURING THE WEEK.

Carey's New Map of the Country Twelve Miles round London, in case, 9s.
Carey's New Map of London, in case, 10s. 6d.
Conversations upon Knowledge, Hapiness, and Education, 12mo. 2s. 6d.

Sun. 1	31	31	30. 15	N.E.	Fair Cl.	Cirrostratus.

Rain on Thursday night. Frost on the nights of Friday and Saturday. Moist fog on Thursday and Friday mornings. Freezing on Saturday morning.

Highest temperature at noon, 41°.

Astronomical Observations.

The Moon and Mars in conj. on Friday, at 5h. 7m. A.M.
Mercury and the Sun in inferior conjunction on Saturday, at 3h. 4m. P.M.
Venus's geocentric longitude on Sunday, 11° 39' in Aqvar.
Jupiter's ditto ditto 13° 6' in Sagitt.
Saturn's ditto ditto 26° 39' in Cancer.
Sun's ditto ditto 3° 49' in Places.
Length of day on Sunday, 10 h. 51 min. Increased, 3 h. 7 m.
Sun's hor. motion on Sunday, 2° 39' plus. Logarithmic num. of distance, 9.99634.

THE FINE ARTS.

This day is published, price 8s.

OBSERVATIONS ON THE ARTS, with Tables of the Principal Painters of the various Italian, Spanish, French, Flemish, Dutch, and German Schools, their Scholars and Imitators, with Lists of the most celebrated Painters of those Schools, arranged by the subjects in which they excelled. By THOMAS WINSTANLEY.

Liverpool: Printed by Wales and Baines, Castle-street, and sold by them and the Booksellers in Liverpool and Manchester; and by R. Jennings, Poultry, London.

HUGHES'S SOUTH OF FRANCE, uniform with Batty and other European Scenery.

This day is published, by James Cawthron, Cockspur-street, AN ITINERARY OF PROVENCE and the RHONE, made during the year 1819. By JEAN HUGHES, A.M., of Oriel College, Oxford. Royal 4to., 1l. 11s. 6d., or imperial 8vo., 1l. 1s. The Illustrations from the Drawings of De Wint, and engraved by W. B. Cooke, Geo. Cooke, and J. C. Allen. India paper, 2l. 10s.; 4to, 2l. 11s.

I informed my friend that I had just received from England a Journal of a Tour made in the South of France by a young Oxonian friend of mine, a poet, a draughtsman, and a scholar, in which he gives such an animated and interesting description of the Chateau Grignan, the dwelling of Madame de Sevigné's beloved daughter, and frequently the place of her own residence, that no one who ever read the book would be within forty miles of the same without going a pilgrimage to the spot. The Marquis smiled, seemed very much pleased, and asked the title at length of the work in question; and, writing down to my dictation, 'An Itinerary of Provence and the Rhone, made during the year 1819, by John Hughes, A.M., of Oriel College, Oxford,' observed, that he could now purchase no books for the chateau, but would recommend that the Itinerary should be commissioned for the library to which he was an abonné in the neighbouring town.—Sir W. Scott's 'Glenfinnan Dervent.'

This day is published, in 8vo., price 2s.
HISTOIRE de RUSSIE et de PIÈRE le GRAND, par M. le Général Camille de Saxe, Auteur de l'Histoire de Napoléon et de la Grande Armée, pendant l'Année 1812.
 Paris, chez Baudouin; Londres, chez Treuttel et Co., 22, Soho-square.

The English Translation will appear in a few days.

This day is published, in two vols. 8vo., price 11. 10s., the second edition of

THE MEMOIRS OF GENERAL MILLER.
 This work has been greatly augmented, with the additional Portraits of San Martin, Bolivar, and O'Higgins. A Spanish edition will be published on the 10th of March. A French edition is in the press.
 Printing for Longman, Rees, Orme, Brown, and Green.

This day is published, by W. Bams, Bookseller to the Royal Family, St. James's Palace, dedicated to Major-General Sir A. F. Bernald, M.B., R.C.M., and Colonel of the First Rifle Brigade, in 1 vol. 8vo., illustrated with Plates, from drawings made on general service, price 14s.

MILITARY MEMOIRS OF FOUR BROTHERS, (Native of Staffordshire), engaged in the service of their country, as well in the New World and Africa, as on the continent of Europe. By the Survivors.

CATHOLIC QUESTION.

This day is published, price 2s. 6d.
THE SPIRIT OF THE BIBLE SOCIETY
 FAVOURABLE TO CATHOLIC EMANCIPATION: an Address to the Members of that Institution, stating and enforcing its Constitutional Principle, which is Religious Charity; a principle that ever seeks the glory of God, by promoting peace and goodwill among men. By a CATHOLIC of the Establishment.

THE FINE AND USEFUL ARTS.

A CATALOGUE has been just published by **PIRSTLEY and WEALE**, of BOOKS very recently purchased and imported, on Architecture, Engineering, and the Fine Arts, in royal 8vo., containing a beautiful View of Windsor Castle, and other Embellishments, given to the Nobility and Gentry upon cards of address being sent.

This day is published, price 6d.

FREEDOM TO CATHOLICS consistent with the SAFETY TO THE STATE; shown in an Address to the inhabitants of Birmingham. By a PROTESTANT.
 Birmingham: published by James Drake; sold by Longman and Co., London; and to be had of all Booksellers.

This day is published, price 2s., Part IV., of

THE EXTRACTOR; or, Universal Repertorium of General Literature and Science; comprehending the whole of the instructive and amusing Articles from all the Foreign and Domestic Reviews, Magazines, Journals, &c. published during the month of February. The whole carefully compiled, digested, and arranged.

The Weekly Number (No. XVIII.) was published on Saturday, in 8vo., containing matter equal to sixty-four pages of 'The Edinburgh' and 'Quarterly Reviews.' Price 6d.
 Published at 'The Extractor' Office, 140, Fleet-street; and may be had of all Booksellers and Newsmen.

This day are published, 8vo., 12s. boards,

MISCELLANEOUS SERMONS, Preached in the Parish Church of Cheltenham. By the Rev. P. Closs, A.M., Perpetual Curate of Cheltenham.
 Printed for J. Hatchard and Son, Piccadilly; and sold by Walker, Bettison, Williams, and Porter, Cheltenham; and C. Duffield, Bath.

Of whom may be had, by the same Author,
 The BOOK OF GENESIS CONSIDERED AND ILLUSTRATED, in a Series of Historical Discourses, preached in the Church of the Holy Trinity, Cheltenham, 2nd edition, 12mo. 2s. 6d.
 A COURSE OF NINE SERMONS, intended to illustrate some of the Leading Truths contained in the Liturgy of the Church of England. 3rd edition, 5s. boards.

THE UNITED SERVICE JOURNAL, AND NAVAL AND MILITARY MAGAZINE, for MARCH, Price, 2s. 6d. contains among a variety of Papers of high interest to both branches of the Service: Accounts by Officers engaged of the Battle of Salamanca—The Battle of Quatre Bras—The Battle of Trafalgar—Escalade of the Battle of Badajoz—The English at Valenciennes, in 1816—A Brush with Greek Pirates in the Archipelago—Extraordinary disclosures relative to the Knights of the Order of the Bath—Strength and economy of our Navy, from the papers of Sir Samuel Bentham—The Roguet Controversy, with the remarks of Napoleon and Colonel Marbot, with Roguet's reply—Resolutions in Quarters; Captain Crichton—On Military Surveying—On Telegraphic Communication—On the Cross Staff, with illustrative engravings—Gun Room Reminiscences—On Steam Navigation, by Captain Ross—Correspondence with the Marquis of Londonderry relative to his Narrative of the Peninsular War—Memoirs of General Jackson—Notes of a Naval Lounger—Hydrography, by the late Alexander Dalrymple, Esq.—Tales of Military Life—The Naval Officer—Facts relative to the Capture of Washington—Original Poetry—The Wounded lying in a Convent Cell—Alfred to his favourite horse—Song of Archie Rover—Drops of the slain in Battle—Original Correspondence with the Editor—Estimate of Army Services for 1839—List of Vessels lost since his Majesty's Accession—Change in the distribution of Corps since February—The Editor's Portfolio—Sir Thomas Bradford—Chelsea Hospital—Reform of Pensions—Notice to Mariners—Loss of the Nightingale and the Kangaroo—Courts of Inquiry—Reductions at the Royal Military College—Losses of the British Army under Lord Wellington—Maritime Schools—Lord Nelson—Captain Beaver—Uniforms; New Sight for Great Guns; Reductions in the Army—General Orders, Circulars, &c. to the Navy—The Army—Indian Army—Military and Naval Court Martial, Naval and Military Promotions and Appointments—Births, Marriages, and Deaths, &c., &c.
 Printed for Henry Colburn, 8, New Burlington Street; Bell and Bradfute, Edinburgh; and John Cumming, Dublin.

The following INTERESTING WORKS are just published by SMITH, ELDER, and Co., Cornhill.

In demy 8vo., price 4s. 6d. each, Parts I. and II. of
INDIA; or, Facts submitted to illustrate the Character and Condition of the Native Inhabitants, and the Causes which have for ages obstructed its Improvement; with Suggestions for reforming the present System, and the Measures to be adopted for the Government of that Country at the Expiration of the present Charter of the East India Company. By ROBERT RICKARDS, Esq.

Part III.—On the Revenue Systems of India under the East India Company's Government, as tending to perpetuate the degraded Condition of the Natives, will be published early in March.

'It is needless, after what we have already stated, to direct the attention of our readers to Mr. Rickards's Work. Interesting and valuable, however, as the Part now before us undoubtedly is, we expect that those parts in which Mr. Rickards proposes to discuss the Revenue Systems, acted upon in India, and the influence of the commercial and political monopoly, will have still higher claims to attention. There are few so well qualified as Mr. Rickards for the discussion of these important questions, or to whose labours we should look forward with higher expectations.'—*Edinburgh Review*.

THE ANNALS OF RAJASTHAN; or RAJPOOTANA, the Country of the ancient Rajpoot Tribes of Western India. By Lieut. Col. JAMES TOD, M.B.A.S., &c. In 2 vols. 4to. Illustrated with most splendid Line Engravings, executed from original drawings. The 1st vol. is nearly ready for publication.

CAPTAIN GRINDLAY'S VIEWS IN INDIA—Scenery, Costumes, and Architecture, chiefly on the Western Side of India. By Captain ROBERT MELVILLE GRINDLAY, of the East India Company's Army, M.B.A.S., &c. Publishing in Paris, each containing six plates, with descriptive letter-press. Atlas 4to. price 21. 2s.

Part IV. is nearly ready, and will contain some fine specimens of the following eminent artists:—Copley Fielding, Westall, Stanfield, Roberts, Purser, &c.

In one Volume, demy 8vo., price 12s., boards,
THE LAST OF THE PLANTAGENETS; an historical Romance, illustrating some of the public events, and the Ecclesiastical and Domestic Manners of the Fifteenth and Sixteenth Centuries.

'One of the most faithful and delicate narratives that the whole library of English Romance can furnish. The plainness, purity, and simplicity of the diction, and the Monastic quietness, the unaffected tenderness, and the repose of the incidents, must render this Volume a permanent favourite with all readers of taste and feeling.'—*Atlas*.

In demy 12mo., price 8s. boards,

THE HOME BOOK; or, Young Housekeeper's Assistant, forming a complete system of Domestic Economy, for the guidance of persons having the Management of a Household of either large or small extent; with valuable Directions for effectually checking the many impositions practised upon respectable families by Servants, &c. &c. The whole deduced from forty-five years' practical experience. By a Lady.

'Let these my counsels be a guide to you,
 And my experience teach your lack of judgment:
 So shall your Home become a Paradise,
 Rich in Earth's purest bliss, Domestic Comfort!'
 Just published, to accompany the above, (or may be had separately.)

THE HOME ACCOUNT BOOK, or, Housekeeper's Register of Family Expenses; arranged upon the improved System recommended in the 'Home Book'; and exhibiting the Weekly, Monthly, Quarterly, and Annual Expenditure for every article of Domestic Consumption. Post 4to. price 4s. 6d., half-bound.

'These two useful and unpretending little Volumes form the most complete System of Domestic Management for the guidance of the young and inexperienced Housekeeper, that has ever appeared.'

CHRONICLES OF LONDON BRIDGE; by RICHARD THOMSON, Esq., Author of 'Tales of an Antiquary,' &c. &c. With fifty-six Engravings on Wood, by the first Artists. In Crown 8vo. 28s. boards; demy 8vo. with the Plates mounted on India Paper, 42s. boards. Proof Impressions of the Plates, on Large India Paper, for the illustration of the Histories of London, &c. 31s. 6d. in a Portfolio.

'These Chronicles deserve a place in every Library; and will long remain a sterling record both for literary recreation and reference.'—*Literary Gazette*.

In demy 12mo. price 10s. 6d. boards,

TALES AND CONFESSIONS,

By LEITCH RITCHIE, Esq.

'Though modest in its title and pretensions, this volume is one of the most extraordinary works of fiction that has for many years issued from the press. The tales are singularly original and powerful productions, every way calculated to create an extensive and lasting reputation for their author.'—*Weekly Review*.

THE ADVENTURES OF NAUFRAGUS;

Written by Himself.

Second Edition. Post 8vo. Price 6s. boards.
 'If you wish for a pleasant travelling companion, or a friend to beguile a lonely or a tedious hour—if you have any desire to view an interesting, we might truly say, a wonderful picture of real life, read 'The Adventures of Naufragus.'—*Scotsman*.

THE ELEGIES OF TIBULLUS,

By RICHARD WHIFFEN, Esq. Poetical 8vo. Price 6s. 6d.

A Poem, in Six Cantos. By RICHARD WHIFFEN, Esq., demy 8vo., priced 3s. 6d. sewed.

In the Press,

THE HENGALLEE;

or, Sketches of Society and Manners in the East:

Including Satires in India, and other Poems.

By an OFFICER of the BENGAL ARMY.

THE HISTORY OF INDIA.

By JAMES AUGUSTUS ST. JOHN and LEITCH RITCHIE.

In 2 vols. demy 8vo. with a Map of India.

In a few days will be published, in demy 8vo.,

A DISSERTATION ON TAXES,

Or Public Revenue;

Including the Outline of a New System of Political Economy.
LAYS OF LEISURE; a collection of Original and Translated Poems. By the Rev. W. B. Clarke, A.M., Author of 'The River Derwent,' and other Poems. demy 8vo. Nearly ready.

COLONIAL COFFEE MART, 18, Fenchurch Lane, City; and WEST BRANCH, 15, Rathbone-place, City.

NICOL and Co., in compliance with numerous solicitations from families of distinction in the western districts of London, have opened a Branch Establishment at 15, Rathbone-place, for the sale of superior Roasted Coffee of the finest qualities; roasted on the premises every day, and sold at the same low scale of prices, which has gained such an extensive share of public patronage and support to the Original Warehouse, established by the West India Planters and Merchants, at 14, Fenchurch Lane.
 The Coffee is procured from Nicol and Co., possesses more of the real pungency and aromatic flavor of this valuable article in perfection, than in former experimental trials have got elsewhere.—Vide Dr. Thornton's Botanical Lectures.

HYMNS AND SONNETS, written by the late REGINALD HEHER, Bishop of Oxford, and set to music by the Rev. W. H. KAVESHAL, A.M., Organist to Rhinodoo Female Schools.

From Greenland's icy Mountains (second edition) 6s.
 'Thou art gone to the Grave' 1s.
 Translation from the Greek of Synesius—'Grant me, released from Matter's Chain' 1s.
 The Farewell—'When Eyes are burning' 1s.
 The Lily and the Rose—'By cool Silphium's shady Hill' 1s.
 'If thou wert by my side, my Love' 1s.
 Three Hymns:—'Life nor Death shall us divide'—
 'Lord! whose Love, in Power enrolling'—'There was Joy in Heaven' 2s.
 Vesper Hymn:—'God, that madest Earth our dwelling' 2s.
 'O Green was the Corn as I rode on my way' 2s.
 Published by PAINE and HOPKINS, 59, Cornhill, London.

This day is published,
BLACKWOOD'S EDINBURGH MAGAZINE.

No. CL. for March 1839.
 Contents:—I. The Assembling of Parliament.—II. Some Meditations. By Delta.—III. Cuttings.—IV. The Duke of Wellington and Mr. Peel.—V. First and Last. No. 2. The First and Last Crime. LONDON, WEDNESDAY, MARCH 11, 1822.

Price 8d.

LETTERS TO MY GRANDDAUGHTER ON THE OLD POETS.

ON SHAKESPEARE'S SONGS.

[The following fragments, of a letter belongs to a series written by an old gentleman, since deceased, to a young lady who lived with him during the late years of his life, and whose education he superintended. Whatever appears quaint or peculiar in his notions, may be attributed to his having taken himself to the study of the English poets very late in life, his first forty years having been passed in various active employments, partly in England, and partly on the Continent. He appears to have pursued the study of our old literature with the ardent and devoted admiration of a first lover; and his observations prove that his enthusiasm was very much predominated over his critical power, if he ever possessed any, which is doubtful. The circumstances, we think, ought to induce his executors to pause before they adopt the resolution, which we understand they have partly formed, of laying the whole collection before the public. As, however, Shakespeare's songs have, so far as we are aware, not been treated of anywhere, except very cursorily and unsatisfactorily by Mr. Heath, we have selected from the papers sent to us, his remarks upon this subject, in the general purport of which we agree. The former and longer part of the letter, for which we could not find room, is on the effect that would result from representing a character in any one of Shakespeare's plays as any other—a notion which is illustrated by supposing the character of Hamlet to be substituted for that of Agamemnon in "Twelfth Night," and vice versa that of Agamemnon for Hamlet in "The Merry Wives of Windsor." The latter part of the letter is a sketch for Anne Page, and the other as a hint for Sir Toby Belch, are noted with many curious turns of phrase.—Ed.]

THERE is one subject upon which I must say a few words before I finish my letter. I am afraid you will press your lips together, and look very wretched out of the corners of your eyes, when I tell you that I am going to talk of Shakespeare's songs. In general, I cannot accuse you of showing any want of deference to my silver locks; but it has often struck me, that, whenever I ventured an opinion upon any thing that had to do with music, you seemed extremely irate and unbelieving. I do not know what you ground your opinions of my incompetence upon; except it be that I once remarked that "Nanny, wilt thou gang wi' me," was the sweetest of all Scotch airs, when you had been playing "Those Evening Bells," or some other outlandish modern composition, that is not Scotch or any thing else. Nothing but your youth and your sex can warrant you in drawing a conclusion from such slight premises; besides, you little minx, what business had you to cheat your old grandfather, and how do you know that my ignorance was not assumed from a fear you should think I was angry with you for the trick? The truth is, that in some of the little by-paths of musical science, which you young ladies are taught to cultivate highly, I am not so conversant as some of my equals; and many of my inferiors. My notions of time are perhaps more comprehensive and profound than minute; and I have always upon principle avoided the bigoted and invidious practice of distinguishing one pretty tune from another, a caution to which I am indebted for this advantage among many others, that, whenever I hear either of our national airs played upon a Christian or Jew's harp without the helpful ornament of the tongue, my respect for the person of the Sovereign mingles in the one case with my delight in our naval supremacy; and in the other, my loyalty is rescued from the slightest taint of banishment, by the inspiring recollection that Britons fully intend never to become slaves. But, of that deep musical harmony (of course you understand me) of that which constitutes the real essence, principle, soul, and centre truth of music, I assure you, my perceptions are far more acute and clear than yours, notwithstanding that you were three years and a half a pupil of Moscheles, and that your pretty little fingers' ends have been

wearing themselves out with practising ever since I knew you. So listen to me while I give you my opinion of Shakespeare's songs. I will begin by quoting one which I request you to read attentively:

O mistress mine, where are you roaming?
O stay and hear, your true love's coming
That can sing both high and low.
Trip no further, pretty sweeting;
Journeys end in lovers meeting:
Every wise man's son doth know.
'What is love?' 'tis not hereafter;
Present mirth hath present laughter;
What is to come is still unsure;
In delay there lies no plenty;
Then come kiss me, sweet and twenty;
Youth's a stuff will not endure.

Now, my dear, I do not expect you to admire this song at all at first reading; I do not say that you will ever admire it; but, if you had met with it about eight years ago, (you were then wailing on eleven,) I am nearly sure you would have liked it fifty times better than almost any of Moore's melodies. 'But is that a test,' you will say. 'Am I not a better judge now than I was at ten years old? Should I have been able to admire "As You Like It" then; and did I not admire many things then which I must not admire now?' But are you not conscious that there is in this respect a difference between the enjoyment of music and every other enjoyment? Do you remember a single air which delighted you in childhood, and has ceased to delight you now? Doubtless, there are many compositions with which you have become acquainted since. Of these, a few, you will readily allow, strictly speaking, give you no pleasure; you admire them, are astonished at them, but do not love them. There are others, I should think by far the majority, which, though quite unable to understand, you would have been as much in raptures with twelve years ago as you are now. It is possible that there are one or two others which do not fall under either of these heads; but, if you examine your heart even about, then I think you will find that the pleasure they afford you is this—that they restore to you the feelings of childhood. That this is the main characteristic of fanciful enjoyment—that it is this which makes it dear to all the lowly wise, all those who are mighty in meekness—and this, too, which renders all whose understandings have outgrown their hearts, who are proud of the accessions they have made since childhood, but ashamed of what they were in childhood, and careless of what they have lost, either incapable of entering into its nature, or insensible to its passing excellence I am assured, not less from what I am able to gather of the experience of others than from my own, in those few glorious moments—the truth will out—in which I do surrender myself, body and soul, to the pleasure of sweet sound, and in those, alas! far more frequent hours when I am a rebel—a haughty, conscious rebel—against its influences, I know that it is the upwillingness to abdicate, even for a few short moments, the vanity of intellect—the reluctance to do that which is needful for all who would draw delight from any spiritual source—to become, even as little children—which prevents me from snatching those stray gifts of loving-kindness which have been heaped up by nature in the realm of sound for those who are not too proud, too mean, to partake of them. Oh! what wretched beings we must be, to shut out wisdom, at one of its choicest entrances, from our souls, because we will not undergo a change

which would itself bring with it more strength and refreshment than any other. To renew our youth! to forget all the stores of sorrow that have come to us from without, all those moor-huge and heavy stores that we have husbanded for ourselves, to forget the treacheries of others and our own sins, and to find again the old fields glistening with the early dew, and the old faces bright as they were before we or they had conversed with coldness, and sorrow, and death! In the Scriptures, which contain a record of every universal feeling of our nature, you will find the ecstasy of this feeling spoken of,—not by Isaiah in the loftiest mood of his inspiration,—not by St. Paul, though he was carried into the seventh heaven and heard unspeakable words,—not by the writer of the Apocalypse, though the whole seraphic vision was unfolded before him,—but by the Psalmist, because the joy of renewing his youth like the eagles, was revealed to him through music.

You remember that glorious passage which we have read together so many thousand times of our own great poet:

'So in a season of calm weather,
Though inland far we be,
Our souls have sight of that immortal sea
That brought us up hither,
Can in a moment travel thither,
And see the children sport upon the shore,
And hear the mighty waters rolling evermore.'

Now, if you—I do not say have taken in the full meaning of this passage, for that neither you nor I have ever done—but, if you have entered at all into the spirit which dictated it, and have observed, moreover, how naturally, and, as it were, inevitably, the poet introduces the sound of the rolling waters as a part of the idea which it embodies, and, lastly, how inextricably blended in our feelings the music of the expression is with the thought, you will understand why I put forward Shakespeare's songs as one of the most transcendent illustrations of his genius. His songs are perfectly, absolutely childlike. The thoughts are not linked to each other by the ordinary principles of composition. Their logic is the logic of a child, a simple, free-hearted child, the current of whose feelings runs on by its own sweet will, neither directed nor turned away by any prescriptions of the understanding. Was Shakespeare, then, ignorant of these laws? Read the dialogue of the play I have quoted, and how you will smile at the question! How you will be struck with the wonderful strictness and coherency of the thought, with the transparency of the language through which it is reflected! Well, then, think for a moment. I have told you that I, a poor, feeble old man, with just enough left of an intellect that was never capacious to assure me that it will not last me to the grave, unless my dear granddaughter lends me a portion of hers to help it out—I, not ten removes off a child in intellect, am yet so proud of the petty distance, that I cannot pass it over, and become quite a child, even to have the richest banquet that the gods ever provided for man. I cannot do it, but *he can!* He, the all-grasper, who took the guage of all finite existence,—he, whose understanding, to use the deeply meaning paradox of the inspired writer, was according to the stature of a MAN, that is to say, of an ANGEL,—he can become a child, 'can in a moment travel' to that infancy which he has left further behind him than any human being before him or since.

I do not know, my dear Frances, whether you will thoroughly understand my meaning; but a little additional study of Shakspeare's songs, and a comparison of them with those which you are in the habit of singing, will clear up any confusion which the muddiness of my language may have introduced into your conceptions. Your mother has often complained to me, that, in spite of her taste and reason, she could not bring herself to like the good sensible words which have, of late years, been set to favourite airs, so well as the nonsense she had been used to connect with them. She attributed this to habit and association merely: I believe it arises from a much truer and worthier feeling. I believe she feels, and, I hope, has imbued you with something of the same feeling, that when an author means to write cleverly—when he thinks about the independent value of the thoughts which he expresses in the words, when, in short, he does not abandon himself wholly to the musical feeling, (the necessary consequence of which would be, that he must often write what the world will call nonsense,) he cannot produce a composition which will deserve to be married to immortal music. Modern writers generally fancy that it is quite compatible with their musical taste to show themselves off at the same time as wits, gentlemen, and scholars; or, if one of them (Why do you look so angry? I did not say Mr. Moore) does, in his great condescension, consent to be what Shakspeare was proud to be—a child—it is such a child! so unlike the round, chubby-faced, simple-hearted being to whom that name ought to be appropriated—such a French-looking creature—such a mere, pert, trowsered, fionaced, drawing-room miss!

My dear, let you and I think it not a condescension, but a difficult, a glorious attainment, to become little children. To me, if I were not, as I am, taking that other route to childhood which makes one regard with a feeling of spite and envy at the one we are leaving behind us—to me it would be an effort laborious and painful indeed; for my mind has been fashioned in an age, and in a country, where men calculate much and love little, where they think much of the progress they are making, but look back seldom, and always with sullen and contemptuous glances, upon the point from which they have started. And therefore are the men of England and the men of the nineteenth century a race among whom the fair flower of music vegetates at wide intervals and but weakly. We wrap the muddy vesture of decay close round us, lest our business should be interrupted, or our pleasures disturbed, by the stars quiring to the young-eyed cherubim. For you, for the women of England, I trust the task is more easy. You are not slaves as we are to your understandings; you have not shut your ears and your heart, against the melodies with which the whole universe is overflowing. Oh, beware how you ever do so,—beware, lest in place of that vanity of intellect, the fiend which haunts us wherever we go,—you admit a not less subtle demon to your heart and hospitality,—the demon of convention, and fashion, and artifice. For this is even a crueller foe of all child-like and humble feelings: this is even a baser vanity. Love simplicity, my dear girl, love music, love Shakspeare; and then I hope, in addition, that you will love me.

THE DRAMA OF SPAIN.

Discurso sobre el Influjo que ha tenido la Crítica moderna en la decadencia del Teatro Antiguo Español, y sobre el modo con que debe ser considerado para juzgar convenientemente de su mérito peculiar. Por D. A. D. Con licencia. Madrid, 1828.

THE evil effects which have resulted in this country from the imitation of French manners and customs, have been by no means the only mischief with which it is chargeable: although those evil effects themselves are neither few nor trifling; although among them we may reckon, in philosophy, the substitution of a lifeless and

inconsistent scepticism for the enlightened and living faith of our forefathers,—in literature, the banishment of the energetic verse and prose which were indigenous in England, to make way for miserable conjunctions disjunctive of epigrams. In the other parts of Europe also, wherever there was any good thing to be destroyed, the spirit of the eighteenth century, whose birth-place and cradle was France, was as busily at work. Fixing the thought, wherever it could, upon the external and mechanical properties of things, and emptying all things of the life and spirituality and energy within, till all that was excellent in form only it completely swept away, and all that from being essentially good was incapable of change or destruction, it so choked up and veiled in mists of its own raising, that very few persons were allowed to suspect the existence of vitality in the mass, and yet fewer had courage or skill to penetrate to the life, through all the obstacles which surrounded and confined it. This system of mechanical and fragmentary philosophy necessarily continued, till it had embraced the whole cycle of art and science, subduing, with admirable impartiality, religion and morals, poetry and prose, metaphysics and criticism, all of which it laid with equal dexterity upon its dissecting-table. But, having passed through the whole physical and intellectual scheme, and failed throughout of solving the problems presented to it, its influence has as necessarily begun to wane; and in many parts of Europe, a deep insight is now gained into many subjects which had hitherto only been contemplated through the opera-glass of Parisian philosophy. In Germany and England, though far less in the latter country than in the former, are the minds of men emancipating themselves from the ignoble bondage in which they have been held, and looking into themselves for the guides which heretofore they have been taught to seek in the dogmas of a material and mechanical system. Hence, in these countries, the craving after truth which has taken place of the former apathetic submission to the verdicts of pedantic dogmatists; hence the renewed speculations upon the nature of man, the ardent inquiry into the mystery of his being, the philosophical foundations given to the æsthetic science, and the investigation of the true end and method of history, physiology, and politics.

The work which we have placed at the head of this article shows that even in Spain the same energy is manifesting itself; that even in that wilderness some good seed is sown, the earnest and pledge of a noble harvest to come. It is a vindication of the national drama of Spain—which, like the national drama of every other European country, was, during the last century, attempted to be subjected to the rules of French tragedy—from the aspersions which have been profusely cast upon it by the Gallicists, or supporters of the French school. Such defences had not been unfrequent both in Germany and England during the reign of Gallicism in those countries; but, unfortunately, from being grounded in false notions, they had never completely set the question at rest. Of this we have a good example in Dr. Johnson's preface to Shakspeare, in which he attempts to refute the objections to him on account of his disregard of the Unities. It was impossible for him not to feel that Shakspeare, Ford, and Massinger, were in the right, however, in the true spirit of French criticism, M. Voltaire might have demonstrated them to be wrong; yet, furnished as he was with this certainty, by the admission of principles which had nothing to do with the question, he contrived to make as bad a defence of our English stage as could well be put forward. Our author informs us that similar attempts had been made in Spain, which had failed for the same reason; that, although the national feeling which every man partakes of, had continued to convince their defenders of the excellence of De Vega, Tirso, and Calderon, still, from not having developed the true grounds on which

their defence was to be rested, these critics had only confirmed the acrimony with which their opponents conducted the attack. In putting himself forward to supply the deficiencies of his countrymen, which he does with great modesty, he develops these true grounds, and applies excellent arguments to show, that, the national drama being in every country of necessity 'the ideal expression of the manner of seeing, feeling, judging, and existing of its inhabitants, it is impossible that a nation should take any pleasure in matters represented on the stage, if they are ill accommodated to the characteristic type of the nation itself; and consequently, that the pretensions of the Gallicists to try the Spanish drama by rules drawn from the French or Grecian stage are absurd, and productive of evil results to the drama itself: in short, he asserts, and we perfectly coincide with him in opinion,

'That, as long as the habit shall prevail of regulating literature like fashions, by Parisian patterns, the genius of nations will create nothing which shall be worthy of appreciation either for its greatness or its originality. Let us undeceive ourselves,' he continues; 'neither the preceptorial centos, nor the outcries of Gallican critics, nor their extravagantly exclusive systems, have ever produced, or ever will produce, the sublime creations of a Shakspeare, a Calderon, a Schiller: and for what reason? Because the stage must be in every country the poetic and ideal expression of its moral necessities, and of the pleasures adequate to the manner in which its inhabitants exist, feel, and judge, circumstances which all exercise a powerful influence upon the poetic inspiration, and which will never result from the art, the metaphysical analysis, or the learning, of foreign works which are opposed to the character of the people.'

The manner in which he shows the necessity of following the national character, even to the destruction of historical truth, is striking. He says,

'This may be observed in Calderon's play, entitled "The Arms of Beauty," which is the story of Coriolanus. In it, the hero, resolved to destroy his native city, despises the entreaties of his relations, friends, and fellow-citizens, and does not desist from his enterprise, till his mother, his wife, and the Roman matrons, come and supplicate him for mercy. At length Coriolanus yields; but to whom does he yield? To beauty, to love, and courtesy. He raises the siege; moved to this act by no political reasons, but by the generosity alone of his chivalric feelings. He makes no stipulations for himself: all is in favour of the ladies; all laws offensive to whom he exacts the repeal of from his fellow-citizens, and greater privileges in whose favour he insists upon their granting. "What inconsistency! What anachronism in habits!" the critics will exclaim. They are quite in the right; but let them give Coriolanus the name of Amadis, let them change the time and the localities; and thus, while the notions associated with the Roman history will disappear from their sight, the incongruity which scandalizes them so much will also vanish. But the Spanish public would have had good right to complain, if Calderon had placed upon the stage a real Coriolanus, since he would then have presented them with a republican and gentle existence, which could not be understood by a monarchical and Christian people; who, in order to appreciate it, would be compelled to study in detail the history of Rome and the philosophy of its customs.'

Having established the assertion that the stage is the representation of the national character, he traces with a skilful hand the circumstances which had acted in Europe generally, and Spain in particular, to create the peculiar character of his country, and to give birth to its drama. His reflections on the difference which the spiritual religion of the modern world has made in the nature of its poetry, are very good.

The social organisation which Europe adopted during the middle and chivalric ages, the new habits and customs which people acquired with it, and, above all, the universality of the Christian religion, discovered to man a vast treasure of notions which had hitherto been unknown gave a new direction to thought, and laid open to the imagination one enlarged plain whereon to raise its poetical creations, whose bases were now in spirituality. Upon the complete downfall of the ancient governments, they dragged along with them,

and buried under their ruins, even the memory of what had been: the adoration of personified nature was justly proscribed as idolatrous, and the gods of paganism were looked upon by the Christians as forms assumed by the rebel spirit for the perdition of man; consequently, the theogony and mythology of those people remained despoiled and stripped of the illusions with which it captivated the human heart, which now insisted upon looking at them under the terrible aspect of lying and falsehood.

The passage from republican to monarchical forms of government, the residence of the Moors in Spain, the constant warfare between the people of Arabic and Gothic race, the high station which women held in the new polity social, with the manifold effects resulting from these circumstances, are accurately and philosophically described; and the conclusion is drawn, that the character thus formed must create a drama for itself, whose elements could no longer be the same as those which existed in the Gentile world. We observe that this gentleman follows M. Schlegel in characterising the ancient mind as placing its ideal beauty in symmetrical and harmonious arrangement; and we ask with him,

How could the same forms be applied to our inward, sublime, and poetic mode of existence, as were fit for a character so constituted as the antique, grounded as it was upon the external and material alone? How can the faith in freedom of will, and the ideal universe, express themselves in the same way as the submission to a fixed and inexorable fate, and a world of sensations?

The difference between the Gentile and the Christian worlds as a general, and the peculiarities of national character as particular distinctions, are, then, the true reason why no one fixed form can be devised for dramatic poetry; and herein Johnson would have found the true answer to all objections levelled against Shakespeare for his disregard of Aristotle or Longinus. In all that poetry has of universal, viz., its independent existence in the human mind, they may be taken to be competent judges, as all good metaphysicians must be; but, when any forms but their own are considered, we immediately reject their arbitrement, conceiving not only that the laws of no one national poetry can be forced upon another, but that the forms which such poetry takes are never forced upon it from without, but are the outgrowth and necessary proceed of the spirit within.

One problem of some interest still remains to be solved: how the Grecian forms could ever be received by the French, they as well as other European nations being under a Christian and monarchical dispensation. This the author does in a note, which we shall translate.

'It will be said, did not France experience equal changes in politics and religion, during the middle ages, with the rest of Europe? And yet, in spite of this, it has not resisted the introduction of the classic style, and has eschewed the romantic. History must resolve this question, and say that, the French theatre having formed itself about the middle of the seventeenth to the eighteenth century after that country had in a great degree modified the social scheme arising from the middle ages, it is not wonderful that the literature should share in the alterations of the national character. In fact, at the epoch in question, France was the stage of a multitude of civil wars and revolutions, which, separating the people from passive obedience, accustomed them to the discussion of political and religious questions, leaving to it a greater or less share in the government and management of the state. Thus, even in the midst of monarchy, the nation became accustomed to a half republican liberty, which permitted or tolerated the censure and discussion of all sorts of opinions. By the introduction and general diffusion of the spirit of analysis, which is as favourable to sciences of fact as it is prejudicial to those of imagination and inward feeling, the French people became daily more separated from the monarchical spirit of the religious and chivalric enthusiasm of the heroic times of the middle ages. The study of Greek and Roman literature had great influence upon these modifications of society; so that, having become general, notions and opinions concerning the uses and conditions of those ancient republics were so widely diffused, that

there was scarcely a well-educated Frenchman who did not pique himself on knowing more of the life of Brutus or Cassius, than of Du Guesclin or of Chevalier Bayard.'

This, he thinks, will account for the adoption of Grecian rules by the founders of the French drama. We, however, are inclined to take a different view of the case, and, indeed, at this moment have very strong suspicions that the French have no national drama at all. We think we can observe that there was a total absence of national character in France at the time when their tragedy came into being: a want of which, the discontinuance of the *Etats Generaux*, the gradual subjugation of the noblesse, and the triumph of arbitrary power in the hands of Richelieu, Mazarin, and Louis XIV., must be looked to as the causes. These circumstances, by destroying the popular interest in the Government, and so crushing the principle of activity throughout the higher and lower classes, and concentrating the attention of all upon the miserable vanities of the Court, joined to the commanding situation which Louis occupied at the beginning of his reign, will amply account for the appearance of 'half-republican liberty' which our author observes. Miserable in all her internal economy, *la grande nation* consoled herself by reflecting how splendid a figure she made in the eyes of her neighbours; and, while individuals had neither liberty of thought, word, nor act, they found for this loss abundant recompense in the vanity which prompted them to believe themselves the arbiters of Europe and the despots of the civilised world. Besides, the ferment of the freedom within, having no better means of manifestation, broke out into an inordinate admiration of ancient republicanism; and the French did according to the law by which all slaves are usually the loudest talkers about liberty: hence they mouthed the sentences of Cato and Brutus with great zeal and self-satisfaction; strutted and looked as big as they could, and talked of Aristides and Cimon, and became declamatory, and philosophical, and stern, and patriotic, all at once, and asserted themselves to be the Athenians of the civilised world. Under this state of things, the French drama arose, and naturally assumed the forms of a stage whose externals only they could assume, but whose spirit they could by no possibility partake.

It is with great satisfaction that we hail the appearance of this little pamphlet: it is not distinguished by great originality; but it recognises principles as foundations for judgment, and rescues criticism from the despotism of words under which it has so long laboured. But this is not the source of our greatest gratification; that is the evidence which this book supplies of the existence in Spain of a germ which cannot perish, but must go on increasing in strength till it bears fruit an hundred-fold: the feelings and opinions which it recognises are connected with the best part of our nature and want only cultivation: they must ultimately prevail. In the mean time, let it be the consolation of this gentleman, that, as an excellent metaphysician and a good man, he has contributed his share to the future advancement of his country, and that he will have been no trifling benefactor to his countrymen, if he can inspire them with some of the admiration he feels for Lope de Vega, Tirso de Molina, Moreto, and Calderon.

NATURAL HISTORY.

The Journal of a Naturalist. 12mo. p. 396. Murray. London, 1829.

THIS is a most delightful book, on the most delightful of all studies, the observation of nature in the gardens and fields, where alone her works can be correctly studied and justly appreciated; and it is little more than a truism to say that there is not a star in the sky, a leaf in the grove, or an insect in the sun-beam, which does not or may not give origin to feelings, or, as Wordsworth beautifully expresses it, to

'Thoughts that lie too deep for tears.'

The author of the book before us is not a closet philosopher, a mere book naturalist, who puts himself in ecstasies on the possession of a rare specimen or a rare edition: the phenomena of nature, everchanging, ever new, are the books which he delights to peruse; and, within the narrow boundaries of his village-fields or his farm-yard, he finds abundant scope for inquiry and research into what is frequently over-looked, ill-understood, or erroneously explained. A person of even moderate ingenuity and of the most moderate talents, can never be at a loss for a subject of inquiry, if he chooses to look around him; but, when zeal, enthusiasm, and cleverness meet in an individual, (as they assuredly do in our author,) who turns his mind to the contemplation of nature, the results are certain to be no less rich than abundant.

We are acquainted with no previous work which bears any resemblance to this, except the Rev. Gilbert White's '*Natural History of Selborne*;' the most fascinating piece of rural writing and sound English philosophy that ever issued from the press. It was, indeed, this very book, as our author confesses, which early impressed upon his mind an ardent love for all the ways and the economy of nature, and which first led him to the constant observance of the rural objects around him; and we may, perhaps, be permitted to say, that we would not think well of any man who derived not from Mr. White's book some portion of the same spirit, more or less ardent as the case might be from previous bias, constitutional peculiarity, or accidental opportunities. With a secluded village-field to ramble in, and with the work of Mr. White or of our author in his hand, we venture to say there are few above the rank of the illiterate peasant who would not say with Coleridge,

'Here will I seat myself, beside this old,
Hollow, and weedy oak, which jry-twice
Clothes as with net-work: here will couch my
limbs,
Close by this river, in this silent shade,
And listening only to the pebbly stream
That murmurs with a dead, yet bell-like sound
Tinkling, or bees that in the neighbouring trunks
Make honey hoards.'

We fully agree with our author, that it is surprising, amidst our general associations and commixtures in life, in times so highly enlightened as the present, when many ancient prejudices are gradually fitting away, as reason and science dawn on mankind, that we should meet with so few, comparatively speaking, who have any knowledge of, or take the least interest in, natural history; or, if the subject obtain a moment's consideration, it has no 'abiding place' in the mind, and is dismissed as only fit for children and persons of inferior capacity. The natural historian, however, if he deserve the character, must attend to something more than the vagaries of butterflies and the spinings of caterpillars; his study is one of the most delightful occupations which employ a rational and inquisitive mind; and perhaps none of the amusements of human life are more dignified than the investigation and survey of the workings and ways of Providence: it occupies and elevates the mind, is inexhaustible in supply; and, while it furnishes meditation for the closet of the studious, gives to the reflections of the moralising rambler admiration and delight, and is an engaging companion, which will communicate an interest to every rural perambulation. It is not necessary, as our author well remarks, for us to live with the humble denizens of the air, the tenants of the woods and hedges, or the grasses of the field; but to pass them by in utter disregard, is to neglect a large portion of rational pleasure open to our view, which may edify and employ many a passing hour, and by easy gradations will often become the source from which contemplations of the highest order well forth in copious streams. In the work before us, this is exemplified in every page: we

select a specimen from the author's winter observations.

'Nov. 10.—Many effusions of the mind have been produced by the approach or existence of the seasons of our year, which seem naturally to actuate our bodily or mental feelings through the agency of the eye, or temperature of the air. The peculiar silence that prevails in autumn, like the repose of wearied nature, seems to mark the decline and termination of being in many things that animated our summer months; the singing of the bird is rare, feeble, and melancholy; the hum of the insect is not heard; the breeze passes by us like a sigh from nature; we hear it, and it is gone for ever. But it is the vegetable tribes, which at this season most particularly influence our feeling, and excite our attention. We see the fruits of the earth stored up for our use in that dull season "in which there will be neither earing nor harvest," the termination and reward of the labours of man. But this day, November 10, presented such a scene of life and mortality, that it could not be passed by without viewing it as an admonition, a display of what had been and is. There had occurred, during the night, a severe white frost; and, standing by a greenhouse filled with verdure, fragrance, and blossom, I was surrounded in every direction by the parents of all this gaiety, in blackness, dissolution, and decay. But the very day before, they had attracted the most merited admiration and delight by the splendour of their bloom and the vigour of their growth; but, now just touched by the icy finger of the night, they had become a mass of unsightly ruins and confusion. Once the gay belles of the parterre, they fluttered their hour, a generation of existent loveliness; their youthful successors, unpermitted to mingle with them, peeped from their retreat above, seeming almost to repine at their confinement: they have bloomed their day, another race succeeds, and their hour will be accomplished too. This was so perfectly in unison with the shifting scenes of life, the many changes of the hour, that it seemed inseparably connected with a train of reflection, with the precepts which all nature points out—her still small whisperings for the ears of those that can hear them.'—Pp. 391, 392.

Every occurrence is turned by our author into the subject of some useful or philosophical reflection, or made the basis of a series of observations for ascertaining some important fact in science, or some interesting result in rural economy. In this point of view, we were much pleased with his remarks upon the influence of atmospheric changes upon vegetation, and particularly with what he says of electricity.

'The effects of atmospheric changes upon vegetation have been noticed in the rudest ages; even the simplest people have remarked their influence on the appetites of their cattle, so that to "eat like a rabbit before rain" has become proverbial, from the common observance of the fact; but the influence of the electric fluid upon the common herbage has not been, perhaps, so generally perceived. My men complain to-day, that they cannot mow, that they "cannot any how make a hand of it," as the grass hangs about the blade of the scythe, and is become tough and woolly; heavy rains are falling to the southward, and thunder rolls around us; this indicates the electric state of the air, and points out the influence that atmospheric temperature and condition have upon organised and unorganised bodies, though, from their nature, not always manifested, all terrestrial substances being replete with electric matter. In the case here mentioned, it appears probable that the state of the air induced a temporary degree of moisture to arise from the earth, or to be given out by the air; and that this moisture conducted the electric fluid to the vegetation of the field. Experiments prove that electric matter, discharged into a vegetable, withers and destroys it; and it appeared to me at the time—but I am no electrician—that an inferior or natural portion of this fluid, such as was then circulating around, had influenced my grass in a lower degree, so as not to wither, but to cause it to flag, and become tough, or, as they call it in some counties, to "wilt;" the farina of the grass appeared damper than is usual, by its hanging about the blades of the scythes more than it commonly does; the stone removed it, as the men whetted them, just at the edge, but they were soon clogged again. As the thunder cleared away, the impediments became less obvious, and, by degrees, the difficulties ceased. The observance of local facts, though unimportant in themselves, may at times elucidate perplexities, or strengthen conclusions.'—Pp. 356, 357.

We may be permitted to add, that the power of electricity over the body is no less if not more

important to be studied than its influence on movable grass. In fact, we can never enjoy health nor comfort without a proper portion of it in the system. When this portion is deficient, we feel languid and heavy, and very foolishly pronounce a libel on the blood which is quite innocent, while we never suspect the damp atmosphere of robbing us of our electricity. Yet so it is. In dry weather, whether it be warm, cold, or frosty, we feel light and spirited; because dry air is a slow conductor of electricity, and leaves us to enjoy its luxuries. In moist or rainy weather, we feel oppressed and drowsy; because all moisture greedily absorbs our electricity, which is the buoyant cordial of the body.

To remedy this inconvenience, we have only to discover a good non-conductor of electricity, to prevent its escape from the body; and this we have in silk, which is so excellent a non-conductor that the thunder-bolt, or the forked lightning itself, could not pass through the thinnest silk handkerchief, provided always that it be quite dry. Those, therefore, who are apt to become low-spirited and listless in damp weather, will find silk waistcoats, drawers, and stockings, the most powerful of all cordials. Flannel is also good, but nothing so powerful as silk. Wash-leather is likewise a non-conductor of electricity, and may be used by those who prefer it. But silk is by far the best, and those who dislike to wear flannel next to the skin, will find equal benefit by substituting cotton shirts, drawers, and stockings, with silk ones over them; or, where more heat is required, flannel ones between the cotton and the silk, for the silk should always be outermost.

Our naturalist's observations on animated nature form more than two-thirds of the volume; and, though they are not always novel to those who have studied the subject, they usually contain some interesting allusion, illustration, or turn of thought, which cannot fail to please and instruct the general reader. The following remarks illustrative of natural theology, struck us as being no less beautiful than correct:

'The extraordinary change of character which many creatures exhibit, from timidity to boldness and rage, from stupidity to art and stratagem, for the preservation of a helpless offspring, seems to be an established ordination of Providence, acting in various degrees most of the races of animated beings; and we have few examples of this influencing principle more obvious than this of the misshapen bird, in which a creature addicted to solitude and shyness will abandon its haunts, and associate with those it fears, to preserve its offspring from an enemy more merciless and predaceous still. The love of offspring, one of the strongest impressions given to created beings, and inseparable from their nature, is ordained by the Almighty as the means of preservation under helplessness and want. Dependent, totally dependant, as is the creature, for every thing that can contribute to existence and support, upon the great Creator of all things, so are new-born feebleness and blindness dependant upon the parent that produced them; and to the latter is given intensity of love, to overbalance the privations and sufferings required from it. This love, that changes the nature of the timid and gentle to boldness and fury, exposes the parent to injury and death, from which its wiles and cautions do not always secure it: and in man the avarice of possession will at times subdue his merciful and better feelings. Beautifully imbued with celestial justice and humanity, as all the ordinations which the Israelites received in the wilderness were, there is nothing more impressive, nothing more accordant with the divinity of our nature, than the particular injunctions which were given in respect to showing mercy to the maternal creature cherishing its young, when by reason of its parental regard it might be placed in danger. The eggs, the offspring, were allowed to be taken; but "thou shalt in any wise let the dam go;" "thou shalt not, in one day, kill both an ewe and her young." The ardent affection, the tenderness, with which I have filled the parent, is in no way to lead to its injury or destruction: and this is enforced not by command only, not by the threat of punishment and privation, but by the assurance of temporal reward, by promise of the greatest blessings that can be found on earth, length of days, and prosperity.'—Pp. 248—250.

The extraordinary care of most animals to keep themselves clean, may be remarked by the most indifferent observer. The house-fly spends the greater portion of its time in brushing the dust from its wings: the cat, as she sits by the fire, employs a part of every day in smoothing her fur; birds, whether wild or tame, are frequently seen preening their feathers; and most animals may be observed carefully cleaning their young offspring with their tongues—a practice which, in the instance of the bear, led to the foolish notion that the cubs required to be licked into shape. Even where uncleanness characterises any animal, it is usually to serve some important purpose, as in the case lately recorded in 'The Athenæum,' of the rhinoceros encrusting itself with mud, as a protection from the gad-fly of the Desert. The following remarks of our author on this subject are excellent:

'The perfect cleanliness of these creatures is a very notable circumstance, when we consider that nearly their whole lives are passed in burrowing in the earth, and removing nuisances; yet such is the admirable polish of their coating and limbs, that we very seldom find any soil adhering to them. The mole, and some of the scarabæ, upon first emerging from their winter's retreat, are commonly found with earth clinging to them; but the removal of this is one of the first operations of the creature; and all the beetle race, the chief occupation of which is crawling about the soil, and such dirty employments, are notwithstanding remarkable for the glossiness of their covering, and freedom from defilements of any kind. But purity of vesture seems to be a principal precept of nature, and observable throughout creation. Fishes, from the nature of the element in which they reside, can contract but little impurity. Birds are unceasingly attentive to neatness and lustration of their plumage. All the slug race, though covered with slimy matter calculated to collect extraneous things, and reptiles, are perfectly free from soil. The fur and hair of beasts in a state of liberty and health is never filthy or sullied with dirt. Some birds roll themselves in dust, and occasionally particular beasts cover themselves with mire; but this is not from any liking or inclination for such things, but to free themselves from annoyances, or to prevent the bites of insects. Whether birds in preening, and beasts in dressing themselves, be directed by any instinctive faculty, we know not; but they evidently derive pleasure from the operation, and thus this feeling of enjoyment, even if the sole motive, becomes to them an essential source of comfort and of health.

'It may be noted probably by some, how frequently I recur to the causes and objects of the faculties, manners, and tendencies of animate and inanimate things. This recurrence springs from no cavil at the wisdom, no suspicion of the fitness, of the appointment, nor, I trust, from any excitement to presumptuous pryings into paths which are in the great deep, and not to be searched out; but are humbly indulged from the pleasure which the contemplation of perfect wisdom, even in a state of ignorance, affords; and, if by any consideration we can advance one point nearer to the comprehension of what is hidden, we infinitely increase our satisfaction and delight.'—Pp. 309—311.

We have remarked several mistakes, chiefly of minor importance, in various parts of the work; some of them arising from deficient acquaintance with recent discoveries, and others from a slight bias towards theoretical speculation; but all these sins of omission and commission we are most willing to look upon as fully overbalanced by the frequent glimpses of originality which gleam out in almost every page, and the light, pleasant style of good-hearted cheerfulness which such pursuits are almost certain to beget, and which charms the reader on from page to page, as the gay butterfly leads on its juvenile pursuer from flower to flower, unwearied and unsatiated.

We cannot better conclude this notice (which we wish we could have afforded space to extend to thrice the length) than in the words of the author's own concluding reflections:

'Without considering the various sources of enjoyment and pleasure bestowed upon an intelligent creature, what a scene of glorious display might be opened to man through the agency of the eye alone! How deep we must abandon, as probably they are beyond our comprehension; but, were the powers of vision so en-

and intrigue, and, by indiscreet disclosures, furnish food for malignity. Unfortunately for the booksellers, the events of the close of the 18th century, and the beginning of the 19th, and the important persons who, during that period, were connected with the court and with diplomacy, are but little adapted to figure in such works. Some there are concerning it,—but they are mere small-talk,—old recollections without any attraction for curiosity,—the authors of which endeavoured, by disclosures which they took good care to make complete or true, but which might easily have been dispensed with, to arrive at a species of immortality of which they will never know the beginning. But the memoirs of the age of Louis XV. possess a character altogether peculiar. That was the time when the favourites of the prince were the only persons who could make recitals full of interest, and charm, and truth,—when love and politics withdrew the veil from their faults and failings. For them, or by them, every thing was done. Their boudoirs were the cabinets of the monarch and his ministers: all the gallants of the court, and the hoary *roués* of the regency, shouldered or insinuated themselves into their saloons.

Among those favourites, the Marchioness of Pompadour and the Countess Dubarri, having longest kept possession of the prince, have been pleased to make disclosures to us both curious and gay, and have sketched, with a vivid and skilful pencil, the portraits of persons, some of whom were raised by credit, while others, in spite of their lofty birth and haughty feelings, crawled at their feet. Madame Dubarri has left us some memoirs truly written, in the form of an epistolary journal, which the Paris booksellers have published, judiciously substituting the convenient plan of division into chapters, with summaries prefixed, but in which, with a puritanism rather misplaced, they have purged the style of the authoress, which is always spirited, and frequently picturesque.

Louis XV., who was so much engrossed by love when he came to the throne, and during the regency and the ignoble domination of Cardinal Dubois,—Louis XV., who so little deserved the name of 'well-beloved,' which the stupid vulgar, or his base and flattering courtiers, gave him,—an indolent king, an uneasy and a jealous father, and the unsafe friend of his young companions,—whose love was pleasure, whose religion terror,—enfeebled by his passions,—leaving either to his ministers or his mistresses the reins of government,—at once a devotee and a libertine, without giving, like his predecessor, the air of the most seductive gallantry and passion to his adulterous amours,—incessantly swelling, by his profusion, the debt of the state without contriving any means for its liquidation,—contributing to give a false direction to continually increasing knowledge,—affecting indifference for men who, by the splendour of their talents and the liveliness of their imaginations, did honour to his reign;—such a prince, when once he had got rid of his cruples, (for he entertained them a long time,) could not but bring on the reign of favouritism and depravity. The ladies of his court were first the objects of his desires. Five sisters of the family of Neale, whose fortune was not equal to their birth, and whose nature, though with much diversity, had endowed with her most precious gifts, had the most easy access to the queen. Madame de Mailly, the eldest of them, good, simple, free from artifice, liable to weakness, but capable of great constancy, was the first mistress of the young prince. The courtiers had but little fear of any ascendancy that she might gain: she was not pretty. This intrigue was involved in mystery; but the second sister, Mademoiselle De Neale, afterwards Marchioness of Vinimilla, had already, in the retirement of a convent, conceived the plan of becoming Madame De Mailly's rival. Divested of timidity, now flattering the prince and now his ministers,

now pretending gaiety and now decorum, she made a conquest of the king, who, then taking the first bold step in the career of scandal, publicly avowed her as his mistress. She died. Mademoiselle De la Tournelle, blooming with beauty, and pretending to blush at the example of her two sisters, aspired to replace them. She inflamed the monarch by the indifference with which she pretended to receive his homage; but, yielding at length after she had sufficiently resisted, she was created by her royal lover, Duchess of Châteauroux. She also was overtaken by death. The King was, for a long inconsolable for this loss; but, the dissipation of a brilliant and corrupt court having effaced the sad impression from his mind, and awakened him to the necessity of fresh delights, he formed a plan for the conquest of the remaining sister. The Duke de Richelieu, who prided himself on having been intrusted with this infamous affair, was righteously doomed to the shame of its miscarriage. She was replaced by the Marchioness D'Étiolle, afterwards Duchess de Pompadour, who, though a stranger, from taste and education, to the art of governing, rapidly attained an empire as absolute as that of the Cardinal De Fleury. The first use that she made of her power was to co-operate with the Duke de Choiseul in the expulsion of the Jesuits. She also died; and Louis XV., who had shown so great an attachment to her, manifested his extreme insensibility by exclaiming as the funeral passed, 'The Marchioness will have fine weather for her journey to-day!'

Soon after, the Queen died; and, while the courtiers were plotting to dissipate the ennui of the old King by the exhibition of *fêtes*, a young courtesan stole into the royal bed, intoxicated his senses, obtained, by voluptuous refinements, a firmer empire than love itself would have yielded her, and became, without hoping, and, perhaps, without desiring it, the arbitress of the destinies of France. Her name was Mlle. Lange, and she lived with one of the corruptest men in the capital, the Count Dubarri, whose last resource was to rent a gambling-house; where, in order to increase its celebrity, he used to exhibit Mlle. Lange, whose beauty was amazingly striking, notwithstanding early prostitution. So speaks a severe historian of the heroine of whose memoirs we are about to give some account; who, though the successor of so many women, renowned as well for their wit as for their beauty, obtained a still greater ascendancy over the old King than they.

It will be curious to see how Madame Dubarri judges herself in the letters which she addresses to her friend M. De N—, and in which, despising concealment and *mensonges de position*, this woman, who paid so dearly for her bad fame, relates without disguise whatever she has seen, whatever she has said, whatever she has done, under the persuasion that the royal favour purified her past life, and absolved her by anticipation from the consequences of all subsequent aberrations. 'I will not,' says she, 'imitate the example of De Stael, of whom it is said, that she only painted herself to the bust. I wish to give a full-length portrait of myself.'

The history of her scandalous life is the history of almost all the distinguished ladies of her time. We give the following anecdote to justify our opinion, and to show the style and manner in which Madame Dubarri makes her disclosures.

[The French Correspondent to whom we are indebted for this review had here introduced an extract, which we doubt not might have been published with great innocence in a Parisian Journal. But we are not quite persuaded that the purity of a reviewer's intentions is a sufficient excuse for an editor in giving insertion to passages which would affront the feelings of those readers whose feelings are most entitled to respect and deference. At the risk, therefore, of appearing ridiculously partial to our friends in France, and with the certainty of making the review much less lively in the estimation of many friends in England, we have ventured to put an abrupt period to this article.—E.]

THE DRY ROT.

The Cause of Dry Rot Discovered: with a Description of a Patent Invention for preserving Deched Vessels from Dry Rot and Goods on board from damage by Heat. By John George, Esq., Barrister-at-law. 8vo., pp. 186. Longman and Co. London, 1829.

A DRY subject, most people may think and say; but, in the hands of Mr. George, it has proved so far otherwise, that we have not lately seen a work written with more animation, though he never wanders for a single line from his subject in search of embellishment. He is no less philosophic in his views than graphic in stating them; and, if he is a young man, and can speak as well as he can write, we have no doubt that he will soon rise and succeed in his profession, as well, if not better, than in preserving ships, &c., from dry-rot. Mr. George was led to the investigation of the cause of dry-rot, by remarking its progress in the door of a wine-cellar belonging to him in Chancery-lane. Upon his first discovery of the state of the door, which looked 'as dry as kecks,' he began to turn the subject in his mind in the following ingenious manner:

'It cannot be the wet, because the wet has never touched the decayed part. The paint on the door has kept the wet even from touching any part of the timber itself; till now, that, from having become so completely rotten as not to be able any longer to retain its own shape and original form, it has shrunk and cracked, and even now the wet does not appear to have entered the crack, and reached the rotten part. If it were the wet, must it not have decayed the outside first, just as it rusts iron, while the interior remains sound? But here the outside is the soundest part; and it showed no symptom of decay till after the interior had become completely rotten, so completely so as for the surface to have shrunk inwards from the loss of substance in the interior, and for want of internal support, or perhaps from the same cause, to have been pressed inwards by the weight of the atmosphere. Then, can it be the air that has done it? There are the same answers to this supposition as to the former; namely, that the paint has kept the air from coming into any actual contact with the timber, and that it is the interior of the timber that has first become rotten. It cannot be the want of air, because the air always has been in contact with it as much as it can be in contact with timber painted; and, if it were this, all painted timber must become dry-rotten, which is not found to be the case. Can it be the want of a circulation of air? I should think not. I cannot understand how the want of the air being in continual motion, or being commonly in motion, against the outside of timber, can rot it in the interior, without first decaying the outside. Is it foul air? The same answer applies, that, if so, we should naturally expect it to decay the outside first; to decay that which it touched, and not that which it did not touch. Besides, there is no foul air here that I can perceive. The servants' water-closet, indeed, is just within the outer vault; and, sometimes when the water-cock is neglected to be turned, the common smell of a privy is very perceptible. But the water-closet is close to the outer door, which is not dry-rotten, whilst it is nine or ten feet distant from the inner door, which is so. Besides which, I never heard that the dry rot was particularly prevalent in places of this description.

'Again, it can neither be the light nor the darkness of the place that has caused the rot. For, with respect to the first, the door, even when the outer door of the outer vault is open, is never in the full light of day. And, with respect to the darkness being supposed to have caused it, the interior of all timber is always in the dark, and moreover, if this were the case, all timber must be dry rotting during the night, and the inner sides of all dark closets, cupboards, and drawers, both night and day.

'It cannot be the cold of the place where the door is fixed, that has caused the rot, because it is never so cold there as it often is at the outside of the outer door, and of all our outer doors. On the other hand, it cannot be the heat of the place, because it is never so hot there, as, in summer, it is in the open air, to which all our outer doors and windows are exposed. It cannot then be caused by the door, or other timbers, being placed in a high temperature, or by its being placed in a low temperature. What, then, thought I, can heat have nothing to do with it? Can it be caused neither by heat, nor by cold, nor by changing from heat to

cold. Step! That does not follow. But how? How is this door affected by the changes of the temperature? I have it—I have found it out. It is the heat which is so constantly working its way, in such a quantity, through the timber of the door, in the one direction or the other, and which, now that some frost has come, is working its way out, and leaving behind it all that wet which it has deposited against the inner side of the door within the vault, and which is now running so plentifully, and making a little pool of water in the ground, that has caused the decay. It is this heat, so almost continually forcing its way through the door into and out of the vault by turns, and, in so doing, coming into immediate contact with, and exerting an action of some sort on, the whole of the interior of the timber, that has, by degrees, effected its decomposition as timber, and made it so rotten as it is. It was by turning the subject in my mind, and sifting and scrutinizing it in this manner, that I came to make my discovery of the cause of the decay.

—P. 13.

Without more space than we can spare, and without the aid of plates, we could not do justice to the invention which Mr. George contrived, in consequence of the above ingenious reasonings; but we conceive that there are few who are interested in the subject, after perusing the detail just given, that will not procure and read the volume for themselves. In fact, from the graphic manner in which it is written, it will prove interesting to many who have no concern whatever with the subject of dry rot.

POPULAR MEDICINE.

The Manual for Invalids. By a Physician. 12mo., pp. 368. Bull. London, 1829.

It was remarked by Voltaire, when his 'Henriade' was attacked by the critics, that it was much easier to find fault than to execute; and, if they did not think his poem a good one, they might write a better if they were able. This, however, is a sort of game which critics seldom choose to play; but, when they do venture upon such comparative trials of skill, they cannot refuse to be tried in the same balance with the works of those whom they have volunteered to rival. The author of 'The Manual for Invalids' is precisely such a critic, and boldly (we might with more justice say impudently) places his criticism as a frontispiece to his book, thus:

'It has been too long the custom of writers on Popular Medicine to direct their attention rather to sketching the outline of all the maladies that 'flesh is heir to,' than judiciously to unfold the true nature of health and of disease, lead the non-medical reader by the route which is open to reason; and, by thus placing the light on his path, enable him to see his own way. They have laboured rather to make a grammar of health, than to give available advice, classing with precision causes, symptoms, and remedies for cure; but leaving the patient to apply them without judgment, as one would direct a blind man on his way, by describing to him minutely the road-side scenery through which he was to pass.'

'The object of the writer of this manual is to instruct his fellow-creatures, first to know what health consists of, then to lead their judgment to the care of it while it is in their possession, and to the regaining of it when disease may have deprived them of it. So various are the shades in disease, so complicated the circumstances accompanying it, that, to place a list of treatises, on acknowledged divisions, in the hands of a non-medical reader, must be, if not dangerous, at least of little use. But, to lay before him a series of instructions and advices, drawn up with a view to open his mind to his true state regarding his health—to enable him to say, "Thus far should I go, and no further: here, I can assist my health, and here should consult my physicians." This is surely desirable. To this one great object, then, is the "Manual for Invalids" directed; and the writer trusts that a long life, devoted to the study of the laws of the animal economy, and to the circumstances which precede the change of health to disease, has qualified him for the task he thus undertakes. He also trusts that his book will be read with interest, alike to those in health and disease; that it will bear to be read "twice and again" by the invalid; that it will instruct as well as interest; and that the reader, above all, will derive practical benefit, as regards the treatment of all human blessings, health.'—Preface.

In Dr. Johnson's time it was very common to employ a different person from the author to write the preface to a book; and, though the practice has long, we believe, gone into disuse, we strongly suspect that this very preface is an attempt at its revival. If it is not so, the author must have looked at his performance through a very partial medium; for there is not, throughout, a single page of the book which has the slightest accordance with these prefatorial promises. That his book will 'bear to be read twice and again,' will depend on the patience of readers; but that it will require to be read much oftener before it can be understood at all by the non-medical reader, we are positive. The author, or rather the writer of the preface, talks, as we have just seen, of 'placing the light on his path;' but, if such light have been any where placed, it must have subsequently been either puffed out, put 'under a bushel,' or enveloped in clouds of murky vapour, so as not even to leave a sufficient glimmer to render the darkness visible. What, for example, is a non-medical reader to make of 'thoracic viscera,' 'vascular excitement,' 'accumulation of high irritability,' 'carbonaceous matter,' 'ducts of sebaceous glands,' and a countless multitude of similar technical terms carefully culled from the slang of the medical schools, not to mention a few of his own peculiar coinings, such as, 'an impetuous strain of consumption,' producing 'a violent pulse;' 'the stream of vital consumption?' &c. &c.

The didactic parts of the volume, where we expect, according to the tenor of the preface, to meet with practical advice, contain little besides a string of truisms and common-places, couched in that sort of pseudo-scientific style, which with some may make them pass for profound. For example: 'The science of pathology and therapeutics, though taught upon general principles, must be practised, therefore, by the standard of the practitioner's ability; and both success and failure will occasionally occur, not only according to the acquirements, but also to the precision, of ideas and natural talent, of every practitioner;' (page 304.) which, being stripped of verbiage, is nothing more than the profound truism—a physician can only do what he can. This, we suppose, is what is alluded to in the preface, as to what cases it may be requisite to consult a physician. In the next page he goes on to say, 'The author has before mentioned his conviction, that ignorance is the fruitful parent of error and misery, in every thing connected with the well-being of man. Fatal errors are often committed in common life.' (Page 305.) In fact, the work is chiefly made up of such useless nothings, many of the truisms having no relation whatever to the professed subject of the book.

The author, however, conceives himself quite 'qualified for the task of instructing invalids.' Why? Because he has 'devoted a long life to the study of the animal economy.' This is precisely the fallacy by which the vulgar are led in their choice of a physician, thinking that experience will always confer skill; whereas the very reverse is frequently the case, when the physician is deficient in the mental powers requisite to take advantage of the experience afforded him. We are sorry to say that our author appears to rank decidedly in this class; and, so far from being able to instruct others, he would require to go to school again himself. This position we could prove with ease from almost every page of his book, which can be of no earthly use to any invalid who does not know two or three hundred of the hardest medical terms.

ENGRAVINGS.

Portrait of George IV. By Flaxman. Moon and Boys.

THIS magnificent engraving was noticed in our columns before it was produced to the public; and since its appearance it has been received with such an unanimous shout of approbation, that any observations

we could now make upon it would be idle. We have no hesitation in pronouncing it the greatest engraving of its kind, and one which raises Flaxman's reputation immensely above its former very high level. If there is any fault in a work very nearly faultless, we should be inclined to particularise the right arm as somewhat too stiff.

York Minster. By Harwood. Colnaghi.

THERE is a melancholy interest belonging to this print, which would procure it popularity even if its intrinsic merits were less considerable than they are; it is fully entitled, however, on that score, to public appreciation.

The Princess Victoria. Dedicated by especial permission to her Royal Highness the Duchess of Kent. Engraved by T. Woolnath, from a picture painted by Anthony Stewart.

THIS miniature is in every way exquisite. It is an unpretending, but most graceful, and we are persuaded most accurate, reproduction of a face replete with intelligence and sweetness. The clear calm eyes, and expressive English beauty of the child, who, we trust, will one day be our sovereign, are, of right, precious to the feelings of Englishmen. And it is the more satisfactory to be put in mind so delightfully of the existence of the Princess Victoria, inasmuch as she is at present the only bar between the throne and a successor whose virtues and abilities we had rather should be appreciated in a foreign country than wasted at home on a people insensible to such merits.

The Passage of the Red Sea. Engraved by Phillips, from the Picture by Danby.

MOST of our readers have probably seen or heard of the picture of which this engraving is a copy. In its general character it must at once remind every one of Mr. Martin's celebrated works. And, undoubtedly, we are giving any picture very high praise when we say, as we do of this, that, in force of conception, it is worthy of that artist. In the arrangement of the design, so as to diversify the subject by just gradations, and make every portion contribute to the unity of effect, Mr. Danby seems to us superior to his eminent rival. In the management of the details, also, he is more judicious, accurate, and elegant; nor do his personages bear so much resemblance to *hippopotami* as we have, from the evidence of Mr. Martin's picture, seen the case with the people of Nineveh. We rejoice unfeignedly at the appearance of this engraving, inasmuch as it will tend to familiarise the public with the creations of a great artist. The humanising influence of the fine arts is one of the best among the many causes now at work to give society a different colour from that which it has hitherto worn in England. Among the innumerable evil tendencies, it is well that we have some good ones; and we know of none with which less ill is mixed than that which disposes to the cultivation of a tranquil, sympathising eye for sculpture, painting, and architecture. We should exult, as Protestants, at seeing the stupid paradox of some German quacks about the incompatibility of our religion with a high development of the fine arts, refuted by our own experience. And we trust that the present manifest improvement in the English schools of painting and sculpture is only the prelude to an epoch which will show that the world, that the country of Shakspeare has something in its genius akin to that of Raphael.

ERRATA.—We owe many apologies to Mr. Barnays, the author of 'The German Anthology,' which was noticed and praised in our last Number, for ascribing his very useful little work to Mr. Bowring. The blunder was merely an ordinary printing accident, but as it was just possible, though not very likely, that Mr. Bowring should have written the work in question, we have thought it our duty to correct it. Through similar carelessness also, Ridgway was mentioned as the publisher of Lord Redesdale's Letter, instead of Hatchard.

larged or cleared as to bring to observation the now unknown fabrication of animate and inanimate things, what astonishment would be elicited! The seeds, the pollen of plants, the capillary vessels and channels of their several parts, with their concurrent actions, the clothing of various creatures, and all that host of unperceived wisdom around us! Yet probably the mind, constituted as it now is, would be disturbed by the constant excitement such wonders would create; but at present, though sparingly searched out by the patient investigator, and but obscurely seen, they solace and delight; "cheer, but not inebriate."

"Oh good beyond compare!
If thus thy meener works are fair,
If thus thy bounties gild the span
Of rule'd earth and sinful man:
How glorious must that mansion be,
Where thy redeem'd shall live with thee!"

'And now I think I have pretty well run over my diary, the humble record of the birds, the reptiles, the plants, and inanimate things around me. They who have had the patience to read these my notes, will probably be surprised, that I could take the trouble to register such accounts of such things; and I might think so too, did I not know how much occupation and healthful recreation the seeking out these trifles has afforded me, rendering, besides, all my rural rambles full of enjoyment and interest: companions and intimates were found in every hedge, on every bank, whose connections I knew something of, and whose individual habits had become familiar by association; and thus this narrative of my contemporaries was formed. Few of us, perhaps, in reviewing our by-gone days, could, the hours return again, but would wish many of them differently disposed of, and more profitably employed: but I gratefully say, that portion of my own passed in the contemplation of the works of nature is the part which I most approve; which has been most conducive to my happiness; and, perhaps, from the sensations excited by the wisdom and benevolence perceived, not wholly unprofitable to a final state; and which might be passed again, could I but obtain a clearer comprehension of the ways of Infinite Wisdom. If in my profound ignorance I received such gratification and pleasure, what would have been my enjoyment and satisfaction, "if the secrets of the Most High had been with me, and when by His light I had walked through darkness?"—Pp. 394—396.

Our readers, we think, will unanimously agree with us, that "The Journal of a Naturalist" is a worthy companion to 'White's Natural History of Selborne;' and a higher character it would be impossible to give.

SECOND SERIES OF THE TALES OF THE MUNSTER FESTIVALS.

The Collegians. A Novel, &c.

It has been complained of, (and we believe, among others, by ourselves,) that Ireland has had no national literature. This complaint was unjust, certainly. It is most true that Ireland has no title to claim Swift, Berkeley, and Goldsmith as Irish authors, however, unquestionably, they may have been Irish men. But it ought rather to have been said, that Ireland *could* not have had a national literature any more than Otaheite. The upper classes were, till lately, imperfect Englishmen, and the lower classes imperfect Irishmen. The one produced English books, (English in spirit,) and the other none at all. The beginnings at least of an *Irish* literature were, till within thirty years, but faintly visible in various dream-books, prophecies, and accounts of rogues and rapparees. From the time, however, when the Roman Catholics were permitted to be any thing better than hewers of wood and drawers of water, there have been increasing evidences of literary yearning and excitement among the 'mere Irish.' They are, in fact, only learning to be a nation; and we are inclined to think that their literature is now analogous in character to that of all immature countries. With the differences in form derived from the customs and tastes of the age in other parts of Europe, yet all that is inward and essential in modern Irish literature, corresponds very closely to the ballad poetry which has always been the earliest expression of a national feeling. Miss Edgeworth and Mr. Banim, both persons of remarkable talent, and the latter of a power which must, we think, develop itself into

genius of no ordinary kind,—these authors, however different in all other respects, yet are alike in this, that all their personages who stand out from the national mass, (excepting only Lady Geraldine in Ennui,) all those of whom we feel that the manner is, and ought to be, English, the lords, heroes, young ladies, and walking gentlemen, are comparatively vague and unmeaning; while every character which belongs purely to Ireland, which expresses itself in that strange but expressive *patois*, is admirably vivid and peculiar. Like the ballads, all that is genuine in the novels is impregnated with a purely national spirit, and is valuable only inasmuch as it manifests that spirit. Nor let it be said that the language of the lower orders of Irish is now English, and that therefore the aberrations from the English standard are mere surface differences. The grammar of this language is indeed nearly the same as that of ours; but, in all that constitutes the life and difference of language, in vital and characteristic idiom, the two languages are as distinct as a forty-shilling freeholder of Clare from an English peasant. This language is employed with most of neatness and tenderness by Miss Edgeworth, with most of strength by Mr. Banim, with most of ease and variety by the author of 'The Collegians.' The two latter have unquestionably a great advantage over the lady in the originality and vigour of their conceptions; and we are inclined to think that, on the whole, they furnish us with a more valuable exhibition of Irish character and feeling.

There are, however, exceedingly important differences between these two brilliant writers. There is no one living who has a more intense and striking conception of situations than the author of 'The O'Hara Tales.' The strength of the Munster Tale-writer lies in dialogue. In description, they are about equally happy, and now and then equally turgid. In character, while Mr. Banim generally exhibits two or three individuals of wonderful energy and splendidly pictured, he is not so skilful as his less popular rival in the crowd of inferior personages.

The book before us contains a striking tale, and one very powerfully told. It is very superior to any previous performance by the same hand, which we happen to be acquainted with. The plot is shortly this:—A young man of good family, Hardress Cregan, (the name is not very happy,) falls in love with Eily O'Connor, a beautiful girl of very inferior rank to his own. He sees her in secret, and persuades her to elope with him from her father's house. He then conveys her to a lonely farm-house at no great distance from his home, where he wishes her to live in retirement until he can break the matter to his mother (the stronger spirit of his parents) and appease her anger. At this time, Anne Chute, a beautiful, highly-born, and accomplished heiress, the companion of his childhood, comes on a visit to his mother. She is secretly attached to Hardress, and the maternal influence is resolutely exerted to induce him to follow his fortune, and win Miss Chute's hand. He has not courage to declare his marriage, and only speaks of promises and pledges, which his mother urges him to despise. He is delighted by the elegant cultivation of the heiress's mind and manner, flattered by her preference of him to a thousand rivals, weary of the ignorance of his amiable wife, and ashamed of her origin; and he gives a humble dependant to understand that he wishes her to be got rid of, his words conveying a desire that she should be sent to America, while there is evidently some darker meaning in his mind. She disappears; and, from this time, amid some strange fits of passion, which are very vigorously delineated, he approaches to the crisis of his marriage with Miss Chute. In the mean time, the body of Eily is discovered; an investigation takes place, and, after some delay, Danny Mann, the murderer, is apprehended. He escapes, however, by Hardress's agency, and promises to leave the country. The young man soon after meets him again, and, in his fury at

still finding him in Ireland, strikes him. Danny, thereupon, gives himself up to justice, and informs against his master, who is seized on his wedding-day, and transported for life. Miss Chute, a reasonable delay having intervened, marries a lover whom she had formerly rejected, Kyrle Daly, another uncouth name, and the second 'Collegian.'

The various pictures into which this story is thrown, are generally of great depth and beauty. The artist has a free and potent pencil; and, as the figures are arranged with care and spirit, so all the accessories are admirable. The dialogue is always abundant and lively, and amply exhibits the character in the mind of the author. For the personages themselves, there is much less to be said. The different periods of the same character are inconsistent with each other; and the love of the women, especially, is very feeble. Eily O'Connor is weak and passive to an absurd degree. Miss Chute is not very impassioned, and we observe in her an instance of a propensity, remarkable in several of the best Irish novels, that of making young ladies be in love with two people at the same time. We are not young ladies; but we are inclined to think that sincerity and permanence in first love is possible; and, at all events, we are sure that the belief in that possibility is, if a delusion, yet among the most agreeable. Hardress Cregan, again, does not appear to us to *hang together*. There is, indeed, no particular portion of this or any other character in the book which is not displayed with great ability. But the different portions are inconsistent, and we are not sure that the state of his mind, after his alienation from Eily O'Connor, would be natural to any man in any circumstances. Yet, as to force of colouring, it is one of the most extraordinary parts of a work, the whole of which is untamed, impressive, and various, in no ordinary degree. We quoted an extract from the beginning of the work last week:—This is in a different style.

'The hospitalities of Castle Chute were on this evening called into active exercise. If the gravest occasion of human life, the vigil of the dead, was not in those days always capable of restraining the impetuous spirit of enjoyment so much indulged in Irish society, how could it be expected that a mere anxiety for the interests of justice could interrupt the flow of their social gaiety? Before midnight, the house rang with laughter, melody, and uproar, and, in an hour after, every queue in the servant's hall was brought into a horizontal position. Even the three that stalked on guard were said to oscillate on their posts with an ominous motion, as the bells in churches forebode their fall when shaken by an earthquake.

'Hardress continued too unwell to make his appearance, and this circumstance deprived the company of the society of Anne Chute, and, indeed, of all the ladies, who took a quiet and rather mournful cup of tea by the drawing-room fire. The wretched subject of their solicitude lay burning on his bed, and listening to the boisterous sounds of mirth that proceeded from the distant parlour, with the ears of a dreaming maniac.

'The place in which his former beastman was confined had been a stable, but was now become too ruinous for use. It was small, and roughly paved. The rack and manger were yet attached to the wall, and a few slates, displaced upon the roof, admitted certain glimpses of moonshine, which fell cold and lonely on the rough, unplastered wall and eaves, making the house illustrious, like that of Sixtus the Fifth. Below, on a heap of loose straw, sat the squalid prisoner, warming his fingers over a small fire, heaped against the wall, and listening in silence to the unsteady tread of the sentinel, as he strode back and forward before the stable-door, and hummed with an air of suppressed and timid joviality, the word.

"We won't go home till morning,
We won't go home till morning,
We won't go home till morning,
Until the dawn appears!"

'A small square window, closed with a wooden bar and shutters, was to be found above the rack, and opened on a hay-yard, which, being raised considerably above the level of the stable-floor, lay only a few feet beneath this aperture. Danny Mann was in the act of devouring a potatoe steeking hot, which he had cooked

in the embers, when a noise at the window made him start, and set his ears like a watch-dog. It was repeated. He stood on his feet, and crept softly into a darker corner of the stable, partly in superstitious apprehension, and partly in obedience to an impulse of natural caution. In a few minutes one of the shutters was put gently back, and a flood of mild light was poured into the prison. The shadow of a hand and head were thrown, with great distinctness of outline, on the opposing wall; the other shutter was put back with the same caution, and, in a few moments, nearly the whole aperture was again obscured, as if by the body of some person entering. Such, in fact, was the case; and the evident substantiality of the figure did not remove the superstitious terrors of the prisoner, when he beheld a form wrapt in white descending by the bars of the rack, after having made the window close again, and the apartment, in appearance at least, more gloomy than ever.

"The intruder stood at length upon the floor, and the face, which was revealed in the brown fire-light, was that of Hardress Cregan. The ghastliness of his mouth and teeth, the wildness of his eyes, and the strangeness of his attire, (for he had only wrapped the counterpane around his person,) might, in the eyes of a stranger, have confirmed the idea of a supernatural appearance. But these circumstances only tended to arouse the sympathy and old attachment of his servant. Danny Mann advanced towards him slowly, his hands wreathed together, and extended as far as the sling which held the wounded arm would allow, his jaw dropt—half in pity and half in fear, and his eyes filled with tears.

"Master Hardress," he said at length, "is it you I see dat way?"

Hardress remained for some time motionless as a statue, as if endeavouring to summon up all his corporeal energies to support him in the investigation which he was about to make.

"Won't you speak to me master?" continued the boatman, "won't you speak a word itself? 'Twas all my endeavour since I came hether to thry an' get 'em to let me speak to you. Say a word, master, if it is only to tell me 'tis yourself that's there!"

"Where is Eily?" murmured Hardress, still without moving, and in a tone that seemed to come from the recesses of his breast, like a sound from a sepulchre.

"The boatman shrank aside, as if from the eye of Justice itself. So suddenly had the question struck upon his conscience, that the inquirer was obliged to repeat it, before he could collect his breath for an answer.

"Master Hardress, I thought, after I parted you dat time—"

"Where is Eily?" muttered Hardress, interrupting him.

"Only listen to me, Sir, one moment—"

"Where is Eily?"

"Oh, vo! vo!"

Hardress drew the counterpane around his head, and remained for several minutes silent in the same attitude. During that time the drapery was scarcely seen to move, and yet hell raged beneath it. A few moans of deep, but smothered agony were all that might be heard from time to time. So exquisite was the sense of suffering which these sounds conveyed, that Danny sank trembling on his knees, and responded to them with floods of tears and sobbing.

"Master Hardress," he said, "if there's any thing that I can do to make your mind aisy, say the word. I know dis is my own business, an' no one else's. An' if dey find me out, itself, dey'll never be one straw de wiser of how advised me to it. If you tink I'd tell, you don't know me. Dey may hang me as high as dey like;—dey may flake de life out o' me, if dey please, but dey never 'll get a word outside my lips of what it was dat made me do it. Didn't dey try me to-day, an' didn't I give 'em a sign o' what I'd do?"

"Peace, hypocrite!" said Hardress, disgusted at a show of feeling to which he gave no credit. "Be still, and hear me. For many years back, it has been my study to heap kindness upon you. For which of those was it, that you came to the determination of involving me in ruin, danger, and remorse for all my future life,—a little all, it may be, certainly?"

It would seem from the manner in which Danny gaped and gazed on his master, while he said these words, that a reproach was one of the last things he had expected to receive from Hardress. Astonishment, blended with something like indignation, took

place of the compassion which before was visible upon his countenance.

"I don't know how it is, master Hardress," he said, "Dere are some people dat it is hard to please. Do you remember saying anything to me at all of a time in de room at de master's at Killarney, Master Hardress? Do you remember givin' me a glove at all? I had my token, surely, for what I done."

"So saying, he drew the glove from the folds of his waistcoat, and handed it to his master. But the latter rejected it with a revulsion of strong dislike.

"I thought I had ears to hear, dat time, an' brains to understand," said Danny, as he replaced the fatal token in his bosom, "an' I'm sure, it was no benefit to me dat dere should be a hue and cry over de mountains after a lost lady, an' a chance of a hempen cravat for my trouble. But I had my warrant. Dat was your very word, master Hardress, warrant was 'nt it? Well, when you go," says you, 'here is your warrant.' An' you ga' me de glove. Wor'nt dem your words?"

"But not for death," said Hardress. "I did not say for death."

"I own you did'nt," returned Danny, who was aroused by what he considered a shuffling attempt to escape out of the transaction. "I own you did'nt. I felt for you, an' I would'nt wait for you to say it. But did you mane it?"

"No!" Hardress exclaimed, with a burst of sudden energy. "As I shall answer it in that bright heaven, I did not. If you crowd in among my accusers at the judgment-seat, and charge me with that crime, to you, and to all, I shall utter the same disclaimer, that I do at present. I did not mean to practise on her life. As I shall meet with her before that judge, I did not. I even bade you to avoid it Danny. Did I not warn you not to touch her life?"

"You did," said Danny, with a scorn which made him eloquent beyond himself, "an' your eye looked murder while you said it. After dis, I never more will look in any man's face to know what he mains. After dis, I won't believe my senses. If you'll persuade me to it, I'll bawn dat there is nothing as I see it. You may tell me, I don't stand here, nor you dere, nor dat the moon is shining through dat roof above us, nor de fire burping at my back, an' I'll not gainsay you, after dis. But listen to me, Master Hardress. As sure as dat moon is shining, an' dat fire burning; an' as sure as I'm here, an' you dere, so sure de sign of death was on your face dat time, whatever way your words went."

"From what could you gather it?" said Hardress with a deprecating accent.

"From what? From every ting. Listen hether. Did'nt you remind me den of my own offer on de Purple Mountain a while before, an' tell me dat if I was to make dat offer again, you'd tink different? An' didn't you giv' me de token dat you refused me den? Ah, dis is what makes me sick, after I putting my neck into de halter for a man. Well, it's all one. An' new to call me out o' my name, an' tell me I done it all for harm! Dear knows, it was'nt for any good I hoped for it, here or hereafter, or for any pleasure I took in it, dat it was done. And talkin' of hereafter, Master Hardress listen to me. Eily O'Connor is in Heaven, an' she has told her story. Dere are two books kept dere, dey tell us, of all our doings, good and bad. Her story is wrote in one o' dem books, an' my name, (I'm sore aserd,) is wrote after it; an' take my word for dis, in which ever o' dem books my name is wrote, your own is not far from it."

As he spoke those words, with an energy beyond what he had ever shown, the fire fell in, and caused a sudden light to fill the place. It shone, ruddy brown, upon the excited face, and uplifted arm of the deformed, and gave him the appearance of a fiend, denouncing on the head of the affrighted Hardress the sentence of eternal woe. It glared likewise upon the white drapery of the latter, and gave to his dragged and terrified features a look of ghastliness and fear that might have suited such an occasion well. The dreadful picture continued but for a second, yet it remained engraved upon the sense of Hardress, and, like the yelling of the hounds, haunted him, awake and dreaming, to his death. The fire again sunk low, the light grew dim. It came like a dismal vision of the epheletes, and, like a vision, faded.

They were aroused from the pause to which this slight incident gave occasion, by hearing the sentinel arrest his steps as he passed before the door, and remain silent in his song, as if in the act of listening.

"All right within there?" said the sentinel with his head to the door.

"All's right your way, but not my way," returned Danny, sulkily.

In a few minutes they heard him shoulder his mus-

ket once again, and resume his walk, humming with an air of indifference, the same old burthen:—

"We won't go home till morning, Until the dawn appears."

Hardress remained gazing on his servant for some moments, and then said in a whisper:

"He has not heard us, as I feared. It is little worth, at this time, to consider on whom the guilt of this unhappy act must fall. We must at least avoid the shame, if possible. Could I depend on you once again, if I assisted in your liberation, on the understanding that you would at once leave the country?"

"The eyes of the prisoner sparkled with a sudden light. "Do you tink me a fool?" he said. "Do you tink a fox would refuse to run to earth, wit the dogs at his bush?"

"Here then!" said Hardress, placing a purse in his hand, "I have no choice but to trust you. This window is unguarded. There is a pathway to lead you through the hay-yard, and thence across the field in the direction of the road. Depart at once, and without farther question."

"But what'll I do about that fellow?" said Danny. "Dat sentry comes by constant dat way you hear him now, axing me if all's right?"

"I will remain here and answer for you," said Hardress, "until you have had time to escape. In the mean time, use your utmost speed, and take the road to Cork, where you will be sure to find vessels ready to sail. If ever we should meet again on Irish soil, it must be for the death of either, most probably of both."

"An' is dis de way we part after all?" said Danny, "Well, den, be it so. Perhaps after you tink longer of it, master, you may tink better of me."

So saying, he sprang on the manger, and ascended (notwithstanding his hurt), with the agility of a monkey, to the window. A touch undid the fastening, and in a few moments Hardress became the sole occupant of the temporary dungeon.

He remained for a considerable time, leaning with his shoulder against the wall, and gazing with a vacant eye on the decaying fire. In this situation, the sentinel challenged several times in succession, and seemed well content with the answers which he received. But the train of thought which passed through the mind of Hardress became at length so absorbing that the challenge of the soldier fell unheard upon his ear. After repeating it without avail three or four times, the man became alarmed, and, applying the butt of his musket at the door, he forced it without much effort. His astonishment may be conceived, when, instead of his little prisoner, he beheld a tall figure wrapt in white and a ghastly face on which the embers shed a dreary light. The fellow was a brave soldier, but (like all people of that class in his time) extremely superstitious. His brain, moreover, was heated with whiskey punch, and his imagination excited by numberless tales of horror which had been freely circulated in the servant's hall. Enough only remained of his presence of mind, to enable him to give the alarm by firing his musket, after which he fell senseless on the pavement. Hardress, no less alarmed on his own part, started into sudden energy, and climbing to the window, with an agility surpassing that of the fugitive, hurried off in the direction of his sleeping chamber.

There were few in the house who were capable of adopting any vigorous measures on hearing the alarm. Hastening to the spot, they found the sentinel lying senseless across the stock of his musket, the stable door open, and the prisoner fled. The man himself was enabled, after some time, to furnish a confused and broken narrative of what he had seen, and his story was in some degree confirmed by one of his comrades, who stated that at the time when the shot was fired, he beheld a tall white figure gliding rapidly amongst the hay-stacks towards the end of the little enclosure, where it vanished in the shape of a red heifer.—Pp. 195—212.

MEMOIRS OF THE COUNTESS DUBARRI.

Memoirs of the Countess Dubarri. 2 vols. 8vo. Paris, 1828.

THE present period might well be styled the Golden Age of Memoirs. Never were they published in greater abundance, never were they read with more avidity, especially when filled with scandal. Now-a-days, every one calls up his recollections to commit them to paper; and the common object of all is, who shall most successfully explore the haunts of shame, error, vice,

way; the sides of this rude apartment are five feet high, and its roof is fifteen feet in length, and in the centre eight feet in height: and as to furniture, when I set down a couple of planks nailed against the sides for seats, as many wooden stools, and a table in the middle, I have catalogued each article. Light is admitted by two narrow doors and four little square vent-holes with alides; yet, with all this, a few shillings and a Ratisbon upholsterer transformed this ungainly berth into a very snugger. The roof itself, from its slope being easy, afforded a second deck, and was furnished with seats, as well as a low edging of plank. My carriage supplied cushions, horse-cloths, and great-coats, by aid of which the hard benches were converted into sofas; books and maps were laid upon the table, my barometer and thermometer were installed in their places, my telescope duly mounted, and, by way of adding variety to my recreations, my 'fraudful Manton' was charged with 'leadén death.'

The work of preparation being achieved, the trusty master Hörnle, and steersman Hansel, on whom Scott's pen or Wilkie's pencil would have delighted to bestow immortality, gave tongue in the shape of 'Heaven prosper our course!' The rope was unshipped, and our bark darted forwards with the impetuous tide. It was some minutes before I recovered from the dizzying effects of the velocity with which the surrounding objects appeared instantaneously to recede from view; and yet, when my sight regained its rightful ownership, I was astonished to observe Master Hörnle, my own servant, and three assistants hired for the trip, exerting every sinew to accelerate the vessel's speed. My friend Hansel, our steersman, assigned, however, a very satisfactory reason for this practice. Though the vessel would be borne along with velocity if left to the mere operation of the current, she would not answer her helm, inasmuch as her speed would be simply equivalent to that of the stream: hence it is necessary she should have a distinct way or course of her own through the water. In order to satisfy myself on this score, I made the crew suspend their labours: the vessel was instantly whirled round like a piece of cork, and, had I not directed them to ply their skill again, we should have been cast against the banks of the river in the twinkling of an eye. The navigator is consequently obliged to keep his post without cessation from break of day till after sunset, earning his pitiful pittance by eighteen hours of unintermitting and most severe exertion. The method they adopt to manage their pletas and barks, is singular enough: each of them is furnished with two helms, the one afore, and the other aft; these helms consist of a limb of a fir-tree, from twelve to fifteen feet in length, to the extremity of which is attached a shovel-shaped board, from two to three feet in length, and twelve or fourteen inches in breadth. This limb or helm-arm is suspended to an upright, five or six feet high, by means of a willow loop, and its thinner end, bearing the water-board, is thrown out sufficiently over the water to preponderate slightly over the other end. Platforms, five or six feet high, are raised at each extremity of the bark for the use of the helmsmen, who work the two helms from these positions, not as rudders but as oars. The after-helm is sufficient for the common steerage of the vessel; that at the head being used only where the rapidity of the current is greater than usual. To each side of the vessel, fore and aft, and not far from the others, are attached two similar helms, suspended to uprights ten feet high, and worked, oar-fashion, by two more steersmen: their object is to assist the vessel against contrary winds and the eddies of the stream.

To return from digression the second. A six hour's float from Ratisbon brought us upon the steep promontories of the Bavarian forest, (Baierwald,) on our northern quarter. They are diversified by a rich succession of rocky scenery, and embellished, below the village of Schwebelweis,

with finely sheltered vineyards. Castles, churches, and ruins meet the eye at every bend of the river; but none so picturesque as the soaring ruins of Donaustauf, which look down from their beautiful pedestal of porphyry on the market-town of that name, from whence a wooden bridge stretches across the Danube. At this spot it is much about the breadth of the Thames at Staines. A screen of high banks and willows intercepted our view on the southern shore, excepting where its dull monotony was broken by the village roof or spire. Our first halt for the night was not far from the mouth of the Wiesend: the pletta was made fast to the shore, and an adjacent hamlet quickly added milk, eggs, butter, and potatoes to our stock of wine and cold meat; the whole, savoured by keen appetites and elastic spirits, afforded us a banquet which princes would have coveted. The pellucid stream rolled on in placid beauty beneath its brilliant, starry canopy; whilst the banqueters sat listening to the navigator's romantic adventures amidst storms and shipwrecks, and lent them a readier ear, because they were propounded in the familiar jargon of the Danubian dialect.

A stroll through the meadows along the shore was the prelude to the hour of rest. The contented find a downy couch wherever they stretch their limbs. Think not my fate was hard, though a rough skin was my coverlid, a wooden bench my mattress, and a hard carriage-cushion my bolster: my slumbers were softer and sounder than ever were dispensed by eider down.

The vessel was in motion at two the next morning. I leaped from my resting place, drew back the slide from one of the tiny windows, found our bark shrouded in an impervious fog, and directed her course to be stayed until we should be once more blessed with the clear light of heaven. The morning breeze sprung up about six, and, dispelling the 'darkness visible,' opened to my sight one of the loveliest landscapes it ever dwelt upon, and yielded its refreshing kiss to the glowing ardour of a sultry noon.

The towers of Straubing glittered from an eminence on our right; the hilly chain on our left had now receded, and laid bare the splendid scenery around the distant crest of the Bohemian forest, where the Roselberg peers three thousand feet above the level of the sea. The crumbling burg, and castle, and monastery, studded the intervening foreground with rich variety. We were seemingly close upon Straubing; but we, in fact, were six hours' sail from it, for the sinuous caprice of the stream prevented us from reaching it until noon. There was nothing in its exterior aspect deserving of the niche it occupies in the Temple of Fame; and I, therefore, suffered my pletta to keep on her course, though not forgetful that it contained the last record of the beautiful and unfortunate Agnes Bernauerin.

The closing scene of her existence was cruel and melancholy. Though so virtuous and so fair as to have been universally recognised as 'the Angel of Straubing,' her inhuman father-in-law, Duke Albert, ordered the common executioner to throw her from its bridge, on the 24th of October, 1434. Whilst in the act of making her escape by swimming, the savage monster plunged a hooked pole among her knotted ringlets, and forced her below the surface of the waters. The memory of her untimely fate can never perish whilst the bridge of Straubing exists to record it.

THE FREE-MASON.

A RETIRED Captain of Cavalry, reduced to the most narrow income, had exhausted all the resources which could save him from misery. He was weary with the many attempts he had made, humiliated by imploring kindness, and being answered by refusals. Without a relation or a patron, and tired, in short, of bearing a burthen which every day became more oppressive, he re-

solved to end a life which had been spared by thirty years of war.

One autumn evening, after having kissed a sword which was wetted by his tears, he proceeded towards the bridge de la Tournelle. He walked rapidly along the foot-way, and contemplated the depth and rapidity of the stream. His foot was already upon the parapet, and he was on the point of executing his fearful purpose, when he heard some one behind him. He turned and walked on, and strengthened his mind more earnestly than before in his previous resolution.

The stranger addressed him. He was a man of about forty-five, of a striking figure, and an open countenance, and appearing to belong to the middle class of society. He asked some commonplace questions, to which the soldier replied briefly, and even with ill-temper. The unknown followed him; and, profiting by the light of a lamp at the moment of passing it, he made a masonic sign. The soldier proved to him that they were brothers; from signs they passed to touching with the hand, and they discovered that they are in the rank of 'Sonn . . Pri . . R . .'

The stranger made the sign of distress, and the soldier answered that he was at the service of his brother. 'And,' added the latter, 'you can preserve me from a great misfortune. Follow me.' By the way, he informed his new friend that he was a father of a family, and employed by the Government as an inspector of wine; and he begged of the officer to pass for his elder brother, whom he was expecting to come from Rennes. The other readily consented, and followed to the Rue de Pontoise, behind the Place aux Vaux. They entered a house, and mounted to the second floor; where the inspector said to a lady, young, fresh, and pretty, 'Here, Estelle, is my elder brother, whom I present to you.' The lady received the Captain with the utmost cordiality and brought to him her three children, who had been playing in another room, and who now united with their mother in showing kindness to the new guest. This touching reception, and the interesting sight of a happy family and a peaceful home, made a deep impression on the soldier; and he delighted to take the beautiful children on his knees, and hear them call him their dear uncle, and let them lay their caressing hands on his military moustache.

'It seems,' said the lady, 'that our brother has left his trunk at the coach-office.' 'My trunk, did you say?' exclaimed the Captain. 'He was so impatient to see us,' hastily interrupted the inspector, 'that he ran here the moment he left the Diligence. But he will find here whatever he can want. In the mean time, pray get ready our supper as soon as you can, and let us have the best possible wine. My brother must be in great need of something to refresh him.' The mother and the children left them: 'And now that we are alone,' said the Captain, 'tell me the affliction which threatens you. You have a wife, who seems to be as good as she is handsome; your children are angels; your household exhibits a respectable competence. What the devil can you want?' 'One must not always trust in appearances, and you will soon know in how much need I stand of your services.' 'Is it an affair of honour? I will be your second, and stand by you to the last. Is it some difficulty as to your office? I can offer you nothing but to run about, and push in all directions. I have still a good pair of legs. They are all that remains to me.' While they were thus conversing, the wife of the Inspector returned, and announced that supper was ready. The Captain ate, or rather devoured, two-thirds of a fowl, which he washed down with about a bottle of good wine. He gained new life, and felt himself at home. His happy host gave himself up to a joy so open and lively, and his countenance became so radiant, that the soldier fixed his eyes on him, and thought, 'A thousand shells! who would fancy that this good fellow is menaced with severe misfortune?'

'Brother,' said the Inspector, 'your last night's sleep was probably not very comfortable; and you must be in want of rest; and, so saying, he led him into a small bed-chamber, remarkable for the neatness of its furniture and its extreme cleanliness. The veteran found there all the clothes he could need; and on the chimney-piece was a large pipe filled with excellent tobacco, and covered by light troops, in the shape of Havannah cigars. 'It seems that your good lady thinks of every thing. You are very happy in having such a companion; as for me, I am alone in the world. But will you now explain your situation; and, now that we cannot be interrupted, tell me what misfortune—' 'I will tell you all at the night-time. I can only assure you at present that I reckon on your aid, and congratulate myself more than ever on having met with you. Good night! Above all, do not forget that you are with a brother; and behave as if you were at home.' The next morning, the soldier, who had enjoyed a sweet and tranquil sleep, went to the room in which he had been received the night before, and found there the three pretty children who jumped into his arms, and talked to him with familiar fondness. They led him to their mother, whom he found engaged in preparing breakfast, and who treated him with the utmost kindness. The Inspector, however, was not to be seen; and he asked her what had become of her husband? 'He went out very early,' she replied, 'and with an air of hurry and anxiety: I inquired in vain what was the matter.' He is gone to fight, and without me!' exclaimed the Captain, with his natural bluntness. 'To fight!' shrieked the lady, turning pale, and tottering; 'can he then have forgotten that he is father of three children?' And, so saying, she clasped them to her heaving bosom, and wept upon their heads. But suddenly the eldest shouted, 'Here he is, here he is!' and ran to embrace his father. The latter entered, heated and panting. 'Thank Heaven!' cried the soldier; 'he has wounded or perhaps killed his adversary.' 'Papa, papa! do not fight any more!' said the children. 'Your life belongs to them,' continued their mother; 'and you have no right to expose it.' 'Fight! Expose the life which I have dedicated to your happiness,' exclaimed in his turn the Inspector; 'who can have told you such a tale?' 'Did you not say,' answered the soldier, 'that you were threatened with a great misfortune, and that you reckoned on my assistance in escaping from it?' 'It was true, my brother; but I have no longer any thing to fear.' 'What evil,' interrupted his wife, 'could trouble your happy lot?' 'The worst of all evils, my dear Estelle. But be calm. Yesterday evening, a man of honour, to whom I am bound by the most sacred ties, wished to destroy himself. I was led to his side by Heaven, which watches over the brave, and sooner or later repairs for them the ingratitude of the world. I induced him to lean on me; by degrees, I appeased the tumult of his mind; and I brought him, without permitting him to suspect my design, beneath his brother's roof.' 'Ah!' said Estelle, 'now I guess the whole; and I recognise the usual excellence of your nature.' After some moments, the Captain faltered out, 'Yes, oh! yes, I feel that it is a crime to cut oneself off from such beings.' 'But why, then, my friend,' continued Estelle, 'leave me with so much mystery at sunrise this morning, and not stay to enjoy your own good work?' 'It was only half-accomplished, dearest. You know as well as I the noble pride of the soldier; you know that it increases amid misfortune. Our friend would not have staid with us for more than a few days; he would have feared to inconvenience a family possessing no more than a moderate competence. And how could I have been sure that he might not be misled anew by disappointment, embittered by the indifference of the happy ones of the earth, and desperate enough again to endanger his own existence? This thought tormented me all night; and this morn-

ing I went to our Director General, who has long promised me an assistant in my laborious duties. I told him my story; I spoke to him of honourable wounds, which, like myself, he judged to be worthy of recompense; and I obtained for the Captain this order appointing him sub-inspector, which secured to him an asylum, and a respectable subsistence, and will give me the happiness of sometimes shaking hands with a brave soldier, and a brother.' 'Such are the fruits of free-masonry!' exclaimed the new sub-inspector, and pressed the hands of his benefactor to his bosom. 'Come, my children, I will devote my leisure moments to playing with you. I will teach you the military exercise. You need no longer fear that you will be orphans; henceforth you have two fathers. And you, my worthy, my excellent sister, call me your friend: your friend, your attached servant. You will never have one more respectful, more devoted. And, if I sometimes kneel before you, and make a gesture of adoration, do not be angry. You are so like the flower, dear to the R. . . †, that I maybe pardoned for sometimes mistaking.'

FOREIGN VARIETIES.

HELIGOLAND.—General Von-der-Dicken, of the Hanoverian Artillery, has lately published 'A Philosophical, Historical, and Geographical Inquiry on the subject of this island; and by this it appears, that Heligoland, Helgoland, or Heiligeland, that is, Holy Land, the circumference of which does not exceed 13,800 German feet, (13,270 feet English,) is the remains of a very considerable island, which is said to have been separated in former times by a very narrow strait from the terra firma of Denmark. It is on record that, in the year 1010, this isle contained two monasteries and nine parishes, but that, in 1300, these were reduced to two parishes only. The ocean continues its inroads upon this naked rock, from which it is constantly abstracting large masses; and there can be little doubt that posterity will, sooner or later, be called upon to record its ultimate disappearance. Its present population is confined to three hundred individuals of Friesland descent, who speak the ancient Friesland as well as the low German tongues, inhabit three hundred and fifty houses, and consist almost exclusively of pilots and fishermen. They gain their livelihood by taking shell-fish and lobsters, of the former of which they annually export above two millions, and of the latter, fifty thousand, to London and Hamburg. Navigation and wrecking are supplementary to this occupation.

General Von-der-Dicken's work is rendered still more interesting by the comparative view afforded, on two maps, of its geographical character, in the eighth, thirteenth, seventeenth, and nineteenth centuries.

CELIBACY OF THE ROMISH CLERGY.—A considerable portion of the population of Prussia and Baden are Catholics; and neither of them have been slow to perceive how great would be the social and moral benefits which would arise from the razing of the dyke that severs the priesthood from community of ties, feelings, and interests with their fellow-creatures. It is to be feared, however, that the *divide et impera* of St. Peter's successors is yet felt to be the corner-stone of their temporal and spiritual supremacy. Despite of the ferment existing on this subject among the Catholics of Germany, we reckon they will have to content themselves with swallowing the pill administered to certain brother malcontents by Cardinal Pallavicini, when Secretary to Pius the Sixth. 'If the clergy be ever permitted to marry,' said he, 'there will be an end to the Roman-papistical hierarchy; for the married clergy will be knit to the state by the tie of their wives and children, and will cease to be subjects of the Roman See. Policy, therefore, renders it imperative upon the Holy Father and the Sacred

College to turn a deaf ear upon any proposal of such a nature.' If such be the politics of the Court of Rome, it is quite clear what ought to be those of every Catholic and Protestant prince: and we shall be anxious to know, whether on the occasion of which we are about to speak, the Grand Duke of Baden will have determined upon receiving a new class of subjects under the sign of a manly and enlightened policy.

In one of the recent sittings of the Baden House of Representatives, Dr. Duttlinger, a petty counsellor, presented a petition to the Second Chamber, praying 'that the Chamber would use its good offices with the Government, to the end that the injunction of celibacy imposed upon the Catholic ministry might be removed in a legal manner within the Grand-duchy of Baden.' This petition was signed by three-and-twenty persons, all of whom are known to be firmly attached to the Roman Catholic religion, and are connected, either as civilians or learned functionaries, with the university of Freiburg. Simultaneous petitions were also forwarded to the Grand-Duke, as well as the Archbishop Bernard. Six only of the deputies voted for the consideration of the question; the majority of the chamber pronouncing that it was not within its competency to entertain it! though it concerned a noxious excrescence, not a vital or acknowledged principle of Christianity.

THE PRUSSIAN UNIVERSITIES.—We are expecting a return of the number of students, who frequented the 'Almas Matres Borussiae' during the past year; and this is an additional motive with us to publish the subsequent report of the year 1827:—'Number of students at Berlin, 1700; Halle, 1100; Bonn, 1050; Königsberg, 460; Griefswald, 150; Munster, 400; Breslau, 1080; total number, 5,890.

FRENCH THEATRES.—A lady of rank, when soliciting M. Necker to grant her a pension of a thousand crowns, observed with much naïveté, 'After all, Sir, a thousand crowns are but a mere trifle!' 'Madam,' replied the upright minister, 'they are equal to the whole produce of a village!' Now, the Parisian theatres, in the year 1828, were assisted by the public Treasury to the extent of 58,300*l.* sterling! a sum equal to the revenue derived from a few score villages, among which, it is probable, not a solitary 'aye' would have been found in support of the grant. The munificence with which most Continental Governments constitute themselves into patrons of the 'sock and buskin,' is, after all, the mere 'robbing of Peter to pay Paul,' or, 'the sacrifice of the many for the gain of the few.' The subsequent details exhibit a pretty summary comment on the blighting consequence of official dependence; the most popular and successful of the Thespian Temples at Paris will seldom be found to be those where the First Lord of the French Treasury possesses a votive tablet:

Produce of the French Theatres, 1828.		
	Government Grants.	Produce.
Th. de Madame	—	£28,670
Olympic Circus	—	25,034
The Opera	£35,416	22,748
Comic Opera	6,250	22,825
Varieties	—	20,481
Theatre François	8,330	20,867
Vandeville	—	18,758
Th. of Gaiety	—	18,675

Odéon (shut 2 months)	4,658	7,696
	£58,645	£243,250

'All our dramatic establishments are in difficulties,' observes M. Dupin; 'the diminution of their receipts affords a proof, that the tax paid by public curiosity bears no proportion to their ex-

SPORTING REMINISCENCES.

No. IV.

MAXIMS.

'Learn of the wise and perpend.'—*As You Like It*.

MAXIM I.

Introductory.

HYPERCRITICAL Reader, peradventure thou wilt question the propriety of putting my Maxims under the above title; but rest thee quiet. If they be not actual reminiscences, they are things to be committed to memory, which is all the same thing.

MAXIM II.

Hunting.

Whilst yet in a state of primitive innocence, man hunted (or might have hunted, if he had chosen) over an unenclosed country. Double ditches and dry-stone dykes are as certainly the effect of the fall of one man as they are the cause of the fall of many.

MAXIM III.

In leaping, some hold on by the hands, some by the knees, and some by the calf of the leg. I rather incline to the last of these; but, if thou hast any natural deficiencies in that respect, thou canst make choice of the former.

MAXIM IV.

If thou shouldst chance to be galloping through a field of young wheat, and, on hearing a shout behind thee, thou shouldst look round and espy a man running after thee, with a florid complexion, and a hedge-stick in his hand, **TARRY NOT A MOMENT**, how earnest so ever he may appear in his endeavour to overtake thee; for it may be that he is the bearer of ill tidings, and it is the property of a wise man to snatch such brief moments of bliss as lie in his way in this world of care without heed to the future.

MAXIM V.

When thou first gettest a red hunting-coat, thou wilt, no doubt, feel either awkward or proud therein, according to thy temperament, under the idea that every one is looking at thee. This may be, in some measure, obviated, by having the tails of the said garment, previous to wearing it, dabbled in any kind of liquid, until they assume an orthodox tinge of dingy purple; for, paradoxical as it may seem, bright scarlet has a green appearance in some cases.

MAXIM VI.

Dogs.

If thy dogs be old and experienced, let them at all times have their own way as much as possible, provided it do not lead them to commit any positive fault; for it is odds but they know better where to find game than thou dost.

MAXIM VII.

On no account strike a dog with thy ramrod, or thou wilt find, when too late, that dogs never are, and ramrods always are, broken by such means.

MAXIM VIII.

When thy dog is in peril of being run over, rather let him take his chance than attempt to call him out of the way, unless, by so doing, you make him turn his head towards the object, whereby he is endangered*.

If thou hast not sufficient 'inward perception of divine truth' to see the rationale of this maxim, *ad experimentum in corpore viti*: call the first old lady's pug-dog which thou mayest see under such circumstances, and I warrant that the brute will be so bewildered between duty on the one side and danger on the other, that he will quickly fall a sacrifice to thy thirst after knowledge, whereupon, if the old lady (who will no way suspect that thou hast caused her bereave ment) be rich, and thou hast the wit to improve the opportunity to thine advantage by suitable condolences and lamentations, the experiment will be attended with the following satisfactory results: firstly, thou wilt have ascertained the truth of my maxim, secondly, thou wilt have added to thy stock of know-

MAXIM IX.

Some like a long dock and some like a short dock. I hold it to be heresy to dock a dog's tail at all.

MAXIM X.

If thou wishest a first-rate dog, and hast opportunity, break him thyself, and, among other things, see that thou teach him to drop to hand: this thou mayest effect in a single lesson by pushing him down, and holding thy hand up, (retiring at the same time,) and thou wilt find it an immense advantage among wild birds.

MAXIM XI.

Guns.

Various contradictory opinions exist as to the proper loading of guns. Colonel Hawker will tell thee to put in equal quantities of powder and shot; thy grandfather, on the other hand, will enjoin twice as much shot as powder; wherefore, pin thy faith to no man's sleeve, but try for thyself. I have tried all ways, from all; shot and no powder to no shot and all powder. The former of these plans I could not get to act at all; and the latter, though brilliant in its promise, I could not reduce to any practical utility. As the result of many experiments, I am of opinion that truth lies between.

MAXIM XII.

Some, when they pull the trigger, shut neither of their eyes; some shut the left; and some both. Of these the first is the best, if thou canst accustom thyself to it; the second is the most common; and the third, though disadvantageous to thine aim, is undoubtedly the safest.

MAXIM XIII.

Whoso wishes for a practical exposition of the fallacy of Hawker's principle, let him take a common garden water-engine, and pump the same: he will find that, up to a certain point, the water will be delivered in a clear full stream; but that, on application of any additional force, so far from any advantage being gained thereby, it will be spluttered about in every direction: even so it is with Colonel Hawker.

MAXIM XIV.

The raised rib is certainly a great improvement; but, where it is, as I have frequently seen it, made so high as to oblige you to aim under a bird, in order to hit, I consider it detrimental both to thy sport and thy shooting.

MAXIM XV.

No gun is too heavy for me, as I have always been of opinion that you get value in the shooting for weight in the carrying; there have, however, been recent discoveries on this point, which I am not at liberty to say more of at present, but which tend to shake my opinion.

MAXIM XVI.

Ammunition.

The article of most consequence in the load of a percussion gun, is the cap. I use (as I have before mentioned) Joyce's, which I find excellent. I have tried Birmingham and French caps: the former are very cheap, and the latter may be almost had for the asking; but I found them both very corrosive. I have also a great aversion to ribbed caps, having tried them in many places, and always found (probably from chance or ill-luck) that a great many of them missed fire.

MAXIM XVII.

Much has been said about the new shot-cartridges: in my opinion, there is one important and one vital objection to them; the first is, that with a cartridge calculated to kill at sixty or seventy yards, thou hast as little chance of a bird at twenty or thirty as thou wouldst have of the former with thy usual charge; and, if thou shouldst chance to kill, the bird would be so mauled that thou hadst much better have left it ledge; thirdly, thou wilt have the pleasing consciousness in *presenti* of having done a good action; and, fourthly, thou wilt have the agreeable prospect of being rewarded for it in future.

alone; the second is the price, which, however they may be tried occasionally as an experiment, must, so long as they remain* at half-a-crown a dozen, effectually prevent them from coming into general use.

MAXIM XVIII.

Keep thy shot in old powder canisters with a funnel to pour the same: by this mode it will remain bright for any length of time, which is not the case in a bag.

MAXIM XIX.

That ingenious and enterprising gunmaker, Purdey, invented, some little time back, a kind of wadding, (since imitated by other gunmakers,) which has the singular property of keeping a barrel perfectly clean. It is made of common paste-board, and the effect is produced by some chemical mixture in which the edges are dipped. The advantages of this invention are great and obvious, as, by keeping the sides of the barrel dry and polished, the whole charge of powder descends to the bottom without sticking by the way, and the gun shoots none the less strong after a dozen shots have been fired out of it. I only hope that the composition has, as they say of the dentrifices, 'just sufficient deterrent power to effect its object and no more;' but of this I am not yet satisfied.

MAXIM XX.

Coursing.

When out with a coursing party, if thou shouldst see a hare squatting, rather start her than call out 'See ho!' until thou art quite certain it is one: a lump of dirt is easily mistaken; and, if thy hare should prove to be one, thou wilt get laughed at, which is not pleasant.

MAXIM XXI.

Neither exclaim 'A go-by,' &c. &c.: it requires a practised eye to understand these matters.

MAXIM XXII.

When thou passest close by a hare, immediately take thine eyes off, and continue thy path as if thou hadst not seen her. By so doing, she will remain quiet until the dogs are brought up; but, the moment she catches thine eye, she is off.

MAXIM XXIII.

The reason why many are so bad at finding hares, is, that they stare about at a considerable distance from them, whereas the place to look is close round their feet.

MAXIM XXIV.

If a young greyhound 'runs cunning,' or shows a disposition to save himself, hang him forth-with.

MAXIM XXV.

Trout Fishing.

To see the fish is always an ill omen: when thou canst see them, rely on it they can see thee; and, if thou hast the vanity to imagine that thy personal appearance will prove a source of attraction, thou wilt find thyself mistaken.

MAXIM XXVI.

Never leave a pool while the trout continue to rise: it frequently happens that they will take in a particular pool, and in no other: therefore, prithee, remember the dog in the fable, and lose not thy sport in the vain hope of bettering it.

MAXIM XXVII.

The fewer joints there are to a fly-rod the better: two are quite sufficient, and old fishermen generally like them better spliced than screwed together. I am talking, of course, of a one-handed rod; for I esteem a two-handed trout-fisher a Hottentot.

MAXIM XXVIII.

If thou meanest to wade at all, thou hadst much

* The price was, till lately, two shillings a dozen; and I am informed, though I cannot answer for the fact, that the wire of which the case is made, instead of being soft copper, as heretofore, is now iron, which, if it be the case, must, I should think, have the effect of a scratch-brush upon the barrel at every discharge.

better go in at once up to thy middle: thou wilt find this not only a more comfortable, but a warmer plan than getting wet inch by inch.

MAXIM XXIX.

When thou hast struck a good trout, always try to take him down the stream: small fish generally take down of themselves, large ones almost invariably run up.

MAXIM XXX.

Miscellaneous.

Partridges are good, and grouse better; but a covey of black game is the thing for the bag.

MAXIM XXXI.

Colonel Hawker advises a person who feels nervous at the report of his gun, to make use of certain remedies which he prescribes: I advise any person who so much as hears the report, (that is, to take the least notice of it,) forthwith to dispose of his shooting tackle, dogs, &c.; for he may depend upon it he will never make any good use of them.

MAXIM XXXII.

The principle laid down in Maxim XXV applies equally to all sorts of game. There are always most birds seen when it is impossible to get at them; while, on the contrary, the difficulty of finding is a sure sign (in a good country) that the birds are sitting close: wherefore, be not discouraged, but seek diligently, and I will bet upon thy bag.

MAXIM XXXIII.

It is all very well to shoot a hare, when thou mayest chance to start one; but I hold that the man who would go out for the express purpose of shooting hares is no sportsman, but ranks with the poacher and potshooter.

The present system of battue shooting is as disgraceful to the higher classes, as the numberless commitments for poaching show it to be demoralising to the lower. If any thing could put it out of fashion, the fine practical satire afforded by Field Marshal his Grace the Duke of Wellington, K.G., K.B., K.C., &c. &c., and his Royal and Right Honourable Highness the Infant Don Miguel shooting the same pheasant in Kew Garden, (a pretty infantine pastime truly!) must have had that effect.

THE DANUBE.

RECOLLECTIONS OF A SUMMER EXCURSION.

During the night, the wrath of the pitiless elements had banished slumber from the dormitory of our snug calèche; but they shrunk away at the approaching pride of dawn, whilst our hearts expanded, and our spirits flowed anew, as the expanding morn irradiated the beautiful vale of Ratisbon with its gladdening splendour. Gar-

* I was favoured with the following programme of the performers on one of those occasions, for the authenticity of which, however, I cannot vouch:

'On —, the — February, 1828, his Royal Highness Don M —, attended by his G — the D — of W —, the E — of M — c —, and one company of the Coldstream Guards, will visit the Royal Gardens at Kew to partake of the amusement of pheasant-shooting.

'The party to be met at the gate by the head gardener and his assistants, each furnished with a long rake.

'As the bushes are rather wet, his Royal Highness and party will remain on the gravel walks: the gardeners will, therefore, rake out the birds from under the bushes, when, if they rise, they are to be immediately fired at: if they run along the walk, fifteen yards, "law" to be allowed.

'His Royal Highness to fire both his barrels before his G — the D — of W —, who is then to fire both his before the E — of M — c —; the officer on duty not to fire unless there is not a possibility of hitting: an occasional volley to be fired by the troops to enliven the scene.

'When his Royal Highness shall have killed as many as he may judge expedient, the gardeners to collect the game into barrows, to be placed ready for that purpose, and the party will return in the same order in which they arrived.'

dens and vineyards greeted us on every side as we approached the Danube. Stadthoff was no sooner behind us, than we found ourselves looking down upon its rapid waters from the only stone bridge which has yet been thrown across them; and another five minutes found us safely housed at Ratisbon, with minds ill-attuned by the smiling scenes in which we had just been revelling, to encounter the dreary gloom of its antiquated piles. I am neither inditing an appendix to the topography of the far-famed register-office of the quondam empire, nor competent to the task, if I would; for there was neither merriment nor recreation to detain us amidst dark and decaying walls. In truth, I was but too anxious to be relieved of the oppression with which its narrow sombre streets weighed down my spirits: neither could I open my lips to one of their tenants without being called upon to sympathise with him in the saddening recollection of days of by-gone happiness. Moreover, the noble Danube was our polar-star; and there lay the huge bark, the *Ordinari*, (or Vienna post-ship,) ready to bear us from this peopled solitude within the next four hours. We had barely time before us to explore a few of the beautiful gardens which embellish the environs, and to render a passing homage to the shrine of Tycho Brahe's great contemporary, the ill-starred Kepler, to whom a life of penury was the herald of an immortality of fame. The hand of nature frequently stamps the mere outward features of the favoured progeny with the bold and striking impress of genius. I had remarked this characteristic in a portrait of Kepler some years ago, and the circumstance flashed instantly across my mind from the moment I here beheld his bust. What clearness of intellect and tranquillity of spirit beam from every feature!

From this spot, we hastily, and inquiringly as hastily, made our way through some of the most remarkable streets of the town. The only peculiar features about them are the mansions of the ancient patricians: from their castellated form, it is quite evident they were designed for strongholds in the turbulent times of the middle ages. There they stand frowning down in baronial pride upon the narrow street; while their style of architecture is manifestly derivable from the exotic skill of Italian hands. A few brief moments were all we had to bestow on the ancient Town-hall: it has long ceased to record the bans and sentences of the German Areopagus; and the 'Holy Roman Empire' has tottered into oblivion, while its heart yet struggles against time and nature. Thence we strayed to the Cathedral, where Dohlsberg's monument, and Visiker's tomb of St. Sibbald, make amends for the sculptural failures of Zandomeneghi. And from this scene, to gratify the importance of our guide, we proceeded on a visit to the ancient place of tournament, *die schöne Haide*, wherein the citizens of Ratisbon vent their civic idolatry on the combat between Hans Dörlinger and Craco the giant, a mere daub against the wall, which has been refreshed, but neither improved nor deteriorated, by successive limners. It is passing unaccountable to me how elbow-room enough was found in this Liliputian tiltyard for exchanging cuts and thrusts with a giant. At length, we trod upon the margin of the glorious Danube, at the very point where its waters disembogue themselves through the fifteen arches of its time-worn bridge, which reminded me to its prejudice of that at Prague. And here we found the *Ordinari* to be neither more nor less than a couple of huge wooden booths, erected upon an uncouth frame-work, intended to represent a ship's hull. On this truly diluvian-looking ark you may float down to Vienna in five or six days, for the trifling outlay of thirteen shillings. I had anticipated a right merry-making excursion, from being cast into contact with five or six score of fellow-pilgrims, with their motley habits, dialects, quirks, and fancies; but, on a nearer survey of the uncouth crew, on whom our life and limbs

were to depend, the result of which was by no means improved by a glance at the rude and boisterous brotherhood collected for the voyage, my hopes and expectations took flight; and I felt I should have bartered comfort and enjoyment dearly, though transported some hundreds of miles for little more than five-eighths of a pound sterling. Forty to fifty greasy operatives, a score of old halidames, a leash or two of indigent students, and some nondescripts, behind none of their messmates in tatters or manners, were huddled together under covert of the booths; but, more fatal to my hopes, and most incontestably indicative of the presence of thirsty souls and throats, was the prodigal store of beef and brandy which the crew was handing over the *Ordinari's* sides; a circumstance in no wise redeemed by the shouts which hailed the goodly presence of their 'fond, familiar friends,' and uproariously attested the libations that had already appeased their native thirst. Vanished was the dream of contemplative calm or rational enjoyment; and I turned away from the obnoxious ark of my disappointments, knowing I had at least the alternative of placing my carriage, chattels, and myself, at the mercy of what is called an *extra ship*, or *pletta*.

This pletta is ten feet in width by forty feet in length, and built of coarse pine timber, neither tarred nor caulked, but expanding into compactness from inhibition of water: it makes the passage to Vienna in somewhat more than ninety hours, and is hired for the trip at a charge of ninety shillings. This, indeed, is its first and last voyage, as it is calculated merely for descending with the stream to Vienna, where it is broken up and sold for its value in timbers: even were the use of sails practicable, the ascent of the Danube in any vessel at present employed upon it would be too tedious and perilous for the extensive conveyance either of goods or passengers. So backward are its navigators in all that concerns their craft, that the noblest of all European rivers is at this moment converted to as little advantage as it was many centuries ago. This, I admit, may, in some measure, arise from the rapidity of the current, which offers so formidable a resistance when a vessel is impelled against it, that four-and-twenty, nay, sometimes thirty, horses are put in requisition to drag a bark which, with her cargo, will not exceed a ton in weight. When floating down the stream, on the other hand, ten or twelve hands are all that are required to manage the largest of its misshapen hulks. Another essential barrier to improvement may be found in the want of, a denser population along its course, as well as from its presenting an outlet into no other channel than a sea which possesses few inducements to European intercourse. To this may be added, the miserable prejudices and prohibitions which wither the internal traffic of Austria, and deprive its hereditary dominions of every advantage they would derive from consuming the rich products of Hungary. There is no river in Europe more susceptible of the peculiar benefits of steam-navigation than the Danube. Unhappily, the natural dams against which the river's marge drives its rapid course, will be more easily moved than the ramparts which prejudice and privilege have interposed between the various members of the body politic.

But the pletta is waiting to receive me. Had I not crossed the great Atlantic with the sense of entire security with which our noble oaken bulwarks are so admirably adapted to inspire the most timorous of adventurers, I should not have stepped with half the apprehension I did on board the coarse-fashioned bark wherein I was about to peril my earthly destinies upon the unquiet surface of this inland deep. I have already given you its principal dimensions. It stands about three feet above the water's edge, is brought to a slender point fore and aft, sloped away at both ends, and flat-bottomed. The deck, if deck it can be styled, is flush in every respect, excepting where it is occupied by a deal hut, which stands nearly at mid-

pense, and that the royal theatres are gradually falling off in the numbers of their frequenters.' No inconsiderable portion of that expense arises from the prodigality with which free admissions are granted: these, indeed, have been estimated to amount to nearly one million in the course of the year: they fill the best and dearest seats, and it is alleged, that they occasion an annual loss to the thirteen greater theatres of 100,000*l.* and upwards. Such is the quid pro quo, which is exacted as the price of public munificence! No wonder it should be deemed an auspicious circumstance, that the Chamber of Deputies have reduced the grant for the present year to 54,160*l.*, though the theatrical proprietary of the first dramatic metropolis in Christendom have yet abundant cause to feel that

'An open foe may prove a curse:
But a pretended friend is worse!'

THE NETHERLANDS UNIVERSITIES.—A learned correspondent enabled us to give, in our 64th number, a detail of the grants which were anticipated in aid of these institutions for the present year. In a recent letter, however, he informs us, that the subsequent sums have been finally voted by the Netherlands' Legislature; viz.

To Louvain (in it the Philosophical College)	146,060 <i>fr.</i> or £12,172	
To Liege	83,770	6,980
Ghent	77,235	6,436
Leyden	120,429	10,036
Utrecht	72,576	6,048
Groningen	74,933	6,245
The Athenaeum of Krancker	20,520	1,710
Budget of the Universities	565,523<i>fr.</i>	£49,672

CLOUDS.

OVER the face of the eternal deep,
Fair, restless wanderers, drinking up the light
Of sunbeams, at the breeze's will ye sweep;
Or on a windless night,
Building around the moon a hollow sphere,
Which with her woven tapestries soft and clear,
She hangs, and, with delight
There sits a queen in her own heavenly right,
Like the wise worm that spinneth far and near
Its amber palace bright—

How can ye bear, sweet wanderers, to be driven,
Restless ever, through the sapphire sky,
Although to canopy the cope of heaven
Your tent be spread on high?
Had ye a motion of your own, and skill
To sail along following your own free will,
How gladly then would I,
Swelling your bright and playful company,
Be wandering with you o'er the blue vault still,—
A joy that ne'er could die.

For there, upon a bright and vernal day,
Cradled I might repose, o'er the young flowers
Weeping from tears, or with the sunbeams play,
Basking the rainbow's bowers;
Or, like a nautic o'er the ocean-brine,
A white and rose-edged bark, I then might swim
Through the long summer hours,
Till, with my freight of fertilizing showers,
I rose, and garlanded the summits dim
Of rugged mountain towers.

Or like a solid dome with battlement,
Crenelle, and buttress furnished, I might rise,
That stands a giant of the firmament,
Watching throughout the skies:
Or there a mountainous ridge of cliffs prolong
By a tall city crowned, and castles strong,
Most like what men devise
On earth, and with the likeness charm their eyes
Of their own works; then shattered drive along,
And mock their vain surmise.

But thus like you by other's will impress,
The unresisting sport of every gale,
O'er earth and sea, and mountain's snowy crest,
I would not choose to sail.
Rather would I with tempest laden sweep
Against the wind, convulsing all the deep
With lightning and with hail.
Though not in storms arrayed a threatener pale,
Loving to climb the sky, but rocks to sleep
Within a sunny vale.

K.

LECTURE ON ARCHITECTURE AT THE WESTERN LITERARY INSTITUTION.

THE devotion, during the last few weeks, of the space in our columns usually destined for subjects connected with the fine arts, to the lectures on painting and sculpture at the Royal Academy, has prevented our noticing the concluding discourse of the series of lessons on architecture delivered by Mr. Hosking, to the Members of the Western Literary Institution. The subject, however,—the modern buildings of the metropolis,—is an interesting one; the lecture itself was judicious; the opinions pronounced appeared conscientious, and independent of hope, fear, or undue bias of any kind, and it affords us, moreover, a good pretext for adding a few observations on architecture, to those already recorded on the companion arts. We shall seek no further apology, therefore, for putting thus late into form, for the perusal of our readers, the notes taken a fortnight since, in the lecture-room in Leicester-square.

In its bridges, London certainly stands pre-eminent over all cities of ancient or modern times. When, in the revolutions of ages, our own city shall be placed in the pages of history by the side of Persepolis, Athens, Carthage, Rome, and Jerusalem, and travellers from the Western Hemisphere shall come to trace the site of the capital whence once issued the mandates which were law under every zone, the massive arches of our bridges, some broken, some perhaps entire, will, of all its numerous constructions, alone remain to attest its present magnificence. Mr. Hosking, therefore, certainly did not err on the side of nationality in saying, that in the number, magnitude, and merit, of its bridges, London is unequalled by any city in the world. He expressed his opinion, 'that the New London Bridge will be a grand and imposing structure; the semi-elliptical arches form a very beautiful curve, and have a most graceful effect; the general result, however, will depend greatly on the cornice and parapet: should the former partake of the bold broad massive character of the work generally, and the latter be simply pannelled and not pierced with mis-shapen balustrades, the bridge promises to be beautiful, at the same time that it will be grand and imposing. It may be regarded as a triumph of science and art combined. The central arch, said Mr. H., stands alone in the world, since its rise of forty feet is little more than a fourth of the span, which is 150 feet,—an effort of science never before attempted to be executed in stone.' Without any desire to detract from the merit of the engineer, we cannot help remarking, that we think Mr. Hosking has here somewhat overrated the merit in point of science, which, if not confined to a due appreciation of the quality and virtue of the material employed in the building, and the degree of pressure it will bear, partakes more of that knowledge than of any peculiarity or profundity in the art of construction. From London-bridge, Mr. Hosking proceeded to notice the other structures of the same class which adorn the metropolis, and to point out the respects in which they excelled or failed. In Waterloo-bridge, he objected very judiciously to the frittered effect produced by the coupled columns and broken entablature; a defect, however, still more glaring in Blackfriars-bridge, since, in the former case, the bridge being level, the columns may be all of an equal height, while in the latter they necessarily increase or decrease in dimension, as they are nearer to, or further from, the centre.

From the bridges, Mr. Hosking proceeded to the modern churches of the capital. In noticing the new St. Pancras Church, he showed how easy it is for a building to be faulty in taste and effect, even while the parts of which it is composed in themselves approach perfection. The portico, it was observed, is too shallow,—a defect not to be excused because it existed in the prototype,—the circular projection of the chancel

might be considered an elegant composition, but it was remarked, that the effect of the whole structure is seriously injured by the attachment of the buildings with caryatides at the flanks; and which, though composed of beautiful parts, are themselves inelegant and defective, the basement being too lofty for the figures which stand on it; while the entablature is extremely heavy. In addition, it was objected, that no line in these wings ranges with any one in the principal body of the edifice. The steeple was treated as a heap of towers, which, taken separately, are not surpassed by any architectural work of the class in London, but which lose all their effect by their combination and collocation. The Ionic portico of the chapel in Regent-street, opposite the Argyle Rooms, was, of all the modern sacred edifices, that which received most applause from Mr. Hosking. This, he said, taken as a specimen of architecture, was quite a model, and only required enrichment to be perfectly beautiful.

Of the secular structures, the Bank of England was the first which came under notice at this lecture. 'Faults, it certainly has,' said Mr. Hosking; 'many things in it might have been better; but it contains more architectural beauties than any other modern structure in Europe,' meaning, in the expression modern, to include all the works of all the Italian architects in all parts of the world, with the exception only of our own Gothic temples. We will not analyse the opinion of our worthy lecturer. It is not often that Mr. Soane receives such unqualified applause from independent and disinterested criticism; and we should be unwilling to throw in any alloy to the gratification he would derive, should it come to his knowledge that he had been so extolled, by examining how great a portion of the praise bestowed on the Bank of England is to be ascribed to a certain spirit of nationality, more patriotic than philosophical, which was traceable throughout this whole course of lectures. We agree in very many of the remarks made on the Bank of England, and especially on the Lothbury front; and, indeed, in all Mr. Soane's works, we perceive a grace and feeling in the details which have ever claimed our admiration, even when his whims and caprices have compelled us to condemn the ensemble of an edifice. Still, however, we would be just to the architects of other countries as well as to our own, and should not have to go far to name a building quite worthy of competing with Mr. Soane's work in Threadneedle-street. Need we remind Mr. Hosking of the Bourse at Paris?

The London University, it was observed; is at the same time one of the chastest and noblest structures of the metropolis. Its grand decastyle portico will be of unparalleled magnificence, though, perhaps, too large for the elegant cupola behind, too much of which will, in the front view, be intercepted by the lofty pediment. One fault, however, was pronounced to be glaring; namely, the poverty of the crowning cornice. To the latter part of the criticism, we make not the slightest objection; but, we confess, that our observations on the London University, as far as its present state permits the forming an opinion, would not take the order, or lead to the conclusions drawn by Mr. Hosking. We should ask Mr. Wilkins and Mr. Hosking, if the University be an appendage to the portico, or the portico an accessory to the University? We should call on Mr. Wilkins to show cause why a decastyle portico should be approved under any circumstances; we should pray to have it pointed out, how the cupola, let it be ever so elegant, rising so immediately over the apex of the pediment, can form a judicious composition. We might ask some more questions—we might implore Mr. Wilkins to conceal, at least, the deformity of his *arrière* parts, since his ingenuity was not clever enough to endow them with grace and beauty; but we reserve ourselves for a more fitting occasion, and hasten to conclude with a report of Mr. Hosking's opinion of a few less pretending edifices.

Of the club-houses, that of the University was preferred to all the others, as the most classical and elegant. The United Service Club-house, on the site of Carlton Palace, contrasts strongly, remarked Mr. Hosking, with the 'University'; externally, it presents no merits to countervail its absolute insipidity and total want of architectural beauty. We are not sure that we can concur with our lecturer in this condemnation of the United Service Club-house. Certainly we are no admirers of Mr. Nash's gingerbread plasterings: we agree with Mr. Hosking in detecting the meagre little cornice of the upper order; which, too poor even for the order it surmounts, is truly contemptible when viewed as the cornice of the whole building: still less do we excuse the ignorance or the wantonness of the architect in placing plain columns above a fluted order; yet, we cannot deny it, there is a certain *non appiamo che* in the front of this edifice, not altogether displeasing or devoid of picturesque effect. Mr. Hosking instanced the Oriental Club-house in Hanover-square, as an improvement on Crockford's. We should have expressed a contrary opinion. With all its sins, there is a boldness and breadth about Crockford's which commands respect, while, in our eyes, the effect of the Oriental Club House is cramped, crowded, and, with all its ornament, mean. From the club houses, Mr. Hosking descended to the private houses; and thence, through new squares and streets, to humble, yet scarcely humble, shop-fronts. For ourselves, we abominate architectural shop-fronts, more especially if an order be prostituted in its decoration, as much as we deprecate the profanation of the Postum Doric, in ornamenting a china closet. The only shop-front, we know at all to be approved is that—we forget its exact situation—in which the entrance to a sepulchre adorned with death's head and bones, and other emblems of the prison-house of the grim destroyer, sculptured to the life, (?) forms the *façade* of a gin-shop.

The best praise we can further give to Mr. Hosking's course of lectures is by stating the fact, that it was attended with constancy, and listened to with attention, and we doubt not with improvement, by an audience which could not have consisted of less than three hundred persons. We have here given a very imperfect sketch of its contents.

THE DRAMA.

King's Theatre.

OUR office as reporters to this theatre is not yet quite a sinecure, though it threatens speedily to become one. Last week we recorded the singular fact of a new opera having been performed by a corps of silent voices; this week it is our painful duty to announce, that the only performer who had hitherto escaped the *malaria* of the Haymarket—and almost the only one who it was very important should escape it, has recently fallen under the same calamity as her brethren and sisters. 'La Donna del Lago,' was performed on Saturday, and Madame Pisaroni was indisposed. *Que deviendra!* the King's Theatre. This misfortune, in the case of Madame Pisaroni, is very considerable, seeing that from circumstances which have been sufficiently dwelt on in the newspapers, her merely walking through the part of Malcolm Græme, does not inspire the interest which it might do if the ambulant were Sontag, Madame Malabran or Ronzi de Begnis. The only compensation for this distressing accident was, the appearance of Mademoiselle Blais in the part of Elena. The applause which this debutante received was probably owing rather to the unfortunate predicament of the other singers than to her intrinsic excellence. She is, nevertheless, a highly respectable singer, and ought permanently to rank in public estimation much higher than Monticelli, or any of the recent female novelties, except Pisaroni. Her voice is a moderate soprano; and, if the natural powers of her voice were worthy of her style, she might assume even a high rank as a singer. At all events, she is a great acquisition to M. Laporte, in the present melancholy state of his establishment.

Covent Garden—Saturday.

'The Maid of Judah', an opera of Rossini's at one of our English theatres, is a novelty which deserves a much more lengthened notice than we have time this week to devote to it. We shall merely, therefore, congratulate our readers on the re-appearance of Miss Paton, though with powers slightly impaired by the long indisposition of which we grieve to say that the traces are too visible in her cheeks and her form. We have often before spoken of this admirable English vocalist; but, as the Managers have lately had the good taste to give her music worthy of her talents, by confining her to operas of Weber and Rossini, we shall not consider that we have done her full justice till we have entered into a very detailed examination of her style of singing. 'The Maid of Judah' was exceedingly well received, whether owing to the magnificence of the decorations, and the melo-dramatic interest of the piece, or to the charms of the music, we shall have an opportunity of considering hereafter.

Monday.

MERCHANT OF VENICE.

MR. PEMBERTON made his second appearance last night, at this theatre, in the character of Shylock. His first, our readers will remember, was in that of Virginius. What a step! from the fictitious Roman to the real Jew—from Goldsmith's history to human nature—from Mr. Knowles to William Shakespeare! And yet so strange are the notions of acting, which prevail in the present day—so strangely are our performers classified, not according to their powers of representing some great conception, or entering into the mind of some great author, but by an imaginary division into tragic, comic, melo-dramatic and pantomimic, that the transformation excites no surprise in any quarter. Did not Mr. Pemberton throw aside the military vest and don him in a turban? And what else is needed to convert the destroyer of the Decemviri into the father of Jessica?

We expressed a favourable opinion of Mr. Pemberton's first effort, and this opinion we feel no wish to retract. Measuring him by the ordinary standard of theatrical excellence, and it would be unfair to try him by any other,—we think he may be pronounced decidedly meritorious. That he was not

'The very Jew
That Shakespeare drew,'

was obvious enough; but, so far from requiring this of any, even the greatest, of modern actors, we should think them unwise if they made the attempt. The utmost that it is possible for them to do, if they wish to succeed in their profession, is to translate the feelings and actions of Shakespeare into language that will be intelligible to the pit and gallery. If the translation is tolerably faithful, and too much is not sacrificed to making it spirited, we are more than content. On the whole, we think this praise was due to Mr. Pemberton. He is over anxious not to appear an imitator of Kean, perhaps from a little consciousness that he is inclined to be one, and this wish has occasionally induced him to substitute for that dry, hard, even passion which Kean adopts in this part, and by adopting which he has made it *chef-d'œuvre* a more violent and outbreathing passion that is very unsuitable to the part. He has no business to drop on his knees in the last act under the weight of his afflictions. Shylock is very sick, but it is the sickness of a rage and despair which would have sustained not crippled him. Though half his goods are confiscated when he leaves the justice-room, he is not about to turn pauper, nor Christian either, unless in hope of accomplishing a more deep and subtle vengeance. He will have more ducats yet, and perhaps a pound of Nazarene flesh, ripe, fresh, and bleeding. Jessica is his only loss, that is utterly and absolutely irreplaceable.

The other actors, with the exception of Mr. Farley, whose Gratiano is vulgar and execrable, all did their duty well. Miss Jarman's Portia is certainly her most successful effort; she looks particularly solemn and conceited in her judicial deportment as the young doctor, and carried off the joke in the last scene with great spirit. As Miss Goward acts every part which she undertakes in the best possible manner, we were not surprised to find that she was the most delightful, wicked little Nerissa on the stage.

MONSIEUR PERLET.

English Opera House.

We are happy to inform our readers that this distinguished performer is again among us, and has appeared at the Lyceum. There are particular characters

of M. Perlet's which English performers could represent as well, or perhaps better. We will give up Keeley, Liton, and Kemble in favour of no one. But there is certainly no English, and, we think, no French actor, who can personate such a range of parts as that which Perlet is completely master of. From the severest style of high comedy, to the broadest farce, he reigns paramount. The Tartuffe and Scapin are, alike; but forms in which Perlet lives and moves. And there probably never was any one who could exhibit the most demure and almost austere personages of comedy with any thing like the same force, and seemingly unconscious humour. The emphatic magniloquent heroes and lovers of French tragedy, he never attempts and probably would not succeed in: he would show them as they are, and then even the audience at the Theatre Français must burst out laughing. But even there he would represent admirably, if he were allowed to personate them in the style in which Whiskerandos is acted among us; and this is the only style in which, consistently with truth and nature, they ever ought to be played. Whatever is true in the French drama, he reproduces with inimitable talent. And we are persuaded, though it is by no means a necessary consequence, that there is no male character whatever in Shakespeare, whom he would not be able to embody better than almost any one living. In saying this, we assure our readers we are quite serious, and are convinced, more especially, that M. Perlet, were he sufficiently master of our pronunciation, could act both Hamlet and Falstaff better than any English actor. We shall take an early opportunity of returning to this subject.

POPULAR LITERATURE.

'Ut in vita, sic in studio, pulcherrimum et humanissimum existimo, severitatem comitatumque malacore, ne lili in tristitiam, hæc in petulantiam, procedat.'—*Plinii Epistola.*

Collecting toys
As children gathering pebbles on the shore.
Milton's Paradise Regained.

1.—PORTUGAL.

Meretricious Poetry.—What is generally called poetry, is like a woman decked with plates of looking-glass and tinsel chains; and is much fitter to excite laughter than engage our love.—*Pascal's Pensées.*

2.—SENTIMENTAL.

Separation.—Separation, the more dreadful it appears, seems less probable; it becomes, like death, a fear, which is more spoken of than believed,—a future event, which seems impossible even at the very moment we know it is inevitable. Love alone can give an idea of eternity; it confounds every notion of time; we think we have not always loved.—*W. Hazlitt.*

True Valour.—Is hee that comes neare death valiant? Why, then, hang trophies over the gallows; the cause must in all things tell whose child the effect is. Hee that fights with fury, is not valiant, but hee that lends justice force. Cato dyed in as fit a time to make his death look nobly, as could bee, and at the fittest course of natural reason; it will seem good reason not to outlive his country's liberty; but had it not bene more compassionately dohe of him to have accompanied his country in misery? Had it not bene more wisely done, to have reprieved hope, and to have watched time, when, happily, by opportunity, he might have ransomed his country? I account not his valour, no more then hee that winks at the blow of death,—the one binding his eyes because hee would not see death, the other seeking death because hee would not feele misery. Cato is not held by mee as a patterne of fortitude, he helped not his country by his death: if to dare dye, you think so excellent, the women among the Romanes could doe it as well as hee; because it is prohibited, wee like it, because, contrary to our selfe-louing minds, we admire it; and in that respect (were it not against diuinitie) I should allow of it; for hee comes nearest virtue that throws against the bias of his affections.—*Sir William Cornwallis.*

3.—PICTURESQUE.

Scene in the Blue Mountains.—The passage of the Potowmac, through the Blue Mountains, is perhaps one of the most stupendous scenes in nature. You stand on a very high point of land; on your right comes up the Shenandoah, having ranged along the foot of the mountains an hundred miles to seek a vent. On the left approaches the Potowmac in quest of a passage also. At the moment of their junction, they rush together against the mountain, rend it asunder, and pass off to the sea. The first glance of this scene hurries our senses into the opinion that this earth had been erected in process of time; that the mountains

were formed first; that the rivers began to flow afterwards; that, in this place particularly, they have been dammed up by the blue ridge of mountains, and have formed an ocean which filled the whole valley; thus continuing to rise, they have at length broken over this spot, and have torn down this mountain from its summit to its base. The piles of rock on each hand, but particularly on the Shenandoah, exhibit the evident marks of this disrapture and avulsion from their beds by the most powerful agents of nature, and corroborate the impression which such monuments of war between the rivers and mountains (that must have shaken the earth to its centre) had created. The broken and rugged faces of the mountains on each side of the river, the tremendous rocks which are left with one end fixed to the precipice, and the other jutting out and seemingly ready to fall for want of support; the bed of the river for several miles below, obstructed and filled with the ooze and stones carried from this mound; in short, every thing on which you can cast your eye evidently demonstrates a disrapture and breach in the mountains, and that before this happened, what is now a fruitful vale was formerly a great lake, which might possibly have here formed a mighty cascade, or had an outlet to the ocean by the Susquehanna, where the blue ridge seems to terminate.—*Jefferson's, Virginia.*

4.—ROMANTIC.

The Chasm River.

That deep romantic chasm which slanted
Down the green hill athwart a cedarn cover!
A savage place! as holy and enchanted
As e'er beneath a waning moon was haunted
By woman wailing for her demon-lover!
And from this chasm, with ceaseless turmoil seething,
As if the earth in fast, thick pants were breathing,
A mighty fountain momently was forced:
Amid whose swift, half-intermitted burst,
Huge fragments vaulted like rebounding hail,
Or chaffy grain beneath the thrasher's flail:
And mid these dancing rocks at once and ever
It flung up momently the sacred river.
Five miles meand'ring with a mazy motion
Through wood and dale the sacred river ran,
Then reached the caverns, measureless to man,
And sunk in tumult to a lifeless ocean.

Coleridge.

5.—ASTROLOGICAL.

Indictment against Lilly.—The Jurors of the Lord Protector of the Commonwealth of England, Scotland, and Ireland, &c., upon their oaths do present, that William Lilly, late of the Parish of St. Clement's Dances, in the county of Middlesex, gent., not having the fear of God before his eyes, but being moved and seduced by the instigation of the Devil, the 10th of July, in the year of our Lord, 1654, at the parish aforesaid, wickedly, unlawfully, and deceitfully did take upon him, the said William Lilly, by enchantment, charm, and sorcery, to tell and declare to one Anne East, the wife of Alexander East, where ten waistcoats, of the value of five pounds of the goods and chattels of the said Alexander East, then lately before lost and stolen from the said Alexander East, should be found and become, and two shillings and sixpence in monies numbered, of the monies of the said Alexander East from the said Anne East, then and there unlawfully and deceitfully, he, the said William Lilly, did take, receive, and had, to tell and declare to her, the said Anne, where the said goods, so lost and stolen as aforesaid, should be found and become: and also, that he, the said William Lilly, on the said 10th of July, in the year of our Lord 1654, and divers other days, and times, as well before as afterwards, at the said parish aforesaid, in the county aforesaid, unlawfully and deceitfully did take upon him, the said William Lilly, by enchantment, charm, and sorcery, to tell and declare to divers other persons, to the said jurors yet unknown, where divers goods, chattels, and things of the said persons yet unknown, there lately before lost and stolen from the said persons yet unknown, should be found and become; and divers sums of monies of the said persons yet unknown, then and there unlawfully and deceitfully, he, the said William Lilly did take, receive, and had, to tell and declare to the said persons yet unknown, where the goods, chattels, and things, so lost and stolen, as aforesaid, should be found and become, in contempt of the laws of England, to the great damage and deceit of the said Alexander and Anne, and of the said other persons yet unknown, to the evil and pernicious example of all others in the like case offending, against the form of the statute in this case made and provided, and against the public peace, &c. Signed, Anne East, Emma Spencer, Jane Gold, Katherine Roberts, Susannah Hulinge.—*Miscell. Curiosa.*

LITERARY INTELLIGENCE.

Just published, an Essay on Man; or, the Mortal Body and the Immortal Soul Exemplified; wherein are developed the Incontrovertible Principles of Christianity. By G. Wirtzman.

COLONIAL COFFEE MART, 19, Fenchurch-street, City; and WEST BRANCH, 15, Rathbone-place, Oxford-street.

NICOL and Co., in compliance with numerous solicitations from families of distinction in the western Districts of London; have opened a Branch Establishment at 15, Rathbone-place, for the sale of superior flavoured Coffee of the finest qualities; roasted on the premises every day, and sold at the same low scale of prices, which has gained such an extensive share of public patronage and support to the Original Warehouse, established by the West India Planters and Merchants, at 19, Fenchurch-street.

The Coffee I procure from Nicol and Co., possesses more of the real pungency and aromatic flavour of this valuable exotic in perfection, than I from experimental trial have got elsewhere.—Vide Dr. Thornton's Botanical Lecture.

THE EXHIBITION of Mr. CAREW'S CLASSICAL GROUPS.—Adonis attacked by the Boar—Arethusa, a Nymph of Diana, and Venus, reconciling Vulcan—executed in marble for Lord Egremont—is now open to the public, from ten till five, at the King's Mews, Charing-cross.—Admittance, 1s.; Catalogues, 6d.

In one thick volume 8vo., price 3s. 6d.
REFLECTIONS on the PRESENT STATE of BRITISH INDIA. Dedicated to Woolryche, Whitmore, Esq., M.P.

We strongly recommend this excellent Work, as one of the best that has been published on India for a very long period.—*Oriental Herald.*

London: Hurst, Chance, and Co., 65, St. Paul's Church-yard.

Rivington.—Of whom may be had.

PERRIN'S FRENCH SPELLING, the twenty-first edition. Edited by C. GROS. Price 2s.

ROWLAND'S KALYDOR, the most infallible specific for protecting the skin and complexion from the cold winds or damp atmosphere, and warranted innocuous. Its soothing and restorative properties immediately allays the smarting irritability of the skin, reduces the most violent inflammation, heals harsh and rough skin, and resists all disorders which disfigure the beauty of the female countenance, and, as increasing the fairness and transparency of the skin, exceeds all competition. It affords soothing relief to ladies nursing their offspring. To gentlemen after shaving, it allays the irritating and smarting pain, and renders the skin smooth and pleasant. Price 4s. 6d. and 6s. 6d. per bottle, duty included. Caution.—To prevent imposition, the name and address of the proprietor is engraved on the Government stamp, affixed on the neck of each genuine bottle, 'A. Rowland and Son, 26, Hatton-garden.' Sold by the most respectable perfumers and medicine vendors.

TO THE PROPRIETORS OF EAST INDIA STOCK.

LADIES AND GENTLEMEN.

THE VACANCY which has taken place in the Direction of your Affairs, by the resignation of Sir George Abercrombie Robinson, Bart., affords me an opportunity of again addressing you.

I beg to return my grateful acknowledgments for the very flattering reception I have hitherto met with, and to acquaint you, that it is my intention to offer myself for the honour of your Suffrages on an early occasion.

I shall have the honour of paying my personal respects to you as soon as possible. In the meantime I earnestly request the continued expressions of my friends for the accomplishment of the important object I have in view.

I have the honour to be, Ladies and Gentlemen,
Your faithful and obedient Servant,
JOHN FORBES.

No. 15, Harley-street, March 4, 1839.

TO THE PROPRIETORS OF EAST INDIA STOCK.

LADIES AND GENTLEMEN.

IN consequence of the resignation of Sir George Abercrombie Robinson, Bart., and in pursuance of my Address to you of the 26th July, 1837, I beg leave to offer myself as a **CANDIDATE for the VACANT SEAT in the EAST INDIA DIRECTION.**

Considering the very powerful support with which I was favoured at the last Ballot, and being now assured of the additional suffrages of many Proprietors of great influence, I feel warranted in entreating the most consistent expectation of success.

Grateful for the kindness I have already experienced, and soliciting a continuance of your support, I beg to assure you, that when through your favour I am placed in the honourable situation to which I aspire, it shall be my study to perform the duties of it faithfully and independently.

I have the honour to be, very respectfully, Ladies and Gentlemen, your most obedient Servant,

WILLIAM YOUNG.

34, Upper Wimpole-street, March 4, 1839.

N.B.—Sir William Young's Committee meet daily, at the London Tavern, where communications will be gratefully received.

At a Meeting of the friends of Lieut.-Col. Sir William Young, Bart., held at the London Tavern, on Wednesday, March 4, the following Notables and Gentlemen, Proprietors of East India Stock, pledged themselves to promote to the utmost of their power his election to the vacant seat in the Direction, occasioned by the resignation of Sir George Abercrombie Robinson, Bart.

The Committee of Lieut.-Colonel Sir William Young, Bart., beg leave to draw the attention of the Proprietors to the strong grounds upon which he solicits their suffrages upon the present vacancy in the East India Direction.

They consist in a long course of military service, performed in the Honourable Company's Army in India, both in the Field and in Garrison; and which, in repeated instances, have obtained for him the marked approbation of the distinguished officers under whose command he acted.

Sir William Young entered the army as a Cadet of Infantry in the year 1798, and on his arrival at Bombay, joined the European Regiment which served under Sir Robert Abercromby, G.C.B. before Seringapatam in 1798.—He was then appointed to the Grenadier Battalion, one of the most distinguished corps of the establishment, commanded by Colonel Gore, and was employed in the reduction of the Dutch settlements in Malabar; also at the capture of Colombo and the Dependencies in 1798; and throughout the Cingalese War, in which he commanded four companies of grenadiers; at the expiration of which service, he received the thanks of General De Meuron, and the Honourable Frederick North, Governor of Ceylon.

In 1797, he was attached to the Staff of Colonel Dow, then in charge of the disturbed districts in Malabar, during an arduous and destructive service of two years, when he was compelled, by ill health, to return to England, and again went out in 1803, at the commencement of the war with Sicily.

and Holkar, when he was appointed to the Bombay Staff by the Honourable Governor Duncan; and engaged, during the arduous contest in the Deccan, in collecting and forwarding supplies for the army, under the command of the Duke of Wellington, for which service His Grace was pleased to express his high satisfaction;—at this period he was also honoured with the approbation of the Governor in Council, of General Nicolls, the Commander in Chief at Bombay;—and of Sir Henry Clive, Bart., the Political Resident at Poona.

In a subsequent period of his service, he had the merit of suggesting and organizing a most efficient plan for recruiting the Native army, which was adopted by the Government, and acted upon with extensive and important results.

In 1823, he was honoured with the favourable recommendation of the Military Board, in a letter to the Government of Bombay, forwarded to the Honourable Court of Directors, by which their attention was drawn to 'the important and acknowledged services performed by him, during a period which demanded all possible energy in the promotion of the public interest;—and on which the Honourable Court were pleased to express their entire approbation, in a dispatch to the Government of Bombay: on the Staff of which Establishment he remained, until he finally quitted India.

On these recorded grounds, establishing Sir William Young's long, able, and faithful services, the Committee pledge themselves, collectively and individually, to support Lieutenant Colonel Sir William Young, and most strongly recommend him to the favourable notice of the Proprietors, at the approaching ballot, on the 26th instant.

JOHN WARD,
Chairman of the Committee.

N.B.—The Election will take place on Friday the 26th instant, when the attendance of Sir William Young's friends is earnestly requested at the ballot.

AT A MEETING OF PROPRIETORS OF EAST INDIA STOCK, held at the City of London Tavern, on Friday, the 6th of March 1839.—Present,

ABRAHAM WILDAY ROBERTS, Esq., M.P., being called to the Chair, it was proposed by Lewis Lloyd, Esq., seconded by Stewart Macdonald, Esq., M.P., and unanimously carried, That, in the administration of the affairs of British India, it is essentially requisite that there should be found among the Members of the Executive Body of the East India Company, a due proportion of individuals qualified by employment in the several departments of the public service in India, for the efficient discharge of that high and important office.

Proposed by Richard Campbell Beazell, Esq.; seconded by James Farquhar, Esq., M.P., and resolved unanimously, That Robert Cutler Ferguson, Esq., M.P., during a residence of 17 years in Bengal, when he acted successively the offices of Standing Counsel and Advocate-General to the Company under the Supreme Government of India, who have rendered their satisfaction and approval of the manner in which his official duties were fulfilled has founded thereby a high claim to the approbation and support of the Constituent Body of the East India Company.

Proposed by Archibald Elliot Innes, Esq.; seconded by Col. Ranken, and resolved unanimously, That the personal and duties connected with his profession during his long residence in India, have afforded him the means of being acquainted with the laws and institutions under which justice is administered, as well as with the habits, manners, and customs of the various classes and descriptions of the inhabitants. That the same pursuits have necessarily led him to an intimate knowledge of the general affairs of our Eastern possessions, and of the system of policy which unites them to the Mother Country; and that these researches and acquisitions, added to his general talents, most eminently fit him, in the opinion of this Meeting, to become a Director of the East India Company. Proposed by Sir George Warrender, Bart., M.P.; seconded by Sir Thomas Harvie Farquhar, Bart., and resolved unanimously, That, with these impressions of Mr. Ferguson's qualifications and preparations, this Meeting recommends him with confidence to the support of the Proprietors at large, and pledges itself, individually and collectively, to use its exertions to ensure his election.

A. W. ROBERTS, Chairman.

The Chairman having quitted the Chair, and Sir Thomas Harvie Farquhar, Bart., being called thereto:

It was proposed by Sir James Shaw, Bart.; seconded by James Macdonald, Esq., and resolved unanimously, That the cordial thanks of this Meeting be given to A. W. Roberts, Esq., for his very courteous and able conduct in the Chair.

MODERN ORATORY.

Few habits of feeling in English society are more observable than that which is made manifest by the phrase, that such a person has a knack of public speaking, a gift of words, and so forth; as if oratory were a separate acquired artifice like a school-boy's Latin versification, or a natural peculiarity like the porci-form countenance of a celebrated public character. Eloquence is popularly supposed to be as little connected with any general superiority or peculiarity of mind as a wart upon the face. There could be no better evidence of the very slight degree to which our studies in ancient literature have mixed themselves up with our thoughts. Cicero is more read among us than any other Roman author, and his works ought to have been the great counteraction to such doctrines. But, though we ought to have learned that oratory is an art, it would be an error to hold that its laws are now the same as they were in the days of the rostrum and the bema. The laws of Oratory, like those of every thing else, are involved and deducible only from the end for which it is designed, the sphere in which it is to act. The changes in the world have pared down the importance of that end, and contracted the vastness of that sphere. And, though no orator is worthy to be considered a speech-artist unless he regards his art in its potential, rather than its actual, dignity,—no one who examines oratory, with reference to our age, must permit himself to forget for a moment, that, though the crown of oratory be as brilliant as ever, its lustre is, for the most part, dimmed in the blaze of other and younger supremacies.

Greece and Rome were the only countries of the ante-Christian world in which the power of the priestly intelligence and the forms of religion, the kernel and life of every ancient polity, were so controlled by the popular force as to give room for the existence of oratory. The era of that art with them, though brief, was indeed magnificent. Before its early energy, the organ of awakened multitudes, went down, after a struggle which, on the opposite side, called forth almost equal vigour, the old dominion of the sacrificial robes and augur's staff, and all the array of that long antiquity which connected the mythologic traditions of monarchy with the existing splendours of republican aristocracies. While the contest continued, oratory was, in a great degree, the weapon of the crowd and the shield of the rulers. When the battle was first won by the democracies, it was the instrument of their power and the insignia of their triumph. When the force which had redressed the balance caused it to fall on the other side, oratory was still the voice of sorrow and of resolution in the sinking state; and it perished for ever only when the classes, amid whose struggles it had been born, were all levelled into the one desolation of a people without fundamental laws or permanent government.

Conquest and Christianity again gave nations to the world; and the bases were laid of institutions in which oratory has had a second birth. But it has arisen with inferior strength and faded honours. The security of property and life, and the recognition of a more definite national religion than that of paganism, and of one as dear to the people as to the upper classes,—these things more firmly established in Christendom than they ever were elsewhere, while they have incalculably strengthened and improved all modern states,

have narrowed the field, and restrained the sceptre, of oratory. To these, we suppose, among other causes, it is owing that England scarcely produced any speeches claiming to be oratory until the great civil war. The battle, as to fundamental laws, then gave rise to some masterly public speaking; and a good deal of the same intellectual product continued to be put forth until nearly our own day.

The speeches of our contemporaries, some of them full of talent and information, do not appear to us very admirable, regarded as works of art. They could not, perhaps they ought not, to be so. From the time that reporting legitimised itself by custom, there was an end of speaking solely for the audience, and for the decision of the moment. Speeches were made to be read and not to be heard,—with, however, this important limitation, that, though the effect upon the assembly to whom the speech was addressed became a thing of secondary importance, it was yet necessary so far to consult their taste and patience as to persuade them to listen. Mr. Shiel's attempt at Penenden Heath (made, indeed, under circumstances for which he could not very well be prepared) gives an example how necessary it is to attend to this condition. Except in forensic speaking, with which we are not at present chiefly occupied, a spoken discourse scarcely ever produces any effect in altering the opinions of those to whom it is addressed. This is fatal to senatorial oratory; and it is only wonderful that our Legislature should exhibit so many approximations to good speaking.

We will say a word or two on some of the most celebrated of our modern speakers. Mr. Pitt, with all his pomp of words, had this defect, one of the worst that can belong to an English Member of Parliament, who is addressing a nation, and not merely an assembly: he never in his life said any thing that any man could remember; probably because he never thought any thing memorable. This conduct was imposed upon him by his circumstances; and he was found utterly wanting to the difficulties in which he was placed. In peaceful times, his ambition would undoubtedly have prompted, and his industry and integrity enabled, him to do good. But, as an orator, his vague and verbose discourses, fluent, indeed, and sounding enough to astonish country gentlemen, and delight his own adherents, yet never presented an image or an argument which any man would have thought worth the trouble of putting on paper. Mr. Fox, the great orator, though not the great statesman, of the period, had certainly more of the negative qualities of a first-rate speaker, and probably more of the positive, than any one of his contemporaries. It is a subject for eternal regret, that his speeches have not been preserved with the same care as those of Demosthenes, though we are far from thinking that the whole of them together would be as valuable as the worst of the mighty Athenians'. Mr. Burke did wisely in printing what he chose to call speeches, elaborate, that is, and thoughtful and splendid essays. We can only say in praise of his oratory, that he was the wisest man who ever mistook the nature of one of the great objects of his life. He was the only Englishman of his time in whose mind politics approached to being a science. What business had he in the House of Commons? Could he think that Adam Smith would be the best champion of free trade at St. Stephen's? Or was he

unaware that the man has never lived who excelled, at the same time, in working out general truths, and in applying them oratorically to particular cases? Burke, of all men, perhaps, was the best fitted to have written a general history of England; as it is, he has earned for himself a brilliant place on a particular page of it, to the miseries recorded on which it may be feared that his authority in some degree added. To Burke's intellect, the matter in hand usually appeared of very little importance, compared with the principles which bore upon it. To his feelings, the thing in which he was engaged at the moment, presented itself as above every thing important. His philosophical understanding thus taught him the laws which related to the French Revolution; while his temper betrayed him into falsifying the facts from which he professed to deduce those general rules. With regard to India and America both, he knew more, and more wisely, than any other man in England; but he did not know how to avail himself of his means against predominating power; and the consequence was a signal failure. With regard to France, his statements are full of misrepresentation, and were, nevertheless, successful. How strange is the fate of a man of genius, who lets himself be lured into an unsuitable position! *

The character of Sheridan as an orator is very ably, and, we believe, justly given by the writer of a late article in 'Blackwood's Magazine,' (on Whately's *Rhetoric*;) to which we have before alluded. There needs no stronger proof how unfit a sphere is the House of Commons for first-rate oratory, than the effect said to have been produced by the mountebank nonsense of that transcendent quack. Of later speakers, Mr. Canning, Lord Grey, Lord Plunkett, and Mr. Brougham, are by far the most conspicuous. Of these, Mr. Canning was the most showy, and Lord Plunkett is undoubtedly the least so. The former was early spoiled by admiration of Pitt, and only began in after-life to work off the outward slough of worthless glitter. He became quieter and more argumentative, graceful and clear he always was; but he retained to the last the habit of labouring merely collateral points, and settling the real question at issue by silence or a jest. Lord Plunkett is the fullest in matter, and most severe in style, of modern public speakers; and there is sometimes in the more important parts of his finer discourses, a tone of suppressed emotion, more striking, perhaps, and more effective, than the finest exhibition of feeling. His orations, and the effect they produce, are a splendid example of the superiority of thought in a public assembly over every other quality. He is universally recognised as the ablest advocate the Roman Catholics ever had in Parliament; and this, with no conspicuous accomplishment, except that which supersedes the necessity of almost any other, knowledge, namely, and earnestness. He is the nearest approach to a great political philosopher that is likely to be effective in the House of Commons. Lord Grey is chiefly remarkable for dignity of manner, and for the even balance of a great number of powers, none of them existing by themselves in the highest degree, but, when combined, of rare and extreme value. He has almost uniformly fought on the losing side; and in oratory, as in every thing else, it is success

* Let it not be supposed that we differ from Mr Burke as to the principles by which he judges the Revolution.

which commonly decides the popular judgment. Mr. Brougham, take him all in all, is the most celebrated among the living public men of England. This is, in a great degree, owing to his having linked himself almost exclusively with great principles, or what have now the force of such. But his speaking is in itself excellent, and still more peculiar than admirable. He deals not in sportive elegance, nor brilliant description, nor lofty declamation. His brightest waves are as bitter with sarcasm and invective as the waters of Meribah. His fairest images come forth hard and weighty, rough with the marks of the ponderous sledge he wields, and black with the smoke of the furnace in which he forges them. He never tilts but with the sharps. His fireworks are loaded cartridges. And wherein he delights to dwell, are fortresses of rock and iron. In his direct invectives, a want is sometimes felt of that straight-forward strength in which Lord Chatham and Mr. Cobbett are first-rate masters. But his side blows are big with annihilation. Place yourself full before him, and you may chance to escape. But flatter yourself that you are safe in his rear; and, like the African serpent which can spring no way but backwards, he will make you feel how deadly is that power which he who skulks from it never can avoid. His oratory is the true force for attack; and we should deeply lament, as mere lovers of eloquence, to see him on the Treasury bench.

THE SHEPHERD'S CALENDAR.

The Shepherd's Calendar. By J. Hogg, 12mo., 2 vols., vol. ii. Blackwood. Edinburgh, 1829.

THOUGH it is undoubtedly a very disagreeable effort of imagination to divest a poet whose genius has compelled us to take an interest in all his most accidental and indifferent circumstances, of that train of associations by which he has bound us so inseparably to himself, and to suppose him transferred into some new and strange situation which his actual presence has never consecrated, yet it is an effort which we must often make, if we would comprehend the complete stature and the full powers of the being in whom we have delighted. Indeed, the case in which we think the struggle with our feelings before we could find courage to make the experiment would be the greatest, is just the one in which we apprehend the results would be most important and satisfactory. To imagine ROBERT BURNS any thing but what he was, any thing but that Ayrshire ploughman whom he has taught us to love, and whose ploughman nature, he has taught us to consider almost consubstantial with that other nature which he received from heaven,—to suppose that he was not fed by the bleak air on the mountains, and that he did not each morning in his childhood see and feel the grey mist before sunrise,—to imagine him brought up in a close and regulated temperature, rocked in a city cradle, nursed by city nurses, is a cruel task to impose upon the imagination, since it is one in which it will meet with every possible resistance from its natural allies and coadjutors, the feelings. But yet, if we can master the difficulty, we shall have a finer conception of his character than we had when we rated it at the highest. We shall perceive how his poetry lives above, and independent of the tissue of circumstances with which it is interwoven, upon what a ground of universal truth and interest they are worked, and how much would remain to us even if they were rudely torn away. We should then be convinced that the mountain breezes fanned his genius, but did not breathe it into him; that in the most ungenial atmosphere it would have made a way for itself; that his masculine intellect grew, indeed, more tough and sinewy from frequent converse with hardships, but that, even if he had lived delicately, it would have asserted its freedom; that he does not seem illustrious, because there is nothing in the petty accidents of a poor man's life which

can come into competition with marked features of character, but that, in those conditions of life in which character is most dwarfed by the grandeur of circumstances, Burns would still have been known only as a MAN and a POET.

It would be a secondary, but not an unimportant, result of this speculation, that we should be better able to compare Burns with the poets who have since appeared in his line of life; for in this particular, we apprehend, consists the vast difference between them. The author of the volume before us is a man of real and great talents, a portion of which has appeared in his poetry, less in his prose, and some of which may still remain idle and undeveloped. But with all this, we must assert, so far as his poetical powers are concerned that there is not even a likeness in kind between the Ettrick Shepherd and his great prototype; and that Mr. Lockhart's dedication of his recent biography to him, in conjunction with another very worthy name, though a kind and graceful compliment to two estimable persons, was an act of implied injustice to the subject of his able sketch. And herein do we think the difference is found: that Burns was a *man* of genius, Hogg is a *shepherd* of genius; that the one would have been as great, though perhaps not so remarkable, in any other situation as in that which Providence assigned him,—that the other, placed in different circumstances, we do not say would become a common-place, ordinary man, but at least would lose much of his real, as well as of his factitious importance; that every thing around Burns was compelled to reflect a portion of his mind,—that Hogg's mind, to a considerable extent, is a reflection of the things around him.

We do not make these remarks from any wish to lower the popularity of the Ettrick Shepherd, which we do not think at all too great, but because it is fit that every man's claims should be placed upon the right ground, and because we wish to know with what good judgment he has employed his talents upon the pleasing volumes before us. In some of his novels it was impossible not to feel that the Ettrick Shepherd was quite out of his element, that he was dealing with subjects which he had not imagination to grasp. But in the narratives which these books contain, he is thoroughly at home; his poetical power has ample scope: for it is too late in the day to tell us that a man who is capable of 'reaping the harvest of a quiet eye,' need go beyond the sphere of his observations in search of materials for his imagination: and it is wasted in the attempt to accomplish more than nature intended it to accomplish. The consequence is, that the 'Shepherd's Calendar' is, to our minds, by far the best and most pleasant prose book that Mr. Hogg has yet produced. Part of the book has appeared in 'Blackwood,' and we are not sure, therefore, that we shall be able, in our extracts, to steer clear of stories with which our readers are already acquainted; but we will do our best to choose passages which they will not be sorry, if they have read them once, to read again. We are strongly tempted to venture upon 'Mary Burnet,' an excellent fairy tale, but it is somewhat too long, so we must be content with a shorter narrative of the same description, which occurs in the chapter, headed 'Odd Characters.'

'He was the last man of this wild region, who heard, saw, and conversed with the Fairies; and that not once or twice, but at sundry times and seasons. The abiding at which Will lived for the better part of his life, at Old Upper Phaup, was one of the most lonely and dismal situations that ever was the dwelling of human creatures. I have often wondered how such a man could live so long, and rear so numerous and respectable a family, in such a habitation. It is on the very outskirts of Ettrick Forest, quite out of the range of social intercourse, a fit retirement for lawless banditti, and a genial one for the last retreat of the spirits of the glen—before taking their final leave of the land of their love, in which the light of the gospel then grew too bright for their tiny moonlight forms. There has Will beheld them riding in long and beautiful array, by the light of the moon, and even in the summer twilight; and there has he seen them sitting in seven

circles, in the bottom of a deep ravine, drinking nectar out of cups of silver and gold, no bigger than the dew-cup flower; and there did he behold their wild unearthly eyes, all of one bright sparkling blue, turned every one upon him at the same moment, and heard their mysterious whisperings, of which he knew no word, save now and then the repetition of his own name, which was always done in a strain of pity. Will was coming from the hill one dark misty evening in winter, and, for a good while, imagined he heard a great gabbling of children's voices, not far from him, which still grew more and more audible; it being before sunset, he had no spark of fear, but set about investigating whence the sounds and laughter proceeded. He, at length, discovered that they issued from a deep clough not far distant; and, thinking it was a band of gipsies, or some marauders, he laid down his bonnet and plaid, and, creeping softly over the heath, reached the brink of the precipice, peeped over, and to his utter astonishment, beheld the Fairies sitting in seven circles, on a green spot in the bottom of the dell, where no green spot ever was before. They were apparently eating and drinking; but all their motions were so quick and momentary, he could not well say what they were doing. Two or three at the queen's back appeared to be baking bread. The party consisted wholly of ladies, and their numbers quite countless—dressed in green pollonians, and grass-green bonnets on their heads. He perceived at once, by their looks, their giggling, and their peals of laughter, that he was discovered. Still fear took no hold of his heart, for it was daylight, and the blessed sun was in heaven, although obscured by clouds; till at length he heard them pronounce his own name twice. Will then began to think it might not be quite so safe to wait till they pronounced it a third time, and at that moment of hesitation it first came into his mind that it was All Hallow Ewe! There was no farther occasion to warn Will to rise and run; for he well knew the Fairies were privileged, on that day and night, to do what seemed good in their eyes. "His hair," he said, "stood all up like the birches on a sow's back, and every bit o' his body, outside and in, prickled as it had been brunt wi' nettles." He ran home as fast as his feet could carry him, and greatly were his children astonished (for he was then a widower) to see their father come running like a madman, without either his bonnet or plaid. He assembled them to prayer, and shut the door, but did not tell them what he had seen for several years.

'Another time he followed a whole troop of them up a wild glen called Entertrony, from one end to the other, without ever being able to come up with them, although they never appeared to be more than twenty paces in advance. Neither were they flying from him; for, instead of being running at their speed, as he was doing, they seemed to be standing in a large circle. It happened to be the day after a Moffat fair, and he supposed them to be a party of his neighbours returning from it, who wished to lead him a long chase before they suffered themselves to be overtaken. He heard them speaking, singing, and laughing; and, being a man so fond of sociality, he exerted himself to come up with them, but to no purpose. Several times did he hail them, and desire them to halt, and tell him the news of the fair; but whenever he shouted, in a moment all was silent, until, in a short time, he heard the same noise of laughing and conversation at some distance from him. Their talk, although Will could not hear the words of it distinctly, was evidently very animated, and he had no doubt they were recounting their feats at the fair. This always excited his curiosity afresh, and he made every exertion to overtake the party; and, when he judged, from the sounds, that he was close upon them, he sent forth his stentorian hullo—"Stop, lads, and tell us the news of the fair!" which produced the same effect of deep silence for a time. When this had been repeated several times, and after the usual pause, the silence was again broken by a peal of edrlich laughter, that seemed to spread all along the skies over his head. Will began to suspect that that unearthly laugh was not altogether unknown to him. He stood still to consider, and that moment the laugh was repeated, and a voice out of the crowd called to him, in a shrill, laughing tone, "Ha, ha, ha! Will o' Phaup, look to your ain hearthstane the night." Will again threw off every encumbrance, and fled home to his lonely cot, the most likely spot in the district for the fairies to congregate; but it is wonderful what an idea of safety is conferred by the sight of a man's own hearth and family circle.

'When Will had become a right old man, and was sitting on a little green hillcock at the end of his house, one evening, resting himself, there came three little boys up to him, all exactly like one another, when the following short dialogue ensued between them:

"Good e'en t'ye, Will Laidlaw."
 "Good e'en t'ye, creatures. Where ir ye gam this gate?"

"Can ye gie us up-putting for the night?"
 "I think three siccan bits o' shreds o' hurchins whinna be ill to put up.—Where came ye frae?"

"Frae a place that ye dinna ken. But we are come on a commission to you."

"Come away in then, and tak sic cheer as we hae."

Will rose and led the way into the house, and the little boys followed; and, as he went, he said carelessly, without looking back, "What's your commission to me, bairns?" He thought they might be the sons of some gentleman who was a guest of his master's.

"We are sent to demand a silver key that you hae in your possession."

Will was astounded; and, standing still to consider of some old transaction, he said, without lifting his eyes from the ground,—

"A silver key! In God's name, where came ye from?"

There was no answer, on which Will wheeled round, and round, and round; but the tiny beings were all gone, and Will never saw them more. At the name of God, they vanished in the twinkling of an eye. It is curious that I never should have heard the secret of the silver key, or, indeed, whether there was such a thing or not.

But Will once saw a vision which was more unaccountable than this still. On his way from Moffat one time about midnight, he perceived a light very near to the verge of a steep hill, which he knew perfectly well, on the lands of Selcouth. The light appeared exactly like one from a window, and as if a lamp moved frequently within. His path was by the bottom of the hill; and, the light being almost close at the top, he had at first no thoughts of visiting it; but, as it shone in sight for a full mile, his curiosity to see what it was continued still to increase as he approached nearer. At length, on coming to the bottom of the steep bank, it appeared so bright and near, that he determined to climb the hill and see what it was. There was no night, but it was a starry night and not very dark, and Will clambered up the precipice, and went straight to the light, which he found to proceed from an opening into a cavern, of about the dimensions of an ordinary barn. The opening was a square one, and just big enough for a man to creep in. Will set in his head, and beheld a row of casks from one end to the other, and two men with long beards, buff belts about their waists, and torches in their hands, who seemed busy in writing something on each cask. They were not the small casks used by smugglers, but large ones, about one half bigger than common tar-barrels, and all of a size, save two very huge ones at the further end. The cavern was all neat and clean, but there was an appearance of mouldiness about the casks, as if they had stood there for ages. The men were both at the farther end when Will looked in, and busily engaged; but at length one of them came towards him, holding his torch above his head, and, as Will thought, having his eyes fixed on him. Will never got such a fright in his life;—many a fright he had got with unearthly creatures, but this was the worst of all. The figure that approached him from the cavern was of gigantic size, with grisly features, and a beard hanging down to his belt. Will did not stop to consider what was best to be done, but, quite forgetting that he was on the face of a hill, almost perpendicular, turned round, and ran with all his might. It was not long till he missed his feet, fell, and, hurling down with great celerity, soon reached the bottom of the steep, and, getting on his feet, pursued his way home in the utmost haste, terror, and amazement; but the light from the cavern was extinguished on the instant—he saw it no more.

Will apprised all the people within his reach, the next morning, of the wonderful discovery he had made; but the story was so like a fantasy or a dream, that most of them were hard of belief; and some never did believe it, but ascribed all to the Moffat brandy. However, they sallied out in a body, armed with cudgels and two or three rusty rapiers, to reconnoitre; but the entrance into the cave they could not find, nor has it ever been discovered to this day. They observed very plainly the rut in the grass which Will had made in his rapid descent from the cave, and there were also found evident marks of two horses having been fastened that night in a wild clench-head, at a short distance from the spot they were searching. But these were the only discoveries to which the investigation led. If the whole of this was an optical delusion, it was the most

singular I ever heard or read of. For my part, I do not believe it was; I believe there was such a cavern existing at that day, and that vestiges of it may still be discovered. It was an unfeasible story altogether for a man to invent; and, moreover, though Will was a man whose character had a deep tinge of the superstitious of his own country, he was besides a man of probity, truth, and honour, and never told that for the truth, which he did not believe to be so.—Vol. ii. pp. 213—221.

The next is very Scotch:

Daft Jock Amos was another odd character, of whom many droll sayings are handed down. He was a fanatic; but, having been a scholar in his youth, he was possessed of a sort of wicked wit, and wavering uncertain intelligence, that proved right troublesome to those who took it on them to reprove his eccentricities. As he lived close by the church, in the time of the far-famed Boston, the minister and he were constantly coming in contact, and many of their little dialogues are preserved.

"The mair fool are ye, quo' Jock Amos to the minister," is a constant by-word in Ettrick to this day. It had its origin simply as follows:—Mr. Boston was taking his walk one fine summer evening after sermon, and in his way came upon Jock, very busy cutting some grotesque figures in wood with his knife. Jock, looking hastily up, found he was fairly caught, and not knowing what to say, burst into a foolish laugh—"Ha! ha! ha! Mr. Boston, are you there? Will you cross a good whittle wi' me?"

"Nay, nay, John, I will not exchange knives to-day."

"The mair fool are ye," quo' Jock Amos to the minister.

"But, John, can you repeat the fourth commandment?—I hope you can.—Which is the fourth commandment?"

"I dare say, Mr. Boston, it'll be the ane after the third."

"Can you not repeat it?"

"I am no sure about it—I ken it has some wheesam by the rest."

Mr. Boston repeated it, and tried to show him his error in working with knives on a Sabbath-day. John wrought away till the divine added,

"But why won't you rather come to church, John?—what is the reason you never come to church?"

"Because you never preach on the text I want you to preach on."

"What text would you have me preach on?"

"On the nine-and-twenty knives that came back from Babylon."

"I never heard of them before."

"It is a sign you have never read your Bible. Ha, ha, ha, Mr. Boston! sic fool, sic minister."

Mr. Boston searched long for John's text that evening; and, at last finding it recorded in Ezra, i. 9., he wondered greatly at the acuteness of the fool, considering the subject on which he had been reproving him.

"John, how auld will you be?" said a sage wife to him one day, when talking of their ages.

"O, I dinna ken," said John. "It wad tak a wiser head than mine to tell you that."

"It is unco queer that you dinna ken how auld you are," returned she.

"I ken weel enough how auld I am," said John; "but I dinna ken how auld I'm be."

An old man, named Adam Linton, once met him running from home in the grey of the morning. "Hay, Jock Amos," said he, "where are you bound for so briskly this morning?"

"Aha! He's wise that wats that, and as daft wba speers," says Jock, without taking his eye from some object that it seemed to be following.

"Are you running after any body?" said Linton.

"I am that, man," returned Jock; "I'm rinnin after the deil's messenger. Did you see ought o' him gann by?"

"What was he like?" said Linton.

"Like a great big black corbie," said Jock, "carrying a bit tow in his gab. And what do you think?—he has taukt me a piece o' news the day! There's to be a wedding ower by here the day, man—ay, a wedding! I maun after him, for he has gien me an invitation."

"A wedding? Dear Jock, you are raving. What wedding can there be to-day?" said Linton.

"It is Eppy Telfer's, man—auld Eppy Telfer's to

be wed the day; and I'm to be there, and the minister is to be there, and a' the elders. But Tammie, the Cameronian, he darena come, for fear he should hae to dance wi' the kimmers. There will be braw work there the day, Aedie Linton,—braw work there the day!" And away ran Jock towards Ettrickhouse, hallooing and waving his cap for joy. Old Adam came in, and said to his wife, who was still in bed, that he supposed the moon was at the full, for Jock Amos was "gane quite gyte awthegither, and was away shouting to Ettrickhouse to Eppy Telfer's wedding."

"Then," said his wife, "if he be ill, she will be waur, for they are always affected at the same time; and, though Eppy is better than Jock in her ordinary way, she is waur when the moon-madness comes ower her." (This woman, Eppy Telfer, was likewise subject to lunatic fits of insanity, and Jock had a great ill will at her; he could not even endure the sight of her.)

The above little dialogue was hardly ended, before word came that Eppy Telfer had "put down" herself over night, and was found hanging dead in her own little cottage at day-break. Mr. Boston was sent for, who, with his servant man and one of his elders, attended, but in a state of such perplexity and grief, that he seemed almost as much dead as alive. The body was tied on a deal, carried to the peak of the Wedder Law, and interred there; and all the while Jock Amos attended, and never in his life met with an entertainment that appeared to please him more. While the men were making the grave, he sat on a stone near by, jabbering and speaking one while, always addressing Eppy, and laughing most heartily at another.

After this high fit, Jock lost his spirits entirely, and never more recovered them. He became a complete nonentity, and lay mostly in his bed till the day of his death.—Pp. 221—226.

To leave our readers with a pleasing impression of the book, we will quote a beautiful anecdote in the article headed "Sheep."

"One of the two years while I remained on this farm, a severe blast of snow came on by night about the latter end of April, which destroyed several scores of our lambs; and, as we had not enow of twies and odd lambs for the mothers that had lost theirs, of course we selected the best ewes, and put lambs to them. As we were making the distribution, I requested of my master to spare me a lamb for a hawked ewe which he knew, and which was standing over a dead lamb in the head of the hope, about four miles from the house. He would not do it, but bid me let her stand over her lamb for a day or two, and perhaps a twie would be forthcoming. I did so, and faithfully she did stand to her charge; so faithfully that I think the like never was equalled by any of the woolly race. I visited her every morning and evening, and for the first eight days never found her above two or three yards from the lamb; and always, as I went my rounds, she eyed me long ere I came near her, and kept tramping with her foot, and whistling through her nose, to frighten away the dog; he got a regular chase twice a-day as I passed by; but, however excited and fierce a ewe may be, she never offers any resistance to mankind, being perfectly and meekly passive to them. The weather grew fine and warm, and the dead lamb soon decayed, which the body of a dead lamb does particularly soon; but still this affectionate and desolate creature kept hanging over the poor remains with an attachment that seemed to be nourished by hopelessness. It often drew the tears from my eyes to see her hanging with such fondness over a few bones, mixed with a small portion of wool. For the first fortnight she never quitted the spot, and for another week she visited it every morning and evening, uttering a few kindly and heart-piercing bleats each time; till at length every remnant of her offspring vanished, mixing with the soil, or wafted away by the winds.—Pp. 191, 192.

HISTORY OF IRELAND.

True Stories from the History of Ireland. By John James M'Gregor. Pp. 353. Curry, jun. Dublin, 1829.

THIS is an imitation (and a very respectable one) of Sir Walter Scott's 'Tales of a Grandfather.' It begins with the early history of Ireland, respecting which so much that is fabulous has been written; but the author passes over what is fabulous with a very slight notice. We do not altogether approve of this; for, in a work designed for youth, it might be of more advantage to in-

dulge the taste for the marvellous, so universal during childhood, with historical fables than with the garbage of fairy lore, which will be certain, from one quarter or other, to have its place. As a specimen of the author's manner, we shall select his account of the accession and the death of the famous Brien Boromhe, whose surname our non-Irish readers may be informed is pronounced *Boroo*.

'Brien Boromhe was in his seventy-sixth year when he ascended the throne of Ireland; yet he still combined all the vigour of youth with the wisdom acquired by long experience. With the exception of a few partisan chiefs of the late sovereign, his authority was universally acknowledged; but these malcontents were soon brought to submission by the valour and activity of Prince Mortogh, the monarch's eldest son, who also vigorously repressed some fresh insurrectionary movements of the Danes. Tranquillity being thus completely established, Brien commenced the great work of extending to the whole island those advantages of which Munster had already partaken; and, in every quarter, the disorder and misery which so lately prevailed gave place to happiness and civilisation. Property was respected, religion venerated, and literature, with the arts of peace, encouraged. At his palace of Kincora, near Limerick, where he still kept his court, a magnificent hospitality was maintained; and here the great and the learned, both of his own and foreign nations, were constant guests.'—P. 65.

Notwithstanding the desire Brien Boiromhe manifested for peace, which he had exemplified during a reign of twelve years, he was eventually involved in a war with the king of Leinster, whence arose the battle of Clontarf, on Good Friday, 1014. The author proceeds:

'The aged monarch passed the day in his tent, anxiously listening to the details which were brought to him by his aides-du-camp of the progress of the battle, and, at intervals, imploring the blessing of Heaven on the arms of his country. Corcoran, one of his attendants, perceiving the flag of Prince Mortogh struck, which notified the fall of the chief, supposed that the Irish army had been defeated; and, entering the royal tent, on his knees he implored his revered sovereign to mount his horse and fly.

"No," replied the veteran, "I came here to die or conquer, and my enemies shall not boast of my death by inglorious wounds; but let you and my other attendants hasten your escape, and announce that I bequeath my soul to God, my body to Armagh, and my blessing to Dennis O'Brien. Proceed this night to Swords of Columcille, and let the clergy come for my body to-morrow; convey it to Duleek, and thence to Louth; and let the Archbishop of Armagh, successor to St. Patrick, accompanied by his clergy, come thither for my remains."

'While he yet spoke, the officer exclaimed,—"I perceive a body of men advancing towards us."

"What sort of men are they?" asked the monarch.

"Grey, naked-looking men," answered Corcoran.

"They are Danes, completely armed," observed Brien, and instantly grasped his sword. At the next moment the troop, with Brodar at their head, rushed into the royal tent. The aged monarch drew his sword, and, with the vigour of youth, cut off Brodar's left leg from the knee; but, almost at the same instant, he received a deadly blow from the battle-axe of his antagonist. Though he felt that the wound was mortal, the hero summoned up all his dying energies, and, with two strokes of his well-tried sword, slew the Danish leader and one of his followers, and then expired himself, falling, like Leonidas or Epaminondas, a sacrifice to the cause of his country, and grasping victory even in death.

'This sad event had scarcely occurred, when the brave Prince of Ulster, eager in pursuit of Brodar's troop, rushed into the royal tent, and cut the remnant of them to pieces. But the sight of the lifeless body of the venerable monarch was more than his exhausted strength could bear. He threw himself upon it, his numerous wounds burst forth afresh; and, refusing all assistance, the gallant Sitric breathed his last in the arms of his friend and faithful ally.

'Thus fell the illustrious Brien Boromhe, a name that will ever be considered the glory of Ireland. Sagacious, humane, pious, valiant, and munificent, he merits a distinguished rank amongst those sovereigns who have been the benefactors, not the scourges, of mankind. He conquered as much by the splendour of

a character, acquired by his philanthropic acts, as by his great military achievements. His bodily endowments and mental powers were of the very first order; and he was, at once, the hero and the lawgiver of his country.'—P. 75.

From these extracts, it will be perceived that these stories are well told.

INFANT SCHOOLS.

Letters on the System of Development, as pursued in Infants Schools. By the Master of an infant school. Southampton, 1829.*

We have more than once asserted our conviction that the systems of education most generally pursued in this country, were not the best calculated to produce a wise and consistent social order: and this, we have hinted, we thought was not altogether the fault of the systems themselves. For education is not in itself an end, but a means to an end, and, as all means do, must vary according to the end proposed. Now, we strongly suspect that, were we to venture on expressing an opinion that the real end of education is very nearly lost sight of at the present time, we should meet with very few willing to coincide with our view of the case. And yet, when every day gives birth to a new system of teaching, (although the acquisition of knowledge has been made almost as mechanical a process as the piling of timber, and the formation of the understanding very similar to the making of any other machine for scientific purposes,) it is difficult, except on this hypothesis, to understand how the interest evidently taken in the subject should not have led us to make some approximation to the true system.

In spite, of the new institutions and methods which every day gives birth to, and which every other day nearly as certainly sweeps away, we do not believe that the real end of education is perceived in England; and we are necessarily bound to believe that the various means are themselves valueless. Perhaps we shall have occasion to show that they are more than valueless: that they not only do not increase the mental energy and remove the obstacles in its path, but that they overrate and distract it, and destroy its power by forcing it to expend that power upon numberless and unconnected impediments.

The end of education we assert to be the formation of the manly character; the teaching man to look within himself for the principles of conduct and of knowledge; the supplying of a counteracting influence by which the evil effects of the world's temptations may be as much as possible neutralised, and the mind, with all its inborn capabilities and yearnings, confirmed, developed, and encouraged in its onward progress towards that possible good, the desire of whose attainment is at once its best stay and its surest pledge of its high destiny; the rescuing of the will from the bondage of things outward, and the building up of a firm and consistent structure on the broad foundations of religion, on love, and freedom, and intelligence. Such is our view of the end of education, as respects the infinite and imperishable in man; a secondary consideration is, we know, forced upon us by the nature of our situation in this world, and education must embrace the instruction by which we are to procure for ourselves the necessities of life.

In claiming for a religious education, the first and, indeed, the only real importance, we beg to disavow any concurrence with those who believe that religious education consists in giving certain pages of an unintelligible catechism to be learned by heart, or in insisting upon certain chapters of Dr. Paley's Evidences being *crammed* up for an examination, or in compelling a certain number of very thoughtless, or very immoral, young men,

* This little work has already been noticed in 'The Athenæum'; but, as we have received the following review from an esteemed contributor, we very willingly return to the important subject of which it treats.—Ed.

to exhibit themselves to a college-master at morning and evening chapel: as little do we give the name of religious instruction to that miscellaneous sowing of tracts, which certain sectarians, hardly less violent in their zeal than the dignified abbots of Granta and Iais, have so widely, and we think so unfortunately, adopted as a means of recommending their peculiar tenets. The education we term religious, has a broader base, and a loftier superstructure, than the zeal of interest or party: it is not to make men fit for one profession more than another, to furnish them with a chart of one narrow road alone,—it is to waken in them or sustain the consciousness that there is one business of life and one only, compatible with, nay, even involving their duties towards those who surround them; to clear away the obstacles which choke up the spring of living waters, so that they may flow on fertilising and in joy, beautiful in themselves, and the source of happiness to all that dwell beside them.

All education, however, be it religious or not, we hold to depend upon the axiom, that there are powers in the mind, *ab origine*, previously existent, which are not only not derived from any exercise of the sensitive faculty, but are the very conditions under which the sensitive faculty becomes capable of furnishing the understanding with the phenomena which enter into the constitution of knowledge. And these fundamental notions we believe it to be the proper province of education to draw out into the consciousness, to marshal them before the man in their due order and dependence, and to refer through them every presentation of the senses to its proper place in the scientific scheme.

The whole essence of education will be then the strengthening those feelings which constitute religion, and the developing those powers of the understanding which are the conditions of all knowledge, and in the due combination of which the manly character exists, as the active and energetic representative of both. In the system which must be formed in order to compass the end which we propose to ourselves, we shall then have ever in view the fixing of the mind upon itself, and its powers as alone regulative both in ethical and in physical science; the leading it to discover, within its own sphere, the laws of its moral being, and the principle of that ordination which supplies a life and unity to the otherwise disjointed and dead facts of the material universe. Those compendious methods of heaping knowledge in the memory which the prolific genius of Scotch philosophers and Italian charlatans have put forth for the benefit of mankind, we shall leave to their own merits, well satisfied that we are beyond the reach of any evil from them, and well assured that these mechanical and fragmentary methods of acquiring knowledge have already been succeeded by one more philosophical, and therefore more capable of supplying the necessities of which the mind is conscious from the first.

Among the signs of this advancement which has been made towards a philosophical method, are the Infant Schools, whose very existence is a proof that this method is in the spirit of the nineteenth century, and a pledge that a better hope is springing up among us; and with this assurance we are well pleased to think that in their wide diffusion over this country we see the seeds of a new social order, with higher ends and better feelings than belonged to that which they will displace. It is true they are the offspring of the last age, that they derive their being from an Italian of the eighteenth century, but they were nevertheless not in the spirit of that century; and therefore, they were every where opposed and thwarted by it: the 'system of development' on which they proceed, partook too much of the character of an older and a wiser philosophy to meet the approbation of the miserable scoundrels of France, and their scarce more deeply grounded antagonists of England: Locke and Voltaire, Hume and Condillac, alike reject the notion of any

thing to be developed, and England has even yet to emancipate herself from the bonds of their shallow psychology. The time has hardly yet come, but it assuredly will, when full justice will be done to the wise and the philanthropic Pestalozzi. We will then rejoice, not that we have added our feeble praise to the well-earned applauses which will be paid to his name, but that we uplifted our voice in commendation of that scheme to the perfecting of which he devoted his splendid talents with unwearied perseverance and success so signal.

We shall let the excellent little work whose name stands at the head of this article describe the system for us, wherever we find it possible: regretting that our limits will compel us to pass very cursorily over one of the most interesting subjects that can be presented to our thoughts: for it is not in the infant school only that the principles this work asserts will be useful; it is not for the children of the poor only, that its author's experience will be made available: in the palace of the wealthy as in the hovel of the labourer, the same words should be sounded, and in the royal foundations of our public schools, and in the clerical foundations of our universities.

We need hardly attempt to prove to our readers that the proper season for education begins with, or even before, the appearance of understanding: every mother who watched her baby in infancy will have observed the astonishing effort by which the little musician learnt to move his limbs to the time of the song, which had always been sung to him, long before his tongue could give evidence of the accuracy with which he had observed it: but even the most decided opposers of our views, the most determined assertors of the external origin of all our knowledge, will agree with us that it is impossible to say when the child first has distinct perceptions. From the moment, therefore, that it is capable of being carried about, it would profit by attending such a school as we describe; and circumstances are mentioned by all writers on this system, which show that, when such infants have been taken by their nurses among their little companions, they have very soon learned to imitate their motions, and to follow their tunes, by that restless necessity of trying their own strength after the fashion of those around them, which seems the most remarkable circumstance in the infant's manners.]

But, from very obvious reasons, children are rarely sent to these schools till they are about eighteen months or two years old; and they continue till they are about ten. Their first occupations are merely gymnastical: they, for a few days, sit and observe; afterwards they begin to clap with their hands, point in different directions, stamp with their feet, march round the school-room, and so on. By this discipline their attention is excited, their interest in the proceedings is insured, the circulation of their blood is promoted, and their physical condition often not a little improved. But, when the capacity of learning by word from a teacher has been observed, what is to be done?

If, then, such be the period of life most proper for the commencement of education, you will ask what method should be adopted and pursued as best calculated to ensure the great end thereof? We, of course, agree that this great end is the salvation of the soul; and subservient to that, a preparation for usefulness in this world. This premised, we answer, the teacher's grand business is to employ such means as may appear best calculated to develop the powers and faculties of the mind; at the same time endeavouring to bleed divine truth with every portion of knowledge which he imparts; and for this purpose he should, as far as possible, teach from nature; because nature is so constituted as to lead the mind to observation, to reflection, to fixed habits of thought, and at the same time to improve it with exalted views of the Almighty, as the Creator, Sovereign, and provident Father of all.

Man is the noblest work of God: every child is a man in embryo. We therefore feel it incumbent to begin with the child himself; first directing his attention to a finger, a hand, an arm, an eye, an ear, a leg,

a foot, a toe, his head, &c. This done, we excite and draw his attention towards some part of the animal creation, as a cat, a dog, their various organs of sense, their limbs, and so forth; observing the particular office of each member, the relation of each part to the whole, the active principle of life pervading every part, and, finally, the similarity between the animal and the child itself. From animals we proceed to vegetables; from those to minerals: and from natural objects thus introduced, we feel no difficulty in ascending to spiritual ones, by an easy transition; thus leading the children to form ideas, according to their own capacity, upon their nature as spiritual and immortal beings; and to an understanding of the mercy of God in the provision of a Saviour, and salvation through him; enforcing all by suitable portions of Scripture, and teaching them to revere the Bible as the only standard of pure and solid truth.

Our aim throughout the whole, is to distinguish between a mere act of the memory, and those of the other powers of the mind. Our object is to teach more by things than words; because in the formation of an idea more is necessary than merely bringing the object before the senses. "Its qualities must be explained; its origin accounted for, its parts described, their relation to the whole ascertained: its use, its effects, or its consequences must be stated;—all this must be done, at the same time, in a manner sufficiently clear and comprehensive to enable the child to distinguish the object from other objects, and to account for the distinction which is made: and, whenever the knowledge of an abstract (or separate) idea is to be communicated, an equivalent of the representation should be given, through the medium of a fact, as an exemplification. For the way by precept is long and laborious; the way by example is short and easy." Farther, we endeavour not only to act upon the child, but to let him become an agent in the improvement of his own mind, by making him think. "His thought should be regular and self-active." We do not so much talk to a child, as enter into conversation with him. The exercises recommended, "for employing the mind and eliciting thought," are such as embrace *Form, Number, and Language*. Whatever ideas we may have to acquire during life, are introduced through the medium of one of these departments: the reason why we would so early call the attention to the elements of number and form; is, besides their general usefulness, they admit of a most perspicacious treatment, a treatment of course far different from that in which they are too often involved, and which renders them utterly unpalatable to those who are by no means deficient in ability."—Pp. 6—8.

The method adopted in order to convey mathematical knowledge to the children who can receive it, is simple: it consists in showing, by means of a large board and chalk, various properties of points, and lines, and figures.

With regard to *Figures*.—By the association of points, lines, and angles, many will be produced, especially of triangles, quadrangles, and others containing many sides and angles. Each school-master is also provided with an instrument made of iron, tin, or brass, cut in ten or twelve pieces of equal length, which are riveted together near the ends, and with which he can at pleasure form figures similar to those above named; in which lessons the scholars are led to observe the difference between an acute, a right, or an obtuse angle; equilateral, scalene, and isosceles triangles: oblongs, squares, circles, ovals regular and irregular, pentagons, hexagons, and polygons. The diameters of circles and their centres; also semicircles, ovals, spiral lines, concave and convex angles, &c., are useful and excellent subjects for *thinking* lessons. I must here anticipate my friend's old objection, "All this is good in its place; but why teach it to poor children?" We answer, our aim is to develop the powers of the infant mind; and that principally by leading them to the study of nature, the various objects of which will be found to form themselves into some one or more of these geometrical shapes. For example, you have of course observed that a tree possesses its points, lines, and angles; its leaves and branches, its stem and its fruit, are either circular, oval, conical, round, or spiral, &c.; while the fragrant flowers, the various and distinct parts of animals, minerals, and the human frame, do also comprise these shapes and forms in their appearances. Hence, ask an infant scholar to show you an angle, and it will point to its elbow, or a knuckle. Ask for a concave angle, and it will point to a corner of its eye, or of its mouth: or for a circle, and it will answer, "My eye-ball." I know a lady who one day asked a class of children,

which she was examining, to tell her "of a circle of the body," when an answer to the above effect was given. "What," she continued, "can you do with your eye?" "We can see," was a general answer; but one little girl, said, "We can *sin*, too." "How!" rejoined the lady, "can you sin with your eye?" "If," was the answer, "we see a young lady or gentleman dressed in nice clothes, and wish they were ours, we covet what is our neighbour's, and that is sinning against God with our eye." I only wish to add, that this branch of knowledge is also exceedingly useful in preparing the children for *writing*, by leading them to the use of the slate and pencil, by means of which they form lines, angles, and figures, of various forms and dimensions.—Pp. 11, 12.

Number and arithmetic are easily taught and acquired with wonderful facility: every thing in this science is done by actual combinations of the simple elements; marbles, pebbles, any thing, in short, is made use of to lead the children to observe for themselves the facts of addition and the other rules; and we can assert, from our personal experience, the wonderful readiness of calculation which this method begets in the learners. We subjoin a short statement of the author's to exemplify the skill and the manner of the children.

"Two ladies and a gentleman, visiting a school not long since, asked, 'What is the half of 16½?'" and were answered in a moment by several of the children, "8½." "The fourth of it?" "4½." "The eighth of it?" "2 and 1-16th." "The sixteenth of it?" "1 and 1-32nd part." "How many are twice 17½?" "35½." "Twice 35½?" "71." "Twice 71?" "142." This they proved as follows:—"Twice 70 are 140, and twice 1 are 2; therefore, twice 71 must be 142." On being asked how they knew twice 35½ are 71, they answered, "Twice 35 are 70, and two halves make one whole; therefore, twice 35½ must be 71." Again, they were required to show that twice 17½ are 35½, when they said, "Twice 10 are 20, and twice 7 are 14; 20 and 14 are 34, and twice ½ are 1; 34 and 1 are 35½; therefore, twice 17½ are 35½." During such calculations, the children either stand or sit, while the promptitude and cheerfulness, the perspicuity and ease, with which they answer, could not be equalled in much older children, who are taught according to the system of the old school.—P. 20.

The same means are made use of to convey a knowledge of weights and measures and the value of money; and the attention of the children is excited by the tables being sometimes thrown into a kind of very innocent doggerel, which is chaunted by the whole number, with very astonishing accuracy of tune and time. The whole of the latter relating to number is so good, that we recommend it to the attention of all persons engaged in the instruction of very young children, as containing by far the best method we have yet met with for that purpose.

Grammar is easily taught, for every action suggests some grammatical instruction: a child may be sent across the room, and the rest may be taught to sing, 'Here he or she comes!' 'There he or she goes,' &c.; and the difference of genders, pronouns, action and suffering, time past, present, and to come—all may be remarked in these simple sentences. Adjectives are equally common, and with equal facility remarked. And thus, by the mere medium of conversation, without books or rules, great accuracy is acquired in speaking, so much so, as indeed to be very striking in children who are generally of the lowest order.

To these three branches of instruction, which must form the ground-work of every philosophical system, and which, when properly followed out, are productive of incalculable advantage to the mind, are added drawing, writing, reading, and singing, all of which the natural desire to imitate soon enables many children to compass: in this they are assisted by coloured prints, sentences in large type on the walls, with other figures, which they may copy upon slates. The art of spelling is taught by a curious process; our author shall describe it:

Spelling is taught, sometimes, to the whole of the scholars at the same time; at other times a class is selected, and each child separately examined: again, we

select several of the forwardest of both sexes, giving each of them charge over eight or ten of their little schoolfellows; and once or twice in the course of each day put the lesson into their hands; when, as they have been taught, so they teach. These little monitors often become more successful teachers than the master or mistress themselves, because they are able to enter into the feelings of their little pupils with greater ease than it is possible for the most affable and affectionate grown person to do. The materials used in order to impart these elementary signs of language are various: the master takes his black board, or slate, and forms the various descriptions of letters, as used both in printing and writing, composing syllables and words; and at the same time exercising the thinking powers of the children, by requiring them to name other words and syllables which may be formed with the same letters, when transposed or decreased. For example, I here select the word *breast*; and it will be found, upon examination, that, with these six letters, *b, r, e, a, s, t*, we can compose the following words and syllables:—*ra, ta, sa, ba, te, se, re, es, eb, ab, as, at, be, est, set, ser, sar, tes, eat, set, tar, tas, cab, erb, arb, bra, tra, ber, bar, reb, ere, teas, beat, sate, hare, best, treb, bret, brat, beer, rare, rear, teat, tate, babe, stab, star, rase, rab, bate, rate, tare, tear, bear, sart, bart, breast, beast, baste, stare, baster, ate, eat, are, ear, bat, bet, set, eat, sea, tea, tar, rat, art, beat, rest, seat, east*: here we count seventy-eight words and syllables formed with six letters; and by the repetition of a letter, in the instance, we get still more, as *barb, tart, barber, taster, easter, tease, teaster, tartar, treat, &c.*—Pp. 37, 38.

The two grand sources of instruction, however, yet remain,—nature and the Bible. The lessons in the first are supplied by live animals, dogs, cats, or pictures of foreign animals, and by the children themselves, who are taught to observe the various parts of their bodies, their uses and abuses. Songs are introduced to keep the attention fixed. Birds, insects, stones, flowers—all are pressed into the service; and in all, the goodness of God is pointed out as a creator and preserver of mankind. We have no room for extracts from the letter on natural history, but it is extremely interesting.

The history of the Old and New Testaments is constantly alluded to; and all the important promises impressed upon the children's minds, not in an unintelligible jargon, but clearly and affectionately; and the moral cautions are carefully laid before them. Of course, the manner in which this is done must be obvious; and we shall add no more upon the subject, but that it is a favourite occupation in these schools to be hearing the scriptural histories.

We shall now take leave of this little work with a very few words on the system and its effects. We could not, of course, expect to do justice to it within the limits of an article; and the best service we could do it would perhaps be the recommending of these very interesting letters to our readers; but the general principles of education on which this system is founded have been so miserably neglected in England, that we should hardly be justified in omitting to state the beneficial effects which experience demonstrates to follow wherever they have been recognised. The principal advantages that appear to us to result, are the zeal for acknowledgment which springs up in the infant mind, for the love of the acquisition itself, and the comprehensive because fundamental expansion of their notions, by the habit of mathematical instruction, and the necessity of observing all things with accuracy for themselves. It was the high philosophy of ancient Greece to make men love excellence rather than to excel; and when a different system was introduced by the sophists, it excited the indignation and called forth the repeated attacks of the most gigantic intellect of the Gentile world. Plato knew that in that seed of evil was contained all the misery and degradation which would overshadow the latter days of Athens, and finally sweep her away from the face of the civilised world. In these schools the same wise plan is pursued; emulation is unheard of: the child is suffered to observe for itself, and is induced to do so by the pleasure it derives from observation.

The following instance came under our own

observation at a school on this plan. The subject of conversation was the industry of the beaver, and by a natural transition the bee was mentioned. On the question being asked, why the bee was industrious, one of the children replied, 'Because it makes honey;' but one little girl said, 'No, the bee does not make honey, it only collects it.' Such an early habit of observation, we contend, is preferable to all the knowledge which can be crammed into the memory from without: holding with the venerable Harris, a man worthy of a better age than the one he belonged to, that the mind is not like a stagnant tank, to be recipient to any thing that may be poured into it; but like a stately tree, which, however it may be influenced by the climate and the soil in which it grows, puts forth its branches and its leaves only by the spirit of life which is within it.

YESTERDAY IN IRELAND.

Yesterday in Ireland. By the Author of 'To-day in Ireland.' 3 vols. 8vo. Colburn. London, 1829.

THIS work is, in every respect, inferior to the Irish novel which we have been reviewing during the last two weeks;—inferior in feeling, inferior in expression, inferior in description, above all, inferior in dramatical power. The author of 'The Munster Festivals,' we do not hesitate to say, has, by his last work, established his claim to be considered a man of genius; and our readers are aware that we are not in the habit of using that phrase lightly, or without attaching to it a very definite and a very high meaning. The author of 'Yesterday in Ireland' is not, and never will be, a man of genius; and, very probably, it is not the distinction which he most covets. His chief ambition, we should apprehend from his former work, which was considerably superior to the present, is to be thought a very philosophical, gentlemanlike person, who finds materials for amusement in the follies of all the parties by whom his country is distracted, but who would consider it vulgar to take any deep interest in any of them. Such a scribe is a very agreeable companion, when he selects his work from that state of society in which the characters are all exceedingly regular, well-behaved, and dull; because we think every one exceedingly clever who is able, and we are exceedingly obliged to him that he is willing, to find entertainment for us, where we could not find it for ourselves. But we neither can commend the ingenuity nor the taste of the man who, professing to describe a state of strong turbid feeling, such as is now, and always has been, the state of the Irish people, makes his narrative a scoffing record of the absurdities of which the different personages in his narrative are guilty;—no this ingenuity—for there needs no wit to tell us that men, when they are mad, commit many laughable actions, and not his taste—for we are not the least glad to have the interest we take in every narrative which exhibits living human nature, distracted by a reference to some of its petty ebullitions. The man who can impregnate himself with the spirit of which he records the manifestations, who has the least reserve for his own pride and personality, is the man who is the fittest to write on such themes, and who, in the long run, will find the most readers.

In his 'To-day in Ireland,' this author showed that, with considerable powers of observation and great power of writing, he had no power of entering into the spirit of the times. We were prepared, therefore, for a still greater failure when he attempted the far more difficult task of embodying in a work of fiction the character of a departed age; and it has turned out as we expected. 'Corramahon' is an attempt to describe Ireland at the time of the Revolution of 1688, in the spirit and language of the nineteenth century. In this view it is perfectly tame and worthless; but there is some interest in the story, which will suffice, with the name and puffs of the publisher, to secure the book a respectable circulation. We will not destroy the best chance of the writer, by giving an analysis of the

plot, but will give the following description of a castle and the storming of it, which will not interfere with the interest our readers may hereafter take in it:

'Descending a hill, the path followed by the band and their captive arrived on the brink of an extensive bog, one of those huge, dark morasses, that lie like lakes surrounded by a shore and limit of hill and high ground. It was immense, extending to the very horizon. Nothing was distinguishable in the shape of hamlet or habitation; no trace of man, in fine, upon its dangerous-seeming surface. O'More's followers nevertheless prepared to venture, or more probably to plunge into it. The horses ridden hitherto by Lady Auchinleck and young O'Mahon were dismounted with, and an osier-seat of very scanty size, borne by two men, was henceforth to serve the lady in lieu of a palfrey.

'This is a thick prison-wall to escape through,' was her remark.

'And an equally impenetrable fortress-wall,' said Garret; 'tis O'More's last defence.'

'They entered the bog, and traversed it with little less speed than they had passed the high and dry land of the hills. It was evident that there once had been a causeway leading through the morass; vestiges of it here and there remained; but it had been broken up, not only by neglect, but by precaution, for the sake of precluding the approach of enemy or stranger. The circuitous path pursued by the band, showed that a straight-forward one was impracticable, and to choose the practicable evidently required a skill that only those habituated to the region possessed. The scene was not absolutely new to Lady Auchinleck, who had traversed many such in her peregrinations. But it brought to her imagination, now and then, the passage of the African deserts, which the present scene almost equalled in wild extent, monotony, and danger. There indeed all was drought, here all damp—the sky of one lofty and cloudless, that of the other brown and low; there were, however, points of resemblance, equal solitude, for instance; for the mournful cry of the curlew, the only sound of life in the Irish morass, rather increased than broke upon the loneliness and stillness which it momentarily interrupted.

'Weariness at length overcame the captive lady, and fatigue outweighed even her terrors; and she longed to arrive at the castle or cave, or whatever might be the abode or lurking-place of Ulick. She inquired, and was told that it stood in the midst of the very morass she traversed. "Quelle site!" was her exclamation—"what a situation for a chieftain's residence!" At length they were enabled to point out to her something like a rocky mound, rising like an island, firm and somewhat above the shaking and insecure mixture of land and water that surrounded it. Approaching nearer, she was enabled to form a perfect idea of this bog-encircled den, which the Rapparee, in his condescension, meditated to share with the daughter and the widow of courtly nobles.

'A rocky interval or space arose in the midst of the bog, and on this a castle had been built in ancient times, probably by the old O'Mores, as the Rapparee boasted. The marks of several causeways, which near it were undestroyed, diverging towards different points of the distant mainland, bore witness to its respectability; as indeed did the extent of the ruins likewise. The castle had been razed, its towers and battlements and chambers all laid low, and nought of it remained, save the arched under-story, as it were, which in old times had served as the cellar of the prison, but which now formed the sole chamber; banqueting-hall, and abode of the O'More. A victorious enemy, perhaps the English, had razed it, but had found it impossible to destroy the archwork and the foundations. On these arches the ruins of the ancient superstructure still rested, mouldered and returned to clay, and covered with a green sward, which rose in irregular mounds, and which gave it the appearance of an ancient cemetery, such as one might expect to meet in the steppes of Tartary.

'At present, however, it wore a more lively appearance; a crowd of women being visible in and before it, who danced, and sung, and vociferated in a manner that betokened glee, though of the fury kind. These, the foremost of whom were honoured as the female relatives of O'More, advanced to meet the band and the lady it bore, with somewhat the appearance of, or attempt at, a procession. Uncouth as they were, the captive was gladdened at the sight of her own sex, and in number, in the rude retreat; and their welcome, in Irish-English, was of a courteous and complimentary, and

even an elegant turn, that rather contrasted with appearances.

'At the threshold of the rocky isle she was met by the young chieftain himself, in no unprincely garb, mantled and adorned with chain and collar. His very beard was trimmed, perhaps for the first time, and it was evident that the savage had taken all pains to humanize himself. Lady Auchinlech's surprise checked the burst of indignation and reproach, that she had meditated to pour forth, and that she had been conning. She regained some confidence on beholding the reverence with which, though a captive, she was welcomed. The rude Rapparee's hand even trembled, as he extended it to receive the high-born and beautiful lady; and the latter instantly knew her power, generally enough acknowledged, indeed; she calmed her fears accordingly, and composed every feeling and feature into the expression of proud and somewhat offended dignity.

'O'More made the humblest and blandest salutations to the widow of Lord Auchinlech; and she received them haughtily, thanking him condescendingly for the trouble he had taken in her liberation from the hands of the Williamites; for which, she added, neither Lewis of Frases, nor James of England, would fail to requite him. O'More answered, that with her, rather than with any potentates, rested the recompense he sought, and he straight poured forth his homage and heart with an humbleness and tenderness as exaggerated, as had been his rudeness to Rachel O'Mahon. Ignorance knows no medium; in both cases he was unlucky, as each extreme offered each lady the opportunity and the means to rid themselves of an unwelcome suitor. The lady received the Rapparee's vows as an homage of course, and, in fact, part of her reception. To hear them nothing moved her, not more than a common salutation. And O'More was at a loss how to convince her of his seriousness, without at once rushing to the extreme of violence, which he had pre-determined to avoid as a faulty mode of wooing.

"We will leave it to time," thought he, "especially as something else than gallantry presses."

'He therefore reassured the lady of his intentions to share with her his power and chieftaincy, with a tone too of peremptoriness that glided into his speech; and she parried the attack with predetermined apathy. The quarrel betwixt them was postponed. The chieftain looking to a successful defence to put security, as well as a noble wife, completely in his power, and the lady looking to the hour of strife and bustle, as the moment which best afforded the means of escape.

'With the arrival of reinforcements to the troops of Catherlogh, in the mean time, the Knight of Palestine had shaken off his inactivity and paternal sorrow. The little army was mustered; its ranks, or rather its rear, swelled with many volunteers from amongst the loyal burgesses of Catherlogh, who were eager to wash away the affront and reproach of want of vigilance and activity put upon them by the rescue of the important prisoner from Whittle's on the preceding night. Deloraine's regiment of horse were also at the rendezvous, and some of its officers were, for reasons not publicly known, all as eager as the citizens, to take vengeance upon the pestilent Rapparee.

'They began their march, and entered upon the hostile country without, as usual, meeting with any resistance. Neither pass, nor ravine, nor rock, nor opposing hill-side—no ground, however apt and opportune for defence, showed any symptoms of a Rapparee. The outlaw population seemed to have taken flight for some similar region, to return, no doubt, when their own wilds were again rid of their enemies. Bodies of troops had certainly been sent in other quarters, to intercept the fugitives, and shut in O'More's people in their bogs and hills; but over such an extent the performance of such a duty was impossible. The troops advanced, however; the Knight of Palestine determined this once to reach and destroy the den of the ruffian, that had so long been to him a dangerous and unpunished neighbour. Different tracks were pursued by different bodies of the invaders; no one, however, unseen by, or uncommunicating with the others; and, the little army having thus traversed a part of the region without encountering an enemy, united again its different bands on the verge of the morass, not many hours before crossed by Lady Auchinlech and her captors.

'The leaders were of course not ignorant of the existence and situation of the Rapparee's den. Sir Christopher had often ardently desired to pay it a hostile visit; but force sufficient had never been at his command, until the late outrage, or repeated outrages

of O'More, joined with the fears of Government of an approaching insurrection, had put into the Knight's power the means of gratifying his wish.

'The line of the causeways, of two of them at least, was chosen, and the troops advanced into the morass, Deloraine's horse being compelled to remain behind on the high and dry shore, where they were ordered to cut off the retreat of fugitives. For this purpose they extended their patrol as far round the brink as they could without separating. It was a difficult march for the soldiers, who soon lost all appearance of order, and scrambled on as they might, leaving divers stragglers of their body stuck beyond all possibility of extrication. Here they first encountered opposition. A fire was of a sudden opened upon them, seemingly from the very bog itself, which it seemed idle to reply to. The men of O'More in ambush, were all, in fact, up to their chins in water, their hands and heads, and the arms they bore, being among the rushes; and, as a kind of camp entrenchment thrown up to protect each submerged band, a large bog-fosse was formed and placed in front of their ambush, and all approach to it so intersected and insecure, that it was seldom and with difficulty that the soldiers could reach their enemies, and even in some cases when they had reached, they found it as difficult to find them. The troops had great numbers of wounded in this ugly warfare; and now and then when the head of a Rapparee was despoiled and seized, the half-drowned wretch pulled up by his wild shock hair, and instantly slain, he was reconsigned to his bog-hole.

'Despite of these impediments, that occurred as often as the ground lent itself to them, the troops and the Knight made progress, and Ulick O'More was in despair. He had resolved with a devoted band of his followers to charge upon the causeway his advancing foes; but their marching in two bodies and in such number, disconcerted him; while in combat with one, his retreat and strong-hold would be taken by the other; nothing remained but flight.

'His wooing was thus seriously interrupted. Some time before the near approach of the red-coated enemies, he had intrusted his fair prisoner once more to Garrett O'Mahon's keeping and guidance, bidding him make for the hills opposite those occupied by the soldiery, and thence proceed to await him at an appointed spot, far out of the reach of the Williamites. The order for her escape was given in time. In their traversing the rest of the bog, they could perceive the troopers of Deloraine's extending their numbers around it; and, when they gained the brink, and horses were procured for them, some of the leading horsemen, amongst whom an officer was conspicuous, spurred towards them, attracted, no doubt, by the female habit, and the seeming urgency of the lady's flight.

'Willomer at once conjectured who it was, and, although he was no longer excited by the momentary humour, in which wine and the councils of Morley had the greatest share of the preceding evening, to win and serve the beautiful widow, still, for the sake of vengeance upon the Rapparee, he would have been glad to capture and rescue her back from his hands. Lady Auchinlech, too, might have guessed at this, and favoured it by lingering, as any fate was preferable to the thralldom of Ulick, especially when in discomfiture and ill-humour. Garrett O'Mahon, however, during the last traverse, had shown symptoms of an inclination to throw off his lately-assumed allegiance to O'More—ties which common discomfiture, in his ideas, had broken. When Lady Auchinlech had proposed the escape of both to the coast of Waterford, and thence to France, young O'Mahon did not seem averse to at once putting himself in safety, and proceeding to the French King's or the Stuarts' Court with a high claim for a gallant character and for reward, in having rescued a lady known and admired in both. To be the companion and protector of the said lady was not without its charm; and the selfish youth determined to forsake his family,—whom, nevertheless, he could in no wise aid by remaining at home,—as well as O'More, in pursuance of his own immediate interest and safety. Even a farewell was not taken by him; and, instead of betaking themselves to the rendezvous appointed by Ulick in the far hills, to which he intended to retreat, Garrett O'Mahon and Lady Auchinlech soon turned southwards, in the direction of Waterford, and escaped from the immediate danger of being intercepted with more good fortune than had attended the lady's former attempt of the kind under the protection of Chef Roger.

'Ulick O'More, in the mean time, retreated also from the seat of his forefathers; so he dignified his cave; and he lamented its approaching profanation by the feet of the Saxon enemy, in terms far more exag-

gerated and poetical and pathetic, than he made use of some hours after, when informed of the treachery of Garrett and the escape of his destined bride. He retreated, lion-like, exchanging shots and blows with his pursuers. These soon planted their flag upon the topmost mound of O'More's retreat, though, upon looking back to their long line of disabled, and dead, and straggling, with which the morass was covered, they might very well remark that the possession of the outlaw's den had been dearly purchased. The Knight resolved to complete its destruction. Its foundations and arches were undermined and bored; the ammunition, useless against a fast-flying enemy, was copiously employed for these purposes of vengeance, which would endure as a trophy of success. The Williamites retired from the rocky mound; and in a few minutes all that remained of the ancient Castle of the Chief, or the modern cave of the Rapparees, was shattered into a black and ruined mass.'—Vol. ii. pp. 120—130.

FLOWERS OF FANCY.

Flowers of Fancy, exhibited in a Collection of Similes, taken from various Authors, and alphabetically arranged. By Henry Schultes. 8vo. Longman and Co. London, 1829.

THE avowed design of this benevolent work is to assist young authors in enriching their styles. It appeared to the author, much reflecting upon the inconvenience which the writers for the Minerva Press have hitherto suffered, in being obliged to hunt for their figures of speech through a host of volumes, troublesome to read and most expensive to buy, that he should be doing a signal service to mankind, if he presented them, in one moderate-sized octavo volume, with whatever, in the celebrated authors of Great Britain, was likely to be applicable to their purposes. It certainly is somewhat hard, that a young gentleman, about to write a heroic poem or a fashionable novel, should be obliged to toil through the twelve volumes of Shakspeare for the purpose of finding fit words and similes, when, perhaps, there are not twelve passages in all these volumes which would do him the least service. This class of the community is under no ordinary obligations to Mr. Henry Schultes, who has not only submitted to this drudgery for their sakes, but has also taken the pains to study the other most distinguished classics of our land, as, for instance, (not to mention Milton and Blackmore,) Mr. John Bowring, Mr. Robert Montgomery, Mr. Leigh Hunt, Miss Lucy Aikin, and the Oxford Sausage.

That there must have been great difficulties in the execution of this meritorious book, our readers will perceive, when we have shown, by a quotation from Mr. Schultes's preface, to what a high standard of excellence in composition he wishes to conduct the writers for Mr. Newman:

'If it were possible to establish a criterion in literature whereby philological taste might be regulated, it would be easy to prescribe rules for deciding at once on literary merit, and awarding its just degree of praise: but, whilst a diversity of opinion continues to prevail amongst mankind, the renown of a writer must necessarily depend more upon fortuitous events and the ruling fashion of the age, than upon the brilliance of his wit, or the force of his genius, as the example of Milton and others may serve to prove. The truth of this remark is so universally acknowledged, that every aspirant for public approbation now endeavours to discover some new path which may lead him to distinction, and hopes, through the medium of novelty, originality, or eccentricity, to gain popular fame. Some authors seek reputation by adopting a conciseness of style; others court regard by an elaborate amplification of their topics; and a few expect to attract notice by a partial revival of obsolete phraseology. Popularity, however, seems, conformably with the existing rules of philology, to be most deservedly due to him who, following the light of truth, is enabled to convey his ideas with clearness into the minds of others, and who can occasionally illustrate his propositions by apposite comparisons, formed by allusion to natural and familiar objects of the senses.'—Pp. v., vi.

Now our readers will perceive, that, much as it conduces 'to popularity,' according to 'the existing rules of philology,' that a man should 'follow the light of truth,' and illustrate his proposi-

tions by apposite comparisons,' that there is one great difficulty in the way of his attaining popularity by this means; namely, that all the apt comparisons have been exhausted beforehand. If this be the case, as there is too much reason to fear, the publication of such a work as the present, instead of being useful to those for whom it was designed, would operate as a serious discouragement to them. For, as Mr. Schultes remarks to his feeling manner:

'Perhaps nothing can be more mortifying to a writer, after he has published (as his own creation) that which he considers to be a happy comparison, to discover that the same incidents, expressed partially or wholly in the same language, had been already given to the world by various predecessors.'—P. 8.

But the comprehensive and sagacious mind of Mr. Schultes suggested a remedy for this great inconvenience. 'True,' he thought within himself, 'if I record not only Shakespeare's comparisons, but likewise that which is compared, the tender conscience of the author of "The Fatal Discovery" or "Clorinda's Cave," may consider it a plagiarism to import either into his work.' But is this necessary, is it even convenient? Certainly not. If an author has a good simile provided for him, he will fit it on as occasion requires. Tell a practised writer that Ceres speaks in "The Tempest" of "a rich scarf to the proud earth," and he will not the least thank you for quoting:

"And with each end of thy blue bow dost crown
My bosky acres and my unshrubbed down,
Rich scarf to my proud earth."

Mention to him that something is, somewhere in Shakespeare, called 'the governess of the floods,' and he will think it superfluous to ask what that something is. Allude to—

"The double cherry seeming parted,
But yet a union in partition,"—

and what can it signify to him, that in its original application, it referred to the early friendship of two fair-stricken maidens of Athens. The use of a simile is, that it may be turned to all purposes; and Mr. Schultes has shown admirable judgment in acting upon this principle. He has called his book 'Flowers of Fancy,' and evidently thinking that the flowers were much better without the stalks, he has so arranged his dictionary that a writer, as soon as he has written down the commonest adjective, has only to turn to the first letter, and he will find twenty apt comparisons for that case made and provided. We will quote a page at random, from which our readers will be able to judge of the great merit of the work in this respect.

'PLEASING as the day. *Poetical Recreations*.—as dawn of day. *Gildon*.—as light to the eyes. *Atterbury*.—as the rosy morn whose lovely cheeks look smiling on the day. *W. Hemings*. Pleasing and gay as the sweet smiling summer. *W. Hett*.—More pleasing than a summer's morn. *J. Clare*.—Pleasing as sunshine to the bee. *Gay*.—as winter suns or summer shade. *Dryden*.—Pleasing to my sense as sleep after a tedious watching. *Glaphorne*.—as dreams of health to the diseased. *Jacob*.—as the pipe of Mercury which charmed the hundred eyes of watchful Argus, and enforced him to sleep. *Play, Lear*.—as hope. *Play, Momus turned Fabulist*.—as hope to the despairing penitent. *Jacob*.

'PLENTY as rabbits in a warren. *Fielding*.—as blackberries. *Centlivre, Sir W. Scott*.—as nettles. *Play, Plymouth in an uproar*.—as hops. *M. P. Andrews*.

'PLIABLE as an osier. *Lacy, J. Worsdale*.—as a twig. *W. Davies*.

'PLIANT as a hazel stick. *Play, Interlude of Youth*.—as the shoots of a young tree in vernal flower. *T. Moore*.—More pliant than wax. *John Baillie*.

'PLUMP as a partridge. *E. Ravenscroft, Pope, and others*.—Plump and shy as a partridge. *Sir W. Scott*.—Plump as a barn-door chicken. *P. Pladar*.—as a puffin. *Farquhar*.—as a cherry. *Herrick*.—as grapes. *T. Killigrew; Play, Psyche*.—as grapes after showers. *Behn*.—Plump and grey as a gooseberry. *R. Burns*.—Plump and juicy as a damson. *E. Ward*.—Plump as stalled theology. *E. Young*.

'POINT to him as naturally as the needle to the north. *Young Hypocrite, in Foot's Comic Theatre*.—Pointed

as a prodigy. *Rawlins*.—Sharply pointed as a thorn. *Herrick*.

'POISON like a scorpion's dart. *Beattie*.

'POISONOUS as the serpent. *Mirandola*.—as an asp's tooth. *Moses Mendez*.

'POLISHED as marble. *E. Young*.

'POLITE as elegance. *Savage*.

'PONDEROUS. More ponderous than the sand that lies upon the new forsaken shore. *Quarles*.

The opinions of a person who could frame such a scheme as this, upon all literary questions, must be worthy of record; and our readers will, we are sure, attach still further weight to Mr. Schultes's authority, when informed that he talks of 'two of our most eminent writers, Shakespeare and Addison,' that he considers the great models 'of purity of language and gracefulness of style,' are Tillotson and Robertson, and that he objects to the similes of joys 'being bright as April flowers,' and of 'empires rising like an exhalation,' because, as he facetiously observes, they evince an erroneous judgment, not unlike that of the blind man who thought the colour of scarlet resembled the sound of trumpet.

Commending Mr. Schultes's book to the patronage of the scribes in Grub-street, for whose use it is designed, we will avail ourselves of its publication to say a few words upon the point which it naturally suggests; namely, the merits and defects of metaphorical writings, and the alleged prevalence of it in certain writings of our own day. But this is matter for a future article.

NEW MUSIC.

The favourite Airs in Pacini's Opera, 'L'Ultimo Giorno di Pompei,' arranged for two Performers on the Piano-Forte, by A. Diabelli. Book II. Boosey and Co.

THIS second Book comprises as much interesting variety as the first; (noticed in the *Athenæum*, No. 63, page 8;) and, as we are now given to understand that it is highly probable the Opera will be performed at the King's Theatre this season, the arrangement here offered will become highly acceptable, and most likely popular. The following pieces form the second Book: 'S'Innamorati all'etra,' a long showy chorus, à la Rossini, in A common time, 'Oh! mio crudele affetto,' Aria di Appio, a very pleasing andante cantabile in C 6-8 time, followed by an allegretto marziale, and 'Ballabile' for a conclusion. We repeat, that they are well arranged, and unusually well brought out.

Fantasia Drammatica, No 1, or, 'Airs from Mozart's Opera, 'Così fan tutte,' arranged for the Piano-Forte, with an accompaniment for the Flute (ad lib.), and dedicated to Miss Peach, (of Ketteringham Hall, Norfolk,) by J. B. Cramer. Cramer and Co.

It would be a work of supererogation to dilate upon the excellence of a piece, bearing upon its title the conjoint names of Mozart and Cramer; we can, therefore, merely add, that it exhibits all the beauty, melody, and elegance of the former, united to the expression, taste, and judgment of the latter. It is arranged quite in a familiar style, is very teachable, and, therefore, very serviceable, and comprises the following variety of airs: Introduzione in Bb 2-4, 'Prenderò quel Brunettino'; 'Bella vita Militar,' as a Spiritoso in F; 'Eco vi il medico,' in G; the graceful air 'E Amore un ladroncello,' in E flat; and, as a finale, 'Donne mie la fate a tanti.'

A Heart for Sale, Song composed by Samue. Henshall of Liverpool. Boosey and Co.

THE music is more estimable than the words, which are composed of such mawkish stuff as is generally given to Miss Love or Madame Vestris to sing. Mr. Henshall seems to be a well-educated musician; and we hope to see his music another time 'wedded' to better verse.

Rondo Polacca, for the Piano-Forte, composed and dedicated to Zechariah Buck, Esq., (Organist of Norwich Cathedral), by Ch. Chabier, Op. 70. Cocks and Co.

THIS Polacca is the first work we have met with of the above writer; although, by his having arrived at of op. 70, he must, we presume, be a successful and popular composer upon the Continent. The present piece exhibits a vast deal of talent and industry, shown by the careful attention he has paid to punctuation and expres-

sion; and, as in the works of Herz, &c., it requires a tolerable Italian scholar to understand all his directions as to style and character. For example: he inserts such unusual phrases and words as the following: 'Semplicemente ed un poco ritenuto,' 'Malinconicamente,' 'Dolcissimo e legato,' 'Leggerissimo,' 'Grandioso,' 'Pomposo,' 'Risoluti,' &c. &c., in addition to all other words used in musical phraseology. The work, however, is of a first-rate excellence, and Chabier will, without doubt, become a popular writer for the piano-forte in this country. His style is bold, showy, and brilliant.

'Love and the Bird,' or 'Qui me negligé me perd,' the favourite Ballad Proverb sung by Mrs. Yates at the Adelphi Theatre, in the popular Drama 'Monsieur Mallet, or, My Daughter's Letter,' by W. T. Moncrieff, composed by John Barnett. Published by the Authors.

FROM the long-continued popularity of 'Monsieur Mallet,' this Ballad must be pretty well known already; but to those who have not heard it in the piece, we beg to say, that it is a bagatelle of an unusually cheerful, pleasing and familiar character. It is a Scherzoso in C. 6-8 time, written within the limited compass of E on the first and F on the fifth lines, and, consequently, applicable to voices in general.

'The Christmas Box,' a new annual or musical Souvenir, a Fantasia for the Piano-Forte, formed of reminiscences of the most favourite Gems of Melody and Harmony, that have lately become popular, collated, arranged, and composed by N. B. Challoner. Mayhew and Co.

THE most successful publications for the piano-forte of the present day are Divertimentos or Fantasias, &c., arranged upon a variety of favourite and well-known melodies, and which species of composition (or rather compilation) is highly popular upon the Continent under the title of Pot Pourri, Melange, Olla podrida, &c.; and the one now offered to notice is the newest and freshest thing of the sort; for, in a pleasing, and rather familiar, manner, the following excellent variety is offered in 'The Christmas Box': viz. after an introduction occupying one page, (a Maestoso in F, common time,) we are presented with Madame Pasta's express favourite, 'Ah! che forse,' and 'Vedrai quest'anima.' This, by an appropriate episode, is followed by Made-moiselle Sontag's favourite 'Wer horte wohl jemah mich klagen,' from Weigel's Opera 'The Swiss Family.' This naturally leads into a very pleasing adaptation of the well-known Tyrolese melody, 'The Swiss Boy,' which is well contrasted by Haydn's beautiful hymn 'Gott erhalte Franz den Kayer,' now daily performing by the Bohemian Brothers, and in which is introduced Dr. Haydn's very beautiful modulations, published by himself in his Violin Quartets. As a contrast to this, the French air, 'Au clair de la lune,' forms a cheerful Finale, in which is introduced Madame Stockhausen's favourite, 'Souvenir de la Suisse,' the Swiss Drover Boy, as sung by her at the Oratorio last Friday evening. The whole presents much taste, variety, and amusement, well incorporated.

We understand that Mr. Buckingham's lectures at Birmingham were attended by a numerous, respectable, and intelligent audience; at first there were about ninety persons present, and towards the close three hundred. Mr. Buckingham is now delivering his course of lectures at Bristol.

The *Lobelia inflata*, a plant that grows spontaneously in different parts of North America, has lately been found a specific for Asthma. Dr. Cutler, an asthmatic, having been effectually cured by it, has published a treatise on its virtues; and Dr. Andrew, of Glasgow, has also found it to merit the character Dr. Cutler and other eminent physicians have given it. Dr. Robinson, in his popular work on the tonic properties of the Round-leaf Cornel, advertised in our present Number, has also given an account of its peculiar antispasmodic properties, with full directions for its use.

THE MUSEUM OF THOUGHTS.

WHEN every thing else in the world has a museum, when birds and beasts and fishes and creeping things, and stones and bones, are all, either jointly or severally, endowed with museums in most of the principal cities of Europe, why should one hesitate to set up a museum for the peculiar patrimony of the Muses, for those thoughts which they themselves have breathed into the soul of man? The name, it is true, has already been often given to literary collections of various sorts; but in most cases it has been without the performance of any enthusiastic rites to propitiate the fair Goddesses, who, in consequence, have not deigned to honour the upstart edifice with their presence: and thus it has come to pass that the contents of such museums have not seldom been drier and more marrowless than an antediluvian bone, and duller and heavier and less instructive than a stone. After looking into some of them, one might almost suppose that the original meaning of the word had been totally forgotten, and that it had been taken in the sense assigned to it by the later Greeks, who, when the Muses had abandoned their sophisticated prose-ridden land, transferred the name of Museum to a tessellated, or, as we call it, a Mosaic pavement: and, in fact, their poetry, or what they called such, in those days was little else; for, strange as it may seem, Gray's notion, that poetry is a kind of synonym for patchwork, and that the Muses are in reality only artificers in Mosaic, has been a delusion of frequent recurrence, a sort of tertian ague, in the history of the human mind; and the atomical, as contradistinguished from the organical, theory of poetry has mostly gone hand in hand with the other members of the atomical ochlocracy. That the fate of the present collection will be more auspicious, and that it will be less unworthy of its noble name, may be hoped without presumption, seeing that the writers, from whom the samples are to be culled, will for the most part be those on whose births the Muses have smiled, and whose genius has heard the nearer or the more distant sound of their mystical confabulations.

With such a view, the first selection shall be taken from the writings of that man who, above all the sons of men, at least in our times, has been the favourite of the whole intellectual sisterhood, and whom they have gifted with the same clearness of insight into every region of speculation, whether it be the crystallography of minerals or of minds, the botany of herbs or of hearts. It will be a duty and a pleasure to revisit him again and again; for there is scarcely any track of thought which he has not trod, and the wealth he has brought back with him will not easily be drained. Indeed, the works of a great poet are as inexhaustible as the sea: you may take all you can out of it, and it will not be missed: nay, the more you have already learnt from him, the more you will still be able to learn from him. Among the subjects that have engaged much of Goëthe's attention, the fine arts, as we see from his biography, have held a principal place from his very childhood; and, as some degree of unity ought always to be observable in every department of a museum, the remarks collected in the present number will all bear upon them more or less.

I. GOETHE.

The graphic arts—as painting and sculpture may be termed, to distinguish them from the rest of the fine arts—have to deal with the objects of vision, with the outward manifestation of the workings of nature. Whatever is purely natural, and produces a feeling of moral complacency, we call *naïve*. Hence naïve subjects are the proper province of art, its business being to invest nature with moral expression: and those subjects are the most favourable, which point both ways, and combine the expression of natural with that of moral feeling.

The naïve being natural is akin to the real. If the real has no moral import, it is vulgar.

Art in itself and of itself is noble; the artist therefore is not afraid of dealing with a thing because it is vulgar. Nay in the very act of appropriating it, he ennobles it; and thus do we often see the greatest artists boldly exercising their prerogative.

Every artist has a germ of audacity in him; for no talent can exist without it: and this becomes especially restive, when people would confine him within bounds which he is capable of passing, and would hire and use him for their own narrow ends.

Even in these respects, Raphael is, of all modern artists, the purest. He is always naïve: there is never any struggle in his pictures between the exhibition of real nature and the expression of moral and religious feeling. The tapestry representing the adoration of the Magi, a composition of surpassing richness and excellence, places a whole world before us, from the venerable form of the oldest of the kings down to the Moors and the monkeys on camel-back munching their apples. In the picture, it was also allowable to represent St. Joseph with perfect naïvety, as a foster-father looking with delight on the gifts that are brought to the child.

St. Joseph has always been an important personage with painters. The Byzantines, who cannot be accused of being too prodigal of humour, constantly give him an expression of uneasiness in their pictures of the Nativity. The child is lying in the manger; the cattle are looking on, amazed, in the room of their hay, to find a living babe of celestial beauty. Angels are doing honour to the new comers: his mother sits silently beside him: but St. Joseph is sitting apart, and turning his head with a look of vexation toward the singular scene.

Humour is one of the elements of genius; but, when it becomes predominant, only a substitute for genius. It accompanies art in its decline, injures, and finally extinguishes it.

The highest aim of the graphic arts is twofold: to beautify some determinate spot, or to produce an object beautiful in itself without reference to any particular locality: and this is the source of what are called the rules of composition. In both respects the Greeks, and the Romans after them, were masters: their single statues exist mostly in pure indeterminate space, while the reliefs for the pediment and friezes of the Parthenon were designed and adapted for their particular situation. So in modern times the frescoes in the Sistine chapel, the Stanze in the Vatican, Raphael's Cupid and Psyche, his Galatea and Hannibal Caracci's, were all executed with reference to the spot they were to embellish. So were the great altar-pieces, which lose much of their appropriateness, and are greatly hurt, if not spoiled, by being transferred from churches to galleries. To take an instance, Leonardo's Last Supper can never be duly appreciated, without considering the place it was to adorn: this is the very point in which the artist manifested his admirable judgment. It was not possible to devise a more suitable or nobler ornament for a refectory, than that parting supper which was to be held sacred by the whole world for ever. As one entered the hall, the prior's table stood opposite at the upper end: on each side were the tables for the monks, all raised a step from the floor: and on turning round to the fourth side, one saw the fourth table represented over the low doorway, with Christ and his disciples sitting at it, just as if they formed a part of the company. It must have been most impressive at mealtimes, to see the prior's table and the Lord's facing each other, and the brothers at their tables enclosed between the two. And this very circumstance compelled the judicious artist to take the

tables of the monks for his models. No doubt too the table-cloth with its puckered folds, its regular stripes, and its knotted corners, came from the laundry of the convent. The dishes, plates, cups, and other utensils were likewise copied from those used by the monks. Here accordingly the painter's business was not to portray the uncertain obsolete manners of antiquity. It would have been extremely ill-suited to such a place to have represented the holy company lying upon couches. No! they were to be brought immediately before us: Christ was to eat his supper along with the Dominicans at Milan.

What an arduous, nay almost audacious attempt it is, to make the outward form exhibit the workings of the inward spirit, may easily be perceived, if we reflect that nature in all her operations proceeds outward from within, and is forced to furnish herself with an infinite multitude of means, before she becomes able, after numberless various experiments, to develop such organs, one out of the other and along with it, as are requisite for a form like the human: and although this form does indeed give an external manifestation to the highest internal perfections, it seems rather to increase the entanglement of the mystery behind which nature conceals herself, than to solve it. And yet to make the outward a faithful exponent of the inward, a translucent veil for the soul, has been the chief and only desire of the greatest masters in art: they not only endeavoured so to image forth the idea of their subject as to make its truth strike the spectator, but the image was to stand in the room of nature herself, nay, as an object of vision, was to surpass her. Now this, in the first place, made it necessary to give the details with the utmost minuteness, which could not be effected except by degrees; and next, it was indispensable that the artist should have the power of re-touching and correcting; and both these advantages and a number of others were afforded by the invention of oil-painting.

It has long been admitted that none but the greatest masters can succeed in representing human faces of a colossal size in painting. The human form, and more especially the countenance, is confined by the laws of nature within a certain space; and only when so confined does it appear regular, expressive, handsome, or intelligent. Let any one look at himself in a magnifying-glass, and he will be scared by the rude inanimate Medusa-like mass of flesh. Something similar is experienced by artists who have to portray a face of enormous size. The life of a picture arises from the accuracy of its details, from the execution of all the minute parts: and how are we to find any minute parts, when every part is distended to the dimensions of a whole?

The older Florentine and Siennese schools departed from the meagre standard forms of the Byzantines, by introducing portraits every where into their pictures: and this did well enough, their subjects being of so placid a cast, that the personages introduced might be allowed to retain their composure. Such subjects as a company of holy men, an assembly listening to a sermon, a collecting of alms, the burial of a pious Christian, do not require any expression in the bystanders beyond what may easily be put into any naturally intelligent face. But as soon as life, motion, passion were required, the difficulty became apparent, more particularly where the object was not to represent persons of similar character together, but persons of the most opposite character in contrast: and thus it is said that Leonardo never finished the heads of Judas and of the Saviour in his Last Supper: for both are purely ideal, and are not to be seen with the eye. Hence in aftertimes, artists of great talents took an easier course, and let their pencil hover to and fro between the peculiarities of real nature,

and the universality of their inborn idea; and thus they moved freely from earth to heaven, and from heaven back again to earth.

The practice of copying pictures did not begin to prevail, until it was acknowledged by all that art had reached its perfection; when persons of inferior talents, beholding the works of the great masters, could not but despair of producing any thing comparable to them from their own resources, either by attempting to imitate nature or to embody an idea; hence painting, sinking from a creative into a mechanical art, began to copy its own productions. In the fifteenth century and the one before it, artists had too exalted a conception of their own dignity and that of their art, and would not readily submit to give repetitions of what others had invented. If the counterpart of a picture was required, from religious or other motives, they contented themselves with producing an inexact imitation, which only exhibited the general character of the movements and action expressed in the original, without being at all strict about the correspondence of the figures or the colours. Owing to this, no gallery, however rich, contains any copies properly so called earlier than the sixteenth century.

The principal requisite in a great composition, is, that a variety of important characters should be assembled round some central point, which should have the power of exciting them to display the peculiar features of their nature, while they are all under the sway of the same common feeling.

Every work of art should be an organised whole; that is, should consist of parts which bear a mutual relation to each other. The first condition is, that it must have a middle, a top and a bottom, a foreground and a background: these are the constituents of symmetry, which, so long as it is completely comprehensible by the understanding, may be called the lowest degree of ornamental beauty. But in proportion as the variety of the parts increases, and this primary symmetry becomes more complicated and latent, and is modified by contrasts and alterations, so as to stand before our eyes with the excitement of a mystery, but of a mystery that we can have the pleasure of seeing through, there is a proportionate increase in the gratification produced; and it becomes quite perfect, when those first elements of symmetry are entirely lost sight of, and we feel the effect that results from something accidental and spontaneous.

Even in regard to colouring, a true artist must raise the representation in his picture far above any thing that the real world can show us: for the act of seeing is affected by an infinity of casualties as well in the eye as in the object: whereas the painter paints objects according to certain laws, and makes them appear as they would do, supposing them kept distinct from one another by light and shade and colour, and seen in their most perfect visibility by a fresh and healthy eye.

It is a sorry makeshift in estimating the talents of extraordinary men, to be overhasty in deciding that at all events they must have drawn their excellencies from such or such a source. When a human being lifts up his eyes out of his childhood, he does not see nature standing before him in her pure simplicity and nakedness: for the divine faculty with which his forefathers were gifted has produced a second world within the first. Compulsory habits, ancestral usages, favourite customs, venerable traditions, precious monuments, wholesome laws, and a numerous variety of noble works of art, so encompass a man, that he is never able to distinguish what is original from what is derivative. He takes the world as he finds it, and makes use of it, and has a perfect right to do so. The name of an original artist may therefore be given to him who treats

the objects around him in a way at once peculiar, national, and consonant with the practice of his age. In speaking then of such a one, it is our duty to consider first, what his talents were, and what he made of them; next, in what state of things he was placed, so far as it supplied him with objects, with facilities, and with bents of thought and feeling: and only in the last instance are we justified in looking abroad and inquiring, not so much what he learnt from others, as how he availed himself of it. For the breath of much that is good, and pleasurable, and useful, floats over the world, and often for centuries, before it exercises any perceptible influence. We often find reason in history to wonder at the slow progress even of such dexterities as are merely mechanical. The Byzantines had the invaluable works of the Greek artists before their eyes, and yet were unable to advance beyond the wretched meagre stiffness of their drawing. And who can see any remarkable evidence in Albert Durer of his having been at Venice? that excellent artist is to be understood and explained entirely out of himself. This leads us to a kind of patriotism, that every country, every province, nay, every city may be entitled to: for as I would exalt the dignity of individual character, which shows itself in not yielding to be mastered by circumstances, but mastering and subduing them; so would I give every people, and every portion of a people, its due honour, by acknowledging that it too has a character of its own, which displays itself in the artists or other remarkable persons it gives birth to. Such is the case with Van Eyck, with Hemmeling, with Israel of Mechlin, with Luke of Leyden, with Quintin Messys: they all keep within their native region, and foreigners had hardly any influence on their talents. Then came Schoreel, Hemskerk, and others, who cultivated their talents in Italy, but notwithstanding could never cast off their national character. Whether instructed by the example of Leonardo of Correggio, of Titian, or of Michelangelo, the Netherlander still continued to be a Netherlander: nay, such is the dominion of that character, they all at length retreated within its magical circle, and rejected every foreign acquirement. Thus the highest kink of talent in the art has been evinced by Rembrandt, who found ample materials and occasions for its exercise in the objects immediately about him, without ever knowing that such persons as the Greek and Roman artists had existed in the world.

The greater the height, the majesty, and the purity attained to by the fine arts at the epoch of their highest perfection, the slower has their fall been; and even in sinking they have often rested at intervals and shone forth brightly for a while. Between the time of Phidias and of Hadrian there were six entire centuries; and who is not glad to possess a piece of sculpture belonging to the age of that emperor? Between the superhuman works of Michelangelo, which however while they surpassed humanity did violence to it, and the sheer mannerism of Spranger, there was scarcely a century: this was enough to drag art down from her constrained grandeur to an overstrained monstrosity.

The clearness and grasp of the eye is intimately allied to that of the understanding: hence, great painters have mostly been shrewd and sensible men.

A STORY WITHOUT A NAME.

CHAP. III.—VISITS TO THE PARSONAGE.

(Continued from page 138.)

FIRST of all, Mrs. Baddersly presented herself at the parsonage. Mrs. Baddersly was the wife of an Exeter gentleman who had made his fortune in one of those branches of business which form a connecting link between commerce and trade, which entitle their professors to rank themselves

with merchants without enabling them wholly to repel the familiarities of shop-keepers,—a person who, while in trade, was esteemed a very honourable guest at the table of a linen-draper who may have his shop-men at the bottom of the table, and rather an unseasonable one by a banker who may occasionally have a Lord at the top of his; yet who is always slighting the favours of the former who venerate him, and always courting the latter who despise him. Any where but in England these distinctions would be unintelligible; but, *dans le pays le plus aristocratique de l'Europe*, where the principle of aristocracy is more felt through all classes, where there is as keen a perception of the minutest difference of rank in the lowest orders of society as in the highest, where a labourer, who digs in a gravelly soil, considers it as beneath him to associate with one who digs in a chalky soil,—they will be perfectly understood.

This individual, having continued to amass considerable wealth, which it was his business to save by due attention to cheese-parings, and his wife's to spend by proper regard to the education of her daughters, had, at her earnest intercession, retired from business into the country, become a laborious meddler at vestry meetings, and one of those useful persons who consider it a far nobler virtue to devote their time than their money to the public service. Mrs. Baddersly, the help-mate of this worthy gentleman, was a portly-looking and rather handsome woman, with an air of dignity and hauteur curiously grafted upon a natural vulgarity and awkwardness. Her character was very well indicated by this combination in the outward woman.

She was coarse in her feelings, and yet, in spite of early disadvantages, she had the talent to avoid the least coarseness in her language: she showed an evident consciousness of her littleness by always courting the great; yet, by a skilful reserve, she could preserve the appearance of equality in any society, and of superiority in most. Without education, and yet seldom displaying her ignorance,—never able to conceal that every word and gesture cost her the most intense effort, yet rather gaining than losing by her want of ease,—she was a woman whom a great many thought the most contemptible of her sex, yet whom many feared, and not one in his heart despised; for it is impossible to despise any human being who is working steadily, consistently, and painfully, to attain an object, though that object be the most insignificant in the world.

The main object of Mrs. Baddersly was to gain a reputation for herself and advancement for her daughters; and, for these ends, she thought nights and days of toil (and even that hardest toil of assuming a character) not thrown away. Among other agents which she pressed into her service, was religion. She was well aware that, to be distinguished, it was necessary to have some distinction which should make her neighbours feel that she was at least different from them, if not above them. A superior table, or a park with deer, would have answered her purpose; but both these distinctions are expensive, and required the consent of another party. The profession of religion was a cheap luxury: what went out in charity was much more than saved in routs; and, moreover, it would seem to account for that solemnity and stiffness of manner which she had found it prudent, for other reasons, to adopt. However little it may seem to compete with her essentially worldly views, she found an unusually vehement profession of respect for religion eminently convenient: indeed, so nearly did she carry this profession to the limits of saintship, which Mr. McKinnon so much dreaded, that, if the worthy rector's mind had not been so constituted that it spent all its hatred against the creed, or rather the name of the creed, and that he never could identify any individuals with the class to which they belonged, he would certainly have regarded Mrs. Baddersly as a very formidable and pestilential person. As it was,

though she insulted him, and scandalised the whole order, by seeking spiritual consolation from an extra-parochial clergyman, they continued on the best footing possible; and she considered it no intrusion to offer her advice upon the important step which he was about to take. She was accompanied to the parsonage-house by her two daughters, the eldest about eighteen, and the second a year younger, who certainly, at first sight, did raise a prepossession in favour of their mother's system. They were slight, elegant-looking girls, both of them with pleasing countenances; that of the eldest being raised above mere prettiness by an expression of liveliness and good temper, that of the youngest being set off by a complexion of exquisite fairness and brilliancy. The loveliness of this complexion was not, however, to be numbered among the trophies of her education, except so far as the labour of the cruel tasks which had been imposed on her had implanted the seeds of that consumption which had already marked her for its own.

'Well,' said Mrs. Baddersly, (after all the preliminaries had been completed, which were too long for repetition,) 'and how is my little friend Ellen? I have not seen her at Apesley Lodge, I scarcely know when. She is a lovely little creature, Mr. M'Kinnon; those jet-black eyes, that talk almost as quickly as her pretty lips, make her one of the most beautiful little angels I ever saw.'

'You are too kind in your praise, my dear Madam; you know how much a father's feelings must be gratified by any praises of his girl, even though they be confined to her person. I am afraid that she was sadly troublesome to you, when you allowed her to visit you. Unfortunately, she has not had the advantage of very good discipline hitherto. You know that we men are not fit for the task of managing our children; that, rather than undertake it, we let them manage themselves, and so they become spoiled; but I trust Ellen will soon be in better hands.'

'You do not think of sending that dear little creature to school,' exclaimed Mrs. Baddersly with well-feigned ignorance, and aware that she was touching the right chord; 'you surely will not subject her to all the misery of a life away from you, I hope.'

'No, Mrs. Baddersly, never; never, unless I become mad or doating. I am delighted to find that you, like myself, abhor the detestable practice of making daughters submit to that dreadful drudgery; indeed, I ought to have known that a person of your sense and feeling cannot but agree with me in my sentiments on that head at least.'

'Most perfectly. I think it positively wicked to send children away from their parents, and place them with persons of whom you cannot be sure that they will instil into them right principles on the most important subjects. I do not know how sufficiently to rejoice that I resisted Mr. Baddersly's wish to remove my dear girls from their mother's eye.'

'The Misses Baddersley, at least, must have reason to be grateful, I am sure,' said M'Kinnon; 'have you not, my dears?'

'Oh! certainly,' said Miss Eliza Baddersly, who thought within herself that it would have been difficult for a boarding-school tyrant to invent more tortures than she had endured from music-masters, catechisms, and backboards.

'Then, I imagine,' said Mrs. Baddersly, 'that you intend to introduce a governess into your family. Have you yet found one?'

'Yes, I am expecting her daily.'

'From Exeter?'

'No, from London.'

Mrs. Baddersly shook her head—'Do you think it absolutely necessary to fetch one from such a distance?'

'Why, London, I should think, contained a larger supply of governesses, as of every other commodity, than other places; and therefore,

at least, I have a better chance of suiting myself there than elsewhere.'

'Aye; but, my dear Sir, have you reflected upon the advantage of having a person who has never seen the vices of the great capital; who has never acquired the superficial method of instruction which is, I am afraid, too common there; who has country habits, country education, and country prejudices. I am afraid that London governesses inculcate a love of dissipation in the young mind: and this is one of the evils against which I have laboured most strenuously.'

'Is it impertinent to ask what is your mode of averting that danger? We differ, perhaps, in our notions of dissipation; but I should certainly wish Ellen to be any thing rather than a trifter.'

'I shall be most happy to tell you any of the plans my experience has taught me, which can be of any use to you in the formation of your daughter's mind. You can bear witness, my dears, how frequently and for how long I have talked to you about the evils of acquiring a taste for gaiety.'

'Oh, indeed, we can, Mamma,' said both the girls at once, in a tone of deep sincerity.

'But I know human nature too well, Mr. M'Kinnon, not to be aware how little weight any mere account of mine would have upon the minds of two inexperienced, volatile children: the great receipt for preventing them from engaging in any trivial pursuits is to keep them, as far as possible, constantly employed in useful ones. My daughters, since they were twelve years old, have never been occupied less than twelve hours, practising included.'

'Twelve hours!' exclaimed Mr. M'Kinnon, with a look of benevolent pity to the two girls; 'do you not think, Madam, such close attention rather likely to impair a young lady's constitution?'

'Oh by no means, what do you—' she was going to make an appeal to her daughters; but the hectic flush on Eliza Baddersly's cheek, and the quick short cough that succeeded it, told her that the illustration would not be very appropriate.

'Eliza, my love, you are sitting in the draught of that window; and you know the cold you caught on the water last Tuesday, and your imprudence in singing when Dr. Mason had prohibited you, have made us very fearful for you.'

'My system,' continued Mrs. Baddersly, 'has been to assign my daughters such a diversity of employments that they could never be fatigued with any. In the morning, geography, chronology, history, natural philosophy, and cyphering, all succeeded each other by turns; then, there were the lessons which they had to prepare, and Italian masters, and, finally, their music. The last you have been used to consider quite a relaxation?'

Eliza's cough came to their assistance at that moment, and something caught Matilda's attention on the lawn, so that she did not hear her mother's question.

'What books do you find most useful in the course of studies to which you have just alluded.'

'An invaluable set of volumes called Pinnock's Catechisms; if you have not, you should purchase them directly. Eliza and Matilda have learnt most of them by heart, ten or twelve times, especially the one on history, which contains the name of every king from Nimrod to George III., thus comprising, you see, all that it is really useful to know. By these means, you see, I leave my daughters little inclination for desultory studies, which are so prejudicial to the female mind; so that my daughters, I believe I may say confidently, have never even so much as wished to read a novel.'

'Extraordinary, indeed!' said Mr. M'Kinnon, looking at the prodigies with rather more acuteness than he was accustomed to throw into his face. They appeared to exchange a sort of timid

glance with each other, but were far too well schooled to give the worthy rector a hint of their real feelings.

'By this process, accompanied with a strict inculcation of religion, through the medium of the Church Catechism—' Mrs. Baddersly, knowing she was suspected of schism, laid an emphasis on the word, which, like some other of her ingenious artifices, defeated her purpose; as, but for that emphasis, Mr. M'Kinnon would not have suspected she could have used any other manual—'But I fear I am tiring you.'

'Impossible! such a subject from such a teacher!—'

Mrs. Baddersly bowed. 'I was going to say, that, by keeping all works of fiction out of my daughters' reach, I have inspired them with a love truth—great sincerity in all their words and actions. This is what I see Mrs. Hannah More particularly inculcate in her last book. Have you seen it, Mr. M'Kinnon?'

'No; I have not had that pleasure.'

'Oh! there are some beautiful passages in it. Lend it me, dear Matilda; it is in your reticule.'

'Yes, Mamma; but—I believe I left it behind,' said Matilda. From some unknown cause, Matilda's reticule would not open and her face became a deep scarlet.

'What is the matter with you, child? Give me your bag. Mrs. Baddersly took it from her, and drew out of it, not the production of Mrs. Hannah More, but 'La Nouvelle Heloise!' Fortunately for Matilda's reputation for truth and sincerity, Mrs. Baddersly had never heard of the work, though she had a sufficient horror of the author.

'How came you by this, Matilda?'

'What is it, Mamma?'

'A French book. Did your governess desire you to get it?'

'Yes—no, Mamma; Emily Nugent recommended it to me. I believe it is very good French.'

'And what business had you to attend to Emily Nugent's recommendation? Who is the author of the book?'

'Fenelon, I believe, Madam.'

'Well, I do not imagine you can take much harm from any work by the author of 'Telemaque'; but you should never read any book without asking the opinion of your governess respecting it previously. That is one of my first lessons, Mr. M'Kinnon. One of the contrivances I have adopted for the purpose of curing my daughters of a dissipated taste I think may need your attention when Ellen grows older. As I know how dull and tedious and unsatisfying all the pleasures of the world are, I have allowed my daughters to be present at one ball, just to give them a disgust to all those kinds of amusement. Has it not, my dears? You would not wish to be present at another of those scenes of frivolity?'

'Oh, certainly not, Mamma,' said Eliza, knowing that it was her turn to fib. Her sister had done enough for one morning, and she remained silent.

After a few more observations, Mrs. Baddersly took her departure, leaving Mr. M'Kinnon to meditate on the beautiful simplicity of a country education, the great advantage of murdering poor girls in order to expose to the world the best method of curing them of a love of dissipation and the surest way of inflicting on them the principles of truth and honesty.

His reflections were not pleasant; and he soon was sick enough of them to wish for his usual consolation with little Ellen. As he looked at her eyes, which seemed as if they would tell all the secrets of her heart, even if her lips could not give utterance to them, he asked himself whether the mind of his child would ever be a mere repository for words and names, whether her character would be the dwelling-place of fraud

and hypocrisy. Yet why not? What was there in the amiable countenance of the girls with whom he had just been conversing, which should indicate that they were incapable of pure and honest feelings? What was there that predicted that they wanted any thing to make them all that a parent should wish! 'No, my love,' said he, involuntarily addressing his child, 'it is the tyrant that makes the slave, it is fear that produces hypocrisy. If you ever fall into the bondage of a Mrs. Baddersly, it is not the candour which Heaven has stamped on your countenance which will prevent your stooping to every mean shift and low equivocation. These remarks were interrupted by the announcement of Mrs. and Miss Mordaunt.

(To be continued.)

PHILHARMONIC SOCIETY.

THE second of these very superior Concerts for the present season, took place on Monday, March 9th, ably led by Spagnoletti, and conducted, as it is facetiously called, by Bishop.

It commenced with Beethoven's voluminous, grand, and classical third sinfonia, denominated 'Eroica,' which the following title, prefixed to it by Beethoven himself, will explain: 'Sinfonia Eroica composta per celebrare la morte d'un Eroe.' It consists of an allegro con brio, (in E flat, 3-4 time,) which is most erudite, harmonious, and beautiful. This is followed by the principal characteristic features of the sinfonia, the 'Marcia Funebre,' an adagio assai, (in C minor, 2-4,) in which are portrayed, to an experienced auditor, the most pathetic and feeling passions that instrumental music can afford. After the lengthened expressions of a mournful description, exemplified by the dead march in the minor key, the oboe solo in the major mode seems to express the more benign feelings of hope and resignation, which again give way to the acute expression of grief; and the sorrowful terminating passages are remarkably descriptive, in which the theme is broken into divided sentences, very similarly to Handel's celebrated recitative, 'Deeper and deeper still,' at Jephtha's apparent inability to give distinct utterance to the words 'To-morrow—dawn.'

The 3d movements are the Menuets and Trio, a very long and eccentric vivace scherzo, principally remarkable for the difficulty of performance; the Trio exhibiting an obligato passage for three horns, which produced a good effect, being better in tune than we remember to have ever heard them before.

The Finale, an allegro molto, (in E flat, 2-4,) presents a remarkable specimen of Beethoven's playfulness and wit, which we believe is known to, or perceived by, but very few amateurs or professors, and which we shall find some little difficulty in explaining, in either a clear or comprehensive manner.

The Thema is a pleasing and simple melody, published (we believe firstly) by Beethoven at Leipsic, in a collection of 'Ländlerische Tänze,' or national country dances, of which we have before us a copy; and, this melody being composed (as is customary with common tunes) principally upon the tonic and dominant 7th harmonics only, the bass notes are of the most simple description. In the allegro we wish to describe, after eleven bars of introduction, these trifling bass notes of the first strain, without any melody besides, are performed by the violins, tenors, and basses, pizzicato. This strain is then repeated, with the wind instruments taking up the notes responsively; and a similar whimsical arrangement takes place with the 2d strain. Secondly, the 2d violin has the same passage, written to be performed legato, instead of pizzicato, during which the 1mo violin and violoncello hold a dialogue in a singing melodious manner. The 3d arrangement is, that the 1st violins have to perform the passage (the original simple bass notes) an octave higher, while the tenors, 2d violins and violoncellos, converse in triplets, and finally the melody itself appears, (as a cheerful ray of light,) performed upon the oboe, and accompanied by Beethoven's richest strain of harmony and beauty of conception. The movement then proceeds in his usual manner, but occasionally the original bass passage is made the subject for an ingenious fugue, worked upon by the various instruments, and interspersed occasionally by the melody, and towards the close of the piece a rich exhibition of composition takes place in an episodic poco andante, commenced by the oboes, clarionets, and bassoons, and enriched by the employment of the en-

tire orchestra; and the whole concludes with a presto, in which every performer is exerted to produce the usual effective clamour, to finish with eclat. The whole of this elaborate and very difficult Sinfonia was excellently performed, and lasted 46 minutes.

No. 2. Duetto, Madame Caradori Allan, and Signor Begrez, 'A che quel trionchi accenti?' from Rossini's fine opera 'Zelmira.' This Duet was acceptable as not being so hackneyed as most of Rossini's pieces, having been (we think) never performed before out of the opera. It was originally sung with excellent effect by Garcia and Madame Colbran; and to those who well remembered such performance, Begrez appeared rather to disadvantage.

No. 3. Sextuor, piano-forte, flute, clarinet, horn, bassoon, and double bass, Mrs. Anderson, Messrs. Nicholson, Willman, Platt, Mackintosh, and Dragonetti, composed by Onslow. A very interesting and excellent performance, although the introductory movement was rather jejune and common-place, the piano-forte part being written only to mark the time (as it appeared) for the other performers; but the allegro amply compensated, melody, harmony, and expression, accompanied by fire and effect, without an overwhelming noise; and it was beautifully performed by our English professors! the honourable non-conformists from French meanness, intrigue, and ingratitude! Can La Porte and his worthy colleague, his estimable associate, exhibit any of their new alien band to produce such time, tone, and tune, such a delightful admixture of melodious harmony, as was here concentrated in the effect produced by Nicholson, Willman, Platt, and Mackintosh? No! *Aere* were 'all the talents;' and our clever countrywoman, Mrs. Anderson, succeeded, in conjunction with them and Dragonetti, in producing a beautiful performance, well appreciated, and deservedly applauded, by every true lover of music. The andante, in C minor, reminded one a little of the old French air, 'Vive Henry Quatre,' especially in its varied, unexpected, and erratic modulations, vacillating as it were between major and minor. The combined sostenuto of the wind instruments was here beautifully contrasted with the restless and appropriate accompaniment of the piano-forte, and Platt's horn solo, in the major of C, was refreshing and cheerful. The various successional, equivocal chords, or diminished 7th's, floating and gliding over a pedal bass, were unusually romantic and scientific; and all the orchestral members of judgment and taste were unanimous in their delight and approbation of the composition and performance. It may be well asserted that a good piece cannot be well too long, but the old saying has it, 'Too much of a good thing is good for nothing;' and Onslow's piece was rather lengthy for the sort of composition; had the menuetto been omitted, the effect produced by the remaining parts might have been greater.

No. 4. Scena, Madame Caradori Allan, 'Tu m'abbandoni ingrato,' by Spohr. This was a beautiful and classical exhibition, of exactly the description fitted to the Philharmonic Concerts, being a detached composition, not likely to be heard at any other performance. Our thanks are due to Madame Caradori for singing it in conformity to the wishes of the directors, as we know she was very desirous to have performed, instead of it, some well known-piece, (calculated to exhibit the singer to greater advantage,) and even after the rehearsal this change was contemplated. Spohr's writing is too classical, too like Mozart, to exhibit a vocalist so far above the accompaniment as they would themselves desire; therefore, thanks are due to those who meet the wishes of the connoisseurs in this respect.

No. 5. Weber's clever overture, 'Der Beherrscher der Geister,' or 'The Ruler of the Spirits,' concluded the act, and was well performed. Mozart's favourite sinfonia in D, commenced the second part of the Concert; and, although we should blush to find a fault in any work of this great composer, (and this sinfonia is held in the highest estimation,) yet we do not think it equal in science to his other grand instrumental pieces. The andante (although encored upon the present occasion) does not exhibit any thing classical; and the trio which follows the menuet, resembles Haydn's earliest, and most simple, productions.

No. 7. Duetto, Signor Begrez and Signor PELLEGRINI, 'Son io desto,' by Paisiello. This union of the two signors was a powerful narcotic for a warm room, and produced a delightfully sedative effect upon all the elderly ladies and gentlemen, who did not awake in time to bestow the slightest applause. It was meagre, tasteless, and ineffective.

No. 8. Quartetto, two violins, viola, and violoncello, Messrs. Mori, Watts, Moralt, and Lindley. This latter gentleman, this universally admired and unrival-

led professor, to indulge the whim of some one, was displaced, in this quartet, from his usual situation in the orchestra, to a seat on the opposite side; which act of changing places, desks, and seats occupied so long a period, (a delay which invariably puts an audience out of humour,) that we lament to narrate that which is of rare occurrence at a Philharmonic Concert, namely, a hiss! and which could be by no means attributed to any other cause. The performance, however, was so masterly as to compensate for that, as well as for Paisiello's poor duet, and charmed the whole assemblage. It was the well known quartetto in F, (the 2nd of his two op. 80,) and nearly the last he composed, not a very difficult one, but upon the present occasion so exquisitely well performed as to receive the most unanimous approbation; and, as a composition for four-stringed instruments, perhaps, it stands unequalled for pathos, simplicity, and sentiment.

The commencement of the first movement is of that sweet cantabile character, that no person, educated or uneducated in music, can hear it well played in tune, without being sensibly delighted. The menuet is so playful, and the subsequent trio so elegant and polished, that all descriptions of auditors must be pleased, and, as aptly and energetically exclaimed in our hearing by an eminent Professor, 'No panegyric can be too laudatory to do justice to its excellencies, and to the lofty mind that produced it.' The flowing calmness of the andante was a little deteriorated by being executed rather too quickly; but it still received the best of all applause, the quiet hum and murmur of approbation, rather than the clapping of hands, or shouting of voices. The finale is a playful bagatelle, and was received accordingly; not but that the various workings of its theme exhibit considerable ingenuity, but it is not of the noble character that pervades the previous movements.

No. 9. Terzetto, 'Cosa sento,' Madame Caradori Allan, Signor Begrez, and Signor Pellegrini. This well-known trio from Mozart's 'Le Nozze di Figaro,' was well performed and received, but, wanting novelty, (however excellent and valued,) failed to excite much interest, or elicit much applause; and Cherubini's clever, but clamorous dramatic overture, 'Des Absentees,' formed an appropriate conclusion, while some of the audience left the room to seek their carriages, a want of taste we never expected to have seen exhibited by any part of the enlightened dilettanti composing a Philharmonic audience.

ROYAL ACADEMY LECTURES.

Mr. Westmacott on Sculpture.—*The Armour of Pyrrhus.*

THE lecture read by Mr. Westmacott on Monday evening, formed his concluding discourse for the season. The subject he has reserved for this occasion was the important one of composition considered as divided into two branches, mechanical and mental, with the three subdivisions of simple, columnar, and pyramidal. Mechanical composition was defined to be the mere arrangement of the form according to rules deduced from observation of the operations of nature, in the positions or motions of figures, or of parts of figures. Mental composition was described to consist in the adaptation of the forms to the character, and in the distribution of the matter suggested by the invention. On the subject of composition in general, it was observed, that the same precepts were applicable both to sculpture and painting; but that the former was confined within a narrower range than the latter, and was subject to rules which it might be competent to the sister art to overstep. The very nature and character of his art require the sculptor to confine himself to the simplest mode of expression, and to avoid whatever has a tendency to complication. This precept was enforced by reference to the constant practice of the Greeks, who in their subjects were studious to choose such moments of action as would least interfere with the beauty of form and expression, as would be least affected in point of truth by the necessity of preserving simplicity, and that degree of tranquillity which constitutes an essential in the beautiful. Hence violent action or passion are unsuitable to the sculptor; he transgresses one of the fundamental rules of his art in attempting to express them. On the same principle, whatever is common or vulgar, is still more carefully to be avoided.

In treating of the subdivisions of composition, the simple was described to be the mode of representing the single figure: of the columnar, an instance was adduced in the beautiful group of Cupid and Psyche, with which the public are familiar, through the multi-

pled casts of it. The pyramidal subdivision gave occasion for a luminous and interesting comment on the Laocoon. The other principal works referred to, in illustration of this lecture, were 'The Youth extracting a thorn from his foot,' 'The Wrestlers of the Florentine Gallery,' 'The Phigalian Bas-reliefs,' some Greek sculpture of the same class from the Museum of the Capitol, 'The Apollo Belvidere,' and some bronze figures in the possession of the Chevalier Brünsted, and which, there are strong grounds for supposing, have formed parts of the armour of Pyrrhus, lost in his first battle with the Romans.

These interesting fragments form a novel subject, and we shall therefore pass over the other examples, referred to by Mr. Westmacott, as matter already exhausted, and on which all that can be said, has been often repeated, and confine ourselves to the armour of Pyrrhus.

We were ourselves favoured by the Chevalier Brünsted, on his visit to London last year, with a sight of these most precious relics, which have the double value so desirable in ancient monuments, of being most curious as antiques, and, beyond all price as specimens of excellence in art. Of the interest attached to them from mere association, much, of course, depends on the circumstances which render probable or otherwise, the fact of their being the identical armour of the King of Epirus. The evidence in favour of their identity, though circumstantial, is, in our opinion, conclusive. The first meeting between Pyrrhus and the Roman army was on the banks of the river Sirus, between Heracles and Pandoeia. Pyrrhus, we are told by Plutarch, was distinguished by the beauty and lustre of his armour, which was of very excellent workmanship. This armour he put off during the action, finding it made him a mark at which unusual efforts were directed by the enemy, and increased more than was prudent in a commander, his personal danger. He exchanged his robe and armour, therefore, with his friend Megacles, who paid dearly for the honour. Megacles soon fell, and his death, under the supposition that the king himself was slain, was a cause of exultation to the Romans, and of consternation to the Greeks, until Pyrrhus, uncovering his head, convinced his own army that he was still alive. The helmet and robe of Pyrrhus were carried off by the Roman who had slain Megacles. What became of the rest of the armour, we are not told; it is but fair, therefore, to infer that it lay uncovered on the field. The fragments possessed by the Chevalier Brünsted were found near the banks of the Syrus, between Heracles and Grumentum, the site of the battle between Pyrrhus and Lævinus; a circumstance, however, which would go but little way in establishing their identity as parts of the lost armour of Pyrrhus, did not the relics contain in themselves grounds for concluding that they belonged to the King. The splendour of the material, which was bronze gilt, but far more the exquisiteness of the workmanship,—and in this respect we have the concurrence of Mr. Westmacott in saying, that they rank among the finest specimens of design and execution in existence,—were such as, even in those days, in which the arts were in so flourishing a condition, could not have belonged to any mean personage, hardly to one less exalted than a king. The strongest corroboration of the supposition that these beautiful specimens formed part of the armour of Pyrrhus, is furnished by the subjects represented on them. These are combats between the two sons of Telamon, Ajax and Teucer, with Amazons. We need not remind our readers, that these heroes were, with Achilles, of the family of the Æacides, nor insist on the probability which here naturally suggests itself, that these morsels were portions of the armour in which the exploits of the Æacides, the family of Pyrrhus, were represented; and that these fragments, which, of the decorated members of the suit, form the least important, were the companions of other ornaments, in which, no doubt, the death of Penthesilea by the son of Thetis, was sculptured. The Bronzes were found in a small ruin near the river, in 1820. They constituted the *repousoir*, the *pectoralia* of the Romans, the ornamental coverings to the parts on each side of the chest, where the *gynaeceon*, or breast-plate, was fastened to the shoulder-strap, which connected it with the part of the cuirass which covered the back.

As we have already observed, these bronzes are of exquisite workmanship; they are in the very finest and most perfect style of art. In the treatment of the two figures of Ajax and Teucer is to be discerned that remarkable adaptation of form and accessories to the expression of the character of the individual represented, for which Greek art is so distinguished. The execution is highly interesting also in a mechanical point of view; as throwing light on the manner in which works of this kind were manufactured. The

figures were first raised, by beating out of the plate of metal, then finished with the minutest care by means of a sharp instrument. Traces of the gilding are still observable. The drawings exhibited by Mr. Westmacott, on larger dimensions than the originals, which are not above four inches in length, appeared to be executed with great spirit, discrimination, and fidelity, and fully justified our recollection of the excellence of the work of which they were copies.

FOREIGN VARIETIES.

INFLUENCE OF THE SOUTH AMERICAN CLIMATE ON THE DOMESTIC ANIMALS OF THE OLD WORLD.—

The Hog.—This animal, when transported to the warm valleys of South America, from which it roams into the woods, and subsists chiefly upon fruit, speedily loses its domestic character, and acquires that of the wild boar. It was conveyed from Europe in 1493, and is found in great numbers between the 15th deg. of northern, and 45th deg. of southern latitude.

The Cow.—When transferred to South America, requires a considerable quantity of salt to be mixed with her food. If this article be regularly and abundantly disseminated through it, these animals are singularly punctual in returning to their homes; but, if it be omitted, they run away altogether, and become wild. There is some difference in the size of the udder under the climate of Colombia, where the milk is less esteemed than in Europe.

The Ass.—Is not perceptibly affected by change of country, either in his conformation or mode of life. In those parts where he is over-worked and badly fed, his form is injured, though he does not undergo any alteration in his domestic habits.

The Horse.—The effect produced upon this animal is very striking; the woods afford him an abundance of chestnuts, and his skin quickly assumes one of the peculiar characteristics of wild animals; his colour becomes indicative of the food on which he subsists, and few instances are known where that colour is not a chestnut-brown. A short gallop is the favourite pace of the Columbian, who accustoms him to it from his earliest years, and by this means renders it as familiar to him as the trot is to the European horse.

The Dog.—Does not undergo any change.

The Sheep.—In temperate climates this animal succeeds quite as kindly as in Europe, and does not betray the slightest disposition to shake off his subjection to a human master; but, under hotter skies, it becomes a difficult task to preserve him in a domestic state. The wool is of slower growth, though this defect is not very perceptible, if he be shorn at proper seasons; but, if this be neglected, nature turns shearer, and eases him of his burthen, though he does not renovate his fleece, but provides him with a coat of fine, short, flat hair, similar to that of the goat under the same sky.

The Goat.—Though, in the Old World, this creature is an inhabitant of mountainous districts, yet, upon being transported to the other side of the Atlantic, its favourite haunts are the warm valleys between the Cordilleras, instead of mountains and elevated plains. It resembles the cow, in respect of the other changes to which it becomes liable.

COLUMBIA.—From the official 'Noticia sobre la Geographia Política de Colombia,' we glean that the superficial extent of this state is 91,950 square leagues; an area equivalent to one-third of Europe, five times larger than the Iberian Peninsula, nine times more extensive than the British Isles, and within 600 leagues as large as Mexico and Guatemala put together. The compiler of this notice is at variance with other authorities on the subject of its population, which he estimates at 2,700,000; whilst the Minister of the Interior has stated it at 2,379,888 on one occasion, and at 2,717,142 on another. This last enumeration, he observed, is independent of 200,000 wild Indians. Salazar, on the other hand, computes the same population at 3,000,000, inclusive of the Indians. As M. Restrepo, the Minister, when he made the first statement of 2,379,888 remarked, that that number was under-rated, because the inhabitants in many districts refused to make any returns from their fears of an impending poll-tax, it may reasonably be concluded that the total number of the inhabitants of Colombia is rather above than below 2,900,000. Of these, he adds,

The Whites are, 1,234,000	Free Mulattoes, 615,000
Natives 915,000	Slaves 16,000

THE KINGDOM OF PRUSSIA.—Increase of population is one of the natural effects of a mild and enlightened system of government; and, in this point of view, the subsequent statement bears an honourable testimony to

the absence of misrule in the dominions of the House of Brandenburg.

	Births.	Deaths.	Increase.	Population.
1820	477,737	306,964	171,763	11,573,163
1821	485,119	316,007	174,482	11,447,596
1822	493,680	314,406	177,121	11,604,797
1823	500,348	326,328	179,688	11,804,579
1824	507,988	328,343	182,645	11,997,815
1825	515,849	339,378	186,471	12,179,686
1826	523,690	338,439	189,340	12,361,626
1827	531,984	340,683	191,322	12,553,277

1,450,877

It appears, therefore, that the population of the Prussian monarchy has experienced an increase of 1,450,887 souls during the short period of eight years; and of these 703,169 constituted that increase in the first four, and 747,708 in the last four years.

The following is a classification of the ages of the persons who died in 1827:

Before completion of the first year	79,833*
Between 1st and 5th year	59,000
5th and 10th	17,036
10th and 14th	6,339
14th and 20th	6,585
20th and 30th	18,889
30th and 40th	18,473
40th and 50th	22,616
50th and 60th	27,009
60th and 70th	36,304
70th and 80th	30,395
80th and 90th	13,064
Of upwards of 90 years	2,919

Total, 340,683

* Besides 16,736 still-born children.

THE DANISH POSSESSIONS.—Their population, in the year 1827, is officially stated to have been as follows:

Denmark Proper	1,531,278
Holstein	274,745
Lauenburg	36,609
Iceland	49,895
Greenland and the Faro Islands	11,240
West Indian Colonies	46,696

Total, 2,939,459

Including Guinea and the eastern possessions of Denmark, her whole population is about 2,100,000. That of Copenhagen is 104,674. The continental clergy consist of 1600 persons; but, with the addition of Iceland, the Faro Islands, and foreign colonies, of 1900.

THE DRAMA.

King's Theatre.

'I MISSICANI' was not produced at this theatre, Oh! M. Laporte! The bills inform us that it will appear to night, (Tuesday), but the infidelity of managers is really *plus qu'on punit*. One act of the 'Conte Ori,' and the second of 'La Donna del Lago,' was produced in place of the promised opera.

Drury Lane.

When Bassanio made choice of his *Casket*, Portia was kind enough to direct that his deliberations should be assisted by sweet music. Unfortunately, when Mr. Price attended the opening of his *Casket*, or in plain language, the rehearsal of the new opera, this accompaniment was wanting, which accounts for his having unfortunately determined to accept a composition which, to the sincere regret of all of its well-wishers, was damned on the first night of its appearance.

Covent Garden.

We proceed, according to promise, to give a more detailed account of the opera of 'The Maid of Judah,' which appears likely to be very popular. It is founded upon a part of the novel of 'Ivanhoe,' and embraces the whole story of Rebecca's persecution by the Templar De Bois Guilbert, from her first reception at Rothwood to the closing scene at Templestow, her trial for sorcery, condemnation, and rescue by Ivanhoe. This very interesting story is made the vehicle for some of the music of Rossini's newest and most beautiful operas; for the arrangement of which M. Lacy deserves the highest praise. The overture, which is from 'Semiramide,' is admirably played, and fully merits the applause with which it is received. Of course our readers will scarcely require us to give any analysis of the piece, for the novel has been tolerably closely followed; and who is ignorant of the novel? Among the pieces of music which struck us as particularly beautiful, are a drinking song, sung by Mr. H. Phillips, as Cedric, and a chorus of Saxons, of a very remarkable and characteristic nature; and a chaunt of Miss Paton's (the Rebecca of the piece) describing her escape from De Bois Guilbert. The quartett at the end of the first act, between Miss Paton and Messrs. Phillips, Wood, and Stansbury, is also extremely beau-

tiful. But, perhaps, the most remarkable piece of music in the whole opera is a quartette in the third act, immediately upon the condemnation of Rebecca; this is sung by Miss Paton, Messrs. Wood, Stansbury, and B. Taylor; and we cannot refrain from thanking Miss Paton especially for the exquisite feeling which she displays in it. The fault of the vocal music we think generally to be in the quantity of words which are forced into the air, and which necessarily break up very much the softness and continuous flow of the music; and this fault we find very generally in the English adaptations of Italian music, it not being yet sufficiently understood in this country as it is in Italy, that the words are meant to be nothing at all, and that the composition is the main object of attention. This fault is painfully evident in a song which is given to Mr. Wood in the third act; it is a fine martial air from 'Pietro Peremita'; but such a number of words are to be sung that its real effect is quite lost; and the singer, we should think, seriously incommoded by it. Perhaps if Miss Paton's songs had been a little less florid on one or two occasions, it would have added to the good effect of the opera. Upon the whole, we have been highly pleased with this piece, the splendid decorations and strong interest of which will not fail to render it very attractive: the execution is generally very good; but particular praise must be paid to Miss Paton for her admirable singing and animated acting, which we do not hesitate in asserting, to be of the highest class, especially throughout the whole of the scenes of the trial, condemnation, and ordeal by battle: and to Mr. Phillips also, both as an actor and a singer; the spirited manner in which he entered into the feeling of his part, has made us desirous of seeing him in other characters.

English Opera House.

The 'Malade Imaginaire,' acted at this theatre last night, is inseparably associated in our minds with the most melancholy event recorded in the theatrical annals of any country. It must be difficult, we think, for a French actor, even of less genius than M. Perlet, to approach that scene of this excellent farce, which was the closing one of its author's life, without a feeling rather at variance with the general spirit of the character he has to sustain. We do not know whether there are any traditions respecting Molière's mode of acting in this piece or in any other; but, believing as we do, that the stories respecting Shakspeare's indifferent performances are altogether apocryphal, we see no reason to suppose that an author may not be able to embody his own ideas as well as any one else. Be this as it may, we question whether Molière or any other person could have given a finer or more delicate representation of 'The Malade Imaginaire' than the actor who filled that part last night. The more we see of M. Perlet, the more we are convinced of the justice and of the imperfection of the general opinions we have so often expressed respecting him. We feel that he has all the powers we have attributed to him, and many more in reserve, which we shall not even have sounded to the bottom when we have seen him in all his vast variety of characters. We will not enter into details respecting a performance, every part of which bore a stamp of the highest excellence; but must not omit saying, to the credit of the company at the English Opera House, that M. Perlet was well supported by all his brother and sister performers, and, above all, by Mademoiselle St. Ange.

POPULAR SCIENCE.

'How charming is divine philosophy!
Not harsh and crabbed as dull fools suppose,
But musical as is Apollo's lute.'—*Comus*.

I.—ANIMATED NATURE.

'And God said, let them have dominion over the fish of the sea, and over the fowl of the air, and over the cattle, and over all the earth, and over every creeping thing.'—*Genesis*.

1.—ANIMAL MECHANICS.

Balancing of Eggs on a Bare Rock.—The following singular fact is stated by the celebrated Harrey, the discoverer of the circulation of the blood, in his ingenious work 'De Generatione.' A bird (*Alca Pica*, Linn.) lays only one egg, which, without making any nest or preparation for its reception, she deposits on the top of a sharp acute stone, and with such firmness that she can leave it and return to it with safety. If the egg should be removed by any means, it can never be replaced, and rolls thence into the sea. The spot, as I have said, is encrusted with a white cement, and the egg, as soon as it is laid, is alimed over with a soft and viscous humidity, which quickly causes its adhe-

sion to the rock, as firmly as if they had been fastened together with bars of iron.

2.—ANIMAL ARCHITECTURE.

Spring and Summer Nests of Birds.—The construction and selected situations of the nests of birds are as remarkable as the variety of the materials employed in them; the same forms, places, and articles being rarely, perhaps never, found united by the different species, which, we should suppose, similar necessities would direct to a uniform provision. Birds that build early in the spring seem to require warmth and shelter for their young, and the blackbird and the thrush line their nests with a plaster of loam perfectly excluding, by these cottage-like walls, the keen icy gales of our opening year; yet, should accidents bereave the parents of their first hopes, they will construct another, even when summer is far advanced, upon the model of their first erection, and with the same precautions against severe weather, when all necessity for such provision has ceased, and the usual temperature of the season rather requiring coolness and a free circulation of air. The house sparrow will commonly build four or five times in the year, and in a variety of situations, under the warm eaves of our houses and our sheds, the branch of the clustered fir, or the thick tall hedge that bounds our garden, &c.; in all which places, and without the least consideration of site or season, it will collect a great mass of straws and hay, and gather a profusion of feathers from the poultry-yard to line its nest. The cradle for its young, whether under our tiles in March or in July, when the parent bird is panting in the common heat of the atmosphere, has the same provision made to afford warmth to the brood; yet this is a bird that is little affected by any of the extremes of our climate.

3.—ANIMAL ETHICS.

Instincts of the Mistle Thrush.—The mistle thrush (*turdus visivorus*) is a wild and wary bird, keeping generally in open fields and commons, heaths, and unfrequented places, feeding upon worms and insects. In severe weather it approaches our plantations and shrubberies to feed on the berry of the mistletoe, the ivy, or the scarlet fruit of the holly, or the yew; and, should the redwing or the fieldfare presume to partake of these with it, we are sure to hear its voice in clattering and contention with the intruders, until it drives them from the place, though it watches and attends, notwithstanding, to its own safety. In April, it begins to prepare its nest. This is large and so openly placed, as would, if built in the copse, infallibly expose it to the plunder of the magpie and the crow, which at this season prey upon the eggs of every nest they can find. To avoid this evil, it resorts to our gardens and our orchards, seeking protection from man, near whose haunts those rapacious plunderers are careful of approaching; yet they will at times attempt to seize upon its eggs even there, when the thrush attacks them and drives them away with a hawk-like fury; and the noisy warfare of the contending parties occasionally draws our attention to them. The call of the young birds to their parents for food is unusually disagreeable, and reminds us of the croak of a frog. The brood being reared, it becomes again a shy and wild creature, abandons our homesteads, and returns to its solitudes and heaths.

4.—CONCHOLGY.

A Shower of Snails near Bristol.—In the south of England, a little banded snail (*helix virgata*) is a very common species on most of the arid maritime pastures, and the sheep-downs of many inland places. It happened, from some unknown cause, that those inhabiting a dry field in a parish near Bristol, were, in one season, a few years ago, greatly increased, so as to become an object of notice to a few, then to more, till at length this accumulation was noised about as a supernatural event. The field was visited by hundreds daily from neighbouring villages and distant towns. People who could not attend purchased the snails at a halfpenny each; and there were persons who made five shillings a day by the sale of them. As this increase of the creature was certainly not to be accounted for, some had the impudence to assert that they had witnessed their fall from the clouds; and many declared their belief that some great public or private misfortune was indicated by it. The proprietor of the field being supposed not to maintain the same sentiments as the commonalty upon a political circumstance, which at that moment greatly agitated the country, it was considered as a manifestation of heavenly displeasure, precursor of malady, misfortune, death. However, autumn came, these snails retired to their holes in the banks, and the worthy man lived on—and long may he live, unmolested and unassailed by all, unscathed by snails or misfortunes.

5.—ENTOMOLOGY.

The Ghost Moth.—The Moth known to collectors by the name of the ghost, (*Heptamelus humilis*), has a singular habit when on the wing, which at once distinguishes it from any other moth. The larva, which produces this creature, is hidden in the ground during the season of winter: the fly being formed in the month of May, and soon rising from the soil, then commences its short career. At this time, one or more of them may frequently be observed under some hedge in a mead, or some low place in a damp pasture, only a few feet from the ground, persevering for a length of time together in a very irregular flight, rising and falling, and balancing about in a space not exceeding a few yards in circumference, an action not observable in any other—and fully indicating this moth. This procedure is not the meaningless vagary of the hour, but a frolicsome dance, the wooing of its mate, which lies concealed in the herbage over which it sports. The two insects are something similar in their general form, but very differently marked. The male exhibitor is known by his four glossy, satiny, white wings, bordered with buff; the lady reposer has her upper wings of a tawny yellow, spotted and banded with deep brown. They are very inert creatures, easily captured; and their existence appears to be of very short duration, as we soon cease to observe them either in action or at rest. The male probably becomes the prey of every bird that feeds by night: his colour and his actions rendering him particularly liable to dangers of this nature, and the frequency with which we find his wings scattered about, points out the cause of death to most of them. The bat pursues with great avidity all those creatures that fly in the evening; and, by its actions, it seems to meet with constant employment, and has greater probability of success than some insectivorous birds that feed by day, as all the myriads which abound at this time are the sole prey of itself and a few nocturnal ramblers. From this singular flight in the twilight hour, haunting, as it were, one particular spot, the fancy of some collector, considering it as a spectre-like action, named it the 'Ghost Moth.' This Ghost Moth discharges her eggs in a very singular manner, and frequently immediately upon capture, not deliberately producing them, but dismissing them from the oviduct in rapid succession, until it is exhausted, by a slight elastic force that sweeps them clear from the abdomen. They are perfectly dry and unadhesive.

6.—OPHIOLGY.

Eggs of the Common Snake.—The common English snake (*coluber matrix*) usually deposits its eggs about midsummer, in dung or compost heaps. They are larger than the eggs of a sparrow, obtuse at each end, of a very pale yellow colour, feeling tough and soft like little bags of some gelatinous substance. The interior part consists of a glareous matter like that of the hen, enveloping the young snake imperfect, yet the eyes and nose sufficiently defined. Snakes must protrude their eggs singly, but probably all at one time, as they preserve no regular disposition of them, but place them in a promiscuous heap. At the time of protrusion, they appear to be surrounded with a clammy substance, which, drying in the air, leaves the mass of eggs united, as if by pasted paper. As many as forty eggs have been found in these deposits; yet, notwithstanding such provisions for multitudes, the snake, generally speaking, is not a very common animal.

7.—SAURIOLOGY.

The Water Newt.—Water, in a state of rest, over-decayed and putrescent vegetable matter, is peculiarly favourable for the residence of many of the insect world. The eggs that are lodged there remain undisturbed by the agitation of the element, and the young produced from them, or deposited there by viviparous creatures, remain in quiet, tolerably secure from accidental injuries; but there are natural causes which render these apparent asylums the field of ravages and of death. To these places resort many of those voracious insects, and other creatures which prey upon the smaller and helpless; for all created things seem subordinate to some more powerful or irresistible agents, from the hardly visible atom that floats in the pool, to man, who claims and commands the earth as his own. But we have no animal that seems to commit greater destruction in these places than the common newt (*lacerta aquatica*). In some of these well-stored magazines, this reptile will grow to a large size, and become unusually wary, and bloated with sapidation; feeding and fattening upon the unresisting beings that abound in these dark waters wherein it loves to reside. It will take a worm from the hook of a fish that angle in ponds; and in some places the boys in

the spring of the year may be seen drawing them up by fishing lines, a very extraordinary figure, having a small shell-fish (tellina cornea) attached to one or all of its feet; the toes of the newt having been accidentally introduced into the gaping shell, in its progress on the mud at the bottom of the pool, or designedly put in for the purpose of seizure, when the animal inhabitant closed the valves and entrapped the toes. But, from whatever cause these shells became fixed, when the animal is drawn up hanging and wriggling with its toes fettered all round, it affords a very unusual and strange appearance.

8.—ICHTHYOLOGY.

Migrations of Salmon.—The common salmon (salmo salar) leaves the sea, and ascends the rivers throughout the summer season. Having reached the suitable station, it pairs, and, in company, proceeds to excavate a furrow in the gravelly bed of the shallow or running water, at the top or bottom of the deeper pools. Into this furrow the milt and roe are simultaneously deposited and covered. This operation occupies nearly a fortnight. The eggs sometimes amount to 20,000. When the fish have spawned, or become kelts, they bask themselves to the deep pools, and then proceed to the sea, the males commencing the journey earlier than the females. Their favourite food in the sea is the sand-eel. The fry leave the spawning groove about March, retire to pools, and proceed, according to circumstances, in myriads along the easy water, at the margin of the river, with their heads against the stream, until they reach the tide in the estuary, where, like the kelts, which frequently go down at the same time, they retire to the deepest part of the channel, and disappear in the sea. These samlets, smolts, or smouts, are regarded by many as re-appearing in the estuaries a few months afterwards in the character of grilse, of from three to nine pounds weight, according to the lateness of the season.

9.—ORNITHOLOGY.

Stratagems of the Tom Tit.—The wiles and stratagems of every creature are deserving of attention, because they are, for the most part, the impulse of the weak and feeble, instinctive efforts to preserve their own existence, or more generally to secure, or defend, that of their offspring. Few are able to effect these objects by bodily power; but all creatures, probably, exert a faculty of some kind to ward off injury from their young, though not observed by, or manifested to us. This poor little blue tom-tit, which has neither beak, claws, nor any portion of strength to defend itself from the weakest assailant, will, nevertheless, make trial by menace to scare the intruder from its nest. It builds almost universally in the hole of a wall, or a tree; and its size enables it to creep through so small a crevice, that it is pretty well secured from all annoyances but those of bird-nesting boys; and these little plunderers the sitting-bird endeavours to scare away by hissing and puffing in a very extraordinary manner from the bottom of the hole, as soon as a finger is introduced, and so perfectly unlike the usual voice of a bird, that many a young intruder is deterred from prosecuting any farther search, lest he should rouse the vengeance of some snake or adder.

10.—MAZOLGY.

The Hedge-Hog.—Notwithstanding all the persecutions from prejudice and wantonness to which the hedge-hog (Erinaceus Europæus) is exposed, it is yet common with us; sleeping by day in a bed of leaves and moss, under the cover of a very thick bramble or furze-bush, and at times in some hollow stump of a tree. It creeps out in the summer evenings; and, running about with more agility than its dull appearance promises, feeds on dew-worms and beetles, which it finds among the herbage, but retires with trepidation at the approach of man. In the autumn, crabs, haws, and the common fruits of the hedge constitute its diet. In the winter, covering itself deeply in moss and leaves, it sleeps during the severe weather; and, when drawn out of its bed, scarcely any thing of the creature is to be observed, it exhibiting only a ball of leaves, which it seems to attach to its spines by repeatedly rolling itself round its nest. Thus comfortably invested, it suffers little from the season. Some strong smell must proceed from this animal, as we find it frequently with our sporting dogs, even in this state; and every village boy with his cur detects the haunt of the poor hedge-hog, and as assuredly worries and kills him. Killing every thing, and cruelty, are the common vices of the ignorant; and unresisting innocence becomes the ready victim to prejudice or power. The snake, the blind-worm, and the toad, are all indiscriminately destroyed as venomous animals whenever found; and it is well for the last-mentioned poor animal, which Boyle says

'lives on poison, and is all venom,' if prolonged sufferings do not finish its being; but even we, who should know better, yet give rewards for the wretched urchin's head! that very ancient prejudice of its drawing milk from the udders of resting cows being still entertained, without any consideration of its impracticability from the smallness of the hedge-hog's mouth; and so deeply is this character associated with the name, that we believe no argument would persuade to the contrary, or remonstrance avail with our idle boys, to spare the life of this most harmless and least obtrusive creature in existence. Hedge-hogs were formerly an article of food; but this diet was pronounced to be dry, and not nutritive, 'because he putteth forth so many prickles.' All plants producing thorns, or tending to any roughness, were considered to be of a drying nature; and, upon this foundation, the ashes of the hedge-hog were administered as a 'great desiccative of fistulas.'

NATIONAL REPOSITORY, CHARING-CROSS.—Patron—The KING.—The EXHIBITIONS of the New and Improved Productions of the Artisans and Manufacturers of the United Kingdom, IS OPEN, and will continue open daily until further notice.—Admission, 1s.; Catalogue, 1s.—By order,

T. S. TULL, Secretary.

TO THE PROPRIETORS OF EAST INDIA STOCK.

LADIES AND GENTLEMEN,
THE VACANCY which has taken place in the Direction of your Affairs, by the resignation of Sir George Abercrombie Robinson, Bart., affords me an opportunity of again addressing you.

I beg to return my grateful acknowledgments for the very flattering reception I have hitherto met with, and to acquaint you, that it is my intention to offer myself for the honour of your Suffrages on an early occasion.

I shall have the honour of paying my personal respects to you as soon as possible. In the meantime I earnestly request the continued exertions of my friends for the accomplishment of the important object I have in view.

I have the honour to be, Ladies and Gentlemen,

Your faithful and obedient Servant,

JOHN FORBES.

No. 15, Harley-street, March 4, 1839.

TO THE PROPRIETORS OF EAST INDIA STOCK.

LADIES AND GENTLEMEN,
IN consequence of the resignation of Sir George Abercrombie Robinson, Bart., and in pursuance of my Address to you of the 26th July, 1827, I beg leave to offer myself as a CANDIDATE for the VACANT SEAT in the EAST INDIA DIRECTION.

Considering the very powerful support with which I was honoured at the last Ballot, and being now assured of the additional suffrages of many Proprietors of great Influence, I feel warranted in entertaining the most confident expectation of success.

Grateful for the kindness I have already experienced, and soliciting a continuance of your support, I beg to assure you, that when through your favour I am placed in the honourable situation to which I aspire, it shall be my study to perform the duties of it faithfully and independently.

I have the honour to be, very respectfully, Ladies and Gentlemen, your most obedient Servant,

WILLIAM YOUNG.

24, Upper Wimpole-street, March 4, 1839.

N.B. Sir William Young's Committee meet daily, at the London Tavern, where communications will be gratefully received.

At a Meeting of the friends of Lieut.-Col. Sir William Young, Bart., held at the London Tavern, on Wednesday, March 4, the following Noblemen and Gentlemen, Proprietors of East India Stock, pledged themselves to promote to the utmost of their power his election to the vacant seat in the Direction, occasioned by the resignation of Sir George Abercrombie Robinson, Bart.

Jas. Alexander, Esq., A. Grant, Esq., H. Porcher, Esq.,

I. L. Goldsmith, Esq., W. W. Prescott, Esq., W. Wadbrook, Esq.,
John Hunter, Esq., S. M. Morris, Esq., F. Whiting, Esq.,
D. Robertson, Esq., Sir F. M. Osmanney Stueon Warner, Esq.,
Sir J. Sewell, LL.D. S. Tidswell, Esq., M. Whiting, Esq.,
R. W. Eastwick, Esq.

The Committee of Lieut.-Colonel Sir William Young, Bart., beg leave to draw the attention of the Proprietors to the strong grounds upon which he solicits their suffrages upon the present vacancy in the East India Direction.

They consist in a long course of military service, performed in the Honourable Company's Army in India, both in the Field and in Garrison, and which, in repeated instances, have obtained for him the marked approbation of the distinguished officers under whose command he acted.

Sir William Young entered the army as a Cadet of Infantry in the year 1788, and on his arrival at Bombay, joined the European Regiment, which served under Sir Robert Abercromby, G. C. B. before Seringapatam in 1792.—He was then appointed to the Grenadier Battalion, one of the most distinguished corps on the establishment, commanded by Colonel Gore, and was employed in the reduction of the Dutch settlements in Malabar; also at the capture of Colombo and its Dependencies in 1795; and throughout the Cingaleze War, in which he commanded four companies of grenadiers; at the expiration of which service, he received the thanks of General De Meuron, and the Honourable Frederick North, Governor of Ceylon.

In 1797, he was attached to the Staff of Colonel Dow, then in charge of the disturbed districts in Malabar, during an arduous and destructive service of two years, when he was compelled, by ill health, to return to England, and again went out in 1802, at the commencement of the war with Scindeah and Holkar, when he was appointed to the Bombay Staff by the Honourable Governor Duncan; and employed during the arduous contest in the Deccan, in collecting and forwarding supplies for the army, under the command of the Duke of Wellington, for which service His Grace was pleased to express his high satisfaction;—at this period he was also honoured with the approbation of the Governor in Council, of General Nicolle, the Commander in Chief at Bombay, and of Sir Barry Close, Bart., the Political Resident at Poona.

In a later period of his service, he had the merit of suggesting and organising a most efficient plan for recruiting the Native army, which was adopted by the Government, and acted upon with extensive and important results.

In 1805, he was honoured with the favourable recommendation of the Military Board, in a letter to the Government of Bombay, forwarded to the Honourable Court of Directors, by which their attention was drawn to 'the important and acknowledged services performed by him, during a period which demanded all possible energy in the promotion of the public interest;—and on which the Honourable Court were pleased to express their entire approbation, in a dispatch to the Government of Bombay: on the Staff of which Establishment he remained, until he finally quitted India.

On these recorded grounds, establishing Lieut.-Colonel Sir William Young's long, able, and faithful services, the Committee pledge themselves to support Sir William Young, and most strongly recommend him to the favourable notice of the Proprietors, at the approaching Election.

JOHN WARD,

Chairman of the Committee.

N.B.—The Election will take place on Friday the 30th instant, when the attendance of Sir William Young's friends is earnestly requested at the ballot.

In 3 vols. post 8vo., 81s. 6d.
